I fear that I must start by disagreeing in principle with what my honourable and very real Friend the Member for Basingstoke (Mr. Hunter) has just said in his analysis of the past, the present and the future. I believe that from Bophuthatswana, as from many parts of the world that used to be painted red in our atlases, we must ask a good deal of foregiveness for the past. We must protect as far as we can good sense in southern Africa against the overpowering forces that oppose it. We must work for the establishment of the values of freedom—and most particularly total emancipation in that part of that continent—that we hold so dear in our country, and in others in the developing world.

Having said all that, let me add that I consider it right of my hon. Friends to draw attention to some of the events, attitudes, values and habits in Bophuthatswana that are in stark contrast with those in the rest of the republic of South Africa. On the basis of one extremely short visit and one rather longer one, I believe that a real elimination of apartheid is taking place—electorally, socially, culturally and economically. It is marked by the economic vitality of many parts of Bophuthatswana, especially those that are quite near to Johannesburg. Bophuthatswana has a multiracial administration and press freedom, again in stark contrast with the rest of the republic. It was marked even then—and I am sure it is marked even more now—by the blocking of broadcasting by Bophuthatswana television and radio so that it could not reach the rest of South Africa.

But there is also the downside. There are real doubts about political freedom in Bophuthatswana—probably no more than in many other black African countries, but there is certainly a smell of suppression of opposition parties and opposition thought. I cannot say more, because it is difficult to be precise.

As has already been said by my hon. Friends the Members for Basingstoke and for Hereford (Mr. Shepherd), Bophuthatswana depends terrifically on the republic of South Africa, despite the camouflage of the quasi-arm's-length attitude of South Africa towards Bophuthatswana and the creation of a pseudo-diplomatic relationship. For example, there is the pretence that the airport in Bophuthatswana is solely for the encouragement of tourism, when it is umpteen times larger than would be necessary for that and is part of the South African Government's total defence programme against the front-line states.

Bophuthatswana also depends on the republic for police support—in intelligence if in nothing else, but I think that it must be in other respects as well. It depends on the republic for border policing, particularly along the border with Bophuthatswana. The republic accepts that this is a channel, a route for the ANC from the front-line states into South Africa, and is openly concerned. It makes no bones about it, so let us make no bones about it here.

Mr. John Watts (Slough): Will my hon. Friend give way?

Mr. Rathbone: No. I shall progress, if I may. [HON. MEMBERS: "Give way".] Unfortunately, my hon. Friends who were so kind as to say that they would listen intently because of my depth of knowledge—*[Interruption.]*——

Mr. Speaker: Order. We often hear opinions in the House with which we disagree. We should listen to the hon. Member with respect.

Mr. Rathbone: I could not be more grateful, Mr. Speaker, for your arrival in the Chair and the respect that you show for a mere Back Bencher.

There is also dependence on South Africa, not just for trade—trade between South Africa and the front-line states has been mentioned—but for fundamental economic support and hard cash.

In addition, there is the Bophuthatswana Administration's attitude to the Swana who live elsewhere in the republic of South Africa. Are they part of Bophuthatswana? Are they part of the heritage, which has just been referred to? Are they not to be embraced in the collegiate total of this slowly emerging independent state? If it is an independent state, it should embrace them more than I understood to be the case when I visited Bophuthatswana not so very long ago.

Mr. Watts: Will my hon. Friend give way?

Mr. Rathbone: I shall proceed, if I may. I hope that my hon. Friend will forgive me. I am sure that he will catch your eye, Mr. Speaker, in order to make his own points.

There is also the question that has already been identified about what the republic of South Africa thinks is its relationship with Bophuthatswana. I honestly believe that it looks upon it as one of the homelands that one can see so clearly established. As soon as one drives across the so-called border between Bophuthatswana and the republic of South Africa one comes from arid poor farmland into extremely well-tilled, good farmland. One can see the invidious nature of South Africa's homelands policy, under which I fear Bophuthatswana still suffers.

Mr. John Carlisle (Luton, North): Will my hon. Friend give way?

Mr. Rathbone: I shall proceed, if I may. I want to give all my hon. Friends more time than would be the case if I were to give way to everybody now.

Mr. Carlisle: Will my hon. Friend give way to me?

Mr. Rathbone: I shall not be tempted by my hon. Friend.

Mr. Carlisle *rose*——

Mr. Speaker: Order. One at a time.

Mr. Rathbone: Never has there been on the Conservative Benches a greater mutual appreciation of the views of my hon. Friend and myself. I am sure that he will understand that I want to proceed.

Therefore, there are two fundamental approaches to Bophuthatswana. Is it an independent state? I do not believe that it is. I believe that the Administration in Bophuthatswana are trying to have it both ways. They are trying to seek international recognition and, at the same time, trying to draw considerable cultural, economic and social support from the republic of South Africa.

Secondly, is Bophuthatswana really trying to throw off the republic of South Africa's homelands policy? I do not think that it is. It is not ready to embrace all the people that it wants to, and should, embrace—the Swana people who live elsewhere in the republic of South Africa.

Mr. Watts: Will my hon. Friend give way?

Mr. Rathbone: No, I shall not give way.

However, I would urge one extra point upon my right hon. Friend the Minister of State for consideration. If we do not recognise Bophuthatswana as an independent state, we must be even-handed about that region of the republic of South Africa and treat it as part of the republic of South Africa. Indeed, my hon. Friend the Member for Basingstoke illustrated that well in the points that he made about the lack of knowledge about Bophuthatswana which he found in our embassy in the republic of South Africa.

I clearly remember an absolutely fascinating and excellent nursery teacher training school in Mafeking, where a woman was doing a most marvellous job teaching nursery teachers. She was not able to apply to our embassy for the overseas development grants which were available to similar schools within the republic of South Africa because Bophuthatswana was considered separate from the rest of South Africa. If we are to regard it as part of South Africa, as I believe we should, those people should be able to draw upon or at least to apply for the funds that we make available.

Mr. John Carlisle: My hon. Friend said that he wanted to be even-handed. I accept much of what he has said this evening in his description of the country of Bophuthatswana. Does he agree that his description of that country, and its dependence on South Africa, is mirrored by so many states in that region, as was outlined by my hon. Friends the Members for Hereford (Mr. Shepherd) and for Basingstoke (Mr. Hunter)? In those circumstances, in his anxiety to be even-handed, how can he say that Bophuthatswana should be treated differently from those other states?

Mr. Rathbone: I am sorry that I gave way, not because my hon. Friend did not make a point, but because I had covered that point earlier. I drew the difference between Bophuthatswana and the front-line states, to which my hon. Friend was probably referring, which of course have trading relationships across the border. Given the economic power that exists in the southern tip of Africa, it would be impossible for that to be otherwise. That is a pity, but in the area of Bophuthatswana it is not just a question of trade. It involves the magnificent and egalitarian factories which exist in the eastern island which make up Bophuthatswana and the underpinning by hard cash grants from the republic of South Africa. So it is not really a comparable point.

Mr. Hunter: My hon. Friend has spoken for nearly 20 minutes.

Mr. Rathbone: I have spoken for this time only because other hon. Members have intervened and I shall continue to make my points. It was churlish of my hon. Friend to say that.

The Foreign Office and the Minister should bear in mind whether recognition will further the all-important fight against apartheid and bring sense to the continuing senseless attitudes of the South African Government and lead them to embrace reform. I fear that movement towards recognition would not do anything to further reform in the republic of South Africa but might inhibit it. The Minister should be wary about espousing political action on the basis of protecting economic interests. It is not sufficient for this country to recognise the existence of another country purely on the basis that we have economic interests in that area.

Contrary to the inclinations of my hon. Friends the Members for Hereford and for Basingstoke, and I fear other hon. Friends, it is premature at best to start taking steps towards recognition of Bophuthatswana as an independent state. At worst, that could be interpreted as support for the South African homelands policy and the South African Government's policy of maintaining the core and essence of apartheid which we all loathe.

9.53 pm

Mr. George Gardiner (Reigate): I congratulate my hon. Friend the Member for Lewes (Mr. Rathbone) on having the courage to go and look at Bophuthatswana for himself a couple of years ago and for acknowledging some of the merits of that country. It is sad that his visit there was so short. Had it not been, he might have reached rather different conclusions. Perhaps he will rectify that in future. Unfortunately, he probably prepared most of his speech before hearing the speech of our hon. Friend the Member for Basingstoke (Mr. Hunter), who answered many of his points before he made them.

I congratulate my hon. Friend the Member for Hereford (Mr. Shepherd) on securing the opportunity to debate this emerging subject. He spoke of a paradox, and so it is. If most of us were asked what we would regard as the ideal political accommodation in southern Africa, we should say that we wanted a country or state in which apartheid had been swept away, where there were full political rights for the different races and where black and whites worked together in a Government who exploited the free market economy for the benefit of their citizens. In Bophuthatswana we find a country that has won its independence and created a state in which all these features are present, but its people are treated as if they were pariahs in southern Africa.

[Mr. George Gardiner]

Foreign Office Ministers have described Bophuthatswana as a child of apartheid. That is a gross insult to the people who live there. Certainly their independence came about as a result of the black homelands policy of the South African Government of the day, but there was a convergence of interests. The policy of the white Government gave black Swanas the opportunities for which they had yearned since the days when a British Government drew an artificial line on the map in the last century and sold out those on one side of it to the Crown colony of the Cape. These people saw the homelands policy as at least a chance to regain their independence, and took it.

Ethnic groupings across Europe seized their chance when the first world war caused the destruction of the Austro-Hungarian empire. Those were, perhaps, more enlightened times than now, for then we gave those European nations our blessing, but there is no such luck now for the Swana people. The Foreign Office regards their country as a child of apartheid and it is therefore barred from recognition for ever.

People who go to Bophuthatswana, as several of my hon. Friends have done, and speak to its citizens do not find that they regard themselves as children of apartheid. They see themselves as running their own territory according to their wishes. I am puzzled about what my right hon. Friend the Minister would say if she met some leaders from that country—that is, after they had managed to get past the "no entry for the children of apartheid here" signs outside her office. What would she urge them to do? Would she urge them to renounce their independence and return to the jurisdiction of the South African Government, who as yet include no black members? Would she urge them to subject themselves to the Group Areas Act? Of course not. I have far more understanding of and sympathy with my right hon. Friend than to imagine that she would. But what could she say to them? The question illustrates the blind inhumanity of the Foreign Office position, which would be revealed in any such conversation.

Not many hon. Members would expect my right hon. Friend to recognise Bophuthatswana as independent. It is our historical duty to help other Western countries to recognise what the Swana people have achieved. If my right hon. Friend consults her European colleagues, she will find that Dr. Strauss had something to say about this matter not very long ago. Those of us who have visited Bophuthatswana and met politicians from Germany, France and Italy know that they are taking an interest in its development and, probably out of the corner of their eyes, considering commercial possibilities.

The debate has shown that the movements to recognise Bophuthatswana are under way and that it is well and truly on the political agenda here as well as in other European countries. I say to my right hon. Friend, in a spirit of friendliness, that, whatever old prejudices still lurk in the Foreign Office, the subject will not go away.

10 pm

Mr. Donald Anderson (Swansea, East): We are living in exciting times of movement in foreign affairs. Following the super-power summit in May, we have seen signs that the Iran-Iraq war is coming to an end, Vietnamese troops withdrawing from Kampuchea, Soviet troops withdrawing from Afghanistan and the possible extension of the anti-ballistic missiles treaty.

There has been movement all around the globe, yet in the debate, in parliamentary questions and in a number of Adjournment debates, Conservative Members have shown interest in six land-locked enclaves within the republic of South Africa. Somebody is bound to ask about that sense of priorities. What provides Conservative Members with such an obsessive interest in those six land-locked enclaves in South Africa?

Mr. Hunter: Will the hon. Gentleman give way?

Mr. Anderson: Not yet; let me get under way.

I accept the nice tones in which the hon. Member for Hereford (Mr. Shepherd) introduced the debate, and all Conservative Members are honourable gentlemen. They have been brought up well. They were probably taught at their mother's knee that if one receives gifts one must say "Thank you." This is their way of saying "Thank you." We know that there is a well-financed lobby——

Mr. Rathbone: Will the hon. Gentleman give way?

Mr. Anderson: I exclude the hon. Member for Lewes (Mr. Rathbone) from any lobby—*[Interruption.]*

Mr. Speaker: Order. I hope that I did not hear the word "hypocrite."

Mr. Anderson: It is a sad fact of political life that there is a well-financed lobby. I say, in all helpfulness, to Conservative Members who have spoken in the debate that their strong advocacy——

Mr. Hunter: On a point of order, Mr. Speaker. Is it in order for an hon. Member to suggest that Conservative Members have been bribed and that as a result their judgment has been influenced?

Mr. Speaker: I did not hear that allegation. It certainly would not be in order for such an allegation to be made.

Mr. Anderson: I said, in all charity, that Conservative Members, as honourable gentleman, must pay, in some form, for the rather pleasant trips that they have had. Their advocacy of Bophuthatswana would be immeasurably strengthened if, from time to time, even a word of criticism of the South African regime were to escape from their mouths. If, for example, any Conservative Member were to criticise the bloody incursions of South Africa into Botswana——

Mr. Hunter: Will the hon. Gentleman give way?

Mr. Anderson: No.

Their advocacy would be strengthened if there were one word of criticism of the detention without trial of many progressive black leaders in South Africa. The fact that there is no such criticism gives some indication of those who form part of the Bophuthatswana lobby.

There is a Bophuthatswana tendency in the House which must be of considerable embarrassment to the Minister of State. I am delighted that the hon. Member for Lewes sprang gallantly to her defence. If he had not, her back would have been exposed. The Minister was brave to go into the meeting of the so-called all-party Bophuthatswana group, which may have an Ulster Unionist Member but it certainly has no Labour Member on it. I confess that I feared for her safety at one stage.

However, we know that she can look after herself. The group was hoping to roast her, but the lady was not for burning.

There is what, in South African terms, would be called the Bitterendes or the Verkrampte tendency among Conservative Members.

Mr. Gardiner *rose*——

Mr. Anderson: At least on this issue the perception of Opposition Front Bench Members does not differ markedly from that of the Government.

We see the origin of Bophuthatswana as part of the Verwoerd strategy to create Bantustans. That is shown graphically on page 23 of the report by the Eminent Persons Group. I recommend that Conservative Members read that report—*[Interruption.]* I will not exchange insults with the star on the Conservative Benches, the hon. Member for Hayes and Harlington (Mr. Dicks).

The motive of the Bantustan policy was to deprive black South African citizens of their citizenship. In 1977 the Status of Bophuthatswana Act was passed and all residents were deprived of South African citizenship. How well founded is the claim to independence? On 7 July 1988, *The Weekly Mail* in South Africa pointed out that the number of personnel from South Africa seconded to key posts within the Bophuthatswana Administration was 299. It gave the amount of financial assistance to the four Bantustan so-called independent states. It said that the South African Government have guaranteed bank loans of 1·3 million rand to cover the budget deficits in the four independent homelands over the past two financial years. Pik Botha told the Parliament that the total estimated overdraft facilities taken by the four independent homelands was 1·081 billion rand.

Mr. Watts *rose*——

Mr. Anderson: There was clearly a substantial financial dependence. In terms of jobs, two thirds of the labour force commutes daily to South Africa and 56 per cent. of the gross domestic product derives from migrant workers. Militarily, we know the position of Brigadier Hennie Riekert, the former South African Defence Force officer. Politically South Africa is the only friend in the world of Bophuthatswana and it seeks, by bullying neighbouring states, to coerce them into accepting the independence of Bophuthatswana.

The examples that one can give are of the so-called BLS states—Botswana, Lesotho and Swaziland—which, when they tried to renegotiate the South African customs union, were told by South Africa that, first, they had to accept the recognition of Bophuthatswana. With the trains to Botswana through Bophuthatswana, South Africa tried to insist on the acceptance of documentation that would have meant acceptance of the recognition of Bophuthatswana. On other occasions, Botswana has criticised the poaching of industries to the heavily subsidised part of Bophuthatswana.

The claim to independence is placed in question by the events surrounding the abortive coup in February this year. The *New Nation* of 11 February described the debate between the Foreign Minister, Pik Botha, and the finance ministries about whether South Africa should have intervened earlier to deal with the corruption of Mr. Mangope. It quoted Professor Keenan of Wits university, and said:

> "According to Keenan foreign affairs valued Mangope's strong links and good relations with right-wing elements in Germany and other West European countries. Mangope's value to foreign affairs is said to have outweighed any embarrassment that could have been caused to Pretoria by his involvement in alleged corruption."

Of course, Right-wing Ultra groups in West Germany and Britain form part of the lobby in favour of Bophuthatswana.

Mr. John Carlisle: Name them.

Mr. Anderson: Some of them have named themselves.

Mr. Mangope had just been re-elected before the abortive coup in February—in a democratic election with a poll of 0·6 per cent.——

Mr. Hunter: That is absolutely incorrect.

Mr. Anderson: *The Weekly Mail* of 12 February quoted President Botha, after the coup, as saying:

> "We are tonight back in full control"—

a very Pavlovian slip. He thought that he had better alter that, and he said:

> "The President of Bophuthatswana is in full control."

What would be the effect if Britain recognised those six enclaves in South Africa? First, it would be a mark of approval for South Africa in general, and its Bantustan policy in particular—too much for even our Prime Minister. Secondly, it would run counter to the views of all our allies in the Commonwealth and the European Community. Thirdly, it would be a giant step away from out declared aim of a united, democratic and non-racial South Africa, to which the Government are committed.

The Government realise that they are going against the tide and are in real danger of being even further isolated in the world as a result of their South African policy. I think not only of the recent decisions of Prime Minister Rocard, but of developments in the United States, which are causing considerable concern to the Government because of their clear message that the British Administration will be isolated. The Prime Minister is prepared to meet Mr. Buthelezi; she is not prepared too meet Mr. Tambo. That sends its own message.

The Opposition congratulate those sportsmen and musicians who reject the wages of "Sin City". We praise musicians such as Jim Keer of the group Simple Minds, and the group Dire Straits. We are pleased to note in *The Independent* today that Seve Ballesteros, the British Open golf champion, has said in terms that he will never visit Bophuthatswana to compete in the £1 million challenge golf cup in Sun City. It was won last year by Ian Woosnam, who I hope will see the error of his ways.

Finally, the Opposition stand by the members of the front-line states, especially Bostwana, which has refused to yield to the economic pressures forced on it by South Africa, which wants international recognition of that part of its territory for its own purposes as part of its greater apartheid policy.

10.14 pm

The Minister of State, Foreign and Commonwealth Office (Mrs. Lynda Chalker): I have listened with interest to the debate initiated by my hon. Friend the Member for Hereford (Mr. Shepherd). Let me make no bones about it: we are very much aware of the deep interest that many hon. Members have in Bophuthatswana and the well-being of the people in Bophuthatswana whom, in all sincerity, they wish to help.

[Mrs. Lynda Chalker]

There is not sometimes so much dividing us on this issue as some of my hon. Friends would have made out tonight. However, there is undoubtedly one central question, as we have heard during the debate, which divides us. Some of my hon. Friends, including my hon. Friend the Member for Hereford, believe that the Government should recognise Bophuthatswana as an independent state. I listened very carefully to what my hon. Friends have said this evening. I hope that they will hear me out because I say this in all sincerity. I should like to see a way to change the position which is plainly seen by my hon. Friends to be unsatisfactory for the people of Bophuthatswana. However, I must recognise what lies in international law and realise what has happened through history.

History causes this Government to describe Bophuthatswana as having developed from the policy of grand apartheid initiated by Dr. Verwoerd. It was created as a key element in that policy of separate development. All the homelands in South Africa were born out of apartheid. By that they live together within their areas as if they were multiracial. However, that can be deceptive. Those who live in the homelands cannot live freely in the rest of South Africa. We must look at this very carefully and with sympathy for those who want to improve the lot of all people in South Africa, whether in the homelands or elsewhere in the republic.

This Government's policy is in line with that of the international community at large. Our policy is to oppose the design of a divided and separated South Africa. Only the South African Government think otherwise. South Africa is the only country in the world which recognises Bophuthatswana as an independent state.

I believe that there is something in the unanimity of the international community. That is a unanimity of attitude which has nothing to do with being blind to the facts or with not listening to the needs of the people. There is an anxiety about what would be imprinted for the future if Bophuthatswana were to be recognised internationally as independent. That unanimity is there for all to see.

I know that my hon. Friends who have spoken tonight are as fully opposed to apartheid in all its manifestations as they could be. The Government are fully opposed to all apartheid whether it be part of some master plan or practised—as it is regrettably still practised—in the republic of South Africa. We cannot recognise as an independent state a homeland that is part of that master plan. Bophuthatswana does not meet the criteria for recognition as an independent state that have been followed by successive British Governments. Those criteria are based on international law.

With others we have supported UN resolutions and statements, which deny recognition to Bophuthatswana. More than all that, and, more importantly, is my duty as a British Minister to examine what British interest would be served by identifying ourselves alone with the South African Government on this issue. Some hon. Members have argued that there are aspects of Bophuthatswana that are sufficient to make the case for recognition. Tonight some hon. Members have referred to visiting European politicians, who may have some sympathy with people in Bophuthatswana. None of the European Governments, whatever individual politicians may say or do—not the Government of Franz Josef Strauss nor the Government of France, before or since the recent election—recognises Bophuthatswana.

I hope that hon. Members will understand that Britain, especially, wants to help, but it would be wrong to lead international opinion in the direction of granting recognition, because it would put our view on a par with that of the republic of South Africa.

Mr. Nicholas Winterton (Macclesfield) *rose*——

Mr. John Carlisle *rose*——

Mrs. Chalker: I say quite clearly that, whatever the case that hon. Members believe can be made for the existence of a democratic, non-racialist society in Bophuthatswana, those are not the points that are central to the Government's reasoning for not recognising Bophuthatswana.

Mr. Winterton: I have listened carefully to my right hon. Friend and to the debate. As my right hon. Friend is aware, this is an area of southern Africa about which I am deeply concerned. Will she advise the House how the south Tswana people can achieve independence, because it was the United Kingdom which put them in what is the republic of South Africa today? It craved independence. It has started on that trail to independence. Does she not believe that a move towards greater recognition of its status would enable it to consolidate the areas of Bophuthatswana and therefore enable it more ably to become the sort of independent nation with integrity about which she is talking?

Mrs. Chalker: I recognise my hon. Friend's frustration. His question was also asked by my hon. Friend the Member for Reigate (Mr. Gardiner).

The point is that we must end apartheid throughout South Africa. It is in the ending of apartheid that the people, including those in the front-line states——

Mr. Dicks: It is about time we heard something about that.

Mrs. Chalker: This debate is on Bophuthatswana, and I shall stick to that.

I say to my hon. Friend the Member for Macclesfield (Mr. Winterton) that the recognition of the independent nature of the individual people in Bophuthatswana is a matter of international law. It is not about the individuals in that country for whom he and the rest of us feel very deeply. Many others in the republic of South Africa are in very much the same position intellectually, and wish to achieve the same, but they are not in Bophuthatswana. Therefore, we must achieve the ending of apartheid throughout the republic of South Africa. There will then be leadership from the very sort of people that my hon. Friends have been talking about in Bophuthatswana, many of whom are practising——

Mr. John Carlisle: Will my right hon. Friend give way?

Mrs. Chalker: I have very little time and I have a lot of questions to answer. If I give way, I shall not be able to answer all the questions.

I was saying that the Government's position on recognition is quite straightforward. We are executing a policy of non-recognition, but we know that that is not free of difficulty. Like others in the international community, we want to know as much as we possibly can

about what is happening in Bophuthatswana—and, lest I be accused of over-concentrating on the homeland, in the rest of the republic.

Some of my hon. Friends have said that we do not have the right sort of information, but whenever I have found information lacking, we have gone back to find it. I know that one or two of my hon. Friends were not happy, when they made a visit earlier this year, that they could not meet the ambassador. I agree that it was unfortunate, but he happened to be in Cape Town and they were in Pretoria. They met a new Minister who was in Pretoria. I can pass on to them an invitation from Her Majesty's ambassador in Pretoria that he will welcome the chance to discuss this and other issues with them when they visit South Africa again shortly. The ambassador and all his staff are under strict instructions to be fully in touch, and they are.

Mr. John Watts (Slough): Will my right hon. Friend give way?

Mrs. Chalker: They supply information all the time.

Mr. Watts: Will my hon. Friend give way?

Mrs. Chalker: No. I must keep going; otherwise, I cannot get through all the points that have been made.

Mr. Watts: It is not true.

Mrs. Chalker: My hon. Friend accuses me of having told the House an untruth. I can assure him that I know what goes on between my Department and the ambassador in South Africa.

Mr. Watts: Will my right hon. Friend give way?

Mrs. Chalker: I should explain to my hon. Friend that, whatever impression he has formed, it is unfortunate because it is not correct.

Mr. Watts: Will my right hon. Friend give way?

Mrs. Chalker: No. I am sorry, but I shall continue with my speech.

Mr. Dicks: This is the Foreign Office view.

Mrs. Chalker: It is easy for my hon. Friends to advise that we should take actions which they think are simple and straightforward, but they would be open to misinterpretation. That is why we are careful and thorough about how we go about ensuring that we are as well informed as possible. We have taken steps to improve our knowledge. I remember a debate in the House in 1986, when I was asked about British Council money being available for people in Bophuthatswana. The question was a complete surprise to me. I went away and found out what was happening and corrected any error immediately. I shall always do that. It was not the Government's intention to mislead the House.

The information that we collect is obviously constrained by the contacts that we can have. I would not have thought that that was the cause of any surprise. The contacts that we have have to be circumscribed by non-recognition of Bophuthatswana as an independent state, but we aim as far as possible——

Mr. Dicks: The Government speak to terrorists in the ANC.

Mrs. Chalker: —to cover as wide a cross-section of people in Bophuthatswana as possible, because that enables us to assist disadvantaged black people in that homeland.

I have already told hon. Members who came to the meeting last week that if there are projects which should be undertaken, the people of Bophuthatswana are just as able to be helped through our projects as people in other parts of the Republic of South Africa.

Mr. Hunter *rose*——

Mrs. Chalker: We will continue to do that.

Mr. Hunter *rose*——

Mrs. Chalker: All suggestions for new projects suitable for assistance, whether inside or outside Bophuthatswana, which hon. Members put to me I shall pass to my hon. Friend the Minister for Overseas Development, who is listening to the debate. We shall examine them with care and, when we can help, we shall.

Mr. Hunter: I am most grateful to my right hon. Friend for giving way, as the debate is drawing to an end. I note the absence from her speech so far of any reference to the historical responsibility of the United Kingdom for the southern Batswana being incorporated into South Africa. Before the debate ends, will she make a passing reference to the fact that, as a result of British policy, the southern Batswana are now in South Africa?

Mrs. Chalker: Not all the southern Batswana are in Bophuthatswana. We covered this point in the 1986 debate and on other occasions. If we could solve this problem by turning back the pages of the history books, it would have happened long ago, but that cannot be done. It would be simple for my hon. Friend to say that he recognises the homeland of Bophuthatswana, but if he did, he would do so in the company of the republic of South Africa alone.

Another question put to me repeatedly has been whether we are prepared to help candidates from Bophuthatswana to take up scholarships. It does not seem widely known that they are eligible to apply for scholarships in exactly the same way as other applicants from the rest of South Africa. We shall continue to ensure that that happens.

History has taught us that what happens in other countries, even where once we had a clear writ, cannot be changed. We have to face the situation in South Africa as it is. The Government believe that Bophuthatswana and the other homelands will find their future in South Africa once apartheid has been abolished. It is the abolition of apartheid that must be the aim and main purpose of British policy.

Several of my hon. Friends referred to the speech given by my right hon. and learned Friend the Foreign Secretary to the Royal Commonwealth Society. It detailed fully our overall policy towards South Africa. We want to see apartheid ended. We want to see it not merely reformed but abolished altogether, and soon. Our policy on Bophuthatswana cannot be isolated from our policy towards South Africa as a whole. [HON. MEMBERS: "Why not?"] It is part of South Africa, and we cannot legally recognise it as anything else.

South Africa as a country has enormous potential, as has Bophuthatswana within South Africa, but that is where it is. We wish to see it develop along with all the

[Mrs. Chalker]

other areas around the homelands. I know that hon. Members are anxious about this and that they will not give up, but the best help that we can give the people of Bophuthatswana is to encourage fundamental change throughout South Africa which will lead to a unified, non-racial and representative Government in South Africa, and that will also include all the people of Bophuthatswana. We want to see that country free of apartheid——

In accordance with MR. SPEAKER'S *Ruling—[Official Report, 31 January 1983;* Vol. 36, c. 19.]—*the debate was concluded.*

Yorkshire and Humberside (Economy)

10.33 pm

Mr. David Hinchliffe (Wakefield): I hope that Conservative Members will take as much interest in this debate on a region of this country as they did in the preceding lengthy discussion about an obscure and somewhat dubious country in southern Africa. But, as the Benches opposite have completely cleared, I doubt whether that will be the case. It amazes me to see their interest in a particularly dubious country and certainly their lack of interest in a most important region of their own country.

I am grateful for the opportunity to initiate this debate on the economy of Yorkshire and Humberside. It would have been remiss of the House to go through the first Session after a general election without having a detailed debate on one of this country's most important regions.

I am reminded of a cartoon that appeared on the front page of *The Guardian* the day after the general election. It depicted a ship, Great Britain, broken into two parts—the north and the south. It showed the passengers on the southern part of the broken ship telling Captain Thatcher, "Sod the others; let's keep going." To me, that cartoon encapsulates much of the Government's attitude to the north, and in particular to areas such as Yorkshire and Humberside.

I propose to draw attention to detailed evidence of very real regional differences that have been added to significantly by the present Government's policies. In particular, I shall consider the problems of Yorkshire and Humberside, and concentrate on my own home area of West Yorkshire and the Wakefield district, although I know that some of my hon. Friends will wish to comment on South Yorkshire and other parts of the Yorkshire and Humberside region. This Government have an appalling record of neglect of the north of England. They have effectively washed their hands of any real concern for the economy and future of the north of England, and of Yorkshire and Humberside in particular.

There has been much debate about whether there is such a thing as a north-south divide. Having spent a lot of time in the south of England since the general election, I know that there are major divisions in London and the south-east—between rich and poor, between the haves and the have-nots—and those divisions have been added to by the Government's policies.

I shall quote at some length from two academic reports that examined the issue of the north-south divide. A report, written by Gudgin and Schofield for the Northern Ireland Economic Research Centre in November 1987, says:

"it remains true that employment opportunities are on average much more restricted in the northern half of the UK . . . than in the southern half. Consequently the poverty associated with high unemployment is concentrated in these same regions."

The report goes on to say:

"Anticipated growth in national output is sufficient to allow expansion in all parts of the UK. This is not the case however for either employment or population. Large parts of the Industrial North and Periphery are expected to lose rather than gain jobs between now and the year 2000."

Again it states:

"What this amounts to is a strengthening of the North-South divide which has become increasingly evident since the end of the long postwar boom in the mid 1970s. The future contrast is likely to be between a booming southern half of the country and a slowly declining northern half."

All the evidence in that report and in others suggests that Government policy is adding to the divisions.

A more recent report by Champion and Green which emerged in January this year, entitled "Local Prosperity and the North-South Divide," says:

"The most striking result that emerges continually from this analysis is the great extent of the North-South divide. The Amalgamated Index scores reveal an even clearer cleavage on this dimension than did the index developed in the previous study."

That was in 1985.

"All the 35 highest-scoring places . . . have been found to lie on or south of a line between the Severn estuary and Lincolnshire".

The report continues:

"Over the rest of the country, the poor performance of the principal industrial concentrations remains evident".

In particular, the report refers to the sharp deterioration in the South Yorkshire area, to which some of my hon. Friends will refer later.

The report states:

"the main weight of the evidence points to the North-South divide as the primary dimension in variations in economic health across Britain at the level of the Local Labour Market Area and it also shows that, despite the above observations, the general trend in the 1980s has been a widening of this gap."

The report concludes:

"the problems of the major urban areas and smaller industrial and mining settlements in the north must be solved in situ, or else their regions will gradually wither away."

Mr. Barry Field (Isle of Wight) *rose*——

Mr. Hinchliffe: No, I will not give way. If the hon. Gentleman wishes to speak, he must catch Mr. Speaker's eye and make his own comments.

I have today obtained from the Library the official employment statistics for the Yorkshire and Humberside region. They show that since 1979 male employment in the region has fallen by 201,000, or nearly 17 per cent., and, while female employment has increased by 0·1 per cent., that has been due to increased part-time working. I shall refer later to the implications of that in terms of low pay.

Real figures relating to unemployment are no longer kept, but even the official figures, which have been adjusted downwards perhaps 20 times and which therefore do not tell the whole truth, show that, allowing for discontinuities and seasonal trends, unemployment in June 1988 was twice what it was in June 1979, when the Conservatives came to power. In April 1988, the latest month for which such figures are available, the proportion of those unemployed in the region for a year or longer, at 41·6 per cent. made it the fifth highest in the country. At 33·7 per cent., the proportion of the unemployed aged under 25 was also higher than the national average, being second only to Scotland.

The standard of living figures, measured by per capita GDP, show that Yorkshire and Humberside have consistently been below the United Kingdom national average for the last eight years. The level of investment in manufacturing per employee—a significant factor when considering the products of the region—has been significantly lower than elsewhere in Britain. In 1987 it was £1,284 compared with the national average of £1,500.

Low pay is an issue of vital concern to hon. Members who represent West Yorkshire constituencies. The

[Mr. Hinchliffe]

regional trend figures for 1988 show that, across the board, earnings in Yorkshire and Humberside were well below the national average. I shall quote from two objective and academic reports prepared by the West Yorkshire Low Pay Unit. Having examined the Council of Europe decency threshold for wages, the unit reported that the county had fallen to the bottom of the national pay league.

For example, it discovered that one third of the total full-time work force in the area was low-paid by the standards of that threshold. For part-timers the position was even more desperate, with over 80 per cent. falling into the low-paid category when assessed on an hourly rate. The unit reported that, since 1979, the proportion of the male work force in West Yorkshire receiving low wages had more than doubled, with just under one fifth of full-time adult male workers being low-paid.

For full-time women workers there has been little change in a far more serious problem, with just under 60 per cent. low paid in the West Yorkshire area. Since 1979, average wage levels in West Yorkshire have fallen relative to the British average and the region is now bottom of the pay league with the worst low-pay problem of all nine urban industrial regions in Britain.

In the last few days a case was brought to my attention of a young lady of 18 working as a care worker in a private home for aged persons in Huddersfield being paid a grand total of 50p per hour. That is a disgrace, but that is the reality of the enterprise culture generated by the Government.

In the light of cases like that, one must also consider the extent of illegal underpayment—an issue about which I am deeply concerned in West Yorkshire. Wages inspectorate visits to firms in Yorkshire and Humberside in 1987 found that 26·6 per cent. of workplaces were not paying the legal rate for the job. The total amount owed to workers, such as the young lady whom I mentioned, was £161,225 in that year alone. Yorkshire and Humberside also had the highest percentage wages debt of any region in the country, 42 per cent. of the debt being unpaid.

Interestingly, however, the total number of prosecutions fell significantly, from 16 in 1978 to nine in 1987—no doubt due to deliberate Government policy in support of a free market in wages. There has also been a deliberate attempt to undermine the role of the wages inspectorate region by region. In Yorkshire and Humberside the number of inspectors has been reduced from 14 in 1979 to just seven in 1987.

In my area of West Yorkshire there is particular concern about two industries—textiles and coal—and no doubt colleagues with greater knowledge will wish to add to my comments on those industries. Ten years ago the textile industry nationally employed 405,800 people. Since then, the figure has been reduced by 45 per cent. The Silberston report of 1984 highlighted the precarious future of the textile and clothing industries in the United Kingdom, suggesting that 50,000 jobs might be lost by 1990.

We know to our cost that many of those predictions have already come true. The National Union of Tailors and Garment Workers claimed that 90,000 jobs would be lost following renewal of the multi-fibre arrangement in 1986, and there has been a huge impact on job losses in West Yorkshire. Many Members present for this debate have experienced greater problems with this than I have in Wakefield, but it is clear that the establishment of a textile closure area in West Yorkshire has only partly slowed down and still constitutes a major problem.

In September last year a joint report was produced by the councils of Bradford, Calderdale, Kirklees and Wakefield on the European regional development fund quota assistance scheme. The report states:

"the Non-Quota schemes . . . have not been sufficient to cope with the area's needs and potential for restructuring. The objectives of the ERDS Non-Quota measures relating to countering high levels of unemployment in textile and clothing zones, and improving the unfavourable physical environment . . . have not been fully achieved. The background continuing vulnerability of the economy and decaying infrastructure have shown that the schemes have been well-intentioned and effective at a micro-economic scale, but have failed at this stage to exploit opportunities to the full and to influence the development of the macro-economy."

Having had discussions with the managemets and unions of firms in my constituency, I am aware of the views of those in the textile industry of Government's policy. Only recently I met the management of Poppleton's in Horbury in my constituency, which left me with no doubt that it considers that the Government have made a disgraceful attack on the textile industry. It considers that the industry has been allowed to be swamped by dumped products and to go to the wall. That has been the case in West Yorkshire.

Mr. Bob Cryer (Bradford, South): Will my hon. Friend take into account the fact that the Government have failed to press the EEC Commission to stop the import of Turkish yarn into the United Kingdom, which has cost nearly 600 jobs in Bradford in the past five months? I am sure that it will cause jobs to be lost in other areas of the textile industry in West Yorkshire.

Mr. Hinchliffe: My hon. Friend is correct. That issue was referred to in the discussions that I had only a few weeks ago with the company that is now closed. It was concerned about the way in which the Government had handled the import of Turkish yarn.

I have spoken in this Chamber about the coal industry on several occasions. The industry is of direct concern to me in my constituency, as it is to other hon. Members who are in their places tonight. I shall draw attention to the problems faced by the Wakefield district as a result of the deliberate attack on and rundown of the industry in West Yorkshire, South Yorkshire and elsewhere. In 1981, in Wakefield district, there were 17,000 employed in mining in 18 pits. There are now 6,000 employed at five pits. Nearly 2,500 jobs have gone so far this year. The implications for individual families and communities must be obvious to all who are present tonight.

Often overlooked are the knock-on effects of job losses elsewhere in local industry, including service industries. Three major engineering companies in my constituency have been badly affected. There seems to be a lack of perception of the way in which pit closures have a knock-on effect in the engineering industry and the retail trade. Numerous small firms within my constituency provide services as subcontractors to engineering companies and the collieries themselves. We see also what happens to the retail trade within the service sector—this is what is called the local expenditure multiplier effect—when pits close. Even jobs in corner shops are part and parcel of the local economy, which should be taken into

account when pit closures take place. In my constituency, nearly 1,500 jobs have been lost in the service sector as a result of pit closures since 1979.

When the Government discuss the coal industry they refer constantly to the public cost of keeping open certain pits that they deem in some instances to be uneconomic. I never cease to marvel at the amount of public money that is used to keep miners unemployed. I shall refer to a report, published recently, which was produced by Kathy O'Donnell of Leeds university for the Wakefield district council. That report deals with the effects of pit closures in the Wakefield area in recent years.

Kathy O'Donnell examined the cost to the public since March 1985, the end of the miners' strike, of pit closures in the Wakefield district. She claims that it cost British Coal £65 million in redundancy payments. It cost Wakefield district council £5·5 million because of the reduction in rate income from collieries and increased demands for services from unemployed miners. It cost central Government £169 million in redundancy and benefit payments. It cost the EC £884,000 in contributions to redundancy schemes. A total of £241 million has been spent since March 1985 to keep people unemployed. That is economic nonsense. The money could have been invested in job creation rather than wasted on unemployment.

In my area, and elsewhere in West Yorkshire and Yorkshire and Humberside, there is deep concern about the coal industry's future under the present Government. Only this week the all-party Select Committee on Energy referred to the implications of electricity privatisation, mentioning the uneven treatment given to nuclear energy and coal:

"The problems of nuclear have been glossed over while there has been an emotional hostility towards the coal industry".

During the last financial year, British Coal sold 77 per cent. of its output to the electricity supply industry. The seriousness of the implications for coal are obvious to anyone. According to a report earlier this year by the Coalfield Communities Campaign, 73 per cent. of jobs in the coal industry depend directly on sales to the electricity supply industry. At national level, those sales account for 98,765 jobs. In North Yorkshire, which relates directly to the Wakefield district, where 87 per cent. of output goes to the CEGB for generation, such sales support about 12,500 jobs. In Wakefield metropolitan district alone, the figure is 5,266.

Two very dubious private Bills, now going through the House, are designed to increase capacity for the importing of coal from countries such as South Africa. No doubt Conservative Members will support that move. But what are the implications for West and South Yorkshire of allowing the CEGB to import 8 million tonnes of coal to the Trent and Yorkshire power stations? The Coalfield Communities Campaign estimates that if imports proceed at projected levels, 36 collieries will close, with a loss of 51,544 jobs. The Yorkshire coalfield would be virtually wiped out.

Mr. Kevin Barron (Rother Valley): Was not the EEC's refusal to fund the project on Humberside a direct recognition of the damage that it could do to other parts of the region?

Mr. Hinchliffe: My hon. Friend is quite correct. It is a disgrace that the Government have supported—as they clearly have—what was supposedly a private measure. We have noted that certain prominent members of the Government have been present to support those Bills.

I understand that I have been on my feet for rather a long time, so I shall draw my remarks to a rapid conclusion. As well as destroying industry in the Yorkshire and Humberside area, the Government have directly attacked the region's capacity to attract inward investment. An example is the scrapping in 1982 of the industrial development certificate system, which directly prevented the movement of firms from south to north to generate jobs in areas such as Yorkshire and Humberside.

In my own area, Wakefield district, assisted area status was removed in 1982. Urban development grants, which were previously used to generate employment, have been taken away. The Government have hammered local authorities' capacity to assist the generation of industry at local level.

The fortunes of the coal and textile industries in Yorkshire—especially in West Yorkshire—and Humberside are ample evidence of an economic strategy based on unbridled market forces. Large parts of those regions have been written off by a philosophy that believes that it makes more sense to pay people not to work rather than to invest and create the conditions for job generation.

Last month the Association of Yorkshire and Humberside Chambers of Commerce published a report on the "Yorkshire and Humberside Eurolink", which makes interesting reading. That report states:

"Our conclusion is that, left to themselves, market forces are unlikely to generate more than a patchy response to the region's infrastructure needs. In the course of our discussions, the region's Chambers have identified a number of priorities in terms of infrastructure."

That report discusses in detail the need for public investment in air transport, in the road network, in the railways, in water mains, sewers, factory premises and sites. Those are areas that the Government should address and it is their own supporters, the business men, who are trying to get that message across.

The people of Wakefield, Yorkshire and Humberside, want to work, and it would make economic sense for the Government to enable them to do so.

11.2 pm

Mr. Irvine Patnick (Sheffield, Hallam): I should be understating the case if I said that I differ from the hon. Member for Wakefield (Mr. Hinchliffe). The picture of Yorkshire and Humberside that he has painted is peculiar to his perceptions and not an accurate representation of the area.

The economy of Yorkshire and Humberside is dependent upon several factors, including the availability and quality of the labour force. I assure the House that, on both counts, the regions' scores are excellent. The economy also depends upon industry investing, creating employment and making profit on its investment—the hon. Member for Wakefield may consider profit a rude word. The region and its people must have self-confidence and generate confidence in outsiders. To succeed, the region must be able to offer factory sites, housing and land, which must be affordable. The region must have good communications by road, rail, sea and air. It must have a decent environment and welcome visitors. I submit to the House that the Yorkshire and Humberside region possesses all those qualities.

[Mr. Irvine Patnick]

Bryan Gould, writing about the inner cities in volume two of the magazine *Agenda*——

Mr. Austin Mitchell (Great Grimsby): The hon. Member for Dagenham (Mr. Gould),

Mr. Deputy Speaker (Sir Paul Dean): Order. I believe that the hon. Member for Sheffield, Hallam (Mr. Patnick) realises his mistake.

Mr. Patnick: I meant no insult to the hon. Member for Dagenham (Mr. Gould) but I must tell that hon. Member for Great Grimsby (Mr. Mitchell) that there is nothing in the magazine to say that he is a Member of Parliament. The magazine just has his picture and his name.

In that magazine the hon. Gentleman states:

"In both Birmingham and Sheffield Labour councils have teamed up with local business and the voluntary sector to produce exciting redevelopment schemes. Independent and experienced consultants have commended the plans. Each interested group stands to gain from a go ahead and so the real beneficiaries will be the local community as a whole who will see balanced developments comprising housing and economic activity, community facilities and new entertainment and transport links—so much better than the unbalanced developments that have given vast soulless commercial centres that close down at six or large housing estates with nothing for young people to do."

Yorkshire and Humberside needs good communications. In a previous debate I referred to that region's links with Manchester airport, which is one of the main outlets for people from that region who wish to visit Europe and America.

The Government have provided the Stockbridge bypass, which runs through the constituency of the hon. Member for Barnsley, West and Penistone (Mr. McKay), and is used by my constituents. A new motorway is not on the cards, but a new link between the M1 and the M62 is under active consideration.

During my discussions with my hon. Friend the Under-Secretary for Transport he said that he was prepared to contact the Peak national park, Derbyshire county council and Sheffield metropolitan district council to ascertain whether improvements could be made to black spots on Snake pass, the A57 and the Woodhead route. Obviously there is need to open up that area and improve Manchester airport. It is a gateway airport that provides a service to people in Yorkshire and Humberside, who can avoid the problems of having to travel south to Heathrow and Gatwick via the M1 roadworks and the overcrowded M25.

A wider range of intercontinental services out of Manchester would be highly desirable to the business communities of Sheffield, Yorkshire and Humberside. The Minister said that Manchester airport was an important factor when considering the road network between Sheffield and Manchester. Northwest Airlines wishes to serve Boston from Manchester, and American Airlines and Pan-American wish to start New York services. The northern travelling community and those who visit the Yorkshire and Humberside area need those new services.

In his consideration of the north-south divide, the hon. Member for Wakefield missed an article further on in *Agenda*, which was not written by a Member of Parliament and which states:

"Looking south across the river from the Armstrong Centre the Metro Centre, symbol of the North East's recent resurgence, shines out like a beacon. The largest out-of-town shopping development in Europe, it features miles of bright shopping malls that attract the shoppers by the coachload from all over the country. The Metro Centre represents a total investment of some £200 million".

The article states that the developer

"also hopes to get the go-ahead for a £50 million Metro Centre style complex in Middlesbrough"

on a 100-acre site. I do not consider that an example of the north-south divide.

Mr. Harry Barnes (Derbyshire, North-East): The hon. Gentleman does not seem to recognise the north-south divide. In my constituency, which is just below the hon. Gentleman's constituency, there is a division between the east and the west of that area, part of which is within the travel-to-work area of Sheffield. In Renishaw, where the pit is being closed, the unemployment rate was 18·6 per cent. in April and had risen by 2·3 per cent. since February. In Eckington south, unemployment is 17 per cent. and in Killamarsh it is 15·4 per cent. In the western part of my constituency unemployment is as low as 5 per cent. and falling in Gosforth Valley and in Dronfield. That reflects social division on a massive scale and shows that many of the problems mentioned by hon. Friend the Member for Wakefield (Mr. Hinchliffe) are endemic throughout south Yorkshire.

Mr. Patnick: As the hon. Member for Derbyshire, North-East (Mr. Barnes) managed to bring north-east Derbyshire into the debate on Northern Ireland, I suppose he can now move the east midlands a little further down the road into north Yorkshire and Humberside. *[Interruption.]* The hon. Member for Rother Valley (Mr. Barron) usually speaks for the Leader of the Opposition.

Mr. Barron: I speak with no one's voice but my own. The hon. Gentleman complains about my hon. Friend the Member for Derbyshire North-East (Mr. Barnes), yet he spends two or three minutes talking about the metro centre in Newcastle, which is considerably further from Humberside and Yorkshire than north-east Derbyshire is.

Mr. Patnick: I did not give the hon. Gentleman credit for being so quick. If he is a little more patient than usual, I shall explain why I used that example.

Unemployment in the constituency of the hon. Member for Rother Valley is 14·2 per cent.; in that of the hon. Member for Derbyshire, North-East, it is 11·6 per cent.; in that of the hon. Member for Halifax (Mrs. Mahon), 9·9 per cent.; and in that of the hon. Member for Wakefield, 11·3 per cent. I obtained those figures from the research note in the Library on unemployment in the constituencies.

Mrs. Alice Mahon (Halifax): Perhaps the hon. Gentleman would like to know what unemployment in Halifax is. In 12 months' time the KP Foods factory there will close with 1,000 job losses, and the Rowntree factory "might not" close in two years' time but if it does 2,500 jobs will be lost.

Mr. Patnick: Sheffield, Central has the fifth highest unemployment rate in the country—23·2 per cent. I know the facts and figures.

I have spoken before about British Rail trains. The east coast main line to Donacaster is a fantastic line. It will soon be electrified. Money has been spent on it. The

London to Leeds service is due to open in October this year. Sadly, the line that Sheffield is on, the midland main line, can only be described as atrocious.

When Sheffield had the huge steelworks, a vast number of employees had work. That work disappeared when the works closed down. Sheffield had its problems, and many people were unemployed. Small firms in Sheffield are now springing up, and a survey by the council—it is not of my political thinking—revealed that in the east end of Sheffield new firms were taking on employees, and council statistics show that unemployment in the Sheffield travel-to-work area is falling. *[Interruption.]* Do Opposition Members wish to intervene? If not, I shall continue.

The official number of unemployed people in Sheffield is coming down—by 3,247 in one year, with the total down by 14 per cent. Success and development create activity that is contagious. Confidence is being restored and employment opportunities are becoming available. The effect is not confined to one area. It is spreading like the ripples of a pebble thrown into a pond and benefiting people in other areas. Sheffield is not alone in that, but it is a classic case of a city that has picked itself up by the bootstraps and got on with the job of making itself great again.

On 21 April 1988, Mr. Winter, the director of land and planning, stated that the total value of schemes for development in Sheffield—I could not believe the figures but they are here for any hon. Member to see—was £1·3 billion. That will give us 30,000 permanent jobs and 10,000 temporary jobs in construction.

The hon. Member for Rother Valley wanted to know what my remarks had to do with Sheffield. There is a project called "Junction 34" in Sheffield. It is a proposed shopping complex with a large number of retail outlets. It will be built on derelict land at a cost of £230 million. Marks and Spencer has shown an interest in the site, as has Savacentre. Debenhams and Sears are interested, too. The site contains 100,000 sq ft of leisure facilities, quite apart from the shopping complex and, believe it or not, parking for 10,000 cars. Yet according to the hon. Member for Wakefield, despair, desolation and doom are imminent.

Mr. Barron: The hon. Gentleman is making great claims about that proposal. Many of the shops that opened in Rotherham town centre under the Rotherham enterprise zone scheme are now closed. It is hardly an area of massive growth.

Mr. Patnick: I am grateful to the hon. Gentleman for reminding me of that. The size of the Rotherham enterprise zone increased and increased. I remember that, when my right hon. Friend the Member for Henley (Mr. Heseltine) was Secretary of State for the Environment, Sheffield was offered an enterprise zone, but it was prepared to accept it only on conditions. I do not know where the hon. Member for Rother Valley gets his facts, but the enterprise zone has had to be increased to accommodate the firms that want to move into the area.

An urban development corporation has been set up in Sheffield. We have received £50 million from the Government, a derelict land grant for Junction 34 and £10 million for facilities at the canal basin. Everything is coming together, and the confidence in the area should be recognised.

An article appeared on 20 July in the commercial and industrial property guide of *The Star* which said:

"Record year for regional investments is forecast. Rising business confidence in Sheffield could mean another record breaking year for investment in the Yorkshire and Humberside region."

In the article, Paul Gilmartin said:

"The record breaking trend looks set to continue. There is a marked increase in business confidence . . . the current year looks like breaking all records".

On the same page, another article said:

"Shops at heart of inner city renewal . . . Government guidelines and local authority policies on shopping are not making the most of the benefits that retailing can bring, says Stuart Robinson, of Hillier Parker Planning."

I refer the hon. Member for Wakefield to a most interesting article that appeared in the *Yorkshire Post* on 28 July. It says:

"Factory values surge as industry expands. A surge in the value of factories and warehouses during 1988 and a shortage of building to meet present demand is reported in West Yorkshire by the Leeds office of King and Co.

During the past 12 months, approximately 1,500,000 sq ft of new buildings have been constructed in the region for occupiers who include William Morrison, Northern Foods, Thorn EMI and Uniroyal."

I said earlier that firms such as Marks and Spencer will invest, not in areas that it thinks are declining but in areas that are improving. Such an area is Yorkshire and Humberside.

The article continues:

"There is a dire shortage of sites capable of development with buildings in excess of 40,000 sq ft"—

There are no prizes for guessing where that is—

"but at Wakefield 80 acres of mainly agricultural land is about to be brought into warehouse and industrial use. The land adjoins the Normanton and Whitwood Industrial Estates at Junction 31 of the M26, midway between the M1 and A1".

The list of firms that have moved into that area is quite unbelievable. The article says:

"More than 215 acres have already been developed at this location where occupiers include Panasonic UK, Associated Fresh Foods, Hewlett Packard, Argos Distributors, Linfood, Tibbett and Britten, Miller Mining, Nestle (UK), Burtons Gold Medal Biscuits, the Halifax Building Society and Sleepeezee."

Mr. Hinchliffe: The hon. Gentleman is making my case for me. Where there is the infrastructure—it is to the credit of the Labour-controlled local authority in Wakefield that those firms have come to the area—it is possible to attract inward investment. That is precisely the point that I made in my speech.

Mr. Patnick: I listened to the hon. Gentleman's speech and it contained nothing but gloom and despondency. Anybody would think that all we have in the region, apart from the hon. Member for Halifax, are KP nuts and coal mining. There is more to Yorkshire and Humberside than those two industries.

Mrs. Mahon: The hon. Gentleman mentioned Halifax and Marks and Spencer. Would he care to give his comments on Reliance Hosiery, which employs 600 people in Halifax? That company is deeply concerned now that interest rates are rising so high. When I visited the company I was told that it was worried. It supplies Marks and Spencer and is threatened with takeover. It really is doom and gloom in Halifax at present. If the hon. Gentleman would like to give me some good news about one of the factories, I should be happy to hear it.

Mr. Patnick: No doubt the hon. Lady can put her own case. I thought that she had something to say.

Mrs. Mahon: The hon. Gentleman will ensure that we do not have time to speak.

Mr. Patnick: I am sorry about that. I recollect that it was not so long ago that I sat in the Chamber trying to participate in a debate when the hon. Member for Normanton (Mr. O'Brien) was speaking. One would have thought that he had suddenly become deaf to those of us facing him, but that he had an ear in the back of his head and was able to hear his colleagues. At least I have given hon. Members a chance to intervene, even the Opposition Front-Bench spokesman. I have been more than generous. —*[Interruption.]* It is always good to hear the hon. Member for Great Grimsby, whether he is sitting, standing or keeping quiet.

On behalf of Yorkshire and Humberside I should like to argue for the Channel tunnel link—*[Interruption.]* Does the hon. Member for Halifax wish to speak?

Mrs. Mahon: I asked about Marks and Spencer.

Mr. Patnick: I shall sit down and allow the hon. Lady to speak, but she does not stand when I offer her the Floor.

The Channel tunnel link is needed for Yorkshire and Humberside.

Mr. Austin Mitchell: The hon. Gentleman must be joking.

Mr. Patnick: I did not think that the hon. Gentleman was a little Englander. I thought he accepted that the time left to the Civil Aviation Authority and airport officials was short. They cause so much inconvenience to people at Manchester, Luton and east midlands airports when they go on strike. When the tunnel is built there will be another way to reach the continent. Time is running out for those people who, every year around holiday time, inconvenience travellers, not just from my constituency, but from Yorkshire and Humberside.

The chairman of the Yorkshire and Humberside Confederation of British Industry said:

"The Government and BR need to commit themselves to a direct link".

Just so that the hon. Member for Great Grimsby knows how even-handed I am, I shall tell the House that the Trades Union Congress warns that the area will lose out further to the south unless it has such a link. Both sides of the great dichotomy—the CBI and the TUC—recognise that, but no doubt the Opposition Front-Bench spokesman, as ever, will know more about it.

In conclusion—everybody will be pleased to hear that —the economy in Yorkshire and Humberside is good and improving. We have all the ingredients that I have listed. It is time that residents appreciated that they have initiative, ability and talent and that the banner of Yorkshire and Humberside, together with initiatives, current and planned, should enable us to go forward. If we appreciate that, the confidence can become infectious. We must draw on the region's strengths—the availability of work and opportunity. Good news will travel. The upward climb of Yorkshire and Humberside will continue.

11.23 pm

Mr. Allen McKay (Barnsley, West and Penistone): It is refreshing to hear the hon. Member for Sheffield, Hallam (Mr. Patnick) praise Sheffield council, of which he used to be a member. It is one of the local authorities that has been laced by the Government on many occasions for the way it runs the city. It was laced irrespective of the fact that the auditor said that it was one of the best-run cities in the country and proved that the authority was right in the direction it was taking.

The hon. Member for Hallam referred to metro developments and to the amount of money that is being spend on Junction 34. It is true that developments are taking place—but they all seem to be shopping and leisure developments. What about manufacturing industry? Why should that not make progress as well? We should turn our minds to those questions during the debate.

It is all very well for other developments to take place, but they depend on people being able to spend money. They are all consumer-oriented. We do not have the manufacturing industry to make the money or the people in employment to earn it, so no one can spend it.

Up to a point I applaud some of the things that have happened because of enterprise zones. They have proved a point. However, only last week a young man asked why we in Barnsley could not have the same facilities as other areas or the same benefits to industry in the form of rents and rates and developments. By the time that he had finished talking, it was quite obvious that although the industry in which he worked in Dodworth had not been there very long, it was upping sticks and moving because it could get preferential rates and development rates in an enterprise zone not too far away. Developments in enterprise zones mean, by and large, that there have been fewer, a lack of, or a rundown in, developments elsewhere.

I agree that all is not doom and gloom in Yorkshire and Humberside, but I am concerned when I see the wealth and prosperity in the south and south-east, and the way in which that reflects on the area in general. In makes me ask why some of that prosperity is not coming north and why it is not in Yorkshire and Humberside. We are one of the most beautiful areas in England environmentally——

Mr. Barry Field: Can the hon. Gentleman tell me why, according to the House of Commons Library statistics to which my hon. Friend the Member for Sheffield, Hallam (Mr. Patnick) referred, the Isle of Wight has an unemployment rate of 11·3 per cent. and why in the recent wages survey we were the third lowest and only just behind Northern Ireland? We should like to see some of the prosperity of Yorkshire come south, to the Isle of Wight.

Mr. McKay: I can add to that, because the area that I am talking about is not the third lowest; it is the second. I am referring to the area in which I live and for which I am developing my argument—*[Interruption.]* Oh yes, we have a male unemployment rate of 27 per cent. Hon. Members can study that fact as much as they want. I am referring to Government figures, which can be found in censuses and in the employment figures. If the hon. Member for Hallam waits and lets me develop my argument, he will see what I am talking about. He is jumping in when he should not not do so. I think that he now realises that he made a mistake in jumping in then. I hope that he will realise that more as I continue.

I am asking why that wealth, prosperity and employment do not come north. I accept that, although there is a north-south divide, parts of the south are probably less prosperous than some parts of the north. Parts of the north are not too badly off, thank you very

much, but, by and large—and that is what we are talking about—it is easier to get work in the south than it is in the north. Manufacturing and other industries are moving to the south and to the south-east, not to the north. That is what we must put our minds to.

Instead of considering only unemployment, we should look also at those in employment because those statistics are probably a better reflection than the unemployment figures. When one considers the figures for those in employment in Great Britain and compares them with the figures for Yorkshire and Humberside, one can see what quite clearly is happening. In agriculture, forestry and fisheries, the figures are almost equal. In Great Britain there has been a drop of 18·9 per cent. and in Yorkshire and Humberside the figure is 18·8 per cent.

For energy and water supplies there has been a drop of 28·7 per cent. in Great Britain as a whole, but a drop of 35·2 per cent. in Yorkshire and Humberside. In manufacturing, there has been a drop of 16·6 per cent. in Great Britain against a drop of 22·4 per cent. in Yorkshire and Humberside. For construction, the figures are 9·8 per cent. and 6·6 per cent. respectively. Only in the service industries has there been a regeneration of employment. In Great Britain there has been an increase of 9·1 per cent. and in Yorkshire and Humberside 12 per cent.

The manufacturing side of Yorkshire and Humberside has disappeared. The steelworks, collieries and engineering plants have gone. Over the period during which the figures that I have quoted were calculated, investment in the United Kingdom as a whole was 30 per cent. In Yorkshire and Humberside it dropped to 22 per cent. That clearly shows that investment is not coming to the area.

A survey was taken which covered Great Britain and in particular focused on Yorkshire and Humberside, south Yorkshire and my constituency. It found that, of all the areas in Britain, Yorkshire and Humberside was the worst. It futher found that in Yorkshire and Humberside, south Yorkshire was the worst. It showed that there is a difference in the rates of unemployment in south Yorkshire and in Yorkshire and Humberside.

Last year, the unemployment rate on Humberside was 14·1 per cent. In north Yorkshire it was only 9·1 per cent. Therefore, as I said earlier, some parts are worse than others. In south Yorkshire, the rate was 17 per cent. and in west Yorkshire it was 11·9 per cent. In some of the areas in my constituency, there is a male unemployment rate of 27 per cent. The rate varies throughout my constituency and is 18 per cent. in parts and as low as 6 per cent. which is fairly normal for the area.

I know that other hon. Members want to speak, so I will be brief. I want to consider the difference between the south-east and Yorkshire and Humberside in the annual average unemployment rates. It is easy to see the changes that have taken place since 1979. They are not so drastic in the south-east, but they are drastic in Yorkshire and Humberside. It is also clear from the figures that when some parts of the country are coming out of the recession fairly quickly, the Yorkshire and Humberside area is coming out of it sluggishly and slowly. It needs pump-priming.

I believe that certain things should happen. Major local authorities have investment companies which, by and large, have been very successful in bringing limited prosperity to their areas. However, the Government have issued a consultation paper on local government investment in companies which clearly shows that they are looking at this area. It would be wrong of the Government to do what the document suggests. The investment companies represent part of local government that is a success. If central Government see success in local government, they want to take it away.

The Government must look again at dereliction grants. My hon. Friend the Member for Wentworth (Mr. Hardy) raised that point in a parliamentary question. Dereliction grants are working the wrong way in Yorkshire and Humberside. Unless those grants are used to clear dereliction for environmental reasons as well as for the hard reasons, Yorkshire and Humberside will be hit.

The Channel tunnel must have through trains to the north. It looks as if all the infrastructure for the Channel tunnel is going to the south. We are talking about fast links between the Channel tunnel and London. We need a fast link between the tunnel and the north. We want marshalling yards and customs sheds in Yorkshire and Humberside,

The infrastructure in Yorkshire and Humberside badly needs replacing; that includes the water mains, sewers and roads. The airports, Leeds and Bradford, Humberside and Manchester—many people from Yorkshire and Humberside use Manchester airport—need regional money for expansion. There is also the cross-Pennine motorway. I am sure that the Secretary of State for Transport will receive a lot of letters from members of the Green party, who will accuse him of ripping up the countryside.

Those are just a few of the matters, and it is a pity that we do not have another hour and a half in which to develop the arguments further.

11.35 pm

Mr. Gary Waller (Keighley): I felt impelled to take part briefly in this debate, because I did not recognise the picture presented by the hon. Member for Wakefield (Mr. Hinchliffe). I believe that during the past few years, we have seen great improvements in the infrastructure and the prospects for industry and for jobs in the Yorkshire and Humberside region.

The textile industry bears little relation to the one which the hon. Gentleman gave the impression of knowing. The decline in jobs has been going on for far longer than the past nine years. I am sure he will recognise that there has been a decline in employment in the clothing and textile industry for many years. It was caused not so much by the actions of any Government—Labour or Conservative—as by changes in technology and in the need to compete with many other countries.

During recent years, that decline has levelled out, largely due to the efforts of the textile industry itself—by improved design, by better marketing and by commitment by management and work force alike to make the industry compete effectively. That has taken place during the past few years, and has enabled the industry to offer more jobs. It is certainly true that many companies have had to reduce their work force, but, if they had resisted the urge to modernise, I am quite convinced that the number of jobs in the industry today would be much smaller.

The Yorkshire and Humberside area has a great reservoir of skills—it is a superb environment, as hon. Members have said—and in the next few months it will benefit from a great new asset—the electrification of the east coast main line. The message that should go forth

[Mr. Gary Waller]

from this debate is not that Yorkshire and Humberside is an area in decline, but that it is looking to people in industry and enterprise throughout Britain and, indeed, abroad, who recognise its assets, to come to the region.

I am sorry that the hon. Member for Wakefield spoke as he did, and that other Opposition Members share his view. People listen to what is said in the House and will hear the impression given of our region. If they feel that the area is declining, they are far less likely to put their money and their resources into it. If the message goes out that not only is the area not in decline, but that there are pockets that are expanding fast—that that impetus can spread and the region can and will expand rapidly given the will—we shall be halfway to success. That is the message that I want to go out tonight, and I am afraid that it is a very different message from that which we hear so often in the House and outside from Opposition Members.

11.39 pm

Mr. Kevin Barron (Rother Valley): I would like to comment briefly on the somewhat myopic view of some Conservative Members about Yorkshire and Humberside. I remind hon. Members that there are good things in Yorkshire and Humberside and good things in my constituency. However, unemployment throughout the region on the adjusted figures for May 1988 was 10·1 per cent., which is more than 237,000 people out of work.

There are other casualties of the past eight years. There are 25,000 people on community programme schemes in Yorkshire and Humberside, and some 88 per cent. of them are on part-time schemes. That hardly represents a healthy income going into a household, especially if it is the only one. More than 14,000 people are on the enterprise allowance scheme, and more than 42,000 are on youth training schemes.

Mr. Patnick *rose*——

Mr. Barron: No, I shall not give way. I know that the hon. Gentleman gave way to me, but I do not have much time.

The success rate of YTS in the Rotherham area is below 30 per cent. in terms of young people coming off schemes and going into full-time work. It is no use trying to gloss over these figures. They are not just statistics. They are people, many of whom live in households in what is deemed to be poverty. We must debate these issues to let those people know that we have not forgotten them, although we are talking about growth in the region.

I was interested to hear the hon. Member for Keighley (Mr. Waller) invite people to come to the region. The Minister is aware that Opposition Members have been instrumental in bringing it to his attention. Between 1978-79 and 1986-87, regional development grant to Yorkshire and Humberside was cut by 50 per cent. Earlier this year, it was abolished, and it is now to be awarded selectively. I am worried that people who did not come in great numbers before may not come at all now because of that reduction. I hope that the Minister will comment on that.

Wearing my hat as the chairman of the Yorkshire group of Labour Members, I would like to tell the Minister that we have met many people from the region during the past 12 months. We have met people from the British Road Federation who are worried about the Sheffield-Manchester link and routes in the Aire valley, and are anxious that the A1-M1 link should go ahead as speedily as possible now that it has received some commitment from the Government.

People are also worried about infrastructure such as railways. They are anxious that, since it looks as though we shall have the Channel tunnel, we should not lose out. We must ensure that, at least in one part of the region, we have an inland port, a Customs clearance depot or a major area where freight can be put on trains to be taken directly under the Channel, so that we can participate in some of the expenditure that will be made.

Has anything been done in relation to the correspondence that the Minister had with the Yorkshire and Humberside development association about larger factory units? If we have made any headway, the Minister will know that the size of factory units is just as important as their number. We want to ensure that the right type of units are being built in the region to help us attack poverty and unemployment there as soon as practicable.

11.43 pm

Mr. Austin Mitchell (Great Grimsby): We are tonight talking about the most beautiful, the best and certainly the biggest part of the country. We are talking about God's own county. It is extraordinary that the Minister has had the insensitivity to wear the red rose of Lancashire in his lapel. That shows either extraordinary insensitivity or a declaration of support for the trans-Pennine group, which is dedicated to the development of both sides of the Pennines.

The area, of which we on this side of the House are so proud because so many of us come from it, has been badly hit by the Government. Contrary to what the hon. Member for Sheffield, Hallam (Mr. Patnick) said—he placed his hopes on shopping centres in a speech that was more of a working men's club comedy routine that should have had a "com sec" rather than a Deputy Speaker in charge of it—our destiny lies in industry. It lies in making things and selling them to the world.

Yorkshire and Humberside is the industrial heart of Great Britain. It generates the power, produces the coal, the steel and the textiles, and does the fishing. That is where our destiny lies, and it is the part of the economy which has been so grievously hit by the Government, particularly by the economic policies that they pursued from 1979 to 1983. In that period the Government closed one fifth of our manufacturing capacity and lost nearly one third of our manufacturing jobs. As my hon. Friend the Member for Halifax (Mr. Hinchliffe) pointed out, that process of closures continues. The Government have inflicted damage on Yorkshire and Humberside from which we will take years to recover and for which the Government will never be forgiven.

The region is the first to suffer and the last to recover. Even now unemployment in Humberside is 12 per cent., which is 3 per cent. over the British average. In Grimsby it is 12 per cent. on the Government's figures and 17 per cent. on the real figures. In Grimsby, male unemployment is 15·7 per cent. Grimsby is not a development area and it is difficult to see why it has been robbed of the urban programme status which it had.

The whole area desperately needs new development and new jobs, yet the Government have only handicapped our

efforts to pull ourselves up by our bootstraps. They have erected obstacles. We have to compete against the superior power of the Scottish Development Agency to attract industry. We have to face the fact that when local government in Sheffield and Grimsby tries to encourage development, the Government hamstring it, imposes financial penalties on it and stops its efforts. We have no speculative factory development in Grimsby. The Government will not build, English Estates has not, and Grimsby council is not allowed to build because of the screws on its capital expenditure programme. The control of local government spending, which will get stronger, inhibits local authority efforts to provide facilities in which industry can develop.

We see from the capital expenditure consultation programme that the Government are foreshadowing further cuts in local government spending, and from the local government business paper that they are thinking of curtailing the current range of economic incentives that local authorities can provide. It is ludicrous to destroy industry as the Government have done, particularly in our area—that destruction has had particularly severe effects in the manufacturing heart of Britain—and not allow local authorities to rebuild those sectors.

Now we face another threat. The country is characterised by a Government from, for and by the south-east at the expense of areas such as Yorkshire and Humberside. As the prosperity in the south-east trickles down to our region—the hon. Member for Keighley (Mr. Waller) is correct to say that there are symptoms of a revival—we are belatedly getting the tail end of that improvement. Just as that is washing north, house prices are beginning to improve, unemployment is falling and development is beginning, the Government are stopping the process because of overheating in the south-east.

If there is overheating, it is certainly restricted to that part where house prices are reaching record levels and where there are skill shortages. Northerners are being lured down the M1 and the rail system to work in the south-east and go home at the weekends. That is where there is congestion. We in the north have none of those pressures. We need the development and the overspill, yet the north will be punished for the sins of the south-east.

The real problem is one of imbalance between areas. We need to spread development fairly and evenly, and to use the social capital and skills of the population. Tragically, this is the end of the golden weather for the Government. We are now beginning a massive deflation because of the size of the deficit in overseas and manufactured trade which the Government have allowed to develop because of their over-valuation of sterling.

That massive deflation—the increase in interest rates and the curtailment of economic activity because of overheating in the south-east—will penalise Yorkshire and Humberside quite disproportionately. It will mean one of two things. We may have an economic policy involving a high exchange rate maintained by high interest rates. In other words, we shall be paying the foreigner high interest rates to bring his money to this country to close a gap that we cannot now close by manufacturing exports. Such a policy would inflict further severe damage on manufacturing industry and therefore disproportionate damage on Yorkshire and Humberside.

If that policy does not work, foreigners will see the real state of health of the economy—that is how weak it is—and we shall have a sterling crisis by the end of the year, which will mean astronomical interest rates to defend the pound. Either way, in the interests of protecting the financial economy, which is concentrated in the south-east of England, the north will suffer disproportionately and Yorkshire and Humberside and the manufacturing industry that is so important to us will be severely hit. That is a prospect that we look forward to with dread in Yorkshire and Humberside, and it could only come from a Government who do not know the area and who do not know the real world of manufacturing.

As I said, Yorkshire and Humberside has suffered disproportionately. A Labour Government will reconstruct the manufacturing industry in the manufacturing heart of this country. That will benefit our area, just as it has suffered under this Government. As part of that process of redevelopment, we shall give Yorkshire and Humberside the power to control and manage its own destiny. We shall do so through regional government. We shall give the regions the power to manage their own economies. We shall do so through regional development agencies on the pattern of the Scottish Development Agency, and by giving back the regional incentives that the Government have taken away to allow those areas to attract back the industry that has been lost.

We are proud of our area. We are proud of being Yorkshiremen and Humbersiders. We once led the country. We were once at the industrial heart of this country and we shall be again. Our message to the Government, who have done so much damage to industry, put in a dialect that the Minister will not understand, is "Gi'up, gi'ower and gerrout."

11.52 pm

The Parliamentary Under-Secretary of State for Industry (Mr. Robert Atkins): I make no apology for wearing the red rose of Lancashire in the context of a debate on matters relating to Yorkshire and Humberside. It must gall the hon. Member for Great Grimsby (Mr. Mitchell) and his hon. Friends to realise that I am a northern Member and a northern Minister; my constituency is even further north than that of the hon. Member for Great Grimsby. It is a fallacy that my hon. Friends and I do not appreciate the problems of Yorkshire.

I am delighted that my hon. Friends the Members for Sheffield, Hallam (Mr. Patnick) and for Keighley (Mr. Waller) have been able to participate. I know that others among my hon. Friends are interested in the debate, particularly my hon. Friend the Member for Skipton and Ripon (Mr. Curry), who I guess is waiting for the debate on the Settle-Carlisle railway, and my hon. Friend the Member for Darlington (Mr. Fallon), who has recently joined us on the Front Bench and who is to be the Yorkshire Whip. I know how much my hon. Friends disagree with the hon. Member for Great Grimsby.

I congratulate the hon. Member for Wakefield (Mr. Hinchliffe) on introducing this debate. It has been fascinating to hear both sides of the story. The Yorkshire and Humberside region makes an important contribution to the national economy, accounting for about 8 per cent. of gross domestic product. GDP per person in 1984 was a little over £4,000—about 12 per cent. below the national average.

The area has a mixed economy, which has made parts of the region vulnerable to cyclical trends in traditional

[Mr. Robert Atkins]

industries. Nevertheless, there have been positive developments—to which some of my hon. Friends have referred. Areas of recent growth include the petrochemical industry on Humberside. Humberside has also seen growth in the frozen food sector. There has been considerable growth in financial and professional services centred on Leeds. Indeed, the importance of Leeds as a regional centre for such services has been growing steadily.

The House may find it interesting if I quote from a recent study by the CBI investigating industry in the area. I shall touch on just some of the headings to which the CBI report refers. Referring to demand and output in the Yorkshire and Humberside region, the CBI report says:

"The general level of order intake is better than earlier this year. The home market is particularly buoyant . . . The area bounded by Leeds, Harrogate and York is being referred to by the building industry as 'the golden triangle.'"

Indeed, I was in Doncaster only last week when the Labour leader there referred to Doncaster as "boom town".

The report goes on:

"So far as steel is concerned, production remains at a high level . . . Coal—the super pits are producing good levels . . . Mechanical engineering—order books are better . . . Electrical and electronic engineering—very busy . . . Civil engineering—plenty of work about . . . House building in the private sector is having a very good period, with demand outstripping supply in many areas . . . Chemicals—this sector remains busy."

Much attention has been paid to the subject of clothing. The report says:

"Companies are very busy . . . Textiles generally—working at high capacity levels . . . Telecom—performing at above planned levels, reflecting the increased affluence of the region . . . Rail services are well used, with InterCity being particularly busy . . . Confidence remains high. Ambitious investment plans for machinery and buildings will be followed through."

Surely that tells a different tale from the one that Opposition Members have been asking us to believe. What I have listed are the facts as presented by the CBI, an organisation which has been talking to people in the manufacturing and service industries. I appreciate that there are some difficulties and problems—inevitably there will be—but that is what the CBI is saying.

Those facts are borne out by the Yorkshire and Humberside Regional Economic Unit, the report of which has been quoted by other hon. Members, as they should do because the unit has at heart the interests of the region. It reports:

"The investment outlook is encouraging, with many companies planning significant expansion projects covering both buildings and capital equipment."

English Estates reports a 20 per cent. increase in factory sales and lettings in south Yorkshire, with increasing demands throughout the region. Unemployment is falling; it was 10·6 per cent. at the beginning of the year and was 10·1 per cent. in May. The fact that Opposition Members have referred to a shortage of factory space—a matter of which I am aware—reveals success in this region, as in others. Had the hon. Member for Great Grimsby been speaking from the Opposition Front Bench some years ago, he would no doubt have been complaining bitterly about empty factories. Now that we have the factories full and there is a shortage, we face a different problem. But it is a problem of success.

While I agree that there are difficulties, investment in and the achievements of the area are particularly good. In tourism, for example, Bradford now has a tourism development action plan and has been successful in developing and marketing its tourism assets. One need only consider the city's historical, literary and industrial heritage, its proximity to beautiful countryside and attractions such as the national museum of film, photography and television, to appreciate the potential of a place such as Bradford.

Sheffield, which my hon. Friend the Member for Hallam represents in part, is shortly to host the world student games, which will be the largest event of its type in the United Kingdom to date. All in all, one can tell a number of success stories.

I come to the problems of Wakefield. It is inevitable that when one decides to accord assistance to some areas rather than others there will be those who feel hard done by. That is particularly the case when, as has happened in the Wakefield area, there have been major closures in a particular industry over a relatively short period. There is little doubt that the loss of 11,000 jobs in the Wakefield area has had a major impact.

It is possible that Wakefield might be eligible for assistance from the European regional development fund, which is currently being restructured. Details of the eligibility of particular areas remain to be settled, and it is too early to predict the outcome, but I assure the hon. Gentleman that we will keep the interests of Wakefield closely in mind during the negotiations. In the meantime, Wakefield will continue to receive aid from the European Coal and Steel Community and to benefit from its priority status under the European social fund.

Wakefield has sought to make a case to have the status of the area reviewed. To avoid raising false hopes, I should say at the outset that it remains our intention, as stated in the White Paper, to keep the present map in place for the lifetime of this Parliament. The map was fixed at the end of 1984 after exhaustive discussions and representations. There are very good reasons for doing that. In setting up assisted areas, the primary intention is to influence private sector investment decisions, which have to be taken with a view to the medium to long term. To change the shape of the map too frequently would weaken the extent to which investment decisions can be influenced and thus undermine the purpose of the policy.

I accept that particular problems are being experienced in the Wakefield area, especially in the Castleford and Pontefract travel-to-work areas where many of the coal closures have taken place. It may be small consolation now, but when the time comes to review the map the case for changing the status of the Wakefield area will be taken into account particularly strongly. In the meantime, I know that officials of my Department and of other Departments in the region are in touch with officers in Wakefield to see what can be done for the area within current constraints. The hon. Member for Wakefield may be aware that I also met a delegation representing the enormous Conservative group on the council about these matters, so I am fully aware of the problems. I assure the hon. Gentleman that within the limits that I have specified we shall do what we can to understand and face the problems in the Wakefield area.

The Yorkshire and Humberside region has good long-term economic prospects. Its assets include specialised sites suitable for industry requiring access to deep

water, modern ports and good access to continental markets—factors that will be of increasing importance in 1992, with all the changes that will follow from that. The region so eloquently described by my hon. Friend the Member for Hallam has a work force with a great deal to offer in a wide variety of areas.

Like my hon. Friends, I am grateful for the opportunity to discuss what has been going on in the Yorkshire and Humberside area, but the Opposition must be careful not to talk down an area which in their own comments they recognise as an attractive and beautiful region both physically and geographically as well as in industrial and other ways. They must recognise that the strengths of the area have to be sold, rather than the weaknesses. If they continue to work as hard in that regard as those of my hon. Friends who so ably represent constituencies throughout the region, I am convinced that the strength that is so important to the region and to the country will continue in the future.

It is said that English cricket suffers when Yorkshire cricket is down. The sooner Yorkshire cricket reaches the standard that we have come to expect, the stronger will be the future of English cricket. I caution the whole House about the importance of this subject in the foreseeable future.

Rail privatisation

12.2 am

Mr. Keith Mans (Wyre): Before setting out my proposals for further private investment in the railway system in this country, I congratulate the Minister of State, my hon. Friend the Member for Enfield, Southgate (Mr. Portillo), on his new appointment. His predecessor did much to improve efficiency within British Rail and encouraged private investment by his many activities. I hope that in winding up today's debate my hon. Friend will be able to give us encouragement and assurance that that process will continue and expand.

One of the Government's major successes has been the removal of many inefficient monopolies from the public sector to the private sector, where state subsidies have ceased and vast improvements in business efficiency have have taken place. They have provided choice where none existed before and have steadily turned themselves into consumer-led rather than producer-led organisations. Moreover, their investment policies have not been hamstrung by the public sector borrowing requirement. All this applies even to British Telecom, with competition provided by Mercury.

One of the last great monopolies left in the public sector is the railway system—still producer-led and still relatively inefficient. I hope to show that, by the provision of more private capital and by the introduction of consumer-oriented management techniques from the private sector, British Rail will be transformed in the coming few years. I know that some of my hon. Friends wish to contribute to the debate and accordingly I shall be brief. I know that they have ideas that should be presented to the House.

We should build on what we have achieved already in privatising certain parts of the British Rail network. Equally, we should build on the experience of other industries that have recently been privatised. Within the rail network, catering at stations is often operated by private concerns. We have sold off the railway hotel chain and Sealink. The engineering section will soon be sold off. All these sell-offs have provided more money for British Rail to invest in infrastructure. It should be remembered that 80 per cent. of the rolling stock, apart from the trains that operate between pitheads and power stations, are already in private hands, amounting to 16,000 trucks. The privatisation that has taken place is already showing returns. An increased amount of freight is being carried by the railways on private trucks. An additional move has been taken by Foster Yeoman, which has bought its own locomotives.

The other experience on which we should base our plans is that of other recently privatised industries. I think especially of the airlines and the airport authorities. We can probably learn something from the soon-to-be-privatised electricity industry and the recently privatised bus companies.

I shall use a comparison between British Rail and British Airways to show what I feel may be the future for the rail network. A few years ago, both industries were nationalised, both were making losses, both were producer-led, both lacked investment and both were overmanned; most important of all, both were insensitive to the market and to the consumer. The change in British Airways since it was privatised has been dramatic. It is now the most profitable airline in the world and is showing

[Mr. Keith Mans]

a clean pair of heels to its European competitors, many of which are still in the public sector and still state-subsidised, and almost all of which are making losses. Unfortunately, British Rail is still in the public sector, and is still suffering from the ills that I have mentioned.

It is worth mentioning the role played in the airways and the air transportation system by the British Airports Authority—again, a recently privatised concern. It runs our airports, together with many other concerns. It runs the terminal and approach facilities that aircraft need when they land and take off. It is interesting that different airlines and airliners use the same airways. At the same time, the airlines see no need to own the airports at their points of departure and destination. Equally, they see no need to operate any of the air traffic control equipment.

It is on that experience that I base my proposal for a privatised rail network. First, we should build upon our experience, especially in the freight operations of British Rail. We should encourage private companies to own and operate passenger trains on the present rail network. We already have one example. The Orient express is owned by a private company and the rails that it runs on are leased for a period from British Rail. As the process develops, we should aim for all the rolling stock on British Rail to be owned by private companies.

Mr. Ian Taylor (Esher): Does my hon. Friend not accept that the problem with the Orient express is that, although it leases the track, it has to accept British Rail workers, and that that has hampered its freedom to negotiate?

Mr. Mans: My hon. Friend is absolutely right. Any future proposals would involve train crews and operators being employed not by British Rail but by the newly created companies.

If we ensure that new investment in the railways is provided by the private sector, capital will be released in the initial stages of privatisation for British rail to invest in the infrastructure—in the signalling equipment and in the track itself. The structure of British Rail would allow that to happen relatively easily, because money obtained from sale or leasing of track goes not to the Treasury but to the British Rail board. The advantage of such a procedure is that it is the only way to provide true competition, simply because consumers would be given a choice between companies' trains operating on the same line.

Mr. Robert Hughes (Aberdeen, North): Like LMS and LNER.

Mr. Mans: I am not certain of the relevance of that comment.

Mr. Hughes: The relevance of the comment is that for decades LMS and LNER had a nice cosy arrangement not to compete with each other.

Mr. Mans: I do not think that that would happen in the case of the newly privatised British Rail network. I am much more inclined to think that the same situation would develop on the railways as followed the introduction of competition between British Airways and British Midland on the Glasgow-Heathrow route. If the hon. Gentleman had travelled on that service both before and after the introduction of competition, he would understand its relevance to British Rail today. His rather anachronistic historical parallel has no bearing on the present circumstances.

My proposals would create true competition and a better service. Some inspired entrepreneur might actually suggest providing trains that guaranteed seats for the passengers. The airlines have guaranteed seats for years. They will even put on an extra aircraft at Heathrow to fly passengers to Glasgow, Manchester or Edinburgh if the first is full. That is precisely the sort of consumer service that we want to introduce on trains.

Mr. Bob Cryer (Bradford, South): Like a jumbo jet.

Mr. Mans: Not necessarily. We could make do with a high-speed train.

Mr. Cryer: The hon. Gentleman is speaking on the basis of ignorance. Does he not realise that if he were to put on a train from, say, London to Glasgow, the passenger capacity would be equivalent to that of a jumbo jet? There would be capacity for about 400 passengers to transport perhaps two or three.

Mr. Mans: That is exactly the point that I am making. As part of its campaign, British Airways will put on an extra aircraft for three people. That shows that Opposition Members do not understand the importance of consumer choice. They do not really want the consumer to be able to sit down on a train; they would prefer him to stand. I can understand that, because I know the background to their arguments.

We are left, then, with a rail network composed of the track and the stations. Our first move should be to sell off the stations. My hon. Friend the Member for Stroud (Mr. Knapman) produced an eminently sensible 10-minute Bill only a few days ago. I know that he wants to catch your eye, Mr. Deputy Speaker, and I hope that he will manage to do so, because I know that he has more to say on the subject.

As part of the sell-off of the stations, there must be a statutory obligation upon the new, private station companies to maintain the track and the signalling equipment in the vicinity of the station. The British Airports Authority has a similar statutory obligation to maintain all the runway aids, the radar and the other equipment which are needed by aircraft to land and take off. Therefore, the precedent exists, and experience has shown that BAA, as part of the private sector, offers a better service than that of old.

Once the stations have been sold off, we shall effectively have reduced British Rail to a national track authority. At that stage I believe that it would be advisable to make British Rail a public limited company. Ultimately, it would be responsible for the integrity of the network and for improvements, and it would derive its revenue from the train and station companies.

With the positive generation of cash at the start of the nationalisation process, present subsidies, which top nearly £7 million a year, could be rapidly reduced. In future, I believe that a partnership will develop between the individual train companies, local authorities and others to provide services in the rural areas. The recently privatised bus companies have already demonstrated the success of such partnerships.

There is a crying need for a railway link between Heathrow and Paddington and for a link between

Manchester airport and the line that already runs to the north-west. We should also make provision for private companies to build and operate trains on those new lines. The national track authority would have a statutory obligation to connect those links with the main network.

It is now 150 years since our Victorian forebears drove the industrial revolution onwards and outwards on the back of a brand new railway network. Their entrepreneurial spirit and engineering feats are still an inspiration to us. We must re-create that spirit and release the rail network from the present stranglehold of the state monopoly which it has suffered for far too long. Let us encourage private capital, combined with individual initiative and business skill, to help to create a second golden age for our railway network.

12.17 am

Mr. Bob Cryer (Bradford, South): I apologise for my hesitation in getting up, but I thought that you, Mr. Deputy Speaker, called "Bob Dunn". I was looking round the Chamber for the recently sacked member of the Government.

I give you notice, Mr. Deputy Speaker, that I wish to withdraw my subject for debate, which is No. 12 on the list.

I listened to the speech of the hon. Member for Wyre (Mr. Mans) with increasing horror. He denigrated British Rail, which provides an excellent service, many times. Of course there are breakdowns, and of course trains are overcrowded, but if the Government provided more money for new trains and for track maintenance and signalling, none of that would happen. British Rail receives a smaller state subsidy than any other rail network in the Western world.

Mr. Conal Gregory (York) *rose*——

Mr. Cryer: I shall give way later, when I have developed my argument.

British Rail receives a subsidy to operate the provincial services, but the subsidy for the InterCity services is to be phased out. As a result, the high-speed trains are being driven into the ground. Those trains receive minimal maintenance because BR wants to keep the HSTs running in order to meet the strict financial limits that are placed upon it by the Government. The trains are often seedy and overcrowded, which is a direct result of the Government's financing limits.

Mr. Gregory: Will the hon. Gentleman give way?

Mr. Cryer: No, I shall not give way at the moment. I shall make my speech without the hon. Member for York (Mr. Gregory) getting up and down like a jack-in-the-box. He must contain himself——

Mr. Ian Taylor: My hon. Friend wants to give the hon. Gentleman some facts.

Mr. Cryer: The hon. Member for York does not know many facts. If the hon. Member for Esher (Mr. Taylor) interrupts, my speech will get longer and longer and other hon. Members who wish to speak will not be able to do so.

As Tory Members find it funny to laugh at public bodies, I remind them that when they talked about selling off British Rail Engineering workshops, unless he was lying to the House, the Minister said that he thought the standard of work was extremely high and that the workshops had an excellent record of producing railway wagons and equipment for British Rail, but the hon. Member for Wyre seemed to suggest that British Rail had no virtues and was producing no new ideas or technology.

The high-speed trains are a demonstration of public innovation and high technology in railway operation. That technology, introduced under public ownership, has been sold to many railways in other countries throughout the world. It was an outrageous act by the Government—one of many—when they closed the workshops or forced them to be sold off.

My hon. Friend the Member for Aberdeen, North (Mr. Hughes) was right to say that we have the experience of past years as a guide. Competition does not work. It results either in some companies going out of business and the winners taking all, or in comfortable cartel arrangements in which the notion of competition is simply and quietly pushed to one side.

In 1922, a Conservative Government compulsorily amalgamated a number of independent railway companies to form four railway companies which operated all but a handful of services throughout the United Kingdom, with the exception of Northern Ireland, where the arrangements were linked to two of the major companies operating there. Even on the basis of the experience of Conservative Governments, the idea of competing railways under private ownership simply does not work.

Mr. Roger Knapman (Stroud): In fact there were not just four railway companies at the time of nationalisation. The then Minister of Transport, Mr. Barnes, said:

"On the assumption that the Bill receives Royal Assent in this Session . . . there will be transferred to public ownership some 60 railway undertakings".—[*Official Report*, 5 May 1947; Vol. 437, c. 36.]

Mr. Cryer: There was a handful—just 56. In terms of mileage, it was a tiny amount. The Stephens light railway was developed by Colonel Stephens in the 1920s, the Kent and East Sussex light railway operated about a dozen miles of grotty track, with equally grotty carriages and locomotives. In terms of mileage, locomotives and rolling stock a handful of railways were still privately owned, but they were largely irrelevant, and none of them operated into any main line stations in any major cities throughout the United Kingdom. Most of them were not even passenger railways. They were mostly freight branches serving junctions where the freight was transferred, and included a number of narrow-gauge railways which, of course, did not even operate to the standard gauge of 4ft 8½in.

I return to my original statement, that the great majority of railways, track and locomotives were taken over into the four major railway companies.

Mr. Gregory: I am grateful to the hon. Gentleman for giving way. The point that I wished to interject at an earlier stage in his argument was that he tried to contend that the railways were not efficient because the Government were starving them of funds. The hon. Gentleman should do his homework before making such outrageous allegations. The British Railways Board has not gone up to its external financing limit for a number of years. The Government made the facilities available, but they were not taken up because there were no opportunities for investment.

Mr. Cryer: The chairman of British Rail, a Tory Government appointee and no doubt sympathiser, made

[Mr. Cryer]

that decision against the wishes of the staff of British Rail. If the hon. Gentleman enjoyed their confidence he would know that they are faced with shortages of maintenance facilities, equipment and materials——

Mr. Gregory: That is not what the hon. Gentleman said before.

Mr. Cryer: It is precisely what I said. Because of Government policy, British Rail is short of money. The hon. Gentleman must know that, although the HSTs provide an excellent service, they are scheduled for mileages beyond their capability unless they receive more maintenance, because there are not enough high-speed train units. British Rail and the Government will not invest jointly in more units, which would relieve the problem of breakdowns on the main passenger services.

I want to mention a proposed privatisation by the Government. The new Minister of State has not yet been to the Settle–Carlisle railway, although he will doubtless visit it to keep himself up to date. The Government have proposed that the section of railway from Settle junction to Carlisle should be sold off because British Rail has proposed its closure. Some time ago British Rail decided to run the line down and failed to provide adequate moisture protection for the viaduct at Ribblehead. That is an example of how a lack of adequate finance for our national rail network has led to stringent economies, which inevitably have their effect over time. Then decisions must be made on whether to spend large sums on structures such as the Ribblehead viaduct or to close them down.

British Rail proposed closure. That is wrong, and the Government should tell British Rail so. They should tell British Rail to keep the line open and exploit it to its full potential. If British Rail receives that instruction, I have no doubt that its chairman will take up the challenge, allocate more funds to the line and appoint more people to market it. It is quite capable of doing that. British Rail has promoted several lines in Scotland for tourism and made a success of it. It could do the job in this case in conjunction with the Friends of Settle-Carlisle Railway Association, who are keen to work co-operatively with British Rail, but who recognise the great difficulties involved in a private organisation taking over this 72-mile double track main-line system.

The railway has already improved from carrying 90,000 passengers in 1983-84 to carrying more than 300,000 a year now. British Rail says that the maximum potential has been reached, but that is clearly not true. There are relatively few trains on the line now, and with more services there could be a much greater increase in passenger usage.

Closure would mean increased hardship. The Minister asked the transport users' consultative committee to examine the possibility of finding greater evidence of hardship. Since the last hearings of the TUCC, new services have been introduced. I understand from a ministerial reply that it is up to the TUCC to decide how it will assess that evidence and whether it will take written objections or hold hearings. So far, it has decided against hearings. That is wrong. I urge the Yorkshire and North-West TUCC to hold public hearings so that people can explain the greater hardship that would be suffered.

More time is required, in any event—the Minister has said that the committee must report by November. That is not enough time—if the Minister has decided that the line must be sold off by April 1989—to allow any private organisation to take over its operations and continue the expansion, in theory, of passenger traffic. I hope that the Minister will be prepared to allow more time to overcome any hardship and to consider the proposals that are put forward. I do not think that private ownership is a tenable alternative.

Mr. Waller: The hon. Gentleman said that British Rail does not believe that the number of passengers who use the line can be increased. The hon. Gentleman and I are anxious that the line should continue in use—we are both vice-presidents of the Friends of Settle-Carlisle Association—and, like the hon. Gentleman, I am strongly opposed to closure. Does the hon. Gentleman think that the line's long-term prospects might be enhanced if it were run by a body more strongly committed than British Rail to its future and to increasing traffic? Would it not be improved by the input of private capital and by its being run by a consortium of local authorities and passenger transport executives?

Mr. Cryer: Local authorities have offered in excess of £500,000 for the restoration of the Ribblehead viaduct. As the hon. Gentleman knows, they contribute to a diesel-multiple unit service and to a linking bus service between Garsdale and Hawes. That is a good basis for an integrated system, but I should like the line to continue operating for an experimental period of at least two years, linked to the Friends of Settle-Carlisle Railway Association, to see whether the type of promotion that the Minister mentioned with regard to the North Yorkshire Moors railway and the Severn Valley railway could be used by the Friends of Settle-Carlisle Railway Association. The revenue that it would yield would be allocated to that line, which would require British Rail to budget on a much narrower basis for the Settle to Carlisle section.

That possibility should be considered, because many thousands of people have a particular affection for the line. They use it to travel to work, photograph it and use it for pleasure because it is a magnificent railway set in beautiful scenery.

The notion of trying to sell off the line is a dead duck. I therefore think that the enthusiasm, dedication and energy of bodies such as the Friends of Settle-Carlisle Railway Association—all its members are volunteers and contribute because of their affection for the line—should be used to support the line, which is unlikely to meet all its capital and revenue costs over a long period. The time scale for any alternative is too short. I am pleased that the hon. Member for Skipton and Ripon (Mr. Curry) is nodding in agreement.

The hon. Member for Esher mentioned a friend of his who was talking about facts. I was the founder of the Keighley and Worth Valley railway preservation society. I was its chairman for the first 10 years and negotiated its purchase from British Rail. That agreement formed the basis for the purchase of the Severn Valley railway and the North Yorkshire Moors railway. I have carried out every job on a steam and diesel-operated light railway. I have fired and driven locomotives, including the largest class of locomotives such as 2-10-0 and Evening Star, as well as

small tank locomotives. I have maintained the boilers, the track, the platforms and the stations. Therefore, I know what I am talking about from hard graft and experience.

I have experienced the difficulties of raising money to buy a railway and finance it. I know that operating steam locomotives is a difficult business and that the amateur organisations do it with great skill, dedication and professionalism. When I say "amateur organisations", that is not a term of denigration. The Severn valley, the Worth valley and North Yorkshire Moors railways are operated to full professional standards. Railways cannot be operated to any other standard, or there would be the danger of accidents.

Having said that, to run steam locomotives over a 140-mile round trip is rather different from running them over a 10-mile branch such as the Keighley and Worth Valley railway. The Minister's predecessor suggested at a press conference that private owners of the Settle-Carlisle railway could borrow a few locomotivives from the Worth Valley railway. The Worth Valley railway, with dozens of dedicated volunteers working through the winter, has great difficulty getting four or five steam locomotives ready for the summer each year. That is for a 10-mile branch, let alone for a 140-mile branch.

The purchasers of the railway would have 21 viaducts, 14 tunnels and 325 bridges, all of which have to be maintained to a safe standard by the operators of the railway. It is impossible for a private preservation society to do that.

The Minister's predecessors suggested that in order to encourage private ownership there should be some sort of dowry. On 16 May the Minister said:

"British Rail would undertake to lift, remove and pay for continuously welded rail surplus to the private owner's operating requirements. That could amount to up to £850,000."—*[Official Report,* 16 May 1988; Vol. 133, c. 678-79.]

Today I asked the Minister

"what information he has as to what mileage of rail on the Settle to Carlisle section of British Rail is continuously welded flat bottomed rail, as to its current value and as to what would be the replacement cost of flat bottomed or bull-head track of equivalent weight; and if he will make a statement."

The answer from the Minister was:

"This information is not available."

The Minister claimed that replacing continously welded flat bottomed rail would provide £850,000. That would not be much good if the new owners had to pay out £850,000 to replace the rail being taken out. We do not know from the Minister how much rail is involved anyway. I merely use that to demonstrate the impracticability of the Minister's suggestion to sell the Settle-Carlisle line to private owners.

There is the question of access. Settle is several miles north of Hellifield. Are the private owners to be given running rights over British Rail? The safety standards of the railway inspectorate would have to be observed. Would the trains run under the wires regularly at Carlisle? Would they go to Kingmoor shed, which has recently been closed, for maintenance facilities? The railway inspectorate will require adequate maintenance and inspection facilities for the locomotives and carriages used on the railway.

What about revenue for diversions? Diversions for the fiscal year ended 30 March 1988 amounted to 320 trains. Would British Rail be allowed to divert over the track? That is unknown and cannot be subject to negotiation. Any potential purchaser has to know what the difficulties are and how they will be solved before embarking on such a vast enterprise.

The Government seem to think that a light railway order operation under the Light Railways Act 1912 at a maximum speed of 25 mph is a potential alternative, because they have not said that that should be ruled out. I should rule it out because travelling at 25 mph for a 140-mile round trip does not seem the most exciting way of spending several days out with the family—that is the amount of time that it would take.

All those points remain unanswered, and in my view they are insoluble. There is no millionaire on the horizon —the Minister's predecessor called him "Mr. Big"—who will spend several million pounds in affection for the Settle-Carlisle railway, to privatise it to the Government's satisfaction. In any case, if the Government are to privatise any part of the railways, the Settle-Carlisle railway is the one that makes the least sense. If one were talking about the Victoria-Gatwick service, that would at least have some shred of logic and credibility, but the Settle-Carlisle line has no potential in that regard.

The hon. Member for Wyre, who initiated the debate, talked about the potential of private ownership. Private ownership would go for sections such as Victoria-Heathrow. It would not be interested in maintaining the Settle-Carlisle line—or other such routes which run through rural areas—with its 135 bridges, the maintenance of Ribblehead viaduct, and Blea Moor tunnel, which is nearly two miles long. Private ownership would not be prepared to take that on. It would shut lines and stations, sack staff and concentrate on the most lucrative and profitable areas.

Unless the provincial sector receives the £450 million subsidy that is currently paid for its services, that whole sector will go by the board. Why should only the south-east sector, which is subsidised by British Rail, get a subsidy, but not a rural line in Yorkshire, which gives access to the Yorkshire dales?

It is important that British Rail should have all possible sources of revenue—from stations, franchising and catering—from wherever it can get the money to help it cover the costs of the rural, relatively more lightly used branch and main-line services, which will inevitably cost money in maintenance because of the heavy costs that we have inherited from our Victorian ancestors.

I stress to the Minister that the future of the Settle-Carlisle line should be as part of British Rail, which should provide the through services with help from such dedicated bands of volunteers as the Friends of Settle-Carlisle Railway Association. I hope that that will be the future of the Settle-Carlisle line, and not the bleak future of closure, which will bring dismay and horror and which, if that is what happens, will be regarded as an act of unparalleled corporate vandalism by the Government.

12.42 am

Mr. David Curry (Skipton and Rippon): I too wish to address my remarks primarily to the future of the Settle-Carlisle railway which runs the length of my constituency; I too am a vice-president of the Friends of the Settle-Carlisle Railway Association to which my hon. Friend the Member for Keighley (Mr. Waller) and the hon. Member for Bradford, South (Mr. Cryer) have referred. I reflect not only my own concerns and those of

[Mr. David Curry]

Opposition Members, but especially those of my right hon. and learned Friend the Member for Ribble Valley (Mr. Waddington), whose constituency is also affected by the line, and those of my hon. Friends the Members for Pendle (Mr. Lee) and for Keighley (Mr. Waller), who spoke in the previous debate.

It is particularly appropriate, and indeed necessary, to raise this issue tonight because the brochure which is going out to people who have expressed an interest in purchasing the line is being sent out this week and may even be in the post tonight. It is intended that there will be a seminar in early September for those who respond to that brochure —the prospective purchasers—and the timetable demands that outline bids should be in by the end of September, with a decision due in November. Almost all that time falls when the House is in recess, so it is important that we should have our say tonight, because the period when we return will be crowded.

That brochure will detail the package of support which has already been pledged. It is important to highlight what is already on the table. There is £1 million from English Heritage for the Ribblehead viaduct. The Training Commission is offering support for projects which are based on the Jarvis recommendations. The English and Cumbrian tourist boards are planning to support tourist projects—for example, accommodation and visitor centres adjacent to the line. The Development Commission for Rural England has pledged up to £100,000 for Ribblehead. The Countryside Commission has pledged £100,000 to match capital invested in tourist projects and commercial concerns like Scottish and Newcastle Breweries, Grand Metropolitan and construction companies have also pledged support to a purchaser.

Those pledges are heavily tourist-oriented. They offer the chance that a private operator can do what British Rail cannot—as it is debarred from acting in this way—and combine rail and road traffic and offer packages that involve part rail and part road transport. That would open up a new market for tourism in the Yorkshire Dales.

Privatisation can succeed, but it needs more flexibility and promotion by the Government. To that end, there are several ways in which the Government can materially improve the prospects of the successful privatisation of the line.

First, I have learned from British Rail that it will be unable to give any figures about the anticipated revenue or level of passengers on the line. British Rail compiles its figures for another purpose, and it has been advised by its legal advisers that it may not give estimates of the level of passengers or revenue. It may not even refer to estimates by other bodies such as Cumbria county council.

It will be a bizarre prospectus if it cannot tell a prospector what he is going to purchase. There will be a blind man's buff in the prospectus. I urge the Minister to investigate that problem. I recognise that British Rail considers that to be a genuine problem, but I want the Minister to investigate to ensure that the information will enable a proper commercial decision to be made.

The hon. Member for Bradford, South referred to the November deadline. I want the Minister to give a clear undertaking that if serious negotiations are in train, given the very short time that any operator will have to prepare a bid from September when he receives the detailed information—which will be very weighty, as it will include a long list of all the assets associated with the line—and assemble his capital, he will not apply the guillotine at that deadline. I want the Minister to undertake to proceed with his negotiations if that happens.

I pay tribute to the efforts made by the Minister's predecessor on behalf of the line. His predecessor said that if British Rail were authorised to cease operations, it would have four months to do so. That is not long enough. We need at least six months. I urge the Minister to make that concession now, as the brochures are sent out, so that purchasers have a proper idea of what is in store for them.

Local authorities have offered help under conditions. Any purchaser who takes on the line will have to accept the capital structures on the basis of "make do and mend". He will face the prospect of annual costs outstripping annual revenues. It would be more helpful if local authorities felt able to revert to an offer of an annual grant towards the operating costs of the line. I appreciate that they already do that in certain aspects. It would help if they upped that figure and in return demanded certain social services such as winter services and services at the beginning and end of the day.

I welcome British Rail's assurance that the private operator can have the option of running his trains over British Rail track to Carlisle into Hellifield and, if he wishes, to run trains to Blackburn via Clitheroe. Will the Minister raise that point with the local authorities, so that they may restructure their support?

Local needs are important. We must not get the idea that we are talking exclusively about a tourist operation. The local needs in that part of the world, with its severe winters and its high proportion of elderly people, must not be overlooked. With increased revenue from tourist operations—the £10·50 day return from Leeds to Carlisle is a very cheap option at the moment—plus some bridging finance for the operating costs, we are in sight of closing the gap between operating costs and revenue, which would enable the line to continue.

This is a very sensitive and political issue. The Minister must appreciate that the Settle-Carlisle line is seen as the symbol of a history of a culture and a character. It is very difficult for me to explain to my constituents why it is right that taxpayers should be asked to pay £5 million to restore the Albert memorial, but it is not right to pay a fraction of that to restore the Ribblehead viaduct. Take those two together, and the Ribblehead viaduct is overwhelmingly the more important monument to our nation's history and has the greater promise for the nation's future.

I support privatisation. I do not seek pure subsidy, but I demand a real commitment to ensure that the venture succeeds. I hope that the Minister will ride the line. Indeed, he must ride the line before he makes his decision, so that he not merely feels its history, but sees its opportunities.

A few days ago on the back page of *The Times* there was a splendid photograph of Mallard hauling a steam train across the Ribblehead viaduct. That symbolises what is at stake—it is not just a dramatic photograph, but a symbol of what there is to save and to build on. I look forward to hearing the Minister's response to those points.

12.50 am

Mr. Roger Knapman (Stroud): As the hon. Member for Bradford, South (Mr. Cryer) has insisted upon duplicating his Adjournment debate speech of 26 May, some of us must take the Beeching axe to our own remarks.

It may interest hon. Members to know that, back at the time of privatisation, London, Midland and Scottish and London and North-Eastern Region were respectively the second and third biggest companies in the world. The Labour Minister of Transport at that time—1947—said:

"Passengers who travel on our railways have not today the comfort, either in matters of refreshment or of travel, which they ought to have".

He finished with a ringing appeal:

"Give this Labour Government five years of power in . . . transport services and the people of this country will see more progress than would be made in 500 years of Tory rule".

Tell that to long-suffering commuters on Network SouthEast, or those trying to get their teeth through a British Rail sandwich.

If, like me, one cannot make a decent speech oneself, by far the next best thing is to hijack one that is 47 years old and resurrect it from that forgotten age. The person replying to that debate was no less than Major Sir David Maxwell Fyfe. His speech is just as topical now as it was then. I feel that I must mention two or three points that he made, having spent some four hours in the Library.

Major Sir David Maxwell Fyfe said:

"I ask those who interrupt me to look at the father and mother of the Bill, the T.U.C. document, in which it will be found that these low costs are stressed"—

he was referring to the low costs, because of the short distances between manufacturing places and the ports—

"but we shall not have them under a monopoly which will be cumbrous and top-heavy, whose structural defects are as manifest as its powers are unlimited."

He went on:

"The right hon. Gentleman has given us one reason for this integration, with regard to railway services, and that was the difficulty of doing capital works on the railways."

That was just after the war.

"He knows as everyone knows that the railway companies had their plans ready for renewals, replacements and new works, and to take his own example, he knows it was planned and that everything was prepared to rebuild Euston Station, which is one of the examples he chose in this matter."—[*Official Report*, 16 December 1946; Vol. 431, c. 1637-8.]

So the will for new works was there after the war—of that make no mistake.

Even more telling—I believe that the word "integration" will be much used in debates as we soon move towards railway privatisation—are the words of Sir Cyril Hurcombe, the Director-General of the Ministry of Transport, who was in charge of the railway system during the war:

"detailed allocation of traffic has not been practicable, nor, indeed, has it been easy to find any fixed principles on which to allocate at all. It must be confessed that wartime allocation of traffic has not been based on principles or methods likely to be applicable to ordinary conditions, so there will be much talk of integration but I suspect rather fewer people who know what integration means".

I will not carry on after that short point, but in 1947 there were relatively few Conservative Members in this place—about the same miserable number as there are Opposition Members now. However, during that time we had the support of the Liberal party. The hon. Member for Yeovil (Mr. Ashdown) talks of the Liberal Bench, but the Liberals followed us through the Lobby time after time in that debate.

My hon. Friend the Minister can look forward to a nice easy ride, if I can put it that way, because we can look forward to certain help from the "SaLaD" party, which I presume to be the Liberal party's successor, when privatisation comes about. I hope that that will be soon.

12.55 am

Mr. David Shaw (Dover): There have been many successful examples of privatisation under this Government. British Telecom is often labelled as one which has not been too successful, but any of us who tried to get telephones 12 or even four years ago knows that the service has been improving steadily. Under Labour, I found the delay excessive and unreasonable. Now, not only is there hardly any delay, but one has a choice of telephone. The consumer is at long last starting to rule the telephone industry and the introduction of Mercury will ensure that that continues.

The Government must not relax with British Rail privatisation. It would be very easy to say that it is too difficult, that it has been in the public sector too long and that it is an old industry. The Government should not go soft. They should face up to the fact that BR is an opportunity to provide the consumer with a better service.

BR's service has undoubtedly improved in some areas, but the current service is no more than adequate. Nothing really exciting exists in BR for passengers or for employees, who are denied the opportunity of profit-sharing and of share option schemes. Management is not paid as decent management would be, so one is tempted to say that it cannot be running a decent business and getting decent pay for it.

Mr. Robert Hughes (Aberdeen, North): How much does the hon. Gentleman get paid?

Mr. Shaw: Not as much as some BR managers.

This is not a decent business that provides a decent service. The businesses that depend on BR do not get the same reaction from the staff and management of BR as they would expect in their own businesses. BR has not been exciting for the taxpayer, who has been the investor for the past 40 years or so, as there has been no trace of a dividend.

Stations in my constituency are not tidy, carriages are out of date, catering facilities are hardly ever available and timekeeping does not accord with what BR tells us in its accounts. It is not very good, especially on Fridays. The only good news is my local village station, which has nice courteous staff and where newspapers are for sale. The station is also relatively well kept.

We are tempted to ask what can be done with private finance. I believe that it could offer new opportunities for BR and the travelling public. Much finance could be available if there were good investment returns for the private investor. Stations could be converted into retail shops, public houses or guest houses, and many of them could become tourist attractions.

As for the rolling stock, there are opportunities for business men's carriages where they can work as they travel. There could be office cubicles with telephones and fax and telex machines. There could be tourism carriages with glass tops in which people could tour around the country. There could be catering carriages with much better catering facilities.

[Mr. Shaw]

Many property opportunities could be taken advantage of at the major termini. Hotels, offices, shops and business premises could be expanded on BR sites. Docklands and Canary wharf is the largest private sector development in the world at the moment, but it is small compared with the potential for King's Cross, which could be an £8 billion development. There are many opportunities for new investment in track. Even new lines could be contemplated if private sector finance and privatisation were introduced.

British Rail should be run to provide a good, efficient service for passengers together with a profit for the investors, and it should be a good place to work for the employees, who could do well from privatisation. My colleagues and I call on the Government to publish a Green Paper on privatisation and to introduce private finance as soon as possible.

12.59 am

Mr. Conal Gregory (York): I congratulate my hon. Friend the Member for Wyre (Mr. Mans) on securing a place in the ballot and choosing this subject, and I am delighted to welcome my hon. Friend the Minister of State to the Front Bench for the first time on transport.

British Rail's corporate plan for 1988 published last week is a thin documentm, certainly unlikely to pass a GCSE in transport and rarely addressing the real issues. It is vital that the railways are put under the spotlight. There are exciting projects—for example, the east-coast mainline electrification, the construction of the Stansted airport rail link, the electrification of the Portsmouth-Southampton line and the provision of international rail services which will come about through the opening of the Channel tunnel in 1993.

Although we hear that British Rail is becoming more customer-orientated—Jimmy Savile used to proclaim that it was "getting there"—the facts speak substantially to the contrary. Can one imagine any other company with rationale advertising its failure by taking advertisements —full-page and London Underground ones—showing the black and red dots of their failure? I cannot imagine any other company doing that. Clearly the railways are operator-led rather than customer-orientated, although they moved from an £83 million loss to a £291 million surplus last year.

The time has come for the Government to ask British Rail for its denationalisation strategy. It is long overdue. It may propose privatising region by region, and on my recent visit to Scotland that was welcomed. It may privatise sector by sector, or, most probably, split the track and maintenance from the operators. I favour the latter. The former runs along CAA lines and the latter would be like customer-oriented companies.

What would denationalisation bring? First, it would bring employee participation, which would be beloved by Labour Members, if they were present, but I see many empty Benches. I look forward to British Rail Engineering Limited being awarded to a company or consortium which allows staff at all levels to participate. Even York's hard Left council paid for a private consultant's report last year which concluded that the best future for the engineering company was—surprise, surprise—in private hands. How right it was, and how silent the Socialist councillors have been since. It makes sense for a heavy engineering firm to be able to take on all appropriate work at competitive prices that would include major coach and defence contracts, using skills which are rarely fully utilised.

Secondly, denationalisation would bring frequency of service. If anyone wishes to go to a theatre or cinema in London or to have a meal at a reasonable time, he will fail to get back to York that evening, because the last published time of departure is 10 pm. I could give examples for many other provincial cities.

Thirdly, at present it is impossible to buy any magazine or newspaper on any train in the United Kingdom. I cannot understand why that is, or why there is that stranglehold monopoly. No doubt the hon. Member for Aberdeen, North (Mr. Hughes) has noticed that he cannot enjoy the pleasure of purchasing *Labour Weekly* on the train.

Furthermore, denationalisation would bring catering en route for the customer. Why is it that frequently no facilities are available for the first 20 minutes or last 30 minutes of a journey? Lunch stops at 12 noon on a train from the north when it reaches Newark. It is time for vending machines on every InterCity and provincial train. It is right that there should be a seat for every customer. Frequently, standard class ticket holders have no seat and British Rail has no answer for that.

My hon. Friend the Member for Wyre referred to the privatisation of railway stations. We need open stations. At present, staff at London termini such as King's Cross simply obstruct passengers and make the carrying of luggage extremely difficult by restricting space. They have even tried to stop me boarding the right train. There is no need for those staff to be there; they could be put to productive use. Similarly, we need to develop passenger services at stations. Why do we not have banking facilities at every station, and why do not all stations do what the Essex stations do and provide one with the opportunity to service one's car?

A visit to the Utrecht headquarters of Dutch Railways showed me the proper use of real estate. There, 250 to 280 retail points exist. The property board of British Rail may say, "We haven't got the space." The answer is to push the railway lines at Paddington and Waterloo further out, so as to put that real estate—the most valuable in Britain —to use.

One should not expect to find trolleys at these important destinations. If hon. Members went to King's Cross tonight they would find trolleys not on the platforms for use by passengers, but at the exit point, where no doubt there would be 200 or more. One will not find services advertised as one would at Heathrow or Gatwick. One will find no facilities whatever. Even the common rail ticket does not refer to any other service or product that is available.

The customer should come first, not the railways or the operator. I look forward to a commitment by the Government to put the user first and to ask British Rail, as a matter of urgency, not for completely inadequate corporate plans but for its solid denationalisation proposals.

1.6 am

Mr. Quentin Davies (Stamford and Spalding): It is no exaggeration to say that the railways in this country have been something of a disaster on wheels throughout this century. I thoroughly agree with the hon. Member for

Bradford, South (Mr. Cryer), the only Opposition Member who has spoken, who implied that the problems went back to a time long before privatisation. Of course they do; they go back to the beginning of the century and are associated with three interlinked factors.

The first was the growth of monopolistic or oligopolistic practices and attitudes of mind on the part of the companies. The second was the extensive and intensive degree of trade unionisation from which the industry suffered from the beginning of the century. The third was creeping Government interference. Nationalisation was promoted as a solution to the problems of the railways, but it made all three aspects distinctly worse.

If I had had time after discovering that you had chosen this very timely subject for debate, Mr. Deputy Speaker, I would have done some research with a view to presenting to the House in terms of constant 1988 prices the sum of the operating deficits incurred by British Railways and British Rail since nationalisation and the new investment poured in from public funds. Presented in constant 1988 prices, those figures would have been very revealing. I am sorry that I cannot present those figures tonight, although I fear that I can think of few more depressing avenues of industrial research.

This unfortunate state of affairs is the result of three factors that were completely predictable. A monopoly will generate monopoly costs; they always do. Those costs are insidious, though incalculable, and they would not exist if there was competitive pressure on the firm. At the same time, a monopoly will not seize the opportunities that a competitive firm would seize, so incremental revenues that might have been generated will not be generated.

The second problem is that a monopoly will develop a very producer-oriented culture. We see that in the terrible structure of restrictive practices, closed shops and compulsory overmanning from which British Rail has always suffered. We also know it anecdotally every time we take the train. Whenever I go to Lincolnshire, I have to queue for about 10 minutes to buy a ticket, and I have to queue to get on to the platform. Ours is the only railway system in the world that makes one queue to get on to the platform. If one wants to get a sandwich or a drink, one has to queue at the bar, which is not normally opened until 10 minutes or so after the train has left the station or when the staff happen to feel like it. That is real producer orientation for you.

The next problem with a nationalised monopoly is that it will always suffer from insidious political interference such as artificial limits being imposed on its borrowing powers.

Nationalisation has made the railways hopelessly unattractive economically. It is impossible to produce a prospectus for major parts of the railway system and have any hope of floating them off. On the other hand, this can be a vicious circle. Nationalisation having destroyed the railways as an attractive investment proposition, we may never be able to get out of nationalisation so as to make the activity prosperous, attractive and viable again. The only way to square the circle is to look for niches which enable us to carve into that monopoly and introduce elements of privatisation.

That is why I welcome the ideas we have heard tonight —for example to privatise small regional railways or to allow private companies to run trains on publicly owned track. We must go forward in the interests of the customers of the railways and the economy as a whole, and not least in the interests of the poor taxpayer who has borne this burden over the years. We must seize every opportunity to reverse the fatal tendency towards monopoly from which the railway system has suffered through the decades of this century.

1.11 am

Mrs. Teresa Gorman (Billericay): I love trains and, like all hon. Members, I want to see the railways improved. I hope that before the Minister achieves that objective by privatising the whole system, he will preserve a few samples of British Rail, such as the plastic cup that bends in the middle and spills boiling hot liquid all over one, the curly sandwich, the dirty old carriage complete with split seat on which one would prefer not to put one's clean clothes, and the timetable.

Sometimes trains run to time, but often on the lines into and out of my constituency they run up to an hour and a half late. My secretary goes home every evening on the train to Southend. On leaving my office at 5.30—if she is lucky—she makes her way to Fenchurch Street station, from where she arrives at her home in Southend sometimes as late as 9 o'clock, a journey which technically should take an hour.

Delays occur because the driver will not go the whole distance, as his scheduled time is up, or he started late, or somebody was not available to operate the signals, or perhaps for no reason at all. So the train is shunted into a siding and after perhaps an hour the passengers are offered a coach ride to complete their journey. The result is that my secretary and her husband do not have their dinner until late.

What I have described is the reality for many commuters. There are four major railway stations in my constituency and almost every household is affected because they have in their families commuters working in London. They are lucky to get to work on time and even luckier to arrive home at a reasonable hour. My description of travelling on these lines is a typical occurrence for commuters who use Liverpool Street and Fenchurch Street stations.

What is more, the rolling stock used on those lines is dreadful old stuff. Whenever I travel in these trains, I feel I need a wash and brush-up on arriving at the terminal, so dusty and dirty are the seats and carriage walls.

This debate is about how we might use private investment to improve the railway system, and already we could allow private operators to run services over BR lines. We could thereby slot in many more trains. Ample people exist to do this. Reference has been made to the Orient express operation. Those concerned with that operate on other lines, too. There are other companies, including Tiphook plc and Foster Yeoman plc, which are able and willing to do this work.

The present dirty old carriages could be improved. Allied Lyons plc recently paid about half the cost of refurbishing coaches on the Waterloo-City line in return for having the company's logo on the outside of the coaches, as is done with the red buses. There is no reason why that type of action should not be taken immediately, even before we get new rolling stock.

My hon. Friend the Minister will be aware that there is a surplus of drivers, so there is no reason for trains to stop in the middle of nowhere because there is no driver. Far more are trained than we need, and young qualified drivers

[Mrs. Teresa Gorman]

often wait years for promotion, which is on the basis of age. Sometimes they have to wait until they are 50 and have only 15 years left. If some of them became private contract drivers with licences, they could come in and take over trains when other drivers reach the end of their schedule. We could also have self-employed porters. In America they do a deal with the passenger on the cost of carrying the luggage and are happy to work on a self-employed basis. Computer technology could do much to improve timetabling.

The platform at Billericay has holes so big that people trip and have serious accidents. We could privatise the maintenance of stations as well as the track. And while we are waiting around for the trains, why should we not have shopping facilities? Every train station could be a mini-concourse of the kind found at Heathrow and Gatwick airports, where people can buy all kinds of bits and pieces. There are so many ways in which the private sector could inject capital straight away and improve the lot of those who travel on those lines.

Finally, I wish to put in a little word for myself. I often travel by rail. As I have said, I enjoy it. I often travel first class, especially if the person inviting me is prepared to pay for the ticket. First-class travel is expensive. It can cost more to visit Hazel Grove than Paris or Barcelona if one pays the full fare of £85, and what does one get for it? There is no reclining seat, no decent selection of food, no in-service magazines, newspapers, muzak or video, or any of the other services provided by British Airways for the same price. I hope that, without the need for primary legislation, my hon. Friend the Minister will think of my poor commuters going up and down those two lines and do what he can straight away to bring in private enterprise and make their lives happier.

1.17 am

Mr. Robert Hughes (Aberdeen, North): I am glad that the hon. Member for Wyre (Mr. Mans) has raised the subject of rail privatisation, as it needs to be properly debated. The Government have been far too reticent about their plans. On Tuesday, the Secretary of State chided the Labour party for not having a transport policy. As he said that he had read every word of our policy review, I give the right hon. Gentleman 100 per cent. for diligence but zero for comprehension as he clearly did not understand a word of what he read. Our policy, which I believe is well supported by most people, is that the railways, like all forms of transport and all service industries, exist to provide for the customer and the user, whether individual or corporate and whether in terms of the economy, regional development or whatever. The main purpose is to provide a service.

The problem is that we are getting privatisation by stealth, which is distorting the whole transport market. As soon as there is the slightest possibility of money being made, private capital is brought in to siphon off the gravy. As a result, morale within British Rail is debilitated. How can one expect initiative from British Rail when it is told that it will be left with the dross and that the only way to survive is to sell off anything that is any good, and constantly retrench?

Comparisons have been made with British Airways and the British Airports Authority. The only excuse for privatisation of the BAA was that it would be able to go out and build hotels, car parks and shops. The hon. Member for Keighley (Mr. Waller), who has such an interest in the Settle-Carlisle line, said that the problem was that British Rail was prevented from doing certain things. That is what needs to be cured. It is not a matter of privatisation but of allowing British Rail to use its initiative and expand. It was forced to sell off its hotels, but it ought to be able to go back into that sector and provide a service if it wishes. In our view, this is the way forward.

The paucity of the Government's policy is amply illustrated by their decision for the Settle-Carlisle line. Everyone knows and accepts that the line should be kept open. Everyone says so. The Secretary of State for Transport accepts that it should be kept open. Even the Secretary of State for the Environment accepts that it should be kept open. The only trouble is that the Cabinet decided that the Secretary of State for Transport should lose, that the Secretary of State for the Environment should be the winner, and that there should be a private enterprise solution.

The so-called dowry—the subsidy for the private section solution—is to be provided by the public sector. I have seen the letter of the Secretary of State for the Environment in which he states that the Government should provide the money to keep the line open, but adds that the last thing that they should so is make it available to British Rail. That is dogma gone mad. The sooner that the Secretary of State and the Minister of State realise that, the better. I hope that they will fight for British Rail and for the passenger.

The deregulation of bus services and the privatisation of the National Bus Company, for example, brought a poorer service for those who are on the periphery. We know—*[Interruption.]* I can understand that at this time of night Conservative Members are unwilling to face reality. The trouble is that they take their dogma and their blinkers through the daylight as well. The problem is that we are dealing——

Mr. Cryer: Conservative Members do not want to know.

Mr. Hughes: I ask my hon. Friend not to heckle. That goes for Conservative Members as well. I am trying to finish my speech.

Instead of endeavouring to provide a service for the public and the nation, the Government are concerned about service for the moneylender. That is the only thing that matters to them. It is that attitude that is destroying the transport system. The Channel tunnel and the concept of spreading benefits throughout the country and not only to Kent, which for some reason does not want it, or to London, where there are problems, will fail because the Government will not accept that the railways are part of the transport system. They will not give priority to service and they will not make available the necessary investment. They will not allow British Rail to use initiative. For all these reasons, British Rail is failing. The new Minister of State can make his mark in the Department if he casts aside all the dogma and past practice and considers seriously developing the railways.

1.23 am

The Minister for Public Transport (Mr. Michael Portillo): The hon. Member for Aberdeen, North (Mr. Hughes) paid tribute to my right hon. Friend the Secretary of State for Transport for his diligence in reading the Labour party's policy on these matters. In the 72 hours that I have held my present office it has not been my highest priority to mug up on Labour party policy. I have not been encouraged to do so by the statement that the market has been distorted by private capital. That is such an extraordinary statement that I am not tempted to read on.

I congratulate my hon. Friend the Member for Wyre (Mr. Mans) on initiating the debate. Two things have become evident to me. First, it is impossible to ignore the spontaneous eruption of opinion on the Government Benches in favour of further privatisation. The full Benches behind me, even in the middle of the night, testify to how strongly that opinion is felt. Secondly, it will be impossible for me to ignore the Settle-Carlisle railway, which will be a major concern of mine in the months to come.

I must disappoint my hon. Friends by saying that I have no major announcement to make, such as the preparation of a Green Paper. That will be a disappointment to my hon. Friends the Members for Dover (Mr. Shaw) and for York (Mr. Gregory), as well as to my hon. Friend the Member for Billericay (Mrs. Gorman), who showed us tonight her clean clothes and her entrepreneurial inventiveness. I congratulate her on that.

We listened to the hon. Member for Bradford, South (Mr. Cryer), who said that the railways were short of finance because of Government policy. No investment proposal since 1983 has been rejected by the Government. If there were a shortage of finance because of Government constraints, surely that would be an argument for privatisation. I found the hon. Gentleman's argument puzzling.

My hon. Friend the Member for Stroud (Mr. Knapman) quoted a speech that was 41 years old. I have to say that it had a fresher feel to it than the speech by the hon. Member for Bradford, South. My hon. Friend the Member for Skipton and Ripon (Mr. Curry) was very concerned about the Settle-Carlisle railway, as indeed was the hon. Member for Bradford, South. I recognise the serious concerns about that, and I look forward to applying my mind to the problems that confront us.

I shall take into account some of the points that my hon. Friend has made, and when I meet the local authorities, as I shall before long, I shall mention what he has said. I shall consider carefully his comments about the lack of available information. I am also happy to concede to him that as the timetable change in any case occurs in mid-May 1989, it seems reasonable that if closure is decided on it should not occur until then. That extends the period in which we can seek a private sector solution, although in my view it is still right for the new evidence on hardship to come forward under the timetable so that we can reach final decisions with a fair degree of urgency.

I very much agreed with the general defence of privatisation policies produced by my hon. Friend the Member for Wyre. Successive Governments have attempted to grapple with the poor performance of nationalised industries through increasingly stringent control frameworks. The cumulative effect has been to create a set of external stimuli which, in the absence of real competitive forces, try to provide pressure similar to that normally provided by market mechanisms. The intention behind the Government's privatisation and competition policy is to replace the surrogate market with the real market.

Privatisation is intended to benefit customers, employees and the economy as a whole. The customers benefit from greater efficiency, which then results in lower prices, wider choice and better service. For employees, privatisation means working in a company with clear objectives, the means to achieve them and rewards for success. The economy benefits through higher returns on capital in the privatised industries, which can no longer pre-empt resources from elsewhere in the economy but must compete for funds in the open market.

Let me say in parenthesis that no better defence of the Government's privatisation programme has ever been made than that made by my right hon. Friend, now the Secretary of State for Social Security, back in 1983. It still remains a remarkable statement about our objectives.

I am proud to join the Department of Transport, which has a most impressive privatisation record. Let me say to my hon. Friend the Member for Stamford and Spalding (Mr. Davies) that there are many examples of the vicious circle being broken in the past. The Department has privatised the National Freight Consortium, Associated British Ports, British Airways and the British Airports Authority, and has a major privatisation programme for the subsidiaries of the National Bus Company. That leaves three industries in the Department of Transport—the Civil Aviation Authority, which I believe is in a category of its own, London Regional Transport, and British Rail.

I stress that we have no plans to privatise British Rail at present, and we are constantly reviewing our long-term options. None is ruled out, as has been made clear successively by my right hon. Friend and my predecessor, my hon. Friend the Member for Hampshire, North-West (Sir D. Mitchell), to whom such a generous tribute has been paid not only tonight but during our debate the other day.

Many issues need further study. We need to examine regulation in monopolies and arrangements for subsidy of loss-making services. In the meantime, as so many of my hon. Friends have said, the priority is to improve British Rail's service to the customer and to increase efficiency. Good progress is being made, with dependence on grant being reduced, productivity increased and substantial investment being made to improve the quality of service.

The objectives set out and agreed between my right hon. Friend the Secretary of State for Transport—now Secretary of State for Social Security—and the British Railways Board call for a series of vigorous measures to broaden the participation of the private sector in providing services to the railway, and for British Rail to establish specific programmes to that end. Private sector involvement has been increasing over the past few years, and I am very pleased with that. It is now quite extensive, with British Rail spending some £1·3 billion annually with private companies, out of a total expenditure of £3·3 billion.

Private caterers compete with Travellers Fare at eight major stations and private companies operate alone at 90 other stations. The private sector also provides prepared food for on-train catering and about 20 private on-train

[Mr. Michael Portillo]

trolley services are now operating. Total private sector involvement in property development is running at about £1 billion.

My hon. Friends will be familiar with earlier sell-offs, which include Sealink, British Transport Hotels, Hovercraft, British Transport Advertising and Doncaster wagon works. That policy will continue, and the House will be aware that British Rail will be issuing a BREL information package shortly to a number of prospective purchasers. Today, the executive directors of BREL made an announcement about their plans for a management and employee buy-out, in which they would be supported by ASEA Brown-Boveri and Trafalgar House. Naturally we welcome all serious expressions of interest in bidding for BREL, although it is too soon to say who the successful purchaser will be. Our approval will be needed for the eventual sale and we shall take all relevant factors into account.

With our agreement, BR is preparing to invite offers for Travellers Fare. That will give the new owners greater freedom to develop the business and should be good for the customer and good for the railway. I thought that there was a certain obsessiveness with food and catering in some of my hon. Friends' remarks. Therefore, I know that they will be interested in that information. British Rail will be ready to invite bids in September and it hopes to complete the sale before the end of this financial year.

The reason why we are able to discuss BR privatisation is that it has made progress under firm Government guidelines and with taxpayer investment. Two other things, however, were necessary—first, the determination of Ministers since 1979 to move industries into the private sector and to stimulate competition; and, secondly, the presence of opinion formers who created the climate in which such enlightened changes could be made. Such opinion formers have been with us tonight on the Benches behind me. I congratulate all my hon. Friends who have made their voices loudly heard.

Overseas Aid and Development

1.31 am

Mr. Tom Clarke (Monklands, West): Notwithstanding the lateness of the hour, I welcome the presence of the Minister for Overseas Development and my hon. Friend the Member for Eccles (Miss Lestor). It is important to have this debate, especially in the light of some of the replies that the Minister has given my hon. Friend the Member for Eccles and other hon. Members recently.

It is appropriate to discuss, in as much detail as time will allow, what the figures, statistics and all the rest that the Minister has offered mean in terms of the problems of poverty in the Third world and the Government's response to them.

I do not know how many letters the Minister has received since he took over the Department, but I suspect that the one that will be foremost in his mind will be the one that began, "Dear Chris". It was an open letter published in the *Sunday Telegraph* on the Sunday after the Minister's appointment, and it was from his predecessor, the right hon. Member for Aylesbury (Mr. Raison). I am sure that the Minister will not be surprised if I remind him that, in that open letter, his right hon. Friend had some interesting things to say. In the quietness of the hour we can reflect on what the right hon. Gentleman said and compare it with the Minister's record in office. His right hon. Friend then advised:

"Nor will you be plagued with adjournment debates"

Therefore, it is right that we should be having this one.

His right hon. Friend also said:

"The *Guardian* over-stated it when they said that you seem 'to have been sadly despatched to the saltmines of overseas aid'."

In one of the most acute exercises in open government, the right hon. Gentleman said:

"I've no doubt Geoffrey will fight the battle well. I only hope that the Prime Minister, having put you there, will be sympathetic. She has many qualities, but I can't say that over-enthusiasm for the aid programme is one of them."

He continued:

"I couldn't help thinking, as we had our amiable farewell chat last Wednesday, that it was about the first time that I had ever had a conversation with her about what I'd been up to at the ODA."

The other day, the Minister assured the House that he had had a person-to-person confrontation with the Prime Minister. Perhaps tonight we shall hear how much she said, how much he said and whether the discussion influenced Government policy.

The most telling sentence in that letter, to which I want to address myself tonight, stated:

"We simply don't have a large enough programme by international standards."

I put it to the Minister, who is highly regarded in all parts of the House—I hope I do not damage his prospects by saying that—that we have seen no improvement in that regard since he took over this crucial responsibility.

The debate is vital and absolutely necessary because of the Government's quite appalling record on overseas aid. We have a moral responsibility to aid less developed countries. As a country, we benefit from that aid through world growth and economic interdependence. That was what the Brandt report was about. The House will not forget that one of the biggest lobbies ever at the Palace of Westminster was when more than 10,000 people urged

upon the House the necessity to accept the principles of the Brandt report. One gets the impression that the Government hardly know that it exists.

The United Nations target figure, the internationally agreed target, is that developed countries should aim to contribute 0·7 per cent. of their GNP to less developed countries as official development assistance. In all candour, the Government's approach is an absolute disgrace and I hope that the Minister will clarify the Government's position.

The United Nations set a target not of real percentage increase, but of a fixed proportion of GNP, as my hon. Friend the Member for Eccles has consistently reminded the Minister. The principle is that, as western economies and western incomes grow, simultaneously, so will our commitment to development and overseas aid. The GNP of the United Kingdom increased by 2¼ per cent. last year, but that was hardly reflected in our aid budget; hence, our proportion fell. Countries that accept the United Nations target figure of 0·7 per cent.—indeed, countries that accept the principle of paying a fixed proportion of GNP—are saying that we should tie the health of the Third world to our wealth.

The target figure of 0·7 per cent. is, to some extent, our income tax due to the Third world. A strange parallel can be drawn between the Government's approach to aid and United Kingdom taxation. They have made it easier for richer people to feel that they have no responsibility to the poor by cutting the proportion of individual incomes used to fund services. Similarly, we, as a rich nation, have cut the proportion of our national income, our GNP, used to fund world development.

The lack of logic in the Government's approach can be seen by using a tax analogy. If a person's income increases, we expect him to pay a fixed proportion in tax. We do not tell him to pay slightly more tax than last year to keep pace with inflation. We do not write to the tax inspector to say that our income increased by 2¼ per cent. last year so we will pay 5 per cent. more in tax. That is nonsense. If we accept that domestically, why should we take this approach to the Third world? Just as income tax is the money that members of the community pay to meet their responsibilities to the community, overseas aid is the money that members of the international community pay to meet their responsibilities to it. So the Government's record is a scandal and their excuses, which we hear every third week on Mondays, for 10 minutes in the House, are tawdry.

Let us hear no more of real terms increases; let us hear when we shall increase the proportion of our GNP that goes to the Third world. That proportion has fallen by 45 per cent. since 1979. On 20 June, my hon. Friend the Member for Eccles asked:

"as the Prime Minister and the Chancellor of the Exchequer repeatedly stand at the Dispatch Box and say how well off the country is, could we not expect more of that wealth to go to the Third world? Instead, the amount is declining at a time when the countries that we visited are in desperate need." —[*Official Report*, 20 June 1988; Vol. 135, c. 830.]

Our record as a member of the international community is appalling. That is nowhere more evident than in the United Nations. In a 1987 league table of OECD contributors to UNICEF, the United Nations children's fund, the United Kingdom came second from bottom. Our per capita contribution of 34 cents compared with Sweden's $9·41. So to say that net aid is growing in real terms is not to give the whole picture. Small increases now are still not making up for the real-terms losses the Government have caused over the past eight years. And the Government's published expenditure plans to 1991 still leave real net aid from the United Kingdom 12 per cent. below that of 1979. That is the first answer to the Government's pathetic excuses.

The second, more important reason why the Government's opinions do not ring true is that real-terms increases do not really matter. They are much less significant than measurements of the proportion of GNP, given that in 1979 this country was well on the way to reaching the 0·7 per cent. target. The figure then was an internationally respectable 0·51 per cent. of GNP. Much of the credit for that is due to Judith Hart, who did so much at the Department when it still meant something in terms of Government policy——

The Minister for Overseas Development (Mr. Chris Patten): Tell that to the right hon. Member for Leeds, East (Mr. Healey).

Mr. Clarke: If my right hon. Friend were here he would have every reason to be proud of his record in this area —much more so than the present Chancellor of the Exchequer. The Minister should tell that to his right hon. Friend.

Mr. Patten: There is one important difference between the former Chancellor and my right hon. Friend, the present one. My right hon. Friend can go to the IMF and help it to lend money to other countries. The right hon. Member for Leeds, East went to it to borrow money.

Mr. Clarke: I look forward to an economic debate. I would be stretching the point, as the Minister tried to, if I were to argue about borrowing. I have many constituents who have been forced to borrow and borrow by this Government, so the Chancellor is not in a position to lecture Labour Members.

I remind the Minister that overseas development is his responsibility. Under his stewardship, the amount of aid given has fallen and continues to do so. The 1987 figures show that the proportion of the United Kingdom's GNP given to aid is only 0·28 per cent. The proportion of GNP given has fallen by 45 per cent. Of the 17 members of the OECD's development assistance committee, that fall is by far the largest. Those countries have Chancellors, or their equivalents, who would not dream of trying to justify the unjustifiable to their Parliaments. I hope that the Minister will not attempt to do so.

That fall should be contrasted with a 300 per cent. increase in the proportion of GNP by Italy, a 138 per cent. increase by Finland and a 43 per cent. increase by Sweden. Other increases have been given by countries such as Denmark, Norway, Japan, Holland and even the United States of America. No wonder the Minister attempted to distract us by trying to introduce issues that are not relevent to his brief.

The United Kingdom is now 14th out of the 17 countries in the OECD league table. In 1979, when my right hon. Friend the Member for Leeds, East (Mr. Healey) and Judith Hart shared responsibility for these matters, we were seventh and set to climb higher. Under this Government, who have a wretched record, we always look as though we will drop lower in the table.

[Mr. Clarke]

In a reply to a written question asked by me, the Minister stated that the Government had set no target for reaching the 0·7 per cent. figure. He said that it

"depends on developments in the economy and other claims on resources."—[*Official Report*, 27 April 1988; Vol. 132 c. 168.]

Since the Government's record has been not one of gradually moving to the 0·7 per cent. but one of decline, perhaps the Minister will say when the United Kingdom will reach 0·2, 0·1 or even 0 per cent. People used to believe that 0·4 or 0·3 per cent. were magic barriers below which the United Kingdom would never fall. The Government have proved that such naive optimism was quite unfounded.

The Government's stock excuse is that our aid budget is growing in real terms. That is an interesting defence, and no doubt we will hear it again tonight.

Mr. Chris Patten: The hon. Gentleman said that he thought it more important to concentrate on increasing the proportion of GNP given to aid than increasing the aid programme in real terms. I cannot believe that he thinks that. Would he like to reconsider his remarks and say whether he believes that what matters above all is the proportion of GNP and that having a sufficiently strong economy to increase aid in real terms is not of any consequence whatever?

Mr. Clarke: Constant prices are important, which is why the Minister seldom, if ever, refers to them. If the Government have changed their minds about the proportion of GNP given and the United Nations' target, they have a responsibility to tell us. They have not yet done so, but the debate will give them the opportunity.

A modest increase in real terms this year looks generous on paper, but we should remember that in constant 1986-87 prices United Kingdom net aid fell from £1,395 million in 1978-79 to £1,198 million in 1987-88. That is a decrease in real terms—in cash terms—of about 14 per cent. in the contributions made before the Government took office. How the Minister can justify any of those figures is beyond me. The debate will give him an opportunity to do so.

The United Kingdom's record is just as bad in other United Nations agencies. We followed the United States of America and pulled out of UNESCO, cutting ourselves adrift from the process of reform currently transforming that organisation. We stand 24th in a table of 24 OECD members in contributions to UNESCO. We are joint bottom with the United States. We are 16th out of 24 in per capita contributions to the World Health Organisation. Our pathetic and miserable 21 cents per head per year is half that of Switzerland, which is in first place. Presumably the Minister is proud of that record. I notice that he is not so keen to intervene on that point, although I am happy to give way.

Mr. Chris Patten: Would the hon. Gentleman care to give us the figures for where we stand in volume terms in our contributions to the WHO? I am sure that he has the figures and is knowledgeable on that point.

Mr. Clarke: I shall give the Minister figures in the same way as he gave me figures. There were times when he was somewhat coy in response to the open questions he has put to me and which I have put to him.

We are 17th out of 24 in per capita contributions to the Food and Agriculture Organisation, and we contribute only 3 per cent. of the per capita figure given by Denmark, which is again in first place. I wonder whether that figure pleases the Minister and whether he regards that as progress.

If we are to continue to follow every move of United States foreign policy like timid and obedient poodles, we should also bear in mind that in league tables for the World Health Organisation, the Food and Agriculture Organisation, UNESCO and UNICEF, in no case does the United States contribute more. Perhaps the Government are racing the United States to the bottom of the heap.

The Government's response to aid is selective in the extreme. In the case of Nicaragua, in 1986 we gave less than $5,000 in bilateral aid for technical co-operation, while Italy gave over $7 million. In 1987 we could still find only £47,000 for technical co-operation, co-financed with British voluntary groups. That is a pittance when compared to the scale of suffering caused by the Contra terrorist war paid for by the United States. Our contribution to Nicaragua, in contrast to our contribution to Costa Rica and even Honduras, is far from generous. We are giving less than we gave to the Somoza regime, which left its people impoverished. The Government's attitude to poverty and health care in Nicaragua is somewhat inconsistent with their attitude elsewhere.

The Minister should be aware—it is unusual for a Minister to ask me questions on statistics, but I am always willing to help when I can—that we are second from bottom of the league table in our OECD contributions to Nicaragua. That is what I was told in his parliamentary answer to me.

Mr. Jeremy Corbyn (Islington, North): Before my hon. Friend leaves the subject of Nicaragua, is he aware that the Government have made no discernible move to assist Nicaragua in the difficulties it faces in borrowing money on the international money markets because it is given such a low credit rating? Is my hon. Friend aware that the British Government have taken part in giving it that low credit rating, despite its excellent record in the repayment of debt?

Mr. Clarke: Since the Minister became excited about borrowing a few moments ago, if he catches your eye, Mr. Deputy Speaker, he may respond to that important point.

On Kampuchea, I asked the Minister a few days ago whether he planned to organise an international relief effort. He said that the Government were considering what response, if any, they will be making to the Food and Agriculture Organisation's appeal for food aid for Kampuchea. I hope that the Minister will take this opportunity to let us know whether the Government will respond to the FAO appeal; how much food they will give; how much our contribution will be in comparison to those of our OECD colleagues and friends, and whether the Government will stop food aid going to representatives of the discredited Khmer Rouge.

On Mozambique, I am sure that the House will accept that that area currently experiences dire poverty. It has one of the highest levels of infant mortality in the world—123 per thousand in 1985. Much of that relates specifically to the policy of destabilisation by South Africa which has contributed to civil war. Therefore, as the Minister speaks

on behalf of the Foreign and Commonwealth Office, I must ask him what steps the Government are taking to prevent South Africa's destabilisation of the Mozambique Government.

I turn briefly to Europe and its role in development. Lorenzo Natali, the European Community's Development Commissioner, has made proposals to allow European Community involvement in microeconomic planning in the African, Caribbean and Pacific states. Those proposals are the basis for the EEC negotiations on the 4th Lomé convention, to cover the period after 1990. It would be interesting to hear the Minister's views on Europe's role in development planning and what opinion, if any, the Government have on Mr. Natali's detailed proposals. Among other things, those proposals would allow more co-ordination between the European development fund, the World Bank and the IMF on the ACP adjustment.

It would be impossible to take part in an important debate of this kind without referring, as I am sure hon. Members and especially my hon. Friends will wish to do, to famine in Africa. The House has had the benefit of what I feel was an excellent report by the Select Committee called "Famine in the Horn of Africa". Difficult though the Minister has made it for me to do so, I should like to say that the Government's response was constructive. What they said should be welcomed. The report rightly identifies one of the major causes of famine as not only the drought but civil war and conflict.

We are especially worried about Eritrea and Tigré. Therefore, we would welcome any urgent action that the Government feel free to take to find a solution to a problem which the House will accept is extremely difficult. However, if the Government decide to increase our contribution to Ethiopia, Chad, Sudan and sub-Saharan Africa, they would have outstanding support. The Minister must know that 76 per cent. of people in an opinion poll said that we should give the same or more, as against 18 per cent. who said that we should give less.

People are concerned that when funding is made available, whether on a voluntary basis or by Government, we should concentrate on measures to deal with drought, on irrigation and on agriculture, and not always on prestigious projects such as dams, airports and power stations. People accept that industrial development and agriculture are extremely important, which is why they take great exception to some of the food surpluses in the EEC and the failure to distribute adequately to those in need. People accept that the quality of aid is important. Therefore, we ask how much of our aid to Africa is going to agriculture, health care, industrial development and social needs. We urge the need for monitoring in those respects.

The absence of the political will to deal with the structural causes of poverty by Governments of North and South is all to obvious. The number of hungry people has roughly doubled over the past 12 years. The House must face the reality that 500 million people—one eighth of humanity—are suffering from chronic malnutrition tonight.

There is also the population problem.

Mr. Corbyn: While one welcomes aid that gets through to help the poorest people in the poorest parts of the world, does my hon. Friend share my concern that some policies, particularly those adopted by the World Bank in its advice to poor countries in receipt of loans it organises, force on those countries economic models that often involve cuts in public expenditure which make the living conditions of people dependent on public services, health, education or housing worse because those countries are pursuing some economic Valhalla similar to that pursued by the present Government? Does he believe that the Government should consider their role in multinational agencies such as the World Bank as well as my hon. Friend's obvious and quite correct concern about the lack of spending on overseas aid in general?

Mr. Clarke: Again my hon. Friend makes a very solid point. I hope that he will be fortunate enough to catch your eye, Mr. Deputy Speaker. I will try to provide that opportunity by drawing my remarks to a close.

There is clearly great concern about the debt crisis, interest rates and commodity prices. Those problems are very important for developing countries that are struggling to assert themselves and release their peoples from poverty. That is the challenge to the House, to the Minister and to the Government's international policy. Developing countries have to face that challenge daily.

I believe that the great mass of the British people in every part of the United Kingdom feel that we could and should be making a tangible contribution to the solution of those problems. However, they bitterly regret the fact that, at a time when overseas aid is declining to very low levels, we still find opportunities to export arms and military equipment. Perhaps we should take a sober look at precisely what we are doing. Those priorities and the policies that the Government have pursued so far do not reflect the approach of the British people, which is not only generous, but takes into account the potential for development by the peoples of developing countries. If the Government ignore that potential, the needs of others and world poverty, they do so at their peril.

2.3 am

Miss Joan Lestor (Eccles): I congratulate my hon. Friend the Member for Monklands, West (Mr. Clarke) on getting this item on to the political agenda tonight. As he said, this subject does not command a great deal of time in the House. We have little time for it at Question Time and few opportunities to make speeches on it. I am indebted to my hon. Friend for the detail in his speech and for his dedication to the subject over the 12 months that I have been involved in it as Labour Front-Bench spokesperson.

I think that the Minister and I share a deep concern for the problems of two countries that we have visited recently, namely, Mozambique and Ethiopia. Within the limits set on him by the Budget, the Minister has done much to increase the amount of assistance and aid to the very sad and war-torn country of Mozambique, which is being destabilised and is suffering as a result of South African aggression. I believe that he has tried, within the limits, to meet some of the needs and requests that have been made.

We are left with the situation to which my hon. Friend the Member for Monklands, West referred. When the target was set by the United Nations at 0·7 per cent. of GNP, it was accepted and agreed that the industrialised countries would move towards that target. Our share will decrease and whether aid goes up in real terms will be irrelevant, because the gap between the rich and poor nations will become wider. We become richer, but we do not share our riches with the developing world.

[Miss Joan Lestor]

The United Nations picked a percentage of GNP—which happened to be 0·7 per cent.—to meet that real difficulty. As my hon. Friend said, when the Labour party left office in 1979 we had reached a figure of 0·52 per cent. of GNP. Now, as the Minister said, as a proportion of GNP the budget is 0·28 per cent. He may say that during the past year or two in real terms there has been some increase here or there, but that is not true in all cases—and we are slipping away from the target. It is legitimate to ask the Minister whether the Government are still aiming at that target. If they are, why is it that we are slipping so much behind that target, when the Government are constantly telling us that we are improving our economic position every day and that the country is better off now than it has been for many years?

The gross public expenditure on aid is down from 1·2 per cent. to 0·90 per cent. That figure shows that, although the Minister may talk about the figures in real terms, we are giving a smaller part of a larger cake. If GNP is increasing, as we are told it is, we are giving less to the developing world.

We can take as an example the bilateral aid given to the member states of the Southern African Development Co-ordination Conference. Gross bilateral aid to those countries has fallen to 64 per cent. of its 1979 level in real terms. We are now giving much more in bilateral aid in real terms to Mozambique. I have gladly acknowledged that. However, in real terms, aid to the other countries involved with the Development Co-ordination Conference, such as Botswana, Lesotho, Malawi, Tanzania and Zambia, is decreasing, and their needs are great, too.

When the front-line states were formed as a result of the military, economic and social destabilisation by the racist regime of South Africa, it was acknowledged that, although many of those countries were, or could be, rich in some natural resources, and perhaps under normal circumstances would be able to develop, the circumstances prevailing were not normal. In addition to the problems of economic debt and the national hazards of drought and floods, the military war of South Africa has taken its toll, especially against Mozambique, Zimbabwe and Angola, and the economies of all the front-line states have suffered from South Africa's policies of apartheid and destabilisation. I know that the Minister, when he was in Mozambique recently, saw examples of that, and we have already exchanged views on this across the Chamber, so I shall not repeat them.

Women and children in front-line states have been the innocent victims of this aggression. In 1986 UNICEF estimated that 140,000 children under five years of age were killed as a result of the war in Angola and Mozambique. That leaves out of account the hundreds of children who have died as a result of famine, drought and other causes. Because of the dislocation of population in the region, 500,000 people are now threatened with starvation, and 8·5 million have lost their homes.

South Africa continues to block food and emergency relief supplies and, as a result, some 200,000 people died between 1983 and 1985. Women and children are particularly vulnerable and daily suffer the most horrendous atrocities committed by MNR bandits and South African forces. It is hard to believe what is happening until one listens to the people saying what has happened to them and sees the villages that have been destroyed and the children who have been mutilated.

The Minister has done a great deal to assist Mozambique within the confines of his budget, but the fact remains that unless the Government are prepared to take on South Africa and the sanctions and investment issue, we are simply bandaging the results of South African aggression.

The result of the wars and the migration of male labour to the South African mines is that many women have been left to maintain essential services. They face additional problems for, despite the rains in Mozambique, there has been a shortage of labour. There have been other complications, as South Africa has suddenly decided that it will employ fewer Mozambicans in the mines, thus again destabilising an economy that has relied heavily on people in some areas being employed in the mines. With the destruction left by the bandits, the result is horrific.

When the South African Development Co-ordination Conference was formed in 1980, it was a positive attempt by front-line states, including Lesotho, Malawi and Swaziland, to break their dependence on South Africa and to promote and plan the economic development of the region. That is why I find it so distressing that those countries are suffering a decline in real terms in the aid available to them. Their needs and suffering are no less than those of Mozambique.

My hon. Friend the Member for Monklands, West has said much of what I intended to say, and I am grateful to him for quoting answers to some of the questions that I have asked and some of my comments. I shall not delay the House by repeating what he said. Of course I am pleased that the Government have tried to deal with some of the debt problem by continuing the Labour Government's policy of converting loans into grants. I was pleased when, a few weeks ago, the Prime Minister finally acknowledged from the Dispatch Box that that was a Labour Government initiative implemented by Judith Hart.

The debt crisis hits at the standard of living of a large number of people throughout the world. UNICEF reckons that income per head fell by 9 per cent. in Latin America in the five years between 1980 and 1985 in 17 out of the 23 countries there. There is rising malnutrition in Chile, Uruguay and Brazil. There are problems with the EEC's common agricultural policy for sugar from the Caribbean, and the over-production of beef in Europe is having an effect on the Botswana economy.

I know that the Minister will talk about the increased money that he has given certain countries during the past few months, but when Italy can increase its aid budget by 300 per cent. as a proportion of gross national product, whereas ours has declined by 45 per cent. as a proportion of GNP, there is something sadly wrong. The Government cannot have it both ways.

In 1983 the Prime Minister answered a world development movement questionnaire that was sent to parliamentary candidates. I remember filling it in, and I am sure that others do. The questionnaire asked many questions but, when asked whether the Government would move towards the United Nations target of 0·7 per cent. of GNP given in aid, the Prime Minister told one of her constituents in her own fair hand:

"We will move towards the UN Target of 0·7 per cent. of GNP when economic circumstances permit."

If the country is doing as well as we are told it is, why do economic circumstances not permit us to increase our aid budget as a proportion of GNP?

2.14 am

The Minister for Overseas Development (Mr. Chris Patten): I am delighted to have the opportunity to discuss this matter which has been so thoughtfully provided by the hon. Member for Monklands, West (Mr. Clarke) on a Friday morning just before the holidays. I am only sorry that the Opposition do not choose to use one of their Supply days for an aid debate because then we could have an even fuller House to listen to our discussions. I shall not allow myself, whatever the hour of the morning, to become waspish and think, let alone speak, the suggestion that perhaps the Opposition might have as much difficulty getting their Members to attend such a debate as they have on other issues. I would not for a moment wish to say anything like that from the Dispatch Box. This is a welcome opportunity to talk about aid.

Whatever arguments there may be about the size of our aid programme—and I shall come to that with relish—there can be no argument about its quality. Certainly there is none outside Britain or in some of the multilateral institutions to which the hon. Gentleman referred and to which we make substantial cash contributions year after year. I shall be pleased to let the hon. Gentleman know about them at some time because plainly he is not as well acquainted with them as one might like. Our aid programme is widely recognised internationally for its quality and effectiveness.

Our aid is concentrated on the poorest countries. That is more the case than with Organisation for Economic Co-operation and Development donors generally. In 1987, 81 per cent. of our bilateral aid went to countries with an income per head of less than $800—that is, International Development Association eligible countries. The major recipients include India and Bangladesh in Asia and Ghana, Kenya and Tanzania in Africa. The Commonwealth continues to provide an extremely important dimension to our overall aid programme.

The grant element of British aid in 1987 was 99·8 per cent. All our aid to the poorest countries is provided in the form of grants. Britain has led the way in forgiving past aid loans. In recent years we have played a leading role internationally in helping to develop new policies towards and solutions to the problems facing developing countries. Our views have carried weight because of our success in managing our economy. It is inconceivable—this is a point I raised in an intervention earlier—that we should be listened to in the same way if the International Monetary Fund were having to manage the British economy again. Our views have also carried weight because we are recognised as a serious donor, willing to reshape our programmes to meet new circumstances and to find additional resources for key initiatives, such as the debt initiative of the Chancellor of the Exchequer and the IMF's structural adjustment facility. We have been, and will continue to be, a firm supporter of structural adjustment and economic policy reform.

I am not suggesting that we or the international financial institutions have all the answers, but I am sure that in too many countries, particularly in Africa, too many past policies have failed too many people. In particular, they have failed too many very poor people. That is why we have reshaped our long-term development assistance to Africa and backed our words with cash.

We are providing substantial balance of payments support for countries able to agree adjustment programmes with the International Monetary Fund and the World Bank. In the last finacial year we spent more than £90 million in bilateral programme aid. Last December, we pledged a further £250 million of bilateral programme aid for co-financing with the World Bank over the next three years to assist the poorest and most indebted countries of sub-Saharan Africa.

As I said in a widely unreported speech in Washington recently, structural adjustment is not a short course of curative medicine. I am sure that my right hon. and learned Friend the Secretary of State for Health would agree that, like all good preventive medicine, it has to become a way of life. That underlines the need both to find ways of protecting the vulnerable groups most immediately affected by adjustment programmes—often in the urban areas—and of improving the access of the poorest groups in society to health and education services through the process of structural adjustment. In Ghana, which has the longest track record of policy reform and which since 1983 has achieved an annual average growth of 5 per cent., we are associated with efforts to do both those things. I was pleased to have the opportunity of discussing them this week with the Prime Minister, Mr. Obeng.

We are as sensitive as anyone to the growing awareness of the need to take proper account of both the social and the environmental impact of our aid. The hon. Member for Islington, North (Mr. Corbyn) has spoken in our past debates on the environmental impact of development. The Government's response to the Brundtland report "Our Common Future" was published on 22 July. It underlines what we are doing about aid and the environment. We have introduced specific measures to strengthen our internal procedures ensuring that the environmental impact of our aid programme is given the weight that it deserves in evaluation, appraisal and so on. We have made arrangements for tapping outside expertise on environmental issues. We are funding specific work such as the Nepal study of the interrelationship between environmental degradation and macroeconomic policies.

Last week I approved over £14 million for a third slum improvement project in India—this time in Indore. I have seen for myself the first of those projects in Hyderabad, and an extremely successful project it is.

Mr. Tom Clarke: Now that the Minister has regained his composure, may I thank him for the interesting information that he is giving the House, notwithstanding the fact that most of it was already available to us in the excellent handouts that come from the Department? Before he concludes his speech, will he tell the House whether the Government still intend to aim at the United Nations figure of 0·7 per cent. of GNP?

Mr. Patten: I assure the hon. Gentleman that I intend to deal with that point. As he laboured the issue, it would be discourteous of me not to give it the attention that it deserves, to do so with relish and to point out to him some of the intellectual shortcomings of his argument.

Mr. Corbyn: Before the Minister leaves the subject of the environment, will he tell us how successful he has been in persuading the World Bank in particular to ensure that

[Mr. Corbyn]

aid programmes or development programmes that it helps to finance are much more environmentally conscious than previous ones? I have in mind the environmental disasters that have happened in a large part of Brazil as a result of mining projects partly financed by the World Bank and the catastrophic consequences for the rest of the world unless something is done to prevent the destruction of the tropical rain forest there.

Mr. Patten: I do not think that it is going too far to suggest that a number of the environmental NGOs would concede that we have done as much as, or more than, any other bilateral donor in ensuring that these environmental issues are on the agenda for the World Bank in a more prominent place than they have been before. One of our most useful actions was to bring together the World Bank and a number of the environmental NGOs in a conference last year during which issues such as those to which the hon. Gentleman referred were discussed in what the press release might have described as a free and frank way.

These are immensely important issues, but it is important to recognise that some of those who criticise the World Bank on environmental grounds do not want any development to take place. They do not want the World Bank and international donors to spend more in developing countries. They believe that the people in those countries have a divine right to go on living in primitive conditions until the crack of doom. That is an easier proposition to advance if one lives in a comfortable suburb in Europe or North America than in dreadful conditions in a developing country.

The argument is not about growth or no growth. It is about growth that is environmentally, economically and socially sustainable, and the World Bank is acutely conscious of that, as we all should be because each year we are still desertifying an area of the planet the size of Nova Scotia and deforesting an area the size of Yugoslavia.

As I said, I was able to see for myself the slum improvement project in Hyderabad. We have just announced our third project—the second was in Vizag—at Indore, and there are good examples of how one can make aid work to assist some of the most disadvantaged groups in society and at the same time make a positive impact on the environment. The project represents an integrated approach to improving the quality of life of about 80,000 slum dwellers, enhancing employment opportunities and giving children better education and health.

Running an effective aid programme requires not only right policies but much dedicated work around the world in the careful preparation of individual projects and programmes. The ODA is acknowledged to be one of the most professional of the bilateral aid agencies and, through our five development divisions and our posts abroad, we maintain an effective presence in the field. I have had the opportunity of seeing many of our aid officials in action and I congratulate them on what they achieve. I am sure that other hon. Members who have seen our aid programme in action, whatever their arguments about the size of it, will endorse that remark.

The hon. Member for Monklands, West referred to Nicaragua and said it was an especially deserving case which needed more generous support from us. Nicaragua is not one of the poorest developing countries. There are over 60 developing countries with lower incomes per head, and as per capita figures are of such concern to the hon. Gentleman I trust that that one will be of equal concern to him.

It is true that we do not give purely bilateral aid to Nicaragua on the scale of the earlier Labour Administration. British aid to that country peaked in 1977 when Somosa was in power there. I do not know whether there were political reasons for that or whether it was entirely coincidental. But the contributions that that Labour Administration made to the Somosa regime were, I am sure, greatly appreciated.

Mr. Tom Clarke: Tory Members who have just arrived should know that I referred to that in my speech, as well as to the regrettable decline under the Tory Government. As the Minister is talking about per capita figures, how does he justify the comparison between Nicaragua and Costa Rica?

Mr. Patten: The figures for Costa Rica and certain other central American countries include contributions that we make to regional institutions in those countries. In our total bilateral and multilateral contributions we pick up 20 per cent. of the substantial aid that Nicaragua receives from the European Community, which totalled £6·2 million in 1986.

Mr. David Ashby (Leicestershire, North-West): How does this country's aid to Nicaragua compare with that of Italy and Germany?

Mr. Patten: Speaking off the cuff, both Germany and Italy give a lot more bilateral aid to Nicaragua. Apart from the money that we put through the joint funding scheme for NGOs, our major contribution is the multilateral contribution through the European Community. I am usually pressed by the Opposition to ensure that our aid programme achieves the maximum poverty alleviation and that money is spent as much as possible in the poorest countries. Whatever the politics of the matter, the fact that there are 60 countries poorer than Nicaragua does not seem entirely irrelevant to the argument.

Mr. Corbyn: Before the Minister leaves the subject, will he come clean and admit that there are clear political reasons why the British Tory Government will not give aid to Nicaragua at the level that it needs and deserves because they do not like the process of reform, development and poverty removal that the Sandinista Government are doing their best to carry out? Will the Minister reconsider the position and provide the aid so desperately needed in Nicaragua, where many of the problems have been caused by the war and not for any other reasons?

Mr. Patten: It is perhaps even more relevant to wonder whether there were political reasons for the more substantial aid to Nicaragua in the past. I am content to rest my argument entirely on developmental grounds and to leave discussion of the political aspects to my right hon. and hon. Friends who are responsible for those matters.

Mr. Tom Clarke: Will the Minister give way?

Mr. Patten: I will give way to the hon. Gentleman at every conceivable opportunity.

Mr. Clarke: I am always willing to rescue the Minister from the embarrassment thrust upon him by his own

alleged supporters. As Italy and Germany have a far better record than ours in terms of aid to Nicaragua, does the Minister believe that they were affected by the factors which he claims influenced the Labour Government?

Mr. Patten: I could troop through the House all those countries considerably poorer than Nicaragua where we have substantially larger aid programmes than Germany or Italy. For historical and other reasons, different countries' aid programmes have different profiles. For instance, 75 per cent. of our aid goes to Commonwealth countries. Alas, that is not true of German and Italian aid, however desirable it may seem to us. I think that in the next few weeks the hon. Gentleman will come to accept that there are historical reasons why some countries have larger aid programmes in central America than ours.

The hon. Member for Monklands, East referred to Cambodia, and I shall respond reasonably fully to his comments. As he suggested, the history of Cambodia over the past two decades has been one of appalling suffering. The bloody Khmer Rouge experiment in remodelling society has been appropriately described as taking Cambodia back to the year zero. The Vietnamese invasion, which was initially welcomed as instrumental in overthrowing the Khmer Rouge, compounded the problem of the Cambodian people by extending the invasion into a continued illegal occupation that has lasted for almost a decade. During this period we have refused to give development aid to Cambodia. We believe that aid would send the wrong signal of implicit support for Heng Samrin and help to prop up his regime. Instead, our aid has been directed to Cambodian refugees in the Thai border camps, who have been made homeless by the years of conflict. Since 1979, we have contributed more than £13 million, which has been channelled mainly through international agencies such as the Red Cross and the United Nations. We are the largest bilateral donor of such assistance.

We welcomed the recent tentative signs that various factions in the conflict may be moving towards a political settlement. It is too early to judge the outcome of the discussions in Indonesia, which have just finished. We have taken note of the announcement by Vietnam that it will be accelerating the withdrawal of its troops from Cambodia. According to some reports, as yet unconfirmed, the withdrawal will be complete by the end of 1989, or the first quarter of 1990. We hope that further progress will be made when China and the Soviet Union discuss Cambodia next month.

In view of these signs, however tentative, of movements in the political situation, I intend to examine closely our aid policy towards Cambodia. We have always been prepared to consider assisting any internationally organised relief effort that sought to provide humanitarian assistance within Cambodia. I therefore propose to contribute £100,000 to the Food and Agriculture Organisation appeal that was launched in May for Cambodia. We shall be examining also whether we should now provide some support for humanitarian aid for projects administered by British non-governmental organisations working in Cambodia. It is far too early to consider aid for reconstruction. We would be prepared to reconsider these matters when a Government acceptable to the majority of Cambodians is in place.

The hon. Member for Monklands, West referred to Europe. I set out in a speech at the Royal Commonwealth Society a couple of months ago, which he may have seen, our principal objectives for the Lomé renegotiation. I do not want to rehearse those again today. I agree with the hon. Gentleman's remarks about the importance of greater co-ordination between bilateral donors, bilateral donors and multilateral donors, and multilateral donors, even when they are separated by the Atlantic. It is important that the Commission and the Bretton Woods institutions engage in a closer dialogue on developmental objectives. That view is shared by Commission staff and by Vice-President Natali, who has made such a distinguished contribution to the development and strengthening of the Community's own substantial aid programme to which we contribute a large amount of money.

The hon. Member for Eccles (Miss Lestor)—I am coming to the question of gross national product—talked about African debt. Britain has been to the fore in advocating special measures for low-income debtor countries, chiefly in sub-Saharan Africa. The Toronto summit agreed on debt relief measures. The initiative behind that was launched by my right hon. Friend the Chancellor of the Exchequer in the spring of 1987. I am delighted that at Toronto other creditor nations agreed to join us in providing interest rate relief or the taking of equivalent measures. Good progress has already been made in working out the detailed arrangements in the Paris Club. These involve ways of ensuring comparability between the concessions offered by different creditors. I hope that the final agreement will allow measures to be put into effect as soon as possible. It is clearly in the interests of African debtor countries that that should be so.

Finally, let me say a few words about the size of our aid programme. We inherited from the last Labour Government a level of total public expenditure that was simply not sustainable. I do not think that many members of the outgoing Labour Government in 1979 thought that it was sustainable, and I certainly do not think that the outgoing Chief Secretary to the Treasury thought so. Between 1979 and 1983 the priority had to be to get public expenditure under control, and aid could not be exempted from that. It was during that period that aid fell in real terms.

Between 1982-83 and last year, the aid budget was broadly constant in real terms. I am delighted that as a result of the last public expenditure round, or more properly as a result of our economic achievements, we are now planning for aid to grow in real terms. We are aiming for cash increases over our 1987-88 budget of £72 million this year, £140 million next year and £185 million the year after that. That reflects the fact that with a strong economy we can afford to do more, and the fact that, used in the right way, aid can be effective in enhancing economic growth and alleviating poverty. It also reflects the recognition that an effective aid programme is in Britain's own long-term political and economic interests. We have the seventh largest aid programme among OECD donors. My job is to continue to seek further improvement in its effectiveness as the best argument for ensuring that it continues to grow in real terms.

The whole argument of the hon. Member for Monklands, West and other Opposition Members is about the 0·7 per cent. target and the proportion of GNP that we spend on aid. The Opposition always avoid any mention of the target mentioned by the United Nations for official and

[Mr. Patten]

unofficial flows—the 1 per cent. target. I suspect that they do that because of our extraordinarily good record of private investment in developing countries.

Mr. Tom Clarke *rose*——

Mr. Patten: I keep on giving way to the hon. Gentleman. I am going to finish this point. The United Kingdom provides almost as much in private investment in developing countries as the rest of the European Community put together, but that does not suit Opposition Members' argument.

Let me now turn to the extraordinary proposition that it matters more to have a proportion of GNP increasing than to have real volume increasing. I have no doubt that, without doing anything to the volume of our aid programme, the Labour party, if in government, would ensure in a very short time that we had an increase in the percentage of GNP, because the growth rate would fall so rapidly. That is all that they would have to do.

Mr. Clarke *rose*——

Mr. Patten: I shall give way when I have finished.

Let us follow the hon. Gentleman's perverse argument to its logical conclusion. Let us take two countries. Country A increases the volume of its aid substantially year after year, but by not quite as much as its economy grows in percentage terms. That country is bad, in the hon. Gentleman's book. Country B, which has a low economic growth rate, increases its aid programme by miserable amounts year after year, but by slightly larger percentages than its increase in economic growth. That country is virtuous.

To the developing country the virtuous country is the one that is managing its economy successfully and the one whose aid programme is growing in real terms. The resources for building roads, hospitals and schools and for the provision of technical co-operation in developing countries are provided by such programmes and successful economic management. The hon. Member for Monklands, West never talks about absolute terms, volume terms or real terms. It is about time that he recognised that his argument is positively perverse.

Mr. Clarke: The Minister is taking a long time to get to the point. We still want to hear whether it is the Government's objective to achieve the 0·7 per cent. of GNP target, as accepted by the United Nations. Given that other OECD countries whose economies have developed in a similar way to ours, although they have not had the beneft of North sea oil—not one drop in many cases—have still stuck to the 0·7 per cent. objective, why are we not sticking to it, or have the Government gone back on that objective?

Mr. Patten: I believe that four, possibly five, countries have achieved the 0·7 per cent. target, and only one has an aid programme that is larger than ours in real terms. The hon. Gentleman refuses to face up to the fact that volume——

Miss Lestor *rose*——

Mr. Patten: I must answer the hon. Gentleman's other question, otherwise he will be on at me again.

The first question that the hon. Gentleman asked obliges me to agree with the previous Labour Government. My hon. Friends may think that that means that I am not entirely sound on this matter, but our views on the 0·7 per cent. target are the same as those expressed by previous Governments. It remains an objective, but we cannot, any more than previous Governments have done, set a timetable for achieving it. If the hon. Gentleman thinks that that is wrong, he must have also made that criticism of the previous Labour Government because that was also their view.

Miss Lestor: I tried to start with a note of agreement because it is the holiday period. At the beginning of this debate, behind Mr. Speaker's Chair, the Minister, in his conspiratorial way, said "I want about 10 minutes." I said "OK. It is the middle of the night and people want to get away." The Minister has now taken almost three times as long as we agreed and he still has not dealt with our argument.

Mr. Corbyn: And he is in a bad mood.

Miss Lestor: I do not mind that, but I could have taken an equally long time. I did not because I have a degree of honesty when it comes to agreements. My old dad was right when he said "Never trust a Tory."

The Minister is sliding away from the point. He says that he accepts the target of 0·7 per cent. but that we cannot have a timetable for its achievement. Previously he has implied that if GNP goes up it does not matter whether the target slips—that the percentage of GNP spent on aid falls to its present low level—so long as there is an increase in the volume of aid. If he was sticking to that objective and steadily moving towards the 0·7 per cent. target, the volume of aid would be greater than it is now. It is wrong to say that GNP has increased and that, therefore, the proportion spent on aid does not matter very much.

Mr. Patten: I apologise unreservedly to the hon. Member for Eccles. I have spoken for about three times as long as I had intended and doubtless longer than my right hon. Friend the Minister of State, Foreign and Commonwealth Office wanted. However, I have given way to every intervention and I have tried to answer the questions that the hon. Member for Monklands, West asked—although I have not satisfied him. If I had delivered the carefully unprepared remarks that I had brought with me, I could have sat down after 10 minutes. However, as the hon. Gentleman made an important speech, I thought it right to try to respond to it. I have not had the advantage of hearing him in full flood before. I wish to make one more point, and then I will sit down, otherwise the hon. Member for Eccles will scold me again.

What matters to me is that we should have an aid programme which is growing in real terms, supported by an economy which makes that situation likely to continue into the future. The best justification for growth in real terms is the effectiveness of our aid programme. At the very least, the hon. Lady, the hon. Gentleman and I can agree that, although some countries would like us to do more, and although they would like us to do more overall, we have an effective aid programme which is a considerable credit to those who manage it and work in it, whether in the public sector or the non-governmental

organisations which play an increasingly valuable role in making sure that aid reaches its targets and helps to alleviate poverty throughout the world.

I could continue, in response to the hon. Lady, but I shall leave it at that and thank the hon. Gentleman once again for giving us the opportunity of dashing around the course. I hope that we shall have a rather longer circuit at some future date.

Latin America

2.51 am

Mr. Jacques Arnold (Gravesham): I am most grateful for the opportunity to initiate a debate on our relations with Latin America. It is no fewer than 38 years since the last general debate on this most important subject. On 26 May 1950 the House last had the opportunity to review the matter, so I believe that the debate is long overdue. So often foreign affairs debates in this place centre strategically on East-West relations, fashionably on Europe, nostalgically on the Commonwealth and indifferently on the remainder.

Latin America represents some 8 per cent. of the world's population. It has outstanding potential, abundant natural resources, skilled work forces and few extremes of poverty with which we are so familiar in Africa and Asia. Above all, Latin America has a close cultural identification and rapport with Europe.

Britain has long had a very special relationship with Latin America. It was our then Foreign Secretary, George Canning, who acted as the midwife of the independence struggles of the new nations in the early part of the last century, with his statement in the House in the debate on the Address of 12 December 1826 that he had

"called the New World into existence, to redress the balance of the Old".

Illustrious Britons fought alongside the freedom fighters in the wars of independence in Latin America. Admiral Lord Cochrane played a vital part in the independence of Brazil, Chile and Peru, and O'Higgins became the first president of Chile. A British legion of veterans of the Peninsular wars made up the backbone of Simon Bolivar's liberating armies in Venezuela, Colombia and Ecuador.

We have a great heritage of good will to draw upon in the region. That was supplemented by the leading part that we played in developing its railways, livestock industries, mining and public and financial services. Latterly we earned their respect in the lead we took for the democracies in the second world war.

The affection with which we are still held compares favourably with the respect for the power of the United States, motivated by the Monroe doctrine and which descends into resentment at the United States' high-handedness and pressures over the years—not least that manifested recently in central America.

However, during the past 40 years, we have returned the Latin American affection very poorly indeed. In 1945, a quarter of Latin America's trade was with Britain. As a boy, I saw the majority of merchant shipping coming into the port of Santos in Brazil flying the red duster. By the late 1970s, our share of trade with Latin America had fallen to a mere 2 per cent.—way behind our trading partners.

We should draw on the fund of good will in Latin America, and at least the Government have made a good start. Our trade share now tops 3 per cent. Three of our right hon. and hon. Friends have travelled to Latin America in the past year to rekindle the flames of friendship, but we must do better. When I used to travel through Latin America 10 years ago Britain meant nostalgia to its people—the battle of Britain and the weird game of cricket. But they had written us off as delightfully decadent.

[Mr. Jacques Arnold]

Today we are seen in the context as a new beacon; the virtues of Thatcherism, privatisation and sound economics are extolled. Perhaps the most salutary thing that my right hon. and hon. Friends on the Front Bench could do would be to encourage our right hon. Friend the Prime Minister to make a tour of the great cities of Latin America. That would show the high regard in which this country holds the countries of Latin America.

We must not let the trauma of the Falklands episode divert us. Latin American solidarity in that matter is proverbially as wide as the River Plate, but only ankle deep. Latin Americans respect our military achievement in the Falklands, but consider the islands a minor irrelevance in the great scheme of diplomatic and commercial relationships. The vivid scar on our relations with Argentina must be allowed to heal with time and without rancour.

British industrialists, told of Latin American opportunities, will often talk of failure to pay, of the debt mountain and of their personal expectations of mud huts, discomfort and palm trees. The debt crisis in Latin America represents Government and bank lending problems, and not necessarily the settlement of trade debt. Even these medium-term lending problems are mixed. Chile, in particular, is paying interest and principal on its debt. Venezuela is repaying official debt, and the recent Toronto summit paid particular attention to overcoming debt problems.

The message must go out: the slumbering giant of Latin America is again on the move, with a new realism setting in. Conditions for foreign investment in the continent are easing. Better trading conditions are prevailing. For instance, Mexico has joined the GATT. There are massive opportunities for joint ventures by companies from this country. There is scope for reciprocity deals with the EEC.

We must give a higher profile here to Latin American affairs. Canning house, the Latin American business and cultural centre in London, already does a sterling job. LATAG—the DTI's Latin American trade advisory group—must be given a greater airing. The British Council must be encouraged in its English language teaching thoughout Latin America. And the outstanding example of the Cultura Inglesa in many countries of Latin America shows what can be achieved in the region. Incidentally, a little more teaching of Spanish and Portuguese in our own schools would not come amiss.

We must also pay closer attention to the sponsoring of students in these countries to come to Britain, to our universities and colleges of further education. We are already making major advances with Mexico and should see what can be done in other countries, notably Brazil.

After a period of extreme difficulty for Latin America's economies, things are again on the move, and I hope that Britain will play a leading part, as it has done in history, in the development of Latin America.

2.50 am

Mr. Jeremy Corbyn (Islington, North): The House should be grateful to the hon. Member for Gravesham (Mr. Arnold) for ensuring that there is a debate on Latin America, albeit at 3 am. I regret that it is seldom debated. I especially agree with one of the hon. Gentleman's remarks: Spanish and Portuguese should be taught much more in schools in this country. The teaching of the history of Latin America could be developed with great benefit to the school curriculum and to the chairs of the history of Latin American development in universities. I learned virtually nothing about the continent at school, although I have since visited almost all its countries. The hon. Gentleman rightly mentioned Latin America's significance to Britain in the past because of its trading relations with Britain.

The hon. Gentleman said that developments were proceeding apace in Latin America. It is true that some Latin American countries are experiencing rapid rates of growth at present, but that often masks the most hideous poverty and the most appalling social disruption of people fleeing to large cities, where they lead short, bitter, miserable and poor lives in shanty towns. That is the lot of many Latin American workers.

There are great contrasts in wealth between Latin American countries. Brazil has a per capita income of about $1,700 per year, which is quite high by the standards of developing countries, but Honduras has a per capita income of only $721 per year. Averages can mean very little. If one's head is in an oven and one's feet are in a freezer, is one's body normal? The contrasts in wealth between Latin American countries are quite appalling.

I fear that the attitudes of the World Bank and the International Monetary Fund in dealing with Latin America's debt problems are solving the problems not for the majority of poor Latin American people but for the banking systems of the United States and western Europe. They are trying to impose economic policies that involve a reduction in public expenditure, loss of education and health programmes, high rates of unemployment, loss of public-sector employment and increased privatisation. That might make some balance sheets in Washington, New York, Frankfurt and London look a bit better, but it does not make life better for poor people, whose efforts to produce crops are not being rewarded if commodity prices continue to be depressed. Life is tough for many poor people throughout the continent.

We should be treating Latin America as part of the same world in which we live and doing what we can to alleviate the misery and poverty of its people. I am not convinced that the economic strategies being used by the world's financial institutions are doing anything of the kind. The line taken by President Garcia of Peru in attempting to limit debt repayments to no more than 10 per cent. of export earnings is a reflection of the anger felt by many Latin Americans about the vast repayments that they must make to banks elsewhere.

Some may say that Latin America's debts should always be top of the agenda and should always be repaid, but I ask them to consider how those debts were incurred. In many cases it was because of the oil boom. The oil-producing states were loaning money to anyone for anything, but the countries that borrowed money do not control the interest rates under which it was borrowed or the commodity prices which their exports earn. The position in Peru, Bolivia and Mexico has become worse as they have had to pay more in interest payments. Increasingly, they are having to take out loans to finance loans that have not been paid. The problem has become quite appalling.

The writing off of debt is the only way in which many countries will survive or recover. That has been recognised by many banks that have written off debts, and last year,

for the first time, some British clearing banks recorded a loss because of non-repayment of debt by Latin American countries.

Mr. Jacques Arnold: The hon. Gentleman should differentiate between writing off the Latin American debt, which has not occurred, and the provision in the balance sheet of major banks against potential loss to the loans they have made, which has occurred. There is an important difference between the two.

Mr. Corbyn: I accept that there is an important difference. I was saying that many banks have accepted that they will not get all their debt back and have made provision for the non-payment of it. I am going a little further and saying that the debt is unpayable because Chase Manhattan bank cannot possess the economy of Peru or Boliva any more than anybody else could. Therefore, there comes a point at which the debt becomes unpayable.

The political consequences of attempting to impose economic models on so many Latin American countries are so catastrophic that I urge people to think carefully before they start urging policies on them that are impossible to achieve.

I am conscious of the fact that other hon. Members want to speak, and I do not want to take up too much time. However, I want to deal with central America, which is much in our thoughts at present. The conflicts there are deep-rooted and long-standing. In Nicaragua, the origins lie in the way in which the United States behaved before the second world war in the imposition of the Somoza family, and the war of liberation, which culminated in 1979 when the Sandinista revolution triumphed and the Sandinistas took over in Managua.

Since 1979 there has been nothing but a process of attack, destabilisation, economic and physical warfare and hired terrorists attacking the Government, all paid for by the United States. That has occurred largely because of President Reagan's obsession with the supposed threat to the United States of the Sandinista Government in Nicaragua. That is a bit of a hollow laugh when a small and poor country is struggling to provide its people with a health service, an education system, housing, jobs and opportunties. I do not understand how that can be a threat to the United States, unless it is the threat of an example which may be copied elsewhere in Latin America as people try to escape from the cycle of debt, poverty and deprivation.

The war that has continued since 1979 has cost the lives of thousands of people. It is ironic that the United States gives so much military aid to the Contras but refuses to give any humanitarian aid to the people of Nicaragua, other than through the Contras. The degree of interference in Nicaragua is appalling.

Mr. Ray Whitney (Wycombe): Is the hon. Gentleman aware that, in the first 18 months of the Sandinista Government, the United States, directly and through the World Bank and the American Investment bank, made available to the Nicaraguan Government more aid than they made available to the Somocista regime throughout its 19 years?

Mr. Corbyn: The Carter Administration promised substantial aid to the Sandinistas. There is doubt as to how much of that aid was delivered before Reagan took office and, in effect, prevented that aid from reaching Nicaragua. The hon. Gentleman must agree that President Reagan has been obsessed with Nicaragua since taking office and that that obsession is continuing into the dying days of his Administration.

The process of peace that has taken place in the region in the past couple of years with the Arias peace plan and the agreement that all Governments in each country in the region would negotiate with the opposition forces, be they guerrilla forces or any other form of opposition, was a significant step forward.

In Nicaragua we see the efforts of the United States at their worst. They are trying to prevent that peace process. No Government has been more open, more quick or more ready to accept the Arias peace plan than the elected Government in Managua. At this moment it is still being frustrated by the decisions and destabilisation measures of the United States. Even now, in the last moments before its recess, Congress is debating yet more proposals for a resumption of lethal aid to the Contras against the Government of Nicaragua.

Mr. Jacques Arnold: Will the hon. Gentleman explain how it helps the peace process for the Nicaraguan Government to close down the Opposition radio station and newspaper in direct contravention of what the peace process is trying to achieve?

Mr. Corbyn: In the past, the Nicaraguan Government have closed down *La Prensa*, and have now closed it down again, and have closed down Radio Catholica because they were telling absolute lies and were inciting the Contra terrorists to continue their work of maiming.

The hon. Gentleman does not seem to understand that Nicaragua has been at war for a long time. During that war, many people have been killed and all sorts of dirty operations have been undertaken. I have visited Nicaragua several times; I have met the editor of *La Prensa* and discussed these matters with him. He showed me some of the stories that had been spiked out of the paper when it was in publication. Frankly, I was not in the least surprised that some of those stories had been spiked. I also met opposition forces in Nicaragua, before the last elections there.

The fact is that we are in the process of the peace plan. The new methods of destabilisation of the past few weeks have been deliberately designed to obstruct that peace process. I hope that the British Government will do what they can to put pressure on the United States Government not to resume lethal aid to the Contras because, if they do, we are straight back to the civil war and to all the deaths that have occurred. A ceasefire is a precious thing to have achieved. I very much hope that the British Government will be prepared to do what they can on that.

Last week a delegation of us went to the American embassy to discuss these matters and we argued with Mr. Seitz, who is responsible for Latin American policy, our view that the United States should not give any lethal aid. We made strong political points.

One point that cannot be answered by the United States Administration or anybody else is that made by Father Metcalfe, the priest to the Bluefields region on the Atlantic coast, which is not an area in which the Sandinistas initially had a great deal of support, although they now have much more. I am sure that Father Metcalfe will not mind me repeating that he has wondered what he can say

[Mr. Corbyn]

to the people in his parish and region, to the mothers of the young men who have been killed by the Contras, to the relatives of those who have been murdered by the Contras, to the people who have lost their homes because of the Contras, and to the people who have had their crops destroyed by the Contras, about the obsession of a man a few thousand miles away in the White House who is so frightened of the process of liberation in Nicaragua that he finances terrorists to murder, kill and destroy.

It is incumbent on the British Government to express the point of view that they support the Arias peace plan; that they support the right of self-determination of the people of central America—but, above all, that they tell the United States to stop financing the Contras, to stop the process of destabilisation and to give Nicaragua the chance that it is seeking for itself to develop its own economy for its people, and to develop its health, education and housing services. The crime that has been perpetrated against the people of Nicaragua during the past eight years is one of the most appalling since the second world war.

Mr. David Ashby (Leicestershire, North-West): Is the hon. Gentleman saying that there is not one iota of genuine opposition to the Sandinista Government among the Contras? Is he saying that no Contras are genuinely and properly opposed to the Sandinista regime? If he is not saying that, is not the process that should be followed one of dialogue and of trying to get the two together?

Mr. Corbyn: Of course the process of opposition must be by dialogue, debate, discussion and election—all those things are possible in Nicaragua. What is not possible in Nicaragua is dialogue, debate, discussion and election if, at the same time, the richest country in the world is financing a group of terrorists to destroy that very process. That is precisely why it is essential that the British Government put all the pressure that they can on the United States to stop funding the Contras.

It is quite interesting that Amnesty International has no cases against Nicaragua at the moment. That cannot be said about very many countries. It is important to remember that the political freedoms in Nicaragua do not exist to the same degree—or any degree—in the neighbouring countries in the region.

Mr. Ashby: I agree with much that the hon. Gentleman says. I take an independent view. However, has not the unofficial human rights group in Nicaragua cited a number of instances of breaches of human rights? Are there not a number of well-documented cases of breaches of human rights in Nicaragua?

Mr. Corbyn: The unofficial human rights group had drawn attention to some cases. Some cases have been resolved and many prisoners have been released under the amnesty towards the ceasefire.

The best way to achieve peace in Nicaragua, as I said earlier—I cannot repeat this often enough—is to end the financing of the Contras so that the peace process and the dialogue can continue. That would be a spur to the peace process and the dialogue in the region as a whole. When the Minister replies, I hope that she will be able to give us some hope in that direction.

I want to refer to the British Government's attitude to Chile. Chile is a poor country. It is one of the most indebted countries in the region. The debt figure per head is $1,540. Some 35 per cent. of its population cannot eat properly. As an example of the very low wages that poor people who have work in Chile experience, I can tell the House that those on the Government's temporary work programmes receive $32·20 a month. There are very many very poor people in Chile.

Chile's recent history is among the most tragic in the region. In 1973, a Government dedicated to eradicating poverty and to the development of a democratic society was overthrown in a brutal coup. General Pinochet has the blood of thousands on his hands. He supervised the murder of Salvador Allende and of about 20,000 other people. He herded all political opposition into the stadium in 1973. Since then there has been a monetarist experiment in Chile which gave great riches to a new middle class and brought terrible poverty to many others. Chile has been through purges; many people have suffered at the hands of the secret police and have been imprisoned. Many Chileans have found refuge here or in other European countries.

Tragically, in more recent years not only have the British Government been happy to trade with General Pinochet, but they have not been as forthcoming as they should have been in condemning the many abuses of human rights. Most appalling of all, they have been prepared to sell arms to Pinochet's Government which have been used to bolster his position in the region.

The horror continues day after day. Last week there was the festival of Chile Crea. That is a festival of culture, science, education and art. During the festival, a number of students were arrested and there were allegations that the Government had tortured people. Such allegations of torture by the Government have been made by many people.

Pinochet does not believe in democracy, fair play or the rights of the Opposition. That is clear, and his record speaks for itself. He is one of the most murderous, bloodstained dictators that the continent has ever seen. I find the British Government's attitude very surprising. They are prepared to sell Pinochet arms and to concede that some democratic process is going on in Chile.

A plebiscite is due to be held later this year, but the registration forms are very expensive, and many poor people will not be able to afford to take part. There will be only one candidate.

Mr. Ashby *indicated dissent.*

Mr. Corbyn: The hon. Member for Leicestershire North-West (Mr. Ashby) shakes his head, but the fact is that poor people cannot afford to take part in the vote in the plebiscite. If the hon. Member looks at the income of the poorest people in Chile, he will begin to realise what I am talking about.

Few people have any faith that General Pinochet, the army or any of the institutions supported by General Pinochet will allow a democratic election of any sort in Chile. I do not believe that the man who murdered his way into power is about to walk out of power because the ballot box finds against him. Dictators are not usually from that mould, despite what some of the United States press might say about him.

We want to know what the British Government's attitude is towards this plebiscite. Do they plan to send any observers to find out what happens during that election? Are they observing the political scene in Chile? The crime that was perpetrated in 1973 against the people of Chile did not stop then. There are not normal political freedoms, in the sense that we understand them, in Chile. There will never be normal political freedoms in the sense that we understand them while Pinochet is in power and the army dictatorship continues. We want the return of a real democracy in Chile, but I do not believe that that is compatible with the presence of General Pinochet.

Mr. Jacques Arnold: One of the difficulties that the hon. Gentleman has in referring to the events of 1983 is in explaining why it is that overwhelmingly the people of Chile were relieved by the change of power and the overthrow of Salvador Allende, because of the disorder and the hunger that that regime brought about. One of the significant aspects of Chile was the initial strong support for the regime of General Pinochet. The hon. Gentleman cannot get away from that point. Further, in saying that a military dictator will not give way he must look at the example of Brazil and a number of other Latin American countries which have made the difficult transition from a military dictatorship to a quasi-democracy without bloodshed.

Mr. Corbyn: The hon. Gentleman has come out in his true colours—as an apologist for the murderer that Pinochet is. Only a year before Salvador Allende was murdered, his party received over 50 per cent. of the vote in the local election. Salvador Allende was elected with 33 per cent. of the vote in 1970. By 1973, in all the local elections that took place, the Unidad Popular Front was achieving more than 50 per cent. of the vote. He was murdered at that time because he was so popular, because he was attempting to nationalise foreign-owned multi-national companies and because he was redistributing wealth to the poorest people. That is why the army, the CIA and ITT moved in with a major vehicle for destabilisation.

The hon. Gentleman said that the coup was some form of popular event. I advise him to talk to the Chilean refugees who live in this country and who went through that hell of September 1973; when they saw their families shot in front of them; when they had to go to the stadium and try to get people out; when people had to hide in the Mexican embassy; and when people had to flee for their lives in fear of a Fascist dictator who had murdered an elected president in cold blood. When an elected Member of the House comes here as an apologist for that process, it is a disgrace of the highest order. I invite the hon. Gentleman to withdraw his words of apology for General Pinochet.

Mr. Arnold: I asked the hon. Gentleman to face up to the fact——

Mr. Corbyn: The hon. Gentleman is an apologist, and he knows it.

Mr. Arnold: —that the people of Chile noted the change of regime with considerable relief, because of the suffering and hunger that went before it as a result of the Allende regime. To suggest that that is some kind of apology for the undoubted breaches of human rights that occurred in that process is a completely different matter and is certainly not the case.

Mr. Corbyn: It is interesting that even now the hon. Gentleman cannot bring himself to condemn the fact that a military coup took place in 1973 and an elected president was murdered. I find it surprising that the hon. Gentleman is still not prepared to do that. If the hon. Gentleman wants to do that now, I shall happily give way to him. He does not want to. *[Interruption.]* I do not know why the hon. Member for Leicestershire, North-West finds this so funny. We are dealing with a murderer. If the hon. Member for Gravesham wants to condone it, so be it—it is on the record.

Mr. Arnold: The hon. Gentleman still refuses to——

Mr. Corbyn: Why does the hon. Gentleman not answer the point?

Mr. Arnold: I intervened on the hon. Gentleman to ask him how he explains the fact that the military regime of General Pinochet in Chile has undoubted support from the ordinary populace. That does not mean that I condone the disgraceful excesses and infringements of human rights that have occurred in that process. There is the difficult problem, which must be tackled, that the Pinochet regime —perhaps even to this day—has the support of the great mass of the Chilean people. If the hon. Gentleman does not face that, he is flying in the face of the reality of Chile.

Mr. Corbyn: The hon. Gentleman is not talking about the Chile that I understood we were debating. If the Government of General Pinochet, as the hon. Gentleman so politely calls him, are popular, why do they require such an enormous secret police? Why do they require so many political prisoners? Why are there so many Chileans in exile? Why are so many Chileans who return from exile in danger? Why are so many poeple shot on the streets? Come on—we are dealing not with a democracy but with a Fascist dictatorship. It is about time that the hon. Gentleman recognised that.

There are, of course, Ministers in the Government that the hon. Gentleman supports who have been to Chile and commended its economic policies. Presumably they are happy that 35 per cent. of the people do not have enough to eat. I hope that the Minister will be able to answer the questions that I have raised.

It is on the record that the British Government have sold ships and arms to the Chilean Government. I hope that the Government will say that there will be no more such sales. I also hope that they will say that British military forces will not use bases or any military facilities in Chile as part of the south Atlantic presence.

There is a great deal of suspicion that British forces have been using Chilean bases as part of the Falklands operation. I hope that the Minister will be able to make a clear statement that the Government condemn the violations of human rights in Chile, that there will be no further arms sales and that observers will be sent to see exactly what goes on in the plebiscite. Apparently they are not planning to do that at the moment.

3.27 am

Mr. Ray Whitney (Wycombe): I also thank my hon. Friend the Member for Gravesham (Mr. Arnold) for giving the House an opportunity, albeit at this time of the morning, to debate, after a very long interval, the affairs of Latin America.

My hon. Friend is the admirable secretary of the all-party Latin American committee, of which I have the honour to be chairman. I know that his deep knowledge of and commitment to British relationships with Latin America are profound. I hope that this debate will carry that interest forward and that we shall invigorate even more the Government's interest in furthering links between us and that continent.

I would like only to reinforce what my hon. Friend has said. Our relationships with Latin American countries are deep and long standing. They are only dimly perceived in this country, but they are remarkably alive in nearly all Latin American countries. Our forebears played a leading part in the liberation of the continent. They did, 150 or more years ago, what I believe the hon. Member for Islington, North (Mr. Corbyn) would thoroughly endorse. It is right that we should continue to take pride in the achievements of our country men and the lives that they sacrificed in the cause of Latin American independence from the Spanish empire, and encouragement from the fact that Latin Americans continue to recognise Simon Boliver, San Martin and all the other liberation heroes of the 19th century.

It is said that the tremendous commercial stake and position that we carved out towards the end of the 19th century and the first part of this century has declined so sharply. Everyone who has visited those countries knows about the railways, the public utilities and the banking systems. For example, Argentina was virtually rescued by the Baring loan in the 1840s and 1850s. All those left a legacy which we have squandered since the war.

The percentage of British trade with Latin America declined to an abysmal extent so that among the Organisation for Economic Co-operation and Development countries our exports to Latin America were at barely 2 per cent. In recent years there has been an encouraging increase, but we are still only at 3 per cent. of the exports of all OECD countries to Latin America. That is deplorable and we must rectify it. For many years I have sought in various capacities to boost that effort, but so far we have not succeeded to the extent that we should. I hope that those efforts will be redoubled or even quadrupled.

One of our problems is the poor quality of reporting in the British media and probably the western European media as a whole on the affairs of Latin and central America. That is why we have misguided views, such as those we heard from the hon. Member for Islington, North. It must be recognised that the United States held out the hand of friendship to the Sandinistas in Nicaragua, following the overthrow of the Somocista regime. The Marxist-Leninist regime of the Sandinistas rejected it and immediately installed a vast army by central American standards before there was any question of civil resistance or Contras. The Soviet Union, its allies and Cuba poured in and built up the army so that the Nicaraguan army is greater by far than the total of her neighbours' armies.

All that happened long before there was any question of action by the Contras or support for them from the United States. The repression that began when the Sandinistas took office, the impact of the so-called Turbas Divinas, and the mobs and thugs who spread revolutionary terror predated any civil war in Nicaragua. The hon. Gentleman and people like him perpetrate this complete misrepresentation of the real position in central America because of the abysmally low quality of reporting in the British media, and they should not be allowed to get away with it.

The other impact of the low standard of reporting, so much of which is extremely biased, is the poor level of understanding of what is happening. In many respects events in recent years are encouraging. Obviously, there is a debt problem and it would be wrong simply to write it off. The British Government, rightly, are taking a positive lead in helping the countries of sub-Saharan Africa with their debt relief. The countries of Latin America are of a very different order. It is true that they have severe problems, but they are greatly in advance of the really poor countries of the world in terms of per capita income, basic wealth and export earning potential. Each of the countries of Latin America has a different problem. They must be helped in terms of flexibility, and the IMF and the World Bank are providing that, but any idea of a blanket write-off would be misguided for the countries of Latin America—or, indeed, for any other developing country that looks to take loans from the international business community in the future.

I agree with the hon. Member for Islington, North that the banking system of the world was, in a sense, becoming too easy thanks to the oil glut and the effect of the Arab oil surpluses. I agree that in the 1970s both the lenders and the borrowers had their faults. I hope that we shall all learn from that. I believe that the debt situation has improved and that it should not be writ too large as a threat.

Our own business men should look at Latin America country by country. The phrase "Latin America" rolls off the tongue far too easily. We all know that there are 20 separate countries with their own traditions and pride and their own possibilities for commercial, political and cultural co-operation. There are great opportunities.

To most of us, the other aspect of relations between Britain and Latin America is the problem of the Falklands. We all recognise that it is a deeply sensitive issue. I suspect that my views are slightly different from those of my hon. Friend the Member for Gravesham. I think that the Falkland islands question looms somewhat larger in relationships with Latin America than he believes. I accept that we are talking largely about words rather than reality, but I think that there is some reality in terms of solidarity with Argentina on this issue.

We must continue to ensure that the freedom and the interests of the Falkland islanders are preserved. We should also acknowledge, however, that we are in a brittle situation and that it is not in the longer term interests of the Falkland islanders that this brittle situation should persist. It is unsatisfactory for them, for us and for the region as a whole.

I recognise that the impact of what has happened in the five or six years since the conflict has been a remarkable economic advance for the islands. However, that is a short-term perspective and before very long we must begin to look for a longer term settlement. That will require sensitivity and understanding on the part of the three communities involved—the British, the Argentines and, above all, the Falkland islanders.

The problem will not go away and the Government should realise that and accept that we cannot rest on the status quo, although we must nevertheless recognise that the interests of the islanders are paramount. In my view, they can be preserved and there are ways forward. I believe that even so we can proceed with a much more positive approach to Argentina, and I hope that the Government will take every possible opportunity to do that. The proposals made by my hon. Friend the Member for Gravesham about the possibility of more frequent visits by Ministers—in particular our right hon. Friend the Prime Minister—to leading capitals of Latin America is an admirable proposal.

I place more emphasis than does my hon. Friend the Member for Gravesham on the need to teach Spanish and Portugese, particularly Spanish, in our schools. We are now embarking on the new national core curriculum and are keen to ensure that what our children learn is relevant to their needs and the needs of Britain in the coming years. One of those is the need for greater facility in foreign languages. The most obvious and effective language, an easy one to learn, is Spanish, a delightful language to speak and one which enables the speaker to communicate with the people of 20 countries.

As we develop and produce the new curriculum, I strongly urge the Minister of State to make sure that her colleagues at the Department of Education and Science are aware of this need. Some hon. Members have been communicating with that Department on this issue and I have been far from satisfied with the response we have obtained. The Government as a whole, including the Department of Trade and Industry with its export promotion responsibilities, must do more about this matter.

It has been a long time since we debated Latin America. This is an extraordinary hour and an extraordinary time in our parliamentary timetable at which to be having this debate, but it has been valuable and I hope the Government will renew their efforts to reawaken British awareness and commercial interest in the continent of Latin America.

3.42 am

Mr. David Ashby (Leicestershire, North-West): We seldom debate foreign affairs. It is noticeable on the rare occasions when we do that the debates are dominated by what we call the great and good in the House. They make wide-ranging speeches covering the world; they deal with America, Europe, China and Japan, and they might just about deal with South America. But they never deal with central America. The reason for that is historical. We in Britain were put off taking an active part in debates on action in central and south America by the Monroe doctrine in the 19th century. Although that doctrine is said to be something of the past and is not part of our policy today—and is not part of America's foreign policy—it still looms large on the horizon and in fact forms an active part in our policies.

We do not seem to have an independent foreign policy covering central America. That poses a problem because almost every other country has such a policy. We are part of Europe and, come 1992, we shall have the Single European Act. Italy, France, Spain, Portugal and Germany have never been inhibited by the Monroe doctrine and they have policies covering central America. They are making use of their political clout to make economic headway in that and other areas. I intervened on this subject in the previous debate initiated by the hon. Member for Monklands, West (Mr. Clarke). Yet we are losing out in south America and in central America because we are stuck with this outdated Monroe doctrine as a result of our special relationship with the United States, which still treats central and south America as its own sphere of influence which the British are not permitted to enter. Yet other countries are allowed to do so. The Americans do not say to the Spanish or the Italians, "Hey, this is our area and you should not go there."

Mr. Jacques Arnold: The Monroe doctrine with which the United States said, in effect, "Don't interfere in our back yard," predated Canning's support for independence and was thus the first instance when Britain made it clear that it would not be associated with the Monroe doctrine —a figment of American wishful thinking which the rest of the world, including Britain, has never recognised.

Mr. Ashby: Britain may not have recognised it, but the spirit or idea of it has inhibited our actions, certainly since the last war. Something in the background of our special relationship with America has inhibited our participating as fully as we should. Other countries such as Italy, Germany and Spain have not been inhibited in that way. One has only to consider the aid going to central America and to Nicaragua from Italy and Germany, which are not Left-wing countries. Since 1945, Italy has been a conservative country ruled and run by the Christian democrats. yet this year, and indeed in the past couple of months, Italy has given substantial amounts of aid to Nicaragua. We have not given that kind of help and our exports are not following our economic ventures.

Mr. Whitney: I continue to be puzzled by my hon. Friend's references to the Monroe doctrine, although I share his concern at the decline in our share of exports to Latin American countries, which is now down to 3 per cent. Is he suggesting that the failure of British business men to look for markets in Latin America is governed by a 180-year-old doctrine, or is he suggesting that there is some kind of Government influence involved?

Secondly, as my hon. Friend the Minister for Overseas Development pointed out in the earlier debate, the balance of aid to Latin America is different for Italy and Germany because the vast majority of our aid goes to Commonwealth countries.

Mr. Ashby: My hon. Friend has not followed my argument. I was pointing to the total absence of any substantial independent British policy towards central America. That is the major point. Countries such as Italy also have former colonies into which they put substantial amounts of aid. It may even be that Latin countries have a tendency to put their aid into other Latin countries, but that does not detract from the fact that countries such as Spain and Italy have policies towards central America which are followed up by substantial exports. That is why they are getting the business there. Germany as well has been following up its aid with business and exports. It has made substantial inroads into central America.

I visited Nicaragua about three years ago and I hope to revisit it during the recess to see the changes that have taken place and to renew my friendships there. The

[Mr. Ashby]

revolution took place following a despicable regime which had been put in place and maintained to a large extent by the United States. There was strong resentment within the region towards the United States for that reason, and that resentment continues to this day.

It is important to remember that it was an all-party revolution, not a Sandinista revolution. When I was in Nicaragua I met a number of people whose politics are not dissimilar from my own. They are Conservatives, but they were all supporters of the revolution. I met Liberals who were strong supporters of it and had participated in it.

The problem is that after the revolution the Sandinistas went on to some extent to hijack it. They took it over as their own. In so doing, they sat upon many who had participated in the revolution. They disregarded them. At times they were to treat them quite harshly.

It was not a revolution that lacked popular support. Indeed, it had the overwhelming support of the population. I believe that the Sandinista Government have the support of the majority of the population. If there were a proper plebiscite, we would find that it is a regime that has the support of the majority. They are a Government who have been accepted de jure and de facto. They are recognised by the United Kingdom and other nations, and they should be respected as such a Government.

In 1984, for the first time for a long time, there were elections in Nicaragua. We must not take a black or white approach to Nicaragua for there are shades of grey in everything. We must not say yes or no, black or white or Stalinist or Marxist. Even within the Sandinistas there are moderate elements as well as elements far to the Left. It is a mix, and it must be regarded as such.

As I have said, in 1984 there were the first elections for a long time. The first steps were being taken towards democracy, and such steps are to be encouraged. It is rather unfortunate that the election was condemned in harsh terms by the world, including the United Kingdom Government and the American Government. It was not a fully fair election, but within limitations it was one to be accepted. We must look to the municipal elections next year and elections in the 1990s in tuning the process of democracy. If we continue to treat this and other central American countries in this way, we are not helping. We should be encouraging what is taking place, and urging the country towards more dialogue and democracy.

We must remember, for example, that a large percentage of the Nicaraguan population has suffered in the wars. I believe that a considerable element among the Contras is genuinely opposed to the Sandinista regime. We are not encouraging dialogue or getting people together by dismissing them as an odious regime. We can take a positive step. It must also be remembered that there are a number of English-speaking people in the Caribbean area. There is a strong English-speaking contingent in the Bluefields area, among the Meskita Indians, and we can be of great assistance there.

In the little time available, let me deal with the Panama. Like Nicaragua, the Panama is being treated most unhelpfully by the Americans. The leader General Noriega has behaved disgracefully, and his involvement in drug-running is well known and documented. But the attempt to destabilise the Government and get rid of him has only strengthened his position and that of his supporters. There must be a better way of achieving what we all wish to achieve than by destabilising the country to the extent that America has done. Our Government can play a part in achieving a decent, democratic Government there.

We should be taking a positive role in central America, and we should have a positive policy there.

3.57 am

Miss Joan Lestor (Eccles) *rose——*

Mr. Deputy Speaker (Mr. Harold Walker): Has the hon. Lady the leave of the House to speak again? I hear no dissent.

Miss Lestor: When we are dealing with a wide range of countries—I agree that we should consider them independently rather than grouping them together—it is very difficult to know which one, or two, to choose in the short time left to us. I should have liked to follow the hon. Member for Wycombe (Mr. Whitney), who raised the question of the Falkland islands, because I feel that we cannot leave things as they are: at some stage we must return to discussing the future of the Falklands and, indeed, Argentina. But that is a matter for another occasion. I shall confine my remarks to two countries, Chile and Nicaragua: perhaps the Minister will be able to deal with them in her reply.

I am not sure whether my information is accurate, but just before the debate began the Nicaraguan network in Washington told the Nicaraguan solidarity campaign that the Stevens-Dole amendment was being supported by the Democrats and was likely to be passed 60-40 in the Senate.

Mr. Corbyn: Disgraceful.

Miss Lestor: As my hon. Friend says, that is disgraceful. If it is true, it is possible that the package could go through before the Congressional recess on 11 August.

The package proposed in the amendment consists of $27 million to the Contras for humanitarian aid, $20 million for lethal aid and $27 million in unspecified aid including insurance for air transport, making a total of $74 million. That is regrettable. It takes no steps towards what we all want to see—a resolution of the terrible problems in Nicaragua.

It is particularly ironic that, just as the first anniversary of the central American peace accord is reached in August, and while the Sandinistas have again unilaterally declared a ceasefire, the only United States of America contribution to that progress is an aid package to the Contras. That will only continue a process from which we hoped that we had moved away. My hon. Friend the Member for Carrick, Cumnock and Doon Valley (Mr. Foulkes) recently led an all-party delegation to protest about that. It was pointed out to the United States embassy that the eight-year war has led to 50,000 deaths. The Contra leadership is now dominated by a man who openly advocates terrorist tactics.

I remind the House that the central American peace accord was a strategy for all central America. However, United States, and to some extent British, policy has emphasised the lack of compliance in Nicaragua. In contrast, to date only the Nicaraguan Government have engaged in serious negotiation with the armed opposition. Talks in El Salvador and Guatemala have long been abandoned, and death squad activity in El Salvador is now

increasing at an alarming rate. Deaths and torture have dramatically increased in Guatemala and its Government have closed down a television news station. A weekly newspaper was also forced to close after its building was set on fire.

It is odd, therefore, that of the five central American countries that have signed the accord, Nicaragua should be singled out for infringement of it. Whatever the arguments about human rights abuses, Amnesty International has no Nicaraguan cases on its records. Surely we should ask the United States to leave Nicaragua alone and ask it not to go ahead with the aid package for the Contras. It should try to make everyone comply with the principles of the central American peace accord of non-intervention. At this stage, Nicaragua should be given encouragement and support rather than subjected to sabotage.

My hon. Friend the Member for Islington, North (Mr. Corbyn) spoke about Chile and I agree with his description of its past and the present state of affairs. It now appears that the junta is getting nervous. Recent opinion polls have shown that large sections of the electorate are undecided about the plebiscite that is to take place, and that the noes may have the majority. We do not know whether that is true, but we know that the state of emergency in Chile continues and that it impedes the activities of any opposition to the junta—that is the reason for it. Access to the media, which was promised, is still not allowed.

It is obvious to me and to many other people that, in such circumstances, intimidation will occur now rather than in the final days before the election. It is essential that, from now on, monitoring is undertaken.

The junta has just announced that it will meet on 30 August to nominate its candidate. Under the constitution, that plebiscite must be held between 30 and 60 days after the nomination and the speculation is that it will take place in the first week of October.

My hon. Friend the Member for Carrick, Cumnock and Doon Valley will be part of two delegations to Chile. One is an international, pre-plebiscite delegation. The other delegation will visit Chile in election week when my hon. Friend will be accompanied by Bishop Taylor, Lord Avebury and the well-known barrister, Geoffrey Bindham. It is important that the Government should also play a part in encouraging a return to democracy in Chile. They should send observers, just as the Labour party and others intend to do, to see what is happening now and at the time of the plebiscite.

I hope that the Minister will explain what pressure the Government are exerting upon Chile to ensure that the plebiscite is fair and that it is conducted according to democratic principles. At the moment it appears that such principles will not be observed.

Until 15 years ago, Chile had a long-standing tradition of democracy. We are concerned that, when human rights violations take place, the voice of our country should be heard. Our country should send representatives to Chile to ensure that such violations do not take place and to ensure that the election is held in as free and as fair an atmosphere as possible.

I am conscious that we have had a wide-ranging debate and that many other issues could have been discussed. Although I strongly disagree with the hon. Member for Gravesham (Mr. Arnold), I am grateful that he initiated the debate. I hope that, some time in the future, the Government will take time to allow the House to debate in full the issue of Latin and central America, which could play an important role in developing other ties with the United Kingdom—particularly trading links, which are badly needed.

4.5 am

The Minister of State, Foreign and Commonwealth Affairs (Mrs. Lynda Chalker) *rose*——

Mr. Deputy Speaker (Mr. Harold Walker): Does the right hon. Lady have the leave of the House to speak again?

Hon. Members: Yes.

Mrs. Chalker: I welcome the opportunity to speak on Britain's long-standing and varied relations with Latin America. It is quite clear that there is need to explain certain aspects of policy.

I listened carefully to my hon. Friend the Member for Gravesham (Mr. Arnold) and I welcome his special role in the formation of the new all-party group on Latin America, which is important to the House. I welcome the role played by my hon. Friend the Member for Wycombe (Mr. Whitney), who is the chairman of the group.

Britain's links with Latin America go back a long way. British troops fought under the great General Bolivar in the struggle for independence from Spain. British business, through trade and investment, has played a major role in the development of almost all Latin American economies. British engineers built Latin America's lighting and water systems, its railways and its river craft. The Portuguese royal family travelled in British vessels to Brazil to escape from Napoleon and it is the clearly stated wish of the Government to build on and develop those long-standing links.

The clear trend of a return to democracy throughout the region is encouraging. It is not as fast as any of us would like, but there are now only four Latin American Governments which are not democratically elected. The British Government very much support the process of redemocratisation.

I shall come straight to the point about Chile. The national affairs of Chile attract particular public interest and excitement. It is now embarking on the democratic process by holding a plebiscite later this year. We want an orderly return to democracy. We make that clear to the Chilean Government bilaterally and with our 11 partners in Europe. The EC statement of 11 July makes absolutely clear our wish to see fair elections. We welcome the fact that there is now co-operation between the democratic opposition parties which have courageously come together in the plebiscite campaign. We do not know definitely who will be the candidate for the opposition, but it is particularly important that the plebiscite takes place in fair and open conditions. I respond to the hon. Member for Eccles (Miss Lestor) on that score.

I can tell the hon. Member for Islington, North (Mr. Corbyn) that, although we are not sending an official observer delegation to Chile, our embassy will report fully on the outcome. The registered democratic opposition can nominate its own observers and scrutineers at all polling stations, and we shall make best use of our team in Chile during the plebiscite.

Mr. Corbyn: What about registration?

Mrs. Chalker: I have only 12 minutes to finish my comments on several countries. Let me try to get them on the record.

The hon. Gentleman is right in intimating that there is a problem about registration, but it is important to note that there has been an increase in voter registration which is now more than 6·5 million people. The democratic opposition now has access to television. I do not wish to prejudge the plebiscite, but the United Nations special rapporteur has declared that the electoral machinery has been prepared in a serious and responsible manner.

We have consistently made clear our concerns about human rights in Chile. We have done so elsewhere in Latin and central America—particularly in Colombia, in the light of the recent Amnesty report. We shall continue to make sure that we take a clear public stand whenever violations of human rights occur. It is not only a matter of "He who shouts loudest." We must recognise improvements when they take place and encourage further progress. We shall condemn violence from all quarters, however it occurs—and the violation of human rights likewise.

It would be easy to spend the whole debate discussing Chile. The hon. Member for Islington, North asked me about arms sales. He knows that it has been the policy of successive British Governments not to disclose details of defence sales. We believe that Chile has a sovereign right to secure its means of defence, but we take great care not to approve the sale of items that we judge could be used for internal repression, and we shall continue so to do.

My hon. Friend the Member for Gravesham spoke a great deal about trade and investment. They should form a much more major element in our relationship with the region. The economic importance of Latin America is not always fully recognised. Latin American GNPs total more than those of the whole of Africa, the Indian sub-continent and south-east Asia combined, and we do well to remember that. Recent moves in the area to modernise economies present important opportunities for United Kingdom business. It has become a cliché that our trade performance is poor. It is now about 3 per cent. of the market in most countries again, having previously fallen to 2 per cent., but our entire trade with Latin America is only about 2 to 3 per cent. of our foreign trade. United Kingdom business men could and should do better, although our percentage share has risen over the past four years.

Latin America is now beginning to emerge from the debt crisis, although I readily admit that it is still worrying for many nations. In trade terms, however, Latin America is ripe for a more concerted export effort. I cannot stress too strongly the importance of personal contacts and of regular visits to the area. Official services are ready and glad to help. I commend the work of the Latin American trade advisory group which brings together those from Government and business who are interested in improving our economic performance there.

I must also mention the reopening of the consulate in Miami, and the British Florida chamber of commerce, which are there to assist United Kingdom trade into Latin America and the Caribbean. The DTI has held a seminar on the advantages to British companies of selling through Miami, and missions to the region are being encouraged to consider Miami in their itineraries before launching forth into Latin America.

We are seeking to offer exporters a range of services for Latin America, as for other markets, and the increasing interest of British companies, which is being reflected in the growth of market share, suggests that the service we are giving is effective. But we shall be truly effective only if—as hon. Members have said—our people can trade in the language of the countries with which they wish to trade. That means Spanish and Portuguese being spoken by our business men, let alone being taught in our schools.

Despite Latin America's problems, it is important that its potential should be made better known to investors. There is now well over $1 billion worth of investment in Brazil, where we are the fifth largest investor. A number of British companies with subsidiaries there and in Mexico and Venezuela, in which we are the third largest investor, are doing well. By expanding debt-equity swaps, we want to give a new entree into these markets. The Government are paving the way for business in Latin America by double taxation agreements and investment protection agreements. We are determined that our competitors, who have been active in Latin America in recent years, will not have the field left to them.

As hon. Members have said, debt still looms large in the popular perception of Latin America. We are trying to work with Latin American nations to solve the debt problems on a case-by-case basis. Many Latin American nations have made enormous sacrificies to meet their debt obligations. I welcome recent moves by Brazil and other countries to reach agreement with their creditors. I understand the frustrations that have been expressed in the debate, but we shall succeed in helping those countries economically only by working with them, not by simply believing that problems will go away if we ignore them. That has sometimes been the attitude of a few countries.

I shall not speak at length about the drugs industry, but one of the most worrying aspects of Latin and central America is the seamy side of their marketing of drugs. It is rather like a ghastly parody of economics that there are problems with demand and supply. If the cocaine problem is not tackled effectively, the dangers not only for south America but for the rest of the world are enormous. We shall continue to attach a high priority to combating the corrosive effects on all our societies of drug misuse and trafficking.

Many of the points made by hon. Members about drugs were too detailed to answer at this stage, but we are giving material support to Bolivia and Peru and have pledged money to the United Nations drugs law enforcement programmes to tackle the problem. We welcome the efforts being made by Latin American Governments to combat the evil of drugs. We shall attack the problem from the cultivation of the basic crop to the smuggling of it into developed country markets and its sale and consumption on the streets of our cities.

I must deal with central America, although I cannot spend long doing so. I add a serious note of caution about the position in central America, where, sadly, the peace process is barely alive. Esquipulas II offers the best hope for peace. We call on all central American Governments to redouble their efforts to implement its provisions in full, especially the conclusion of ceasefire agreements to make rapid progress towards a pluralist democracy. It is important for Europe to urge all parties to comply with their commitments, especially for democratisation. In this

context, I deplore the recent measures taken by the Nicaraguan Government in direct contravention of their Esquipulas II obligations.

Together with our EC partners, we welcome the Esquipulas II agreement, which was made in August 1987, and the Sapoa truce, which was made in March 1988. I am sorry that the regional peace process and the Nicaraguan ceasefire talks are virtually at a standstill. The peace agreement is still the best hope, and we must make progress at the various meetings of central American foreign Ministers and presidents, which will be held, as the hon. Member for Islington, North said, in August, towards a successful, peaceful, negotiated settlement of the conflict in the region. We shall continue to urge all parties to comply with their commitments.

My hon. Friend the Member for Leicestershire, North-West (Mr. Ashby) accused the Government of not having a central American policy. It would be helpful to write to him at length to outline what is going on in central America.

I was asked whether I would condemn the United States' support for the Contras. My colleagues and I have been asked that question many times of late in the House. United States' policy is a matter for the United States. We do not always agree with the United States, and that is well known. Our position is quite clear. We shall continue to advocate peaceful, negotiated solutions, not military ones. We believe that to be as right in central America as anywhere else. The problems of the region cannot be solved by armed force, and we shall continue to urge restraint on all sides. We tell the United States of our views repeatedly.

Several hon. Members have mentioned the importance of language. I commend the sterling work being done by Canning house in promoting the study of Spanish and Portuguese. However, we need more teaching of those languages in our schools. We shall continue to press our colleagues for greater attention to be paid, not just to the language training of children but to the need for teachers able to train the next generation of children.

Mr. Whitney *rose*——

Mrs. Chalker: We try to help with scholarships for Latin Americans to come to study here and some of those Latin Americans help to increase our understanding of their countries as well as increasing their understanding of our country.

I cannot go any further other than to say that the Latin American region is one of great potential. We have historical links and we want to build on and expand those links. There are opportunities for business. Much work has been done and much remains to be done. The debate has been useful in showing our recognition of the importance of the region and I hope that by the efforts of the group in which my hon. Friend the Member for Wycombe and other hon. Members are participating we shall be able to build up political and economic links between Latin America and the European Community.

Latin America is increasingly looking to Europe, and we have made it clear that we support regional integration in Latin America. We hope that the region will learn some lessons from the European experience and that there will be greater political dialogue between the European Community and the group of eight countries, which has been a recent feature of international life. There is much to be done, and at 4.21 am it is time we got on with it.

The Environment

4.21 am

Mr. Simon Hughes (Southwark and Bermondsey): It is an odd time of the day to be debating anything, either ending or beginning. However, I am glad of this opportunity to speak on the environment. This is the first debate that any member of my party has introduced under our new leadership. I hope that it is significant that the first debate opened by a Social and Liberal Democrat under that new leadership reflects two of the expressed concerns of our leader—our internationalism and our environmentalism. As my party's spokesman on the environment I am glad to have this opportunity.

I welcome the Minister on her first appearnace at the Dispatch Box. She would probably have chosen a different time and possibly a slightly fuller House. However, it is good to see her. I congratulate her sincerely on her appointment. I am a little embarrassed because I intended to write to her to congratulate her but she is on duty so quickly that I have been beaten to it.

I have to concede that I campaigned briefly against the Minister's election in the year after I was elected. I had mixed thoughts about the result, but I am glad that she can sit on her party's Benches and has been promoted and taken on her new responsibility. I am sure that she will do a good job.

It is said that, as yet, the structure of the Government does not allow us to have a department of environmental protection with the same overview of environmental matters as the Treasury has of economic matters. I received today the list of ministerial responsibilities under the new regime since the Government reshuffle earlier this week. It is to be noted, and a little regretted, that so far there has not been a clear division of ministerial responsibilities with appropriate titles, similar to the previous way, which I thought was an improvement in the way in which the Department was structured after the general election. Ministers were then described as being the Minister of Environment, Countryside and Water, the Minister for Housing and Planning, or the Minister for Local Government. Perhaps that will come but it is not yet the way in which Ministers are described. At the moment the Under-Secretary of State has a rather anomalous group of responsibilities in her Department. I hope that in future the Department can be structured in a way that will allow the importance of environmental protection to be recognised in its form as well as in its subject matter and work.

What I propose to do is to air a range of issues of which I notified the Minister's office. Without wanting today to have a particular go at the Government, I want to put these issues on the political agenda. The Library has told me that there has not been a general debate on international environmental matters since the 1979 general election. That is sad. I hope that one objective that we may achieve in the coming years is more often to debate our international environmental responsibility.

The title of the debate that I submitted originally to the Table Office was "The Global Environmental Crisis." In the way that the Table Office does, that title was slightly amended to be more objective and less judgmental. But it is the growing awareness of the environmental crisis internationally which has prompted me to seek this debate, and it has prompted many people in the country and throughout the world—not just politicians—to raise it recently as a much more important issue on the political agenda. That is a good thing. It is good that our international and environmental responsibilities are now seen to be politically important.

I confirm that by referring to the words of the Prince of Wales when he presented the European Year of the Environment awards at Merchant Taylors' hall in the City of London in March this year. He said:

"When we read that over the next 60 years, if we go on as we are doing, something like a third of all the forms of life at present living on this planet may be extinct, can we feel anything but a kind of cosmic horror?

We were facing a serious and urgent challenge on a huge international scale.

Too many political leaders still gave far more attention to the obvious costs of action than to the concealed costs of inaction."

That recognition represented an increasing awareness among the establishment in this country, as well as a general concern. An opinion poll, conducted last year by MORI on behalf of Friends of the Earth and the World Wildlife Fund, showed that 81 per cent. of respondents felt that the Government should give a much higher priority to protecting the environment. I am sure that that is a correct analysis of people's concerns and that that number will increase rather than decrease.

I am aware that this subject crosses departmental boundaries. Clearly, it involves the Foreign and Commonwealth Office and the overseas aid and development portfolio. The two areas are very much interrelated because the way in which we contribute economically in trade and in patterns of trade within the international community affects environmental matters. Therefore, it is difficult in simplistic terms to analyse how much we spend on environmental protection because some of that expenditure is hidden rather than explicit. However, I should point out that there is concern, and I ask the Minister to take on board and recognise the fact that we have been cutting our expenditure on important environmental matters in certain key areas, which is to be regretted.

In reply to a parliamentary question last month the Secretary of State for the Environment gave total figures for the Department's expenditure on environmental research and protection. The figures were then broken down into expenditure relating to radioactive waste, air pollution, water and countryside. The figures supplied cover 1981-82 to the present day.

In real terms, expenditure on radioactive waste and water matters in connection with environmental research and protection has been reduced. It has been reduced for radioactive waste from £11·9 million in 1981-82 to £9·9 million in 1987-88. Expenditure on water has been reduced from £4·5 million to £3·5 million over the same period. We have seen attacks on science and research funding and there have been staff cuts at the Natural Environment Research Council. An article appeared in *The Guardian* on 6 July anticipating large-scale cuts in oceanographic research. The Minister should recognise that there is scientific and professional concern that we are not spending what we should to ensure that Britain is sufficiently aware of what is happening. We are not investing sufficiently in research on environmental matters. I hope that that position will be reversed.

Everyone who has considered this subject believes that expenditure today can be very helpful in preventing

enormous waste and destruction tomorrow. Unless we are prepared to make that financial public expenditure commitment, the Government's contribution to the strategy of dealing with environmental destruction and despoliation will be considerably impaired.

One of the encouraging aspects of the past few years has been the amount of international concern about this issue. The Minister will be aware that there are two seminal works on the subject—one more general, the other more specific. I am referring to the Brandt and the Brundtland reports.

I want to refer to some of the comments made by the Prime Minister of Norway. Mrs. Gro Harlem Brundtland was appointed by the United Nations to chair the World Commission on Environment and Development at the end of 1983. Her statements are trite in a way, but they deserve to be repeated because they reinforce the conclusion that, after taking evidence of the international nature of the problem, there is a need to deal with the issues internationally. Mrs. Brundtland states:

"one of the most fundamental of our findings is that the problems we face are global in nature and that they defy solution by local or even national endeavour . . . There is now a growing recognition that much of today's development is not sustainable. Rather it is based on a squandering of our 'biological capital'; soil, forests, animal and plant species, even air and water. It consumes its own ecological foundations. The result has been devastating, as was bluntly stated by Bjornulf Kristiansen, a speaker at the Commission's Oslo meeting."

He said:

"The most serious threat facing the world today, apart from nuclear war, is a global ecological crisis."

Mrs. Brundtland continues:

"Many of today's economic, monetary and trade policies as well as energy, agriculture, forestry and human settlement policies, induce and reinforce non-sustainable development patterns and practices. Widespread poverty and concentrated affluence conspire to increase environmental degradation, to increase pressures on resources and to increase inequities that lead to global instability and political tension. Indeed, poverty can be said to be one of the most important environmental problems."

One witness who gave evidence in Ottawa said:

"Poverty is self-sustaining, a self-generating process that compels people to live in a way which destroys valuable soils, water resources and forests. Much of the environmental degradation is the result of the desperate search by the poor and the landless for such basic needs as fuel, food and water. Small farmers are held responsible for environmental destruction as if they had a choice of resources to depend on for their livelihood, when they really don't. In the context of basic survival, today's needs tend to overshadow consideration for the environmental future. It is poverty that is responsible for the destruction of resources, not the poor."

It is not that the poor are unaware of the problem. I met an impressive man last year, who was the leader or representative of a group in north India, mainly women, who have taken to protecting their trees by hugging them, and they received one of the Right Livelihood awards. They did this to protect what is both necessary for their ecology and their community. They have taken direct action and it has been successful.

Mrs. Brundtland continued:

"We are beginning to learn that there are better ways to manage our small planet than to 'react and cure': we must anticipate and prevent. This may sound simple and obvious, but it requires that we recognise environment and development as essential and mutually reinforcing goals. We must learn that we cannot separate the two. The environment is not a luxury, nor can it be postponed until later. Environmental considerations must be built into development at the earliest possible stage, otherwise it will not be economically sustainable. The world—and especially the Third world—is littered with cases of 'development-without-environment', often aid-supported, that have literally consumed their own bases—in soil, in water and other resources—and ended up reducing rather than increasing the future economic potential of their countries.

Finally, it requires that we begin to take a much broader view of environmental policy, seeing it not just as air, water, waste and noise policy, but more importantly as resource, energy, agricultural and transportation policy, and development assistance, trade and economic policy".

I started there because that was the conclusion by the representatives of the international community, which made it clear that we must look at the subject as a whole. Of course, the subject is made up of component parts, and I now want to deal with them in turn.

Land is a delicate, finite and precious resource. Every year we lose more than 200,000 sq km of land to desert. That happens because of erosion, over-grazing, over-ploughing, poor irrigation and bad farming techniques generally. According to United Nations estimates, every 10 years the Sahara desert alone spreads by the size of Czechoslovakia. History shows repeatedly how more ancient civilisations have been destroyed by desertification than by conquest. There are some very telling examples. The Sahel comprised what once were great civilisations. Timbuktu, which we are all taught in primary education was the end of the earth—the furthest and most remote place one could ever get to—was the centre of a vast empire at the time of the Roman empire. The Lebanon was once famous for its magnificent cedars, which it exported around the world, and were used to build the royal palaces of Egypt, of Babylon and of Assyria, but there are not many of those left. The pattern has been changed as much by ecological as by military or economic change. It is important to recognise that.

By straining land in the short term, the very agricultural practices that produce the food surpluses, which enable civilisations to flourish, starve them in the long term. For example, the area along the southern Mediterranean—all the African shoreline—used to produce the wheat for the Roman empire. Now there is very little production of wheat or other crops; it is very much desert with, I suppose, some tourism thrown in. A once grain-rich area has given way to sand.

Desertification is a major international problem. The expansion of deserts has been far more rapid in the past few decades. We must realise that other countries feel the consequences of that process. The whole international economic order is affected.

Global warming is recognised as a cause of desert expansion. There was an interesting conference in Toronto at the end of June. It considered, even if not for the first time, the climatological crisis that will arise if we continue to interfere with the atmosphere. It is estimated that the earth's temperature has risen by between 0·3 and 0·7 deg. C this century. If the temperature were to decrease by only 4 per cent. on average, we would be into a new ice age. An increase of 0·3 per cent. is therefore enormously significant.

The greenhouse effect contributes to global warming. The concept is now well known and it is the subject of parliamentary questions. It was debated in the other place earlier today. Its causes are becoming clearer. They are gases and pollutants which are used by man, the felling and burning of tropical rain forests and additional carbon dioxide, methane and fluoridated hydrocarbons and other gases which accumulate in the atmosphere, preventing

[Mr. Simon Hughes]

heat from bouncing back into space. The climatological consequences of that are potentially devastating. Many cities could be flooded within 50 or 60 years. If Antarctica were to melt just a little, we would face enormous problems, and they would be the result of our own activity.

There are simplistic ways in which to tackle the problem, such as dealing with CFCs and gas pollution produced privately and by industry, but we must co-operate internationally to anticipate and deal with the potential crisis.

We destroy the earth's resources substantially through soil erosion. Scientists estimate that soil which can have taken between 200 and 120,000 years to form can be lost in a few years. We know from our own gardens that topsoil is vulnerable. It is much needed and can be "lost" easily. Topsoil only 2 cm thick can be removed by wind or water power, but farming throughout the world depends on it. Soil was previously able to form at the same rate as it was eroded, but the pace of erosion now outstrips reformation alarmingly.

The wind erodes soil when natural vegetation cover is removed. Man might cut down forest or overgraze grassland, as happened in the American dustbowl disaster of the 1930s. The soil was lost because of the interests of short-term production. A very odd phenomenon resulted. About 350 million tonnes of fertile topsoil were blown up into a giant cloud, even producing an eclipse. The topsoil was lost and it has taken half a century to recover from that climatological aberration. The retention of soil for farming in this country and north America, particularly in times when, as now, there is a substantial drought, has an important effect. Farming and incentives to farming that we encourage through our aid programme and collectively in the international community are influential.

The third form of effect on the land is water erosion. When the natural protective cover of trees and plants disappears on hills and mountains topsoil can be lost permanently. I gather that 25 million tonnes of soil is washed away by rains, rivers and flood waters every year. Next week I hope to go to north Wales where my family comes from. I have been there in August most years of my life, when there is normally a substantial amount of heavy rain. We see in a small way exactly what happens. It is a major problem and we cannot prevent the effect of water eroding the soil, but we can work to anticipate how we recover it. That is particularly necessary in the poorest areas of the world where only one phenomenal period of heavy rain can eliminate the potential for farming for a long time.

Since farming began in the United States it is estimated that one third of the topsoil across the nation has been lost. The present escalating demand for firewood and forest land for cultivation will mean that increasing quantities of our precious land—I say that as a world citizen—will be exposed to degradation. There are deserts in every continent bordered by vast areas of semi-arid land that support huge populations, many of which are in danger of becoming deserts. We tend to forget that the semi-arid areas provide the world with 20 per cent. of food supplies and support 850 million people. If in 60 years' time they become desert, 20 per cent. of our food capacity will be lost, probably when there is an increase in population making demands on those areas.

At present, 230 million people are directly threatened by desertification, and by the year 2000, only 12 years hence, one third of the world's present farm land will be desert. That is a frightening statistic. Although that figure is reached using the scientifically agreed definition of a desert, which is according to its aridity, we will have a major problem which we must help to solve.

At the same time we must recognise that if we farm over-intensively, whether in our country or by contributing through chemicals and so on to farming abroad, and if we interfere in the soil composition either by using chemical fertilisers, lime, humus and other ways of dealing with the acidity of the soil, or by over-intensive ploughing we shall damage irreversibly an element that we need. The issue is simple: man and woman cannot survive without food, and the earth produces it.

The second most fundamental element of our environment is air. The older citizens of this city will be more aware than most people of air pollution at its worst. I remember that when I was young we had smog the like of which we no longer see. I was brought up in what is now Greater Manchester and we certainly had some pretty grim autums and winters. Such conditions caused thousands of deaths at the turn of the century and before.

We have done better than that. The Clean Air Act 1956 was the beginning of recent legislation on these matters. Unfortunately, however, we do not yet have clean air. A number of very effective lobbying organisations are still trying to ensure not only that legislation is introduced but that when Acts such as the Control of Pollution Act 1974 are passed their provisions are implemented. Sadly, in the past decade or so there have been substantial delays between the enactment of legislation on this subject and its implementation.

We have moved pollution away from the centres of population. We have made chimneys taller and thus spared ourselves, but the pollution that we create now gets sent further afield—western and northern Europe have been the principal and doubtful "beneficiaries". It is a well known fact—we have debated the question quite often—that the forests and lakes of Europe and north America are being damaged, in some cases irreversibly, by the pollution that still comes from our manufacturing processes.

The obvious enemies are sulphur dioxide and nitrous oxides, which are discharged mainly by power station chimneys. They mix in the atmosphere to produce acid rain, which may fall near or further afield. Every time I drive up the M4 I look to see the state of the trees on either side of the motorway. People have examined, much more carefully than I, the terrible effects of acid rain in Germany and Scandinavia. The Scandinavians are still very cross with us—that is putting it nicely—because we still cause destruction to their fish stocks, lakes, fjords and trees.

Approximately 40 million tonnes of airborne sulphur dioxide were still being produced in Europe a few years ago—the equivalent of 66,000 30-tonne lorries full of sulphur being dumped directly into the lakes of Europe. In southern Norway, more than 13,000 sq km of lakes are nearly empty of fish. It is estimated that 50 per cent. of trees in West Germany are affected.

Unfortunately, we are still the dirty man of Europe. We still produce nearly 30 million tonnes of airborne sulphur every year—two thirds of which is blown away to Scandinavia. It is estimated that of the 610,000 tonnes of

sulphur deposited in Sweden every year, only about a sixth comes from there; the rest is imported, not by invitation but because we expel it.

I am sad to say that we have dragged our feet. I know that at the Environment Council in June we reached an agreement to reduce our sulphur emissions by the turn of the century. It was not as much as Opposition Members —and indeed some Conservative Members—had hoped for. Our refusal to join the 30 per cent. club is sad, and there is substantial room for improvement. I hope that the Minister will take a specific interest in that. The Department has done some good work but when it comes to the crunch we are one of the countries in Europe that has been most reluctant to agree to strict enforcement of control on our pollution.

Similarly, the ozone layer is threatened by air pollution produced on an everyday basis by our chemical processes. That produces not only harmful effects on the environment, but health consequences, too. Skin cancer is on the increase and it is suggested that a factor of 2 to 3 per cent. of its increase is attributable to the damage to the ozone layer. Ultraviolet radiation is causing increased eye disease and there are also effects on marine ecosystems, plant life, crop and timber yields and so on.

The third major element is water, the third resource in the world under threat. Our planet's waters have been contaminated by waste deposited in the sea by rivers, streams, pipelines and dumping vessels. I heard on "Today in Parliament" at 11.30, over five hours ago, about a debate in the other place in which they discussed how, when we talked to the French about sewage deposits, we suggested that perhaps the answer was to make our pipelines longer. Apparently the French replied that if we built longer pipes, sending out our sewage nearer to them, they would build longer pipes, too, and we would get similar coming back. That is clearly not the way to proceed.

With the threat of unclean, environmentally unacceptable beaches—which have now to be notified; we have all had experience of visiting beaches which are foul, to put it mildly—we often have foul water. There are hazards of a short-term nature, and concern has also been expressed recently about the aluminium contamination of water in Britain. Water pollution is bad for the health of this and every other nation, bringing bacteria, viruses and other disease-causing effects. The pollutants are mainly industrial by-products—apart from sewage—and we have a responsibility to deal with this issue to protect curselves, marine and bird life.

About 3·5 million tonnes of oil is dumped into the sea every year. The Mediterranean contains an enormous amount of sewage, 85 per cent. of it untreated. If people knew that as they waited at Gatwick airport they might decide it was not such a desirable and healthy place to go for their often delayed summer holiday. Mussels and oysters are becoming increasingly unsafe to eat. Typhoid, paratyphoid, dysentery, polio, viral hepatitis and food poisoning are common. They are caused, among other things, by poisoned and contaminated water.

In addition to contaminating the water, the world has been guilty of over-fishing and over-drawing from the marine environment. We cannot afford to do that. For example, nearly one third of Peru's foreign exchange is earned through anchovy fishing. In 1974, it fished 9 million tonnes of anchovies, and the world was grateful for the fish. But those methods allowed woefully insufficient time for the anchovies to breed and replenish themselves, and by 1980 the catch had gone down to 1 million tonnes. One could give many other examples worldwide. That sort of foolish over-exploitation causes many problems.

In Britain and elsewhere we rely on estuaries for the breeding of fish, crustaceans, and so on. But that is where pollution is at its greatest because of chemical, industrial and sewage pollution. As a result, many of the world's estuaries are dying. We cannot put off dealing with that problem.

If, as estimated, there is a 200 to 300 per cent. increase in water withdrawals in the world by the end of the century, we must make sure that the water that is withdrawn is suitable and is used properly. At the same time, the water table is falling in many key agricultural areas. Much water needed for irrigation is being lost through over-evaporation and transpiration and is not available for re-use.

If we do not have water we will perish. Earth, air and water are the staple elements of our planet's life-support system. With them we have the basis for food and shelter. With them we can accommodate, feed and provide the resources for the increasing global population, and that is one of the remaining issues with which the world must deal.

Although world population growth has been slowing since 1965 to 1970, the highest annual increase, averaging 87 million extra people per year, will be between 1990 and 2010. The global total has already passed 5 billion and may reach more than 10 billion before it starts to level out—and 96 per cent. of that growth will be in the developing countries. Regional trends are highly diverse. Birth rates remain high in Africa and western Asia, growing at 3 per cent. and 2·8 per cent. per year respectively. In Latin America and south Asia the figures are 2·3 per cent. and 2·2 per cent. and have started to slow down. In east Asia, the increase has slowed considerably. Rapid population growth, coupled with wasteful or polluting technologies and lifestyles, are depleting the planet's finite resources and jeopardising our life-support systems of soil, forest and climate. We can produce enough food to feed future populations, but in 73 of the 122 developing countries food production has fallen behind population growth, arable land per person is declining and in many countries population exceeds, or soon will exceed, the carrying capacity of the land. That is a vital area to address in terms of political pressure.

Aid for population programmes is still inadequate. Since 1965, when the total was just £10,000, it has grown to £1 million and then to £15·5 million, but population programmes receive only 1 per cent. of total British aid compared with an OECD average of 1·5 per cent. British bilateral aid is patchy, with one or two projects accounting for a large chunk of the aid. In 1984 and 1985, two thirds of our bilateral aid for population programmes went to one project in Orissa state in India. The whole of sub-Saharan Africa received an average of only £235,000 per year from us in the three years from 1982 to 1985—the price of a four-bedroom flat in Hampstead, as was pointed out in a briefing note that we all received, and scarcely an acceptable contribution on a world scale from the British Government.

Aid for population programmes drawing attention to the dangers of failure to act and concern that we give more

[Mr. Simon Hughes]

in overseas aid must be among the key elements of our strategy in the future. We must anticipate the greater problems that lie ahead.

We must educate to ensure that our young people are aware of their global responsibility and invest in that education. We must encourage the idea that an environmental approach to all our activities, particularly our economic activity, is a prerequisite for a sustainable economy for us all in this and every other country. Those are the principles of environmental awareness that we must follow.

I end as I began, with a quotation from Mrs. Brundtland:

"We stand at a crossroads. In the past the pursuit of 'progress' in the industrialised West was founded on four dominant beliefs: that people dominate the earth, that they are masters of their destiny, that the world is vast and unlimited, and that history is a process of advancement, with every problem solvable. But we must now call into question those four basic beliefs. Instead, the essential basis for sustainable development must be the concern for the world's environment. We need individual participation at all levels in the care of the planet and, based on this deeper and wider perception of the basis of life and human activity, we need profound changes in economic and social attitudes. If the planet is to be saved, this is a battle we are all called on to fight."

Government and Parliament have a responsibility to respond to an international call such as that. Whether it is food, energy, arms, defence, aid or education policy, we have a collective responsibility to ensure that all activity of Government makes for a much greater priority to be attached to it. I believe that the international community is now ready to be pushed into taking that sort of action. I hope that our Government will make international environment and responsibility a major political priority. I trust that we shall see that reflected in an increasing amount of attention being given to these matters in this place, and increasing resources given to them on behalf of the people of Britain, both in energy and in money.

5.5 am

The Parliamentary Under-Secretary of State for the Environment (Mrs. Virginia Bottomley): It is a privilege and an honour to reply to the debate, which has centred on environmental issues. I thank the hon. Member for Southwark and Bermondsey (Mr. Hughes) for raising such important questions, and especially for presenting his remarks in such a thoughtful, detailed and well-informed fashion. I thank him for his kind remarks about my appointment. I have taken an interest in our environment throughout my career, and it is an exciting challenge to tackle the many problems that remain to be solved.

The Government's environment record is a good one. One of the first papers that I read this week was the Department's recent publication that is entitled "Protecting Your Environment". This excellent guide, which understandably had to be reprinted to meet public demand, sets out succinctly and convincingly the Government's policy for environmental protection. Our basic principles stress the need to base decisions on the best available scientific foundation, to adopt a preventive approach and when necessary take precautionary measures, to set realistic goals for the quality of the environment, and to take full account of technical feasibility and economic considerations. We want to ensure that the public are aware of the state of our environment and that their feelings are reflected in our policies, which are designed to develop the concept of the best practicable environmental option. We have published today a consultation paper on integrated pollution control.

We recognise the international dimension to so many environmental problems, and welcome the fact that the hon. Member for Southwark and Bermondsey has chosen to focus on this aspect of the subject. We play our full part in finding international remedies.

I am especially keen to work more closely with the many environmental groups that have done so much to raise the profile of environment matters, and with the press and the journalists who keep the public better informed and more enlightened about the vital importance of developing policies for the environment worldwide.

I am looking forward to working with my noble Friend Lord Caithness, the Minister of State, who has already proved his commitment to the environmental cause as well as showing his great skills as an international negotiator. The hon. Member for Southwark and Bermondsey referred to some confusion about the roles of various individuals. My noble Friend will still lead on this subject, but I am pleased to say that I shall be speaking on environmental protection in this place.

I hope that the House will join me in paying a tribute to my hon. Friend the Under-Secretary of State with responsibilities for sport. He has shown his understanding and persuasive abilities in this place when discussing these important topics.

I pay a personal tribute to my hon. Friend the Member for Broxbourne (Mrs. Roe). She is a much valued parliamentary colleague whose concern for rural housing, the provision of low-cost houses and protecting villages has greatly impressed the House. Her personal commitment to and support of the housing association movement is well known to us all in this place and to many outside.

Before dealing with the issues that particularly affect the Department, I shall deal briefly with some of the arguments that the hon. Member for Southwark and Bermondsey was advancing, which is some respects should more properly be raised by the hon. Member for Inverness, Nairn and Lochaber (Sir R. Johnston). Having had the privilege to serve my hon. Friend the Minister for Overseas Development earlier in my time here, I am well aware of the serious commitment the Overseas Development Administration has to many of the topics raised by the hon. Member for Southwark and Bermondsey. He rightly pointed out the extent to which these subjects cross departmental boundaries. One of the privileges of being a Back Bencher that I am quite sad to lose is that of being able to stroll freely across Departments. I shall now have to observe the convention and confine my remarks primarily to my own Department.

I refer the hon. Gentleman to the ODA booklet "The Environment and the British Aid Programme". The questions of preservation of soil, desertification and tropical rain forests were all given keen attention during the International Year of the Environment, and I think that he will find there a good deal of useful material. The tackling of population expansion, which the hon. Gentleman also mentioned, is also a matter primarily for the Overseas Development Minister. The Government accept the grave threat to sustainable development posed by rapidly increasing populations in many poorer parts of

the world, and we share many of the Brundtland report's conclusions about giving more priority to support for primary health care activities, with special emphasis on mother-and-child health and family planning.

I hope that the hon. Gentleman will agree that my right hon. Friend the Minister of Agriculture, Fisheries and Food has taken great steps to spell out the need for reform of the common agricultural policy, and to consider the overproduction in Europe and the United States in the context of the shortages in many Third world countries. Again I refer the hon. Gentleman to the work done by the Minister for Overseas Development on the reform of food aid, in which he has given priority to these issues.

Let me return to the responsibilities more directly in my Department, particularly the international aspects. Clearly the European Community plays a central role. More and more legislation in Brussels affects our lives here. Important EC legislation helps to govern the quality of the air we breathe, the water we drink, the seas and the life that surround us, and even our stratosphere. This is not an imposition; the Government are positively committed to improving the quality of our environment. We see Europe as a challenge, an opportunity to share our concern for the environment and to work together with others on transboundary issues to shape the environmental future for our own children and those of our fellow Europeans.

A major event last year was the European Year of the Environment, which was a great success in the United Kingdom. Our national committee included many non-governmental bodies, which played a crucial role. It mounted an energetic publicity campaign which stimulated hundreds of first-rate, small-scale environmental projects. This is relevant to what was said by the hon. Gentleman in relation to the increasing public awareness, interest and concern about these important subjects.

The European Year closed on 31 March, and its momentum led within three months to European Ministers agreeing far-reaching measures to protect the environment. The positive role played by the United Kingdom in helping to bring about those achievements was of major significance.

On 16 June, after four and a half years of difficult negotiations, the Environment Council reached agreement on the large combustion plants directive: a phased programme of reductions in emissions of sulphur dioxide and nitrogen oxide from power stations and other large combustion plants. Even more far-reaching was the agreement to ratify and implement the Montreal protocol. I am glad to say that we also reached agreements in December 1987 and June this year on pollution standards for medium and small cars. June also saw the virtual conclusion of negotiations on amendments to the so-called Seveso directive, which deals with major accident hazards from chemical stores. We also made substantial progress on a draft directive aimed at controlling waste from the titanium dioxide industry. We hope it will be possible to sew up an agreement in November.

The hon. Gentleman rightly spoke about the importance of air pollution. Many thought that the Clean Air Act 1956 would solve the problem. It was a major improvement and a recognition of the need, but of course new threats have emerged and developed since then.

This year we have reached historic agreements on the means to protect the quality of our air. I thought that the hon. Member for Southwark and Bermondsey was a little mean-spirited in his description of the country's performance in that regard.

The outstanding agreement is the large combustion plants directive. The directive commits the United Kingdom to reducing 1980 levels of sulphur dioxide emissions from existing large combustion plants by 20 per cent. by 1993, by 40 per cent. by 1995 and by 60 per cent. by 2003; and nitrogen oxide emissions by 15 per cent. by 1993 and by 30 per cent. by 1998, again from a 1980 base.

Before that agreement, the United Kingdom was already undertaking a substantial £1 billion programme to reduce acid emissions, the second largest in Europe. That included plans to retrofit three major Central Electricty Generating Board coal-fired power stations with flue gas desulphurisation equipment and to fit all major CEGB coal-fired power stations with low-nitrogen oxide burners. All new coal-fired power stations are required to have technology to control acid emissions. The commitment undertaken in the directive will require substantial further effort over and above existing programmes.

The United Kingdom can be proud of the major part it is playing in reducing European emissions and helping to bring about an end to the acid rain problem.

Vehicle emissions are another important component of acid rain. They are set to fall substantially following the Government's intention to introduce, as soon as practicable, tighter new exhaust emission standards agreed in the European Community in December. Still further progress was made last month when EC Environment Ministers reached agreement, subject to views of the European Parliament, on the further tightening of standards for small cars.

I would like to point out the great strides we have made in promoting sales of unleaded petrol. The Government are fully committed to the introduction of unleaded petrol. My first engagement in the Department was to chair the unleaded petrol group, which brings together the oil and motor industries, consumers and Government Departments to work for a smooth transition to the new fuel. In this year's Budget the tax differential in favour of unleaded petrol increased significantly. Unleaded fuel is now being sold some 6p per gallon below the price of 4-star and comfortably below that of 2-star. There are powerful incentives for motorists to save money and contribute to a cleaner environment.

I urge all motorists to find out whether their cars can use unleaded petrol—two thirds of cars can run on unleaded petrol, although some may need a minor adjustment. Some 1,520 petrol stations now sell unleaded petrol—a significant improvement, but there is still further to go. Environmental groups, fuel companies, vehicle manufacturers and the media, working with the Government, must urgently get the message across to more motorists.

Global issues need global solutions. Protection of the ozone layer is a classic instance of the need for action on an international basis. The United Kingdom was one of the first countries—and the first EC member state—to ratify the Vienna convention on the protection of the ozone layer, which we understand is due to enter into force in September. We played an active part in negotiating the Montreal protocol to control emissions of chlorofluorocarbons. That protocol is a landmark in international

[Mrs. Virginia Bottomley]

co-operation on the environment. It is the first international measure designed to prevent rather than cure a global environmental problem.

Our first priority—shared with our partners in the EC—is to ensure that the protocol enters into force on 1 January 1989 as planned and with the widest possible participation. On 16 June the Council of Environment Ministers agreed, in principle, proposals for the Community and for all the members states to ratify the protocol before the end of this year and to implement it in the EC. Clearly, however, in the light of important scientific developments since Montreal we must look ahead to the process of assessment and review of the protocol measures. British scientists, economists and officials will be participating fully in the international meetings in the Netherlands in October which will set the process in hand. By then the Department's stratospheric ozone review group will have published its second report, which will give a full assessment of the latest evidence. In the meantime, we have noted carefully the warning in the executive summary of the group's report issued last month about the need to strengthen the protocol. The Environment Council, on 16 June, gave a clear political signal in its resolution on the ozone layer about the importance of going beyond Montreal and calling for further measures on a voluntary basis to reduce the use of CFCs and halons to the maximum possible extent.

The hon. Gentleman mentioned research. I can assure him that the NERC changes will not affect research on stratospheric ozone. The United Kingdom has a strong programme of stratospheric ozone research. British scientists were involved in the Antarctic campaign last September, and will be involved in the Arctic programme next January. The Department supports this and other work and keeps in close touch with the results of other United Kingdom research programmes, principally the Meteorological Office, NERC and SERC, collectively amounting to some £2 million a year. The United Kingdom has taken the initiative in bringing together research programme managers from EC and EFTA countries to discuss how stratospheric ozone research in Europe should be co-ordinated. Progress on that front has been encouraging.

The protocol provides a stimulus to research into alternatives. The two United Kingdom producers are actively engaged in research and development work to find substitutes and have joined an international consortium to speed their commercial development.

We are all well aware of the importance of the issue of climate change, raised by the hon. Gentleman. As my noble Friend said in a message to last month's conference on the changing atmosphere in Toronto, the principle of sustainable development faces possibly its greatest challenge in man-made climate change. Its causes and effects pose difficult and challenging problems which can be solved only internationally. There are great uncertainties, but it is important to reduce them as quickly as possible by co-ordinated international research. The Department has increased spending on climate change research and has commissioned a study of possible impacts of climate change on the natural environment of the United Kingdom. There are measures which can be taken now on the basis of our current understanding. For example, CFCs and halons are also greenhouse gases. The Montreal measure will not only benefit the ozone layer but reduce the greenhouse effect.

Turning to the water environment, the hon. Gentleman mentioned bathing and the water round our beaches. I can assure him that £70 million a year is already being spent on cleaning up bathing water, and it is likely that the amount will increase.

The United Kingdom has a history of international collaboration on measures to prevent and remedy pollution. Because of our island location, we do not suffer from the problems of transboundary pollution in the same way as many of our continental partners situated on major international waterways. As a result, much of our collaborative effort has been directed towards combating pollution of the seas.

The North sea is one area in which the United Kingdom has taken a series of initiatives, together with its North sea partners, to make a real contribution towards protecting and improving the international environment. Last November my right hon. Friend the Secretary of State hosted the second international conference on protection of the North sea. Its successful outcome was internationally acknowledged.

The United Kingdom has taken an early lead in implementing the conference declaration. In February the Department published a detailed guidance note on implementation addressed to water authorities, industry and other relevant agencies throughout the United Kingdom. Today we are publishing our detailed proposals for reduction of dangeous substance inputs to rivers. Earlier in the year a new programme of regular aerial surveillance was launched by the Department of Transort to monitor illegal discharges by ships and offshore installations. In March, we hosted the inaugural meeting of the international scientific task force and, together with the Ministry of Agriculture, Fisheries and Food, Her Majesty's Inspectorate of Pollution is now reviewing licences for liquid industrial waste dumping and incineration.

Mr. Allan Rogers (Rhondda): Will the hon. Lady give an undertaking that, in investigating those issues, her Department will look closely at the development of "the polluter pays" principle so that the people who pollute our waterways pay for the cleaning up?

Mrs. Bottomley: I thank the hon. Gentleman for making that point. I shall certainly consider it with some urgency. I know that it is the subject of discussion, and I shall provide him with a more considered response.

Many of the issues raised tonight—and many more—are covered in depth in the Government's response produced this week to the report of the World Commission on Environment and Development, "Our Common Future". The hon. Member for Southwark and Bermondsey paid his repects to and drew at length on the Brundtland report. Like his, the Government's response recognises the importance of a variety of Departments. They include the Foreign and Commonwealth Office, the ODA, the Department of Trade and Industry, the Ministry of Agriculture, Fisheries and Food, the Department of Energy, the DHSS—or rather the DH and the DSS—the Ministry of Defence, the Scottish, Welsh and Northern Ireland Offices, the Treasury and indeed the Prime Minister herself——

Mr. Simon Hughes: That shows better than anything I could have said the importance of giving one Department a cross-departmental lead responsibility in environmental matters. In economic affairs, it is impossible for Departments to run their finances without someone from the Treasury taking charge. Clearly, as the Minister's list shows, the same needs to apply to environmental matters. Either her Department or another newly created one needs to be in charge and bring others together.

Mrs. Bottomley: An excellent response has been produced by co-ordination and collaboration, and I find no fault or difficulty in that. I commend that response to the hon. Gentleman and other hon. Members.

When the Brundtland report was launched in April 1987 the Government gave it an immediate and warm welcome. The response, "Our Common Future", examines the report point by point in more than 60 pages of detailed commentary. It demonstrates where we have already made progress in putting the message of the report in hand. For example, all Government Departments have been asked to examine their policies against it. But the report also recognises that many of the problems identified will require concerted international efforts if they are to be resolved. We are working hard through various international organisations, notably the Organisation for Economic Co-operation and Development and the United Nations environment programme, to follow up the report. And we have seconded a senior Government official to help the Norwegian Government with their preparations for a major follow-up conference in 1990 to review progress. Copies of "Our Perspective" have already been placed in the Library. I would thoroughly commend it as suitable holiday reading for all hon. Members.

As my right hon. Friend the Prime Minister says in her foreword, "Our Perspective" describes where we stand in the United Kingdom. It is intended to inform interested organisations and individuals at home, and to stimulate further international consideration of the report, notably within the OECD and the United Nations. I see it also as a contribution to the ministerial conference which the Norwegian Government will hold in 1990 to examine what progress we have made to safeguard "Our Common Future".

The Prime Minister's remarks underline the nature of the task that lies ahead. Considerable and encouraging progress has already been made on international measures to protect the environment. The Government have played a leading and constructive role in a series of important achievements. In the past year the Montreal protocol was signed and the successful second North sea conference held. In the past few months agreement has been reached on the European Community large combustion plants directive and the Luxembourg vehicle emissions package. The EC ratification and implementation of the Montreal protocol, the endorsement of the Brundtland report by the Toronto economic summit and the publication of our formal response to it have all occurred in recent months. Only a consultation paper on integrated pollution control was published.

I congratulate the hon. Member for Southwark and Bermondsey on raising this vital subject, and I assure him that I shall give serious consideration to what he said. This has been an excellent opportunity to emphasise the great importance that the Government attach to improving and preserving the environment, to highlight a number of the Government's achievements in this crucial area and to point the way ahead.

National Health Service (Lottery)

5.28 am*

Mr. Simon Burns (Chelmsford): I should like to take this opportunity to thank my hon. Friend the Parliamentary Under-Secretary of State for Health for being present at this unearthly hour of the morning, and I apologise for subjecting her to being present for the debate.

The purpose of the debate is not to discuss the funding of the National Health Service but to consider the effect of lotteries in providing additional funds for the Health Service.

People in this country enjoy a justifiably high reputation for giving generously to good causes. The Charities Aid Foundation has calculated that in 1985 there were 160,000 charities in England and Wales, which raised over £12·5 billion for good causes. Just under 9 per cent. of those charities raised money for health-related services.

Since that time, there have been the phenomena of Live Aid, telethons, the Wishing Well appeal and other fund-raising events, which have shown that we are a nation of givers.

In addition to high-profile fund-raising activities, there are different forms of local lotteries across the country, which raise money for a variety of richly deserving causes, including the Health Service.

In my constituency there is the excellent Friends of St. John's hospital, which is always raising funds through lotteries, even if they are called raffles. Two children's intensive-care cots were provided for the local hospital by people in the area joining together and raising money through fetes, collections and raffles.

In the past two months, Trafford health authority has announced the setting up of a local lottery to help finance a breast cancer screening unit, a coronary-prevention programme and a scheme to help children who have special emotional and learning needs. All these enterprises are laudable, but I wonder whether the prizes of dinner for two in an air-raid shelter, a trip down the Manchester sewers or a day at an operating theatre as an observer will appeal to everyone.

While raffles and other fund-raising activities have gone from strength to strength in the past few years, the same cannot be said of local lotteries, which are allowed under the Lotteries and Amusements Act 1976. They must be registered with the Gaming Board for Great Britain or a local authority.

In the past five years, total ticket sales and the number of lotteries have declined dramatically. In 1983-84 there were 4,045 local lotteries registered with the Gaming Board for Great Britain, with total ticket sales of £40·4 million. In 1987-88 the number had fallen to 1,401 lotteries, with total ticket sales of £21·5 million. These figures show a decline of 76 per cent. and 59 per cent., respectively, over that period.

Why have local lotteries, which raise additional funds for the Health Service and other good causes, fallen off so much while other forms of fund raising have done so well? The answer is that local lotteries are too small to generate enough interest to be a success. They dilute their effects, and the maximum prize money of £2,000 or £6,000 is too low. The fact that draws do not take place for weeks or months after the sale of tickets dilutes excitement, anticipation and interest to the point where most people will not participate.

I am convinced that the answer to that problem, which would bring immense additional financial benefit to the National Health Service, would be a single, legal national lottery. It would help to avoid the problems that we have seen over the past few months. Organisations, such as the National hospital trust, have tried to get round existing lotteries laws and jump the gun. With a properly run national lottery, over £1 billion could be raised for the National Health Service by the fourth year of its operation. That money could be spent on extra equipment, such as kidney machines, computerised axial tomographic scans, intensive-care cots or on providing more accommodation so that parents could live near the hospital when their children had to stay in hospital for more than a day.

A national lottery would harness the deep-seated generosity of the British public and provide invaluable additional funds in a way that would create excitement and the reassurance that if somebody does not win a prize they will at least have the satisfaction of knowing that the money they have lost has gone to a good cause. In that way they would not feel that it was money down the drain. The vast majority of British people are not puritanical. They enjoy a harmless flutter and would warmly welcome an initiative of this nature.

It must not be forgotten that this idea is not particularly new or revolutionary. The first lottery in England was in 1569 to raise money for repairing the Cinque ports and our sea defences.

Mr. Peter Thurnham (Bolton, North-East): Will my hon. Friend accept that there is more than one sort of lottery in life? Some people are born healthy and others are born unhealthy. Some people who are born with handicaps are able to go to court and come out with £500,000 if they can blame somebody else, but some people come out with nothing and have to carry a burden all their life. Any source of funds that can help the Health Service is of help to them.

Mr. Burns: I am grateful to my hon. Friend for his remarks and I agree with him.

Since 1569 and the first lottery, lotteries have been used to raise money to bring fresh water to London and for the ransom of English slaves in Tunis in 1660. Just as the Sydney opera house was built by lottery money, so was the British museum in the 1750s, with the first prize being a staggering £200,000.

Since then, supporters of national lotteries have ranged from the 1978 Royal Commission on gambling, which concluded that

"there should be a single national lottery for good causes",

to Sir Robin Day, who wrote in *The Times* in May 1987 that he believed that a national lottery

"would greatly enrich the national life . . . and be hugely popular into the bargain."

Even the noble Lord Lord Jenkins of Hillhead, in a previous incarnation as Labour's Chancellor of the Exchequer in the 1960s, supported the idea of a national lottery.

A national lottery for the Health Service would be monopolistic. That might seem odd coming from someone like myself who believes passionately in deregulation. However, I have reached that conclusion because all the

advice I have been given from directors of state lotteries in New Jersey, Massachusetts, Rhode Island and Ontario is that it is only with a single lottery that the scheme will work properly because it will not dilute the effect of maximising the fund-raising initiative or general excitement generated, which is so important to the success of a lottery.

There should be an independent monitoring body such as the Gaming Board to ensure that the lottery was being run properly and honestly. The day-to-day running of a national lottery should be put out to private tender and a private company with proven expertise in that business should be appointed to run it. The successful company should have a fixed-term contract of three or five years and should provide all the money to finance the investment in setting up the system, as is done in the United States.

I would envisage 20,000 to 25,000 retail outlets using the latest technology and all linked to a central computer to register the sale of tickets and make the draw. Points of sale would be in existing retail outlets such as tobacconists, confectioners, newsagents, supermarkets, corner shops and sub-post offices. It would provide a valuable additional income for those outlets. In certain instances it may help to keep open small shops in rural areas.

There would be a series of games costing either 50p or £1 and would include lotto, which has proved to be so popular in newspapers such as *The Sun*, and instant games. The lotto games would be drawn daily and weekly with a number of smaller prizes and one large prize at the top of the pyramid. If the large prize was not won, it would be rolled over to the next draw and in that way substantial prizes could be won. Again, that would contribute to the publicity of the scheme and would help generate excitement and encourage people to buy tickets.

Lotto, which is used in some of our national newspapers, and the football pools show that people are attracted by the idea of being able to win a substantial sum of money in one go. Looking at the money that would then go to the National Health Service, the costs would break down as follows. Operating and advertising would initially be no more than 15 per cent. of the total sales revenue per year. That figure should and could be reduced to between 8 and 10 per cent. once the lottery is firmly established. Prize money would be 50 per cent. of sales revenue and the money that would go to the National Health Service would start at 35 per cent. of sales revenue in the first year and rise to 40 per cent. by the fifth year.

The example of other countries—we are the only country in Western Europe that does not have a national lottery—suggests that by the fourth year of operations a British national lottery could raise £1 billion for the Health Service on a total sales revenue of £2·8 billion. That figure is arrived at by projecting the revenue for the Health Service of £246 million in the first year on a sales revenue of £703 million; of £564 million in the second year on a sales revenue of £1·6 billion; and of £836 million in the third year on a sales revenue of £2·2 billion.

If hon. Members doubt those figures, I suggest that they examine the sales revenues that have been generated in other countries. In Spain, in 1986, the sales revenue was £3·5 billion; in the 22 states in America that have lotteries it was £7·3 billion; and the story is similar in France, West Germany and Australia. With that sort of money being created, the Great Ormond street Wishing Well appeal could have received its money in two weeks and Peter Pan's profits could have been used for further items of expenditure in that hospital.

The other issue at stake is that when 1992 arrives and we have a European internal market I understand that there will be nothing to stop lottery tickets from France, Spain, West Germany or anywhere else in the Community being sold legally in this country. If there is no lottery here for the National Health Service or any other good cause, the people who buy those tickets in this country in the hope of winning a prize will be contributing their money to some foreign good cause rather than to one in this country. In my view, that would be a grave error.

I should now like to deal briefly with those critics who claim that a national lottery for the Health Service would encourage gambling or take money from existing fund-raising activities. I accept that there are people who have serious misgivings about gambling, but I wonder how many take part in lotteries when they go to their local church fete, their Conservative garden party, their SLD Chablis and Brie do, or their Labour fund-raising functions. All such functions hold raffles to raise money. It is the most elementary form of lottery in this country, but nobody raises a hair because in the view of the people attending the money is going to a good cause. To my mind, a national lottery for the Health Service would come in the same bracket.

Similarly, people will claim that a national lottery would deter other fund-raising activities. That is true but only with regard to the football pool companies. Over a number of years, their revenue would decline because the number of people who play the football pools would decline correspondingly as they bought tickets in the national lottery instead. Football pools are, to all intents and purposes, a national lottery, but with the difference that, although they pay taxes to the Treasury and donate about £16 million to the football clubs, any profits that they make go into the companies' coffers. Surely that money would be better going to the Health Service. Perhaps there should be a system that complements the football pools with a lottery. People would then have a choice between the two.

Some people also fear that a national lottery would deprive existing charities of funds. I do not share that fear, nor do many charity organisations and organisers with whom I have discussed this. They also believe that a national lottery would simply complement the existing system and in some ways would help the charities because, by encouraging people to give money to good causes, they would be encouraged to give money to a local charity as well. The experience in Massachusetts and Ontario shows that charities do not lose out by the presence of a national lottery.

There is also an argument that the Treasury would try to get its hands on the money and absorb it into general public expenditure. That is a too cynical view of the Treasury and how it behaves. The Treasury would not behave like that, because it would consider the experience in other countries where treasuries or exchequers do not poach the money.

If people are worried that the Treasury would hover over the money like a vulture waiting to grab it, the money can be denied to the Treasury if it is never given to it. The money could be placed in a separate fund, organised by the great and the good who have experience of running charities or of the health care sector. Local hospitals could

[Mr. Burns]

contact them directly with appeals for money or equipment and hospitals that met the criteria could receive money.

Lotteries have a role to play in providing additional funds for the Health Service. I believe that a single national lottery would fulfil that role, providing a great deal of money for the Health Service and an immeasurable amount of fun for millions of people who would welcome the idea by supporting it and buying the tickets. They would ensure that it was the success that I passionately believe it would be.

5.46 am

Mr. Peter Thurnham (Bolton, North-East): I congratulate my hon. Friend the Member for Chelmsford (Mr. Burns) on his good fortune in being drawn in the ballot in such a position that his debate has been reached. I also applied for a place in this debate and was drawn at No. 16. However, it is unlikely that I shall be reached.

I welcome all sources of additional funds for the National Health Service. My hon. Friend the Member for Chelmsford made an excellent case for a major lottery. I believe that a large national lottery could stimulate the collection of funds in small local lotteries. However, some people feel that a large national lottery would draw funds away from small local lotteries which have always done so much to raise funds for local hospitals.

In Bolton a great deal of money has been raised for equipment for the local hospitals and for the larger hospitals in the region, such as the Christies hospital for cancer in Manchester. Such small local lotteries could well be stimulated by general interest in a larger lottery for the Health Service.

I welcome the introduction of another source of funds for the Health Service, because health itself is a lottery. The point that I made to my hon. Friend the Member for Chelmsford earlier is that it is all a matter of luck. Some people are born with good health and some without it. Some 2 per cent. of children are born with a registrable handicap. Scientists have said that cancer is, in many cases, a purely random process. It is all a matter of chance whether some of us will suffer from a disease that will kill us while others will live.

About one child in 50 is born with a registrable handicap. Of those, a further one in 50 has a major handicap which presents massive problems to the family when the child is born. Many of the children fail to survive, but with modern medicinal methods increasing numbers survive to become adults. Parents may have been able to cope with young children, but as they grow old they struggle desperately to manage youngsters who may grow physically into adults, but have severe mental handicaps.

If parents cannot manage, their children may have to go into a National Health hospital or into some other institution, or be adopted or fostered by other families who are able to cope. I draw attention to an appeal for funds by the British Agencies for Adoption and Fostering, which says that it costs £2,000 to find new parents for each severely handicapped child. It is appealing for an extra £50,000 during 1988 to meet the increasing demand for its services. Perhaps that is the sort of cause that could benefit from the moneys raised in a national lottery.

Bolton has a better record than most both for care in the community and for the fostering and adoption of not only healthy, but handicapped children. It has been chosen as a pilot area for care in the community.

I should like to address my remarks to the funding of this aspect of the Health Service which would benefit from the moneys raised in a lottery. Care in the community has been the Government's policy for 25 years, but it still causes a great deal of confusion. I was surprised to read that that confusion exists not only in the minds of the public, but in the minds of mandarins. *New Society* of 18 September 1987 stated that a former DHSS permanent secretary apparently said to his staff:

"If you are not confused about community care, it shows you are not thinking clearly."

I felt then that I had, perhaps, been thinking clearly about this subject all along.

As I said, Bolton has been chosen as a pilot area for care in the community policies. Families who live in the area feel that there is good statutory provision up to the age of 19, but after that there is a cliff edge with little beyond. The families say that they need good respite care so that they can cope for part of the time themselves with the confidence that their handicapped young adult is being properly cared for during the rest of the week.

In Bolton I helped to carry out a survey of families with handicapped children over the age of 19. That showed that many of them are unhappy with the services available to them. If respite care was more readily available, many parents feel that the respite homes could become more permanent homes as their children become older and they themselves reach the end of their lives.

In my constituency some of the most desperate cases that I have come across fall into that category. I have encouraged parents to form a handicapped action group, and I have helped them to prepare a survey of their needs. After interviews with some 40 carers with very severely handicapped children—that includes people who may have the minds of children, but have the bodies of 30 or 40-year-olds—it was clear that there was a need for much improved services.

My hon. Friend the Member for Chelmsford will be aware of the Audit Commission's report and the Griffiths report, which first reflected the tension which inevitably exists between individuals, the Health Service and other providers in the local area and central Government.

We would all like to know what the Government's response will be to the Griffiths report on care in the community. I hope that the Government will make clear which Minister has responsibility for care in the community, especially after the division of the Department of Health and Social Security.

Madam Deputy Speaker (Miss Betty Boothroyd): I appreciate the hon. Gentleman's interest in the subject, but at the same time I feel that he is poaching on another hon. Member's debate. If he relates his remarks much more to funding the National Health Service rather than to care in the community, I will hear him out. I ask him to try to relate his comments much more to the subject before us.

Mr. Thurnham: I am grateful for your clarification, Madam Deputy Speaker.

More funding is needed for Health Service provision in this area. The feeling that there is insufficient funding, and of uncertainty about how it is to be provided, has led to

confusion about provision for the mentally ill and those who suffer from some mental disorder. There is confusion nationally as well. Funds must be allocated properly.

If additional funds were made available through a lottery, perhaps they could be used to smooth out the difficulties caused by funding by different local departments. The division of the Department of Health and Social Security may add to the confusion. I do not know whether responsibility for care in the community will lie with the Department of Health or with the Department of Social Security, the address of which may now be known as the DOSS house. Perhaps my hon. Friend the Minister has not been able to establish which is responsible in the short time that the two Departments have been established.

No doubt my hon. Friend the Minister will be able to tell us how funds that are made available nationally will be divided between the two Departments. Griffiths said that the problem is essentially local. His solution is to give greater responsibility to local authorities. I take a different view, and ask the Government to carry out a full audit of every area in the country to assess how each area is coping. The audit could be carried out by the Social Services Inspectorate or the Audit Commission, or perhaps both, but the SSI will have to be beefed up for such a task.

I have heard good reports of both bodies, so both could make a contribution. The Government have not said when the Disabled Persons (Services, Consultation and Representation) Act 1986 will be implemented in full. Reports, especially by the SSI, will be needed on sections 7 and 11 when they are implemented. Section 8 has already been implemented. It would be nice to know what advice my right hon. Friend the Secretary of State is to give to local authorities on services that should be provided for the carers.

The survey which has been conducted in my constituency shows considerable dissatisfaction with services provided by the health authority and others. One of the worries is that if someone who suffers from a severe mental disorder is to go to one of the new neighbourhood network homes, he or she must first go to one of the local large mental institutions such as Brockhall or Calderstones to qualify for funds to come out again into a neighbourhood network home. That is bureaucratic nonsense. We must provide for people to go straight from their own family home to a neighbourhood network home without the nightmare of two moves and going into a large institution, which the family will have struggled all their lives to prevent the child from entering. That was one cause of concern.

Another was the fact that a child with a mental disorder could go to Pendlebury children's hospital, but from the age of 19 could not be seen locally and would have to go to a mental health institution to be provided with the necessary drugs or whatever. Great anxiety was expressed in the interviews, and perhaps I may write to my hon. Friend and tell her of the anxieties brought to my attention so that she can be aware of local feelings.

Without taking up further time, I conclude by again thanking my hon. Friend the Member for Chelmsford for affording me time in his debate to draw the attention of the House and the public to some of the problems in this sector of the NHS which could be eased considerably if additional funds were provided by a lottery. I hope that it would be sufficiently flexible to sort out some of the difficult areas in the care-in-the community policy where the bureaucratic nightmare of the provision of funds between all the Departments involved could be overcome by the discretion which could be exercised by the trustees of a large lottery-funded provision.

6.1 am

The Parliamentary Under-Secretary of State for Health (Mrs. Edwina Currie): This has proved to be an interesting end to a lively week for this Minister and I am grateful to my hon. Friend the Member for Chelmsford (Mr. Burns) for offering us, in a well informed and argued speech, this opportunity for considering once again some of the possible alternative forms of funding for the National Health Service. My hon. Friend will realise that policy on lotteries is a matter for my right hon. Friend the Home Secretary, and I shall ensure that he is aware of the points that have been made today.

My hon. Friend the Member for Bolton, North-East (Mr. Thurnham) did me the courtesy earlier today of discussing some of these matters with me and I hope that he will accept that at present I should like to note his thoughtful remarks. I know that he will send the fruits of some of his research in Bolton to me and I look forward to it. I take his point about exactly how the allocation of responsibilities for aspects of community care will be met, and I assure him that the announcement of ministerial responsibility will be made in due course.

My hon. Friend the Member for Chelmsford mentioned some of the lotteries in the United States. A great deal of research work has gone into this. There is a strong tradition there because some of the earliest English public lotteries were run to support the new colonies. I think that the earliest was for Jamestown, Virginia. Contrary to some of the ecclesiastical history in this country, the colonists in America relied heavily on lotteries to support their churches, which were among the primary beneficiaries. There were a number of other good causes and many of those lotteries trace their history back to that time.

At roughly the same time, European Governments seized on lotteries as sources of new money. Official lotteries were started in the Netherlands in 1726, in Denmark in 1754, in Spain in 1763 and so on, and some of these lotteries are continuing. By the mid-1800s Government lotteries were falling prey to abuse and fraud, as was everything else at that time. Licensing procedures and communications were simply inadequate to the task of ensuring the integrity of the games. Profits were diverted to middle men and to pay bribes, so that the money flowing through to the designated beneficiaries was no longer sufficient to make the operation worthwhile. Therefore, by 1900 there were virtually no official lotteries in the English-speaking world, although they continued unbroken in many parts of Europe. That is why there is such a diversity of experience now between us and Europe.

Today Government lotteries are big business and represent important sources of money to many countries. Governments around the world use lottery profits to the benefit of good causes or to enlarge their general fund. Of all the countries in the developed world, not just western Europe, only the United Kingdom is without a national lottery.

My hon. Friend mentioned some countries in detail. Many people come across the glossy promotions which they give to their national lotteries and think that we

[Mrs. Edwina Currie]

should do something similar. They do not realise the cost of prizes and promotion. Administration in some established lotteries usually consumes a large proportion of the takings—sometimes as much as 60 per cent. The net benefit is comparatively modest.

Apart from that, such schemes do not enjoy consistent support. After the first year or so people tend to lose interest and new incentives must be devised to try to maintain support.

I have a little experience of lotteries myself. When I was a councillor in Birmingham, we tried to take the opportunity presented to us by a local lottery, which went very successfully for a while. A substantial sum was raised in the city. However, as with other local lotteries, after a couple of years interest dropped away and so did the money. Fairly rapidly, the administrative costs started to swallow a much larger proportion of the money that was being offered by Birmingham citizens.

My hon. Friend will know that a Royal Commission on gambling reported in 1978. It concluded that it would be inappropriate to use a national lottery to help fund services such as the NHS which have a statutory source of funding. I hope that my hon. Friend will forgive me if some of my remarks, which will show some sympathy for the report, seem a little negative. We always welcome additional ideas, especially for more money for the National Health Service. I suspect, however that a national lottery for the Health Service would neither produce the net return nor be as trouble free as my hon. Friend seems to claim.

Even if the entire estimated net yield from a national lottery were devoted to the National Health Service it would probably continue to contribute only a tiny percentage to the costs of running the service. All sorts of figures have been bandied around, but given that the National Health Service is costing about £23·5 billion a year to run now, we could not expect a lottery to provide more than a tiny percentage. There would also be considerable problems in allocating this comparatively small sum to provide any worthwhile addition to normal funding, with no guarantee of a steady income.

My hon. Friend mentioned the question of European Community countries selling lottery tickets here. However, he should be aware that our legal advice is that the development of the European Community's internal market cannot be used by other countries to set up a national lottery in this country. The Lotteries and Amusements Act 1976 does not permit a national lottery and other countries cannot escape that. I refer my hon. Friend to the answer given by my hon. Friend the Minister of State, Home Office on 8 July:

"There are no measures in the single market programme at present specifically relating to lotteries and, in their absence, the controls which United Kingdom law places on lotteries would not appear to be affected."—[*Official Report*, 8 July 1988: Vol. 136, c. *765*.]

Mr. Burns: I fully understand my hon. Friend's point, but does she not accept that, although European countries could not set up a national lottery in this country, after 1992 there would be nothing to stop them selling tickets in this country for their own lotteries back home in France, Germany or Spain?

Mrs. Currie: As I said a few moments ago, that is a policy matter for my right hon. Friend the Home Secretary. I understand that it is not legal to sell such lottery tickets and that no change of the law is proposed in 1992. If my hon. Friend will allow me, I shall ensure that my colleagues in the Home Office have their attention drawn to this point. They will be able to give him a more substantive answer than I can.

In the debate on the report of the Royal Commission on 29 October, most of those who spoke were firmly against the idea of a national lottery because of the difficulties that they mentioned of control and bureaucracy and especially because it would take money away from local voluntary effort. Although attitudes have shifted somewhat, those remain our concerns.

There is a genuine fear that money might be diverted from the existing fund-raising effort for local good causes. The Health Services Act 1980 gave health authorities the power to raise money locally, but its provisions did not extend to local lotteries. In 1986-87, the most recent year for which I have figures, the fund-raising activities by the health authorities generated about £3 million, but that was only a small proportion of all their charitable income, which totals nearly £117 million, much of it from legacies and other such sources.

Large sums of money can be, and are being, raised for health care through fund-raising activities and there is no doubt that the success of one-off appeals for funds—for example, the Great Ormond street appeal, which is proving to be very successful—or by national charities is to be commended and welcomed. But that is no indication of how successful a national lottery might be, whether it was organised by the Government or, as my hon. Friend wisely suggested, by some outside body.

Charitable appeals seek unconditional donations and may be only an annual event or, as in the case of Great Ormond street, an event of a generation. A national lottery would be much more frequent, would have to run for a number of years, and would appeal mainly to gambling motives. We are genuinely concerned about the effect that a national lottery would have on many voluntary and charitable groups who do much good work to raise money locally for NHS hospitals.

These people work to low overheads and are mostly volunteers. By choosing a specific fund-raising target, such as the purchase of an advanced piece of equipment, they attract considerable support from the local community. We would not want to see that support undermined by some counteraction, such as a national lottery with its conversely small net return.

I suspect that my hon. Friend's letter dated 30 March 1988 to the present Secretary of State for Social Security recognised this problem, for he wrote saying that

"such a measure . . . would help to harness the existing local charitable fund-raising activities".

I am not sure what he thought he meant by "harness", but there is at least a slight suspicion that it might mean "compete" or "detract from." One must be aware that that danger would need to be dealt with.

The other side of the issue is that some money could possibly be diverted from other forms of gambling, such as betting or bingo. That may be regarded as a thoroughly desirable change, but the NHS and national Exchequer do rather well out of the tax revenue from gambling; in Britain in 1986-87 it amounted to almost £800 million. The pools alone yield about £250 million in tax a year. A switch

in gambling habits to support a national lottery could cause the Government to lose as much or more in taxation as it might receive from a lottery.

Some careful calculations on this have been done and they show that the lottery would not be starting from scratch. We are already getting a great deal of money from the gambling habits of the British people and we would be wary of challenging that behaviour in too dramatic or drastic a way for fear that we might end up losing more than we gained.

We feel that these fears are genuine. For example, an article in *The Economist* of 9 July 1988 pointed out that bingo clubs felt that they had suffered badly from the introduction of newspaper bingo. Meanwhile, in Spain the national lottery suffered when the gambling laws there were liberalised. That too was pointed out in an article published on 16 January 1988 in *The Economist*, which seems to take a close interest in these issues. I notice that some of the reforms in Spain did not turn out to be quite what the Spanish Government intended.

The Spanish spend about £13 billion a year on gambling, half of which goes through slot machines. Recently they have tried to reform some of their lottery legislation. For example, says the article, they have a

"normal diet of three lotteries a week. One of these is the Primitivo, introduced by the Government three years ago as a supposedly simpler and easier-to-play lottery. However, Mr. Carlos Solchaga"—

my opposite number there—

"the economy minister, recently admitted on national radio that he did not know how to fill in a Primitivo lottery form."

So it could not have been quite that easy. The Catalonian Government started two lotteries of their own last year and intend to use some of the money to help finance the Barcelona Olympic games in 1992.

They found in Spain on the restoration of democracy in 1977 that the liberalised gambling laws presented gamblers with a feast of choices, and one result was that the lottery income was damaged. If it works one way, we suspect that it might work the other way as well and that if one were to promote lotteries heavily some of the other income which we already get from other forms of gambling might be damaged. I think that my right hon. Friend the Chancellor would be unwilling to forgo much of the £800 million currently raised from such sources.

We have said many times, and we remain of the view, that we wish to encourage the long-standing tradition of charitable support for the National Health Service. Such support is often aimed at specific goals such as research into or treatment of particular conditions or the provision of improved facilities or new equipment for a particular hospital, and such effort is extremely effective. In that sense, therefore, we should recognise that the money currently coming in from gambling is already being spent on kidney machines, CAT scanners, parents' accommodation and so on, but we would always encourage and wish to benefit from the enthusiasm, interest and inspiration of local people who wish to express their appreciation of the work of the Health Service by raising money locally. I have been involved in such activities both as a local citizen and as chairman of a health authority and it is very valuable indeed. I often wish that those who object to such activities realised how much personal satisfaction the people involved obtain. It often helps bereaved people to express their appreciation and assuage their grief in this entirely laudable way. We must also take into account the fact that by its very nature income from lotteries is unpredictable and thus not always conducive to the system of longer-term service planning that we are trying to improve in the National Health Service.

My hon. Friend the Member for Chelmsford wrote to my right hon. Friend the present Secretary of State for Social Security asking for lotteries to be considered as part of the review of the National Health Service. He should be aware that lotteries are being discussed rather more broadly by colleagues and if there is anything new to be said about our views it will be said in due course.

I am grateful to my hon. Friend for raising the subject today and to my hon. Friend the Member for Bolton, North-East for setting out once again his thoughtful views on care in the community for people with mental handicap. We shall take the views expressed by both my hon. Friends very seriously and will hope to make progress.

Royal Naval Armaments Depots (Milford Haven and Trecwn)

6.17 am

Mr. Nicholas Bennett (Pembroke): I rise to speak on a matter of great concern to my constituency and to many people in the adjoining constituency of Ceredigion and Pembroke, North—the future of the two Royal Naval armaments depots at Milford Haven and Trecwn. The debate is of great importance to my constituents because the Milford depot in my constituency is one of the largest employers in the area. It is thus a matter of vital concern that the future of the depot should be resolved as quickly as possible so that we know where we are going in terms of employment in the area.

I begin by paying tribute to my hon. Friend the Parliamentary Under-Secretary of State for the Armed Forces, who is present at this ungodly hour of the morning and who, throughout all the discussions that I have had with the Ministry, has shown great courtesy and concern about the future of the two depots. He visited both depots about two months ago, and all the employees there are grateful for his promise to have further meetings with them now that the report has been published.

I pay tribute to the work of the two depots. Their work for national defence since 1939 has been invaluable and their work at very short notice in stocking the task force for the Falklands campaign should be on record for people in the town to note.

I also pay tribute to the staff of the Milford depot, whom I know quite well, and in particular to three gentlemen who have been leaders of the work force—Peter Sizer, chairman of the joint union action committee who took over from George Noden, the previous chairman, and the local official of the Transport and General Workers Union, Mr. Danny Fellowes. I hope that it will not be the kiss of death for Mr. Fellowes' career in the TGWU when I say that he has acted in a most responsible and intelligent way throughout all the discussions about the future of the depot. He is representing the men in an exemplary manner. He has been giving them invaluable advice on the best course of action that they should take.

The report has been awaited for a considerable time. In a letter to me on 20 July 1987, shortly after I was elected the Member for Pembroke, my hon. Friend the Minister said that he hoped that the unclassified consultative document would be issued later in the year. That statement was repeated to the hon. Member for Ceredigion and Pembroke, North (Mr. Howells) in a letter of 3 September from the Ministry of Defence. Yet we had to wait until July of this year for a report which was commissioned in 1986, a report which has been eagerly awaited by the people of Milford Haven.

What do we get? We have a seven-page, double-space typescript, which could have been written during a day. I accept, of course, that the research would have taken longer than that. It has taken the gestation period of an elephant to produce a mouse. The report leaves unanswered far more questions than it attempts to answer. It is somewhat surprising that it has taken so long to produce a report that lacks so much detail. I have made numerous attempts to raise the matter by tabling questions. I have raised the matter twice in debates. The first occasion was on 28 October 1987 during the Defence Estimates debate, when I said:

> "I appreciate that any inquiry or review into the future of those depots must start from the position of their importance to the future defence of the country. It is important that there is a role for the mine depot—ensuring that we have conventional mines for the Royal Navy for use in our waters for defensive purposes.—[*Official Report*, 28 October 1987; Vol. 121, c. 368.]

I asked my hon Friend the Minister to take into account also the important social and economic consequences for the depot and the town of Milford Haven. The town has 30 per cent. unemployment. If the depot were to close, or to be transferred, the effect on the town would be dramatic.

I raised the matter again during the St. David's day debate on 2 March. I said then that there was considerable concern in Milford Haven about the depot, which employs nearly 300 people. I explained that there was great concern about the future of the depot and that I hoped there would be an early decision. Having seen the report, I am none the wiser about what the Ministry of Defence hopes will stem from its publication.

I return to the background in 1986, when the report was commissioned. The study for the Ministry of Defence was at that time to be conducted by a Mr. John Glover, an official of the Royal Naval Supply Transport Service, which manages the depot. The terms were as follows:

> "*(a)* to review the current and future tasks, organisation and staffing of the RN Armament depots at Trecwn and Milford Haven and to determine how the depots' tasks can be achieved most economically and effectively.
>
> *(b)* to consider the implications of any changes that may be necessary, and to recommend how they should be achieved and over what time scale."

The foreword added:

> "The study will need to cover the possibility of concentrating tasks at Trecwn and reducing or closing facilities at Milford Haven, but other options will also be fully examined and there can be no foregone conclusions about the outcome. Ministers will of course take the eventual decision on the basis of all relevant factors."

I suggest that one of the most important things that needs to be taken into account is the impact on local employment at Milford Haven. A report issued by the local authority's steering committee in November 1986 observes that the majority of employees at the Milford Haven depot live within the former jobcentre area. The benefits from employment are localised, and if the depot were to close there would be the worst possible scenario.

The local area of Milford will feel the brunt of closure. When I asked how many are employed at Milford—a figure that I thought would have been in the report, but is not—I was told that the information was not yet available and would be supplied later. I must therefore fall back on the figures given in the local authority's report, which showed that, of the then 285 people employed at the depot, 231, or 81 per cent., lived in Milford Haven itself. The implications for Milford Haven are therefore very important. The report points out that the jobs are predominantly male jobs, and will be difficult to replace. A high proportion of them are skilled and professional posts. The depot provides a higher-than-average local wage level, and work for registered handicapped people would probably be almost impossible to find elsewhere in the area.

There are implications not only for the work force but for the town. We must consider the wider effects of the

amount spent by the depot and by the work force in the surrounding area. The local authority's report calculates that the average annual amount spent directly by the Ministry of Defence is £270,000, which includes £63,490 commercial expenditure and £206,000 spent on utilities. The PSA annual expenditure on Milford and Trecwn combined is estimated at £1·9 million.

The signs of the multiplier effect—the effect of a pound earned by the employees in the depot on the economy of Milford Haven—are impossible to calculate exactly, although evidence from various studies suggests that the local multiplier could be of the order of 1·15 to 1·3. That implies that another 85 jobs could be dependent on the Milford depot, and makes clear its importance to the local economy.

On 17 November last year I asked the Secretary of State for Defence:

"what estimates have been made by his Department of the economic impact of the location of its establishments on United Kingdom regional policy; and if he will make a statement."

The Parliamentary Under-Secretary, my hon. Friend the Member for Hove (Mr. Sainsbury), said:

"While we aim to secure a more even spread of defence employment across the regions, decisions on all proposals affecting the future of defence establishments must be made on their own economic and operational merits."—[*Official Report*, 17 November 1987; Vol. 122, c. *464-65*.]

I entirely agree with that sentiment, but I believe that, given the concentration of Government employment in the south-east and the desire of all Ministers to spread the impact of Government jobs to the rest of the country, the effects on the area of closing the depot ought to be considered in that light.

The importance of defence establishments to the county of Dyfed, in which Milford Haven is situated, is clear from the figures given in a parliamentary answer on the same day as the one to which I have just referred. At the last count, 2,209 civilian personnel and 831 service personnel were employed by the Ministry of Defence in the county of Dyfed. I hope that the Ministry will pay great attention to the importance of ensuring that, if the depot has to close in its present form, every effort is made to consider whether some other form of defence establishment can be established on the site.

I said a few minutes ago—when I quoted from a speech that I made on 28 October last year—that I believed that the depot must justify itself on defence grounds. I see no reason to retract that statement. I have made my view clear to the work force, to my local press and during the last election. It is important to recognise that the Ministry of Defence faces a difficult decision. It is not a job-creation scheme; it is the defence of the country. Therefore, it must ensure that whatever it does is in accordance with the principles laid down by the Government for its role.

I recognise that the role of the Milford depot, as now constituted, is coming to an end, and that it would therefore be unrealistic for the work force to argue for the status quo. The work force recognises that. However, that does not mean that we should simply fold up our tents and creep away. I believe that there is plenty of opportunity for the depot to be used for other MOD purposes.

A recent article in the *Western Mail* announced:

"The Property Services Agency Wales has been asked to investigate sites which could bring the Royal Navy's Sea Systems Controllerate under one roof."

That would employ 4,500 personnel.

I am not suggesting that Milford Haven is the right location for that establishment, but it does have a deep-water port facility and I can think of worse places for it to be located. If that establishment cannot come to Milford Haven, the MOD should consider carefully what other naval establishments could be suitably transferred. If there is nothing for the Royal Navy at Milford Haven, a possible site for the other armed forces could be considered.

Before the future of the depot is signed and sealed, we must consider whether the MOD's traditional use of it can continue. If that is not possible, we must consider the employment implications.

The MOD report is feeble. As I have already said, it has had the gestation period for an elephant, but a mouse has been produced. The local authorities have been able to produce an 18-page, closely argued report, with a number of appendices, within a few months. Therefore, I am amazed that, after two years, the MOD has produced a double-space typescript of only seven pages. It has failed to address the main issues that are of concern to the employees and the local people. The report contains no detail of the work force—grading structure, age and sex profile, salary structure, and length of service of individual employees. The local authorities and the unions need to have that information so that sensible decisions can be made about the depot's future.

If the depot is closed, the report states that between 40 and 50 or 80 and 90 staff could be transferred. That demonstrates that the report is vague and wishy-washy. There is no information about whether those who transfer will be given free transport, which was provided for those who were forced to move to Carmarthen when local government was reorganised in 1974. The staff are asking about such matters and they deserve answers.

Little information is given about the possible redundancy package. I put down a written question about what constitutes the normal redundancy package at the Ministry of Defence. That question was answered today and I received some additional information, but the staff, their families, the unions and the local authorities should have had such information made available in that report.

The report gives no information about the possible future use of the site. One of the main anxieties in the town is that the site is reputed to have explosives impregnated in the ground. Before that site is used for any other purpose it must be cleaned. In a written answer, the Minister informed me:

"The estimated cost of (a) certifying RNAD Milford Haven free from explosives is estimated at between £500,000 and £1 million."

The absence of those figures from the report is a glaring omission. The author of the report did not set out to answer the questions that the local people needed to have answered.

An apprentice training school is based just outside the main gates of the depot. We have been told that it could be unaffected by the closure of the depot. Will it be a viable training school if it is so far from any other RNAD complex? It is a long way to Trecwn when one is 17 or 18 years of age and without personal transport. Will it have a viable future as an MOD apprentice school, or should it become a general engineering school for the area? Should it continue to be run by the MOD, or would it be better run by the Training Commission and the local authorities? Those questions have not been answered by the report, or

[Mr. Nicholas Bennett]

even by the questions put forward and flagged. I recognise that it is a consultative report, but for consultation to take place the report needs to convey meaningful information so that the staff and the unions can discuss what should be done next.

No information has been provided about other uses for the site, apart from use by the Ministry of Defence. How many other people have expressed an interest? What package will be made available should the site have to be closed to ensure that it is used for the benefit of employment in the Milford Haven area? That question is not answered.

I very much welcome the reply to one question that has been answered. The people who live in Ministry of Defence houses, now owned by the PSA, welcome the fact that they may now purchase those houses under the right-to-buy legislation. I welcome my hon. Friend's assurance on that point, and the ending of the uncertainty that has lasted for a considerable time.

I turn briefly to the Trecwn depot. I have concentrated most of my speech on Milford Haven because it is in my constituency. The Trecwn depot is half a mile outside my constituency, but the last count of employees in October 1986, provided by the local authority's joint committee, revealed that 46·5 per cent. were constituents of mine. Therefore, whatever happens to Trecwn is important to the people of Pembrokeshire, because it will have an impact on the local economy.

I am very disappointed that after two years the report leaves the question of Trecwn in the air. Paragraph 14 of the report states:

> "The reduction of the mining support task will also have a substantial effect on the loading of Trecwn. This will be the subject of further study by the Ministry of Defence. These studies will include an examination whether other MOD tasks can be put to the depot. The outcome of this further work will not be known until 1989."

I wonder why the MOD works at snail's pace when it comes to examining what it will do for the future of the depots. We waited two years for the report, and now we are told that we need another report, another study, on the future of Trecwn, which will take another year. I hope that it is a little more informative than the report which was published earlier this week.

Finally, what will happen to the site should it be decided that there is no future for the depot in the Ministry of Defence and it becomes available for commercial use by private enterprise or by other Departments? An urgent meeting should be held between the Ministry of Defence and the Welsh Office to ensure that that prime site of 260 acres, situated on the shores of the River Cladeau on the Haven, should be brought into use for other commercial undertakings if the Ministry of Defence does not want it. That should be done as quickly as possible. I have always made it clear that if the decision is taken to close the depot, it should not be death by 1,000 cuts over a long time. The closure of the depot should be fast, the site should be cleaned up and prepared for other uses, and there should be early advertising of the site for other enterprises.

The Welsh Office should consider whether it has any uses for the site which would create employment and whether any other Government Departments which are decentralising from London have any uses for the site. If that is not the case, we have to ensure that the site is made available for private enterprise.

Yesterday's *Western Mail* states that workers at the depot have asked whether the MOD would make a gift of it to the town. That is highly unlikely. I am not sure that it would be right for the local authority to take over the site. It is not terribly experienced in running commercial undertakings or sites of that size. Of course the Welsh Development Agency would be the right body to take over the site and prepare it for business occupation after the MOD has cleaned it up. I do not say that it is the Welsh Development Agency's job to pay for cleaning up the site. That is an MOD responsibility. The Pembrokeshire business initiative could, with the WDA, help to identify possible uses for the site and attract employers to it.

I finish on that positive note because I believe I should follow the example of the work force at Milford Haven, which has recognised the reality that the depot will not continue as a mine depot. It recognises that mine warfare and defence strategy have changed. The MOD must recognise that realism and reward the loyal service of the work force and the dedication of the people of Milford Haven to the depot since 1939. The MOD should ensure that, if the site is closed as an MOD depot, it will be made available for the future employment and prosperity of the people of the area.

6.41 am

Mr. Allan Rogers (Rhondda): I had not intended to speak in this debate, but my hon. Friend the Member for Leyton (Mr. Cohen), who has the next debate, has not arrived yet, so perhaps we should continue this one for a while.

I listened to the hon. Member for Pembroke (Mr. Bennett) with great interest. I thought at one point that he might have been converted to the views of the Opposition, but towards the end he covered his bets with the Conservative side. What he faces is something of great difficulty and concern for any hon. Member: the closure of a works, factory or—as in this case—depot, with the consequent unemployment. Many Opposition Members who represent industrial areas have had to face this problem often under this Government. I only wish that the hon. Member for Pembroke was as forthcoming in his support for other areas as he is for his own.

Because Opposition Members have faced this problem so often, I want to speak in support of the depot, and I hope that the Government will change their mind about it. The area faces certain difficulties with employment. It is on the periphery of the European Community—that is one strike against it. Secondly, it is surrounded by a mainly rural area, so the development of service industries there will be extremely difficult. It cannot act as a nucleus for warehousing, so it will find it difficult to attract jobs. However, as the hon. Gentleman said, the people of these communities have given a great deal of service to the country in war and peace and they deserve better than to be summarily dismissed.

The hon. Member for Pembroke talked of dispersing MOD jobs. I noted with interest that that happened this week, with the dispersal of jobs to Llangennech, near Llanelli, and the people there are grateful. However, I warn the hon. Gentleman that the MOD's history of dispersal is not good. Some years ago it undertook to

disperse jobs to Glasgow. We found that jobs were leaving the south-east and going as far afield as Gloucester and a little north of London. Then those jobs shuffled up as far as Manchester, and by the time the ripples of the dispersal reached Glasgow there was little advantage to be had from the process. As a positive scheme, it was a disaster. That was recognised in a report of the Public Accounts Committee, which I think was published about two years ago. If I were the hon. Member for Pembroke, I would not rely too much on the Ministry of Defence dispersing jobs to replace those that are being lost.

The hon. Member for Pembroke tried to change horses or face all ways in relation to local authorities. It was gratifying to hear him extol the virtues of local authorities. The hon. Gentleman praised the local authority's report, and I am sure that his praise will be received by the local authority with satisfaction. His damning indictment of its ability to run a small industrial site will not be so well received. I was pleased that the hon. Gentleman said that local authorities could do anything. On numerous occasions in debates over the past couple of years and on the Widdicombe report on the organisation of local government, Conservative Members have criticised local authorities for taking initiatives.

The report that the hon. Gentleman praised could be illegal, if any political comment is made in it, under the new rules that the Government are introducing. I hope that when we debate the rules and regulations the hon. Gentleman will have the courage of his convictions and condemn the Government for trying to strangle local authorities and prevent them from carrying out their duty to protect local communities.

Mr. Nicholas Bennett: I appreciate that the hon. Gentleman is trying to prolong the debate until his hon. Friend the Member for Leyton (Mr. Cohen) turns up, and that he knows little about the subject and has not seen the local authority's report. The authority has made an excellent report that is not political but neutral and unbiased and deals with the problems facing the area.

Mr. Rogers: That shows the political naivety of the hon. Gentleman. If a report that deals with an institution that provides jobs and bread to the community is not political, what is? The hon. Gentleman showed his bigotry and prejudice. He believes that all matters must be party political, and that was the view of the Government when they reorganised local government. The recommendations of the Widdicombe report were based on the sort of prejudices that the hon. Gentleman has just shown.

The local authority has done a good job, but it would be illegal under the new rules that the Government have introduced. If a local authority fights for jobs in a community, the Government say, "You cannot do that because you are criticising Government policy and it is political." Throughout the country, Labour authorities —they are the only authorities fighting for jobs in their communities, unless a Conservative Member such as the hon. Member for Pembroke is affected by a proposal—are condemned for fighting for jobs in their communities. I hope that the hon. Gentleman will have the courage of his convictions and will support our opposition to the Government's proposals. It is perfectly understandable —I speak from the arrogance of a large majority—that the hon. Gentleman wants to cover his back on this electoral issue. That is what it will be. The hon. Gentleman's constituents will be looking not at what he did but at what the Government did to jobs in the area when they vote in the next election.

The hon. Gentleman is not alone in his inconsistency. We have seen it time and again among Conservative Members. They talk about market forces and letting the market economy operate. However, when that affects their constituency it is a different story. In the previous Session some Conservative Members complained bitterly about the dumping of nuclear waste. However, they would vote for the Government in their nuclear energy development policy. I will tell the hon. Member for Pembroke what I told them then: one cannot have it both ways. If one supports a nuclear industry, one has to be prepared to be the recipient of the waste from that industry. Significant Members of the Government fought hard against having a nuclear dumping ground in their constituencies.

The hon. Member for Pembroke asked the MOD not to fold up its tent and creep away. It will fold up its tent, and I am afraid that the local authority, in conjunction with the Welsh Development Agency, will have to fight for it. I agree with the hon. Gentleman that the MOD should take the responsibility for clearing up the site. Many pits have been closed in the south Wales valleys and for a considerable number of years the sites were left derelict and were an eyesore. It is a tribute to Governments of all persuasions that they have developed, particularly over the past 15 years, extensive land clearance schemes that have restored areas to the community for housing, recreation or industrial development. I urge the Minister to pay attention to that point and follow the advice given to him by his hon. Friend the Member for Pembroke. If the MOD quits the site, it should clean it up and leave it in a decent condition so that it can be used for other purposes. I have more confidence in the local authority than the hon. Member for Pembroke. The local authority should be the agency to develop the site.

Mention was made of the apprentice training school related to the site. Naturally the hon. Member for Pembroke is worried about the future of youth training in his area. It is a serious problem because, throughout south Wales and the rest of the country, the Government have been closing down skill training centres and depriving young people of the opportunity of becoming skilled. It is a real problem and I shall give an example to the hon. Gentleman.

One county council area in south Wales was looking at where it should place the new schemes for next year. In that county there were bids for 77,000 places. The resources available will allow the county to develop only 8,000 places. That area is not far from that represented by the hon. Member for Pembroke. I have little hope that he will be able to obtain support for the development of the apprentice training school or that the Training Commission will put any substantial effort into it.

I advise the Minister that he may have closed the depot, but he has a responsibility. He cannot pack up his tent and walk away; he should invest by clearing the site and ensuring that it is handed over in a fit and proper state for use by the local community.

6.54 am

The Parliamentary Under-Secretary of State for the Armed Forces (Mr. Roger Freeman): I add my congratulations to my hon. Friend the Member for

[Mr. Roger Freeman]

Pembroke (Mr. Bennett) on securing this debate. I know that for him, his constituents and other hon. Members, this is an important issue. He has demonstrated great persistence and great energy and courtesy in representing the interests of his constituents in this matter. I have visited the site with him and met some of his constituents. I have corresponded with him for a considerable time and we are now joined in debate. Doubtless this will not be the last time that we have the opportunity to debate this matter.

Before I reply in detail to the points that my hon. Friend has raised it might be helpful if I were to remind the House of the main facts of this issue. The House will be aware that on 25 July the Ministry of Defence published a consultative document, which recommended that the Royal Naval armaments depot at Milford Haven be closed. At this stage I should like to deal with what may be a misconception in my hon. Friend's mind about the consultative document. It is not a report. It is not a document that purports to be a comprehensive study of the problem—that is a separate document, which is classified, and which we have in the Ministry of Defence. The consultative document is a brief summary. I believe that my hon. Friend referred to it as being seven pages long. I apologise for its brevity if my hon. Friend believes that it shortchanges him and a number of his constituents on some matters. I shall attempt to answer some of his points.

It is important that we appreciate the purpose of the consultative document. The procedure is as follows. When I come to consider the closure of a particular base, garrison or depot, a report is commissioned internally in the Ministry of Defence. The issue is considered properly and thoroughly. Indeed, the criticism is often made that we take far too long to study the problem. I believe that when one is dealing with the future of loyal work people, who have spent a considerable period of time in a particular locality, it is important that the study should be comprehensive, factual, free of prejudice and emotion, and that, after consultation with other Government Departments, it should present the facts as fairly as possible.

I make no apology for the fact that sometimes those studies take what may seem an inordinately long time. That is perfectly understandable and defensible. I would much rather get all the facts right, and have all the facts, than get half a story, sometimes tinged with emotion.

Mr. Rogers: Why does the consultative document need to be classified? I can understand that there might be a section dealing with the grand strategy of the defence of this country—that might be in the first two paragraphs—and that that could be classified. However, we are talking about an industrial issue and I cannot see why the hon. Member for Pembroke (Mr. Bennett) should not at least see the document. I do not see why the document should be classified.

Mr. Freeman: Perhaps I should explain to the hon. Gentleman that the consultative document is not classified. It is a seven-page document which was produced specifically for the trade unions. The report, which is something separate, and which runs to several hundred pages, is a classified document. It is classified for the simple reason that we are dealing with the technology of making, distributing and laying sea mines for the Royal Navy. Therefore, for obvious reasons, the document must be classified.

The consultative document is produced for consultation with the trade unions, so that they understand what recommendations and proposals have been made to me or to the relevant Minister for the future of the depot.

The consultative document is not a sales document. It does not offer alternative uses for the site. It does not spell out redundancy terms; nor does it describe the real estate. It is a brief statement, stating that the recommendation is to close the depot. It sets out the main reasons for that and explains that we should like to enter into a brief period of consultation with the trade unions, to ensure that we have the facts right, and to take into account any other factors. Only after that will a decision be taken. Once the decision is made—and it has not yet been made in this case—what my hon. Friend the Member for Pembroke wants will be produced. The welter of detail about the future and welfare of the work force, and full details about the real estate involved, will be available for distribution and discussion in the Ministry of Defence, and with our allies and perhaps with other Government Departments and the private sector.

I hope that my hon. Friend will draw a distinction between the report and the consultative document.

Mr. Nicholas Bennett: I appreciate the difference between the wider 200-page report to which my hon. Friend referred, with its defence implications and classified nature, and the consultative document, but does he agree that perhaps the MOD should reconsider what it produces as a draft consultative document, bearing in mind the importance of all the closures and decisions, not just for the work force and the unions—which may be well informed—but for the local authorities that will have to consider the matter, the Member of Parliament in this case, and anyone else in the area who is concerned about the future? In the next few months we are to be asked to consult and discuss a matter about which there is very little information. The information will not be of much use to us if we get it after the decision has been taken.

Mr. Freeman: I understand the point made by my hon. Friend and the hon. Member for Rhondda (Mr. Rogers). My hon. Friend has made a valid point, which I accept. When we prepare the next consultative document in the next case I shall look at the extent of the information included. If it would be more helpful to the work force and local authorities to have more information at an early stage, I shall bear that in mind.

The consultative document that we are discussing gives the work force, the trade unions and local authorities two months in which to comment in principle on the proposal. We are seeking a reaction to our decision on the future of the depot. Only when I have had a chance to consider the replies will I be able to make a final decision about the future of the depot. We are not talking about the imminent closure of the depot at Milford Haven. That may be two or three years away. We are embarking upon a consultation process—albeit a fairly brief one. The MOD is committed to ensuring that the process is frank and open. I have already told the work force that I am prepared to meet a delegation, should the workers so wish. I made that promise when I visited Milford Haven and I am happy to repeat the assurance to my hon. Friend.

The Royal Naval armaments depot at Milford Haven was built in 1939 to wartime emergency standards and covers about 260 acres. The depot's principal tasks in recent years have been the storage and maintenance of exercise mines, the updating of high explosive mines, the upkeep of what is called replenishment at sea gear, the repair and maintenance of motor transport and the training of apprentices. At present there are 285 employees.

As the result of long-term changes in mine technology and mining policy the size of the task performed at Milford Haven has been considerably reduced in recent years. If the depot were closed and the tasks transferred, capital expenditure of about £500 million would be necessary to provide new buildings elsewhere. The costs for extra staff at the new location, or locations, would amount to about £500 million per annum, or between 40 and 90 posts. My hon. Friend the Member for Pembroke chastised me for not being precise about the number of new jobs that would be created elsewhere. Perhaps we are being unduly cautious, but it would be foolish to be too precise at this stage, when work still has to be undertaken.

Given that the operating costs of Milford Haven are £3·6 million per annum, the House will readily understand why, in our view, there is a persuasive argument in favour of closing the depot. It gives me no pleasure to announce the possible closure of one of our establishments, but the Ministry of Defence has an obligation to obtain the best value for money for the taxpayer within the defence budget. The task for which the depot was built has substantially declined, and there is no longer a defence requirement for it to remain open. We cannot ignore the reality of the situation, however grateful we are for the loyal service rendered by the work force in both peace and war.

The news for west Wales is not all bad. On 25 July I announced that up to 250 jobs were likely to be created as a result of the transfer to Llangennech of the forms and publications stores of the three services, which we hope will take place early in 1991. In addition, we are examining the possibility of moving some other complementary activities to Llangennech, absorbing more of the depot capacity and creating additional local employment. That is evidence of our determination to make use of our assets, if at all possible, by moving other activities and departments within the Ministry of Defence.

The consultative document is merely a short summary of the outcome of the Trecwn district study. The Trecwn district includes both the Trecwn and Milford Haven depots. The original report cannot be published, because it is classified. The consultative document is not intended to provide all the answers to the questions that the work force or their representatives may wish to raise. It is designed to form the basis for consultation. My officials will do their best to reply to the questions that arise during the consultation process.

There have been criticisms of the length of time taken to publish the consultative document. As I have said, we are dealing with a highly complex subject—the future of the United Kingdom's mining policy and the storage capacity necessary to meet it. Last year it was necessary for all the Ministry of Defence branches to give full consideration to the implications of the Trecwn district study. We consulted the Welsh Office about the future of Milford Haven, and we shall consult it, too, about the future of Trecwn. I regret the time that all that has taken, but to have proceeded more speedily would not have been in the interests of either the Ministry of Defence or the work force.

My hon. Friend the Member for Pembroke is unhappy because the consultative document does not say what other defence uses were considered for the depot. The depot's facilities have serious shortcomings and its layout no longer meets stringent explosive safety prescriptions. Therefore, it is not an option to continue to use it efficiently as an explosives depot, and we have been unable to identify any non-explosive, Navy task that could be transferred there. The Army and Air Force departments have said that they have no need for any of the Navy's surplus storage space. If that changes, and a defence use for Milford Haven is identified, I shall inform my hon. Friend and the House as soon as possible.

The possible use of the site by other Government Departments will be fully assessed if and when I take the final decision to close the depot, and the closure process will take three years. If no further use is found for the site, our normal procedure will be to offer it for sale on the open market. In reaching a decision about disposal I shall ensure that there is full consultation with the normal authorities, the Welsh Office and its agencies. I assure my hon. Friend that any disposal procedure will be pursued with vigour and with the objective of ensuring that the site is not left idle.

My hon. Friend asked for some detailed information about the number of staff who might transfer to Trecwn and about a possible redundancy package. Yesterday I answered a parliamentary question from my hon. Friend giving him information about the Ministry of Defence's standard redundancy terms. It is impossible at this stage to be precise about how many staff could or would transfer if the depot were closed. That will emerge during the consultation process.

As for the cost of certifying the site free from explosives and removing all existing buildings, the former would cost between £0·5 million and £1 million, and if the site leaves the ownership of the Ministry of Defence, I give the assurance that that will be done. Consideration of the removal and demolition of the buildings is an integral part of the disposal process. We shall consider what needs to be done when we examine other uses.

The Ministry of Defence has no plans to close the apprentice training school. I am glad to give my hon. Friend that assurance. I shall ask my officials to consider his suggestion about widening the scope of training there. In the event of the depot being closed, sitting tenants of Ministry houses will be given an opportunity to buy them on favourable terms.

My hon. Friend's disappointment over the further study on Trecwn is understandable, but the proposal to close Milford Haven means that the residual task still performed there will have to be transferred somewhere. Trecwn is certainly the favoured option.

Mr. Nicholas Bennett: Will my hon. Friend consider providing transport for the transferred staff?

Mr. Freeman: I said earlier that between 40 and 90 new jobs would be created at one or other location to which we transferred the remaining tasks performed at Milford Haven. I visited Trecwn shortly after visiting Milford Haven, and I know that the distance between them is not inconsiderable. I shall look into the possibility of assisting

[Mr. Freeman]

with transport to carry workers who might be offered jobs and accept them at Trecwn but who live at Milford Haven. I am sure that my hon. Friend does not expect me to give any guarantees, but I shall look into the matter.

I shall ensure that the work on the future of Trecwn is undertaken as quickly as possible, but the result cannot be expected before 1989. During Operation Corporate Milford Haven was involved in assisting with the supply of replenishment at sea gear to some Royal Fleet Auxiliaries, while Trecwn provided stocks of naval ammunition to the armaments depots at the base ports. The Government are grateful for the work undertaken by the work force at both depots during the operation, which was in accordance with the high standards of the Royal Navy supply and transport service.

I am grateful for the opportunity to respond to this brief debate. I look forward to joining my hon. Friend in ensuring that the site, if we close the depot, is used profitably and that the loyal, hard working and efficient work force finds alternative employment.

Disarmament

7.12 am

Mr. Harry Cohen (Leyton): I congratulate the Minister on his new appointment to the Foreign and Commonwealth Office. Some people have called it a sideways shift following his row with his previous boss on the Housing Bill. If it is, he has done quite well out of it because he has got quite an interesting portfolio. He has a bit of a reputation as a stonewailer. Some people might think that that is appropriate for the Foreign Office, but I have to warn him that there is a spirit of glasnost now, so he might come up against a few problems if he stonewalls. I wish him well in his new job.

One of the Minister's important jobs concerns disarmament, which is the subject of this debate. I recently received a postcard which simply had a picture of the globe. At the top, coming out of the shadow, was an arrow marked, "Them", and in the middle of the globe was another arrow marked, "Us". The legend said:

"The Russians, being cunning and devious, hide their country behind the curve in the earth so that we can't see. We, on the other hand, are right out in the open on the flat part."

I am afraid that that has been the cold war attitude of some people in the West. The result has been a disastrous build-up of military spending. It has meant a continuous cold war of the type to which the postcard refers, and an enormous drain on the resources of both sides which could be much better used elsewhere, and it has perpetuated impoverishment in the Third world because while we spend on arms we cannot relieve poverty and suffering there. It has also involved a high risk in terms of the potential destruction of our people, particularly from the nuclear element.

In addition, there has been an increasing risk of accidents. Chernobyl is the prime case, arising from the drive to create more nuclear material, but the Iran Airbus is a more recent example of how accidents can happen. If it is said to be in defence interests to shoot down an Airbus, it may also be in defence interests to fire a nuclear weapon. Those are the consequences of the cold war and the material build-up that we have seen since the war.

Mikhail Gorbachev has attempted to break the logjam, and since he came to office all the initiatives have come from the Soviet Union. As Frank Blackaby, the former director of the Stockholm International Peace Research Institute, said, a more liberal-minded, intelligent elite has risen to a position of influence in Soviet politics. The Soviet Union has enormous economic pressures. About 16 per cent. of its GNP is spent on defence, which is immensely crippling and wasteful. That pressure has brought about the initiatives.

NATO has been reacting primarily. It has been intransigent in many respects, especially on short-range nuclear missiles. There was a great chance to get a deal on them, but the Prime Minister in particular would have none of it and that worked its way into NATO philosophy. Moreover, the Government have imposed great pressure to increase militarisation and military spending. That is what modernisation is all about. Only last week during defence questions, when the Secretary of State was asked about burden sharing and the Americans pushing more of the costs of NATO on to European countries, he made it clear that he was acquiescing in more defence spending and Britain picking up a bigger part of the bill. We should

be reducing expenditure when there is an opportunity to do so, not increasing it. NATO has not even produced a comprehensive concept of arms control and disarmament. It has not got its mandate together to go to the negotiating table. That is poor when there is an opportunity to make big reductions.

Recently the Government produced a leaflet entitled "The UK Role in Arms Control: a short guide to British Government policy". Short is the right word because there is precious little substance in it. It should have had a photograph of the tea and salmon sandwiches that the Prime Minister gave Mr. Gorbachev at Brize Norton because that is about the biggest contribution that the Government have made to arms control. It even states:

"The UK's national deterrent is a minimum force, and it will remain so when the new Trident submarines become operational."

Trident represents an eightfold increase at a time when the super-powers are trying to get rid of some of their weapons in that category. Yet the Government still described that as a minimum force. One can only conclude that the Government use those words as they choose and that in that context "mimimum force" means just what they want it to mean.

The document discusses the Geneva protocol and Britain's role in it back in 1925, as well as new efforts to reach agreement on getting rid of chemical weapons. I pay tribute to the Foreign Office for what it did up to halfway through last year in trying to get an agreement to a chemical weapons ban. Subsequently, however, there has been undue delay and foot-dragging by the Government on this matter. Out come the same old slogans about the Soviet Union's chemical weapons supply, and we are told the Russians have 300,000 tonnes. No justification has ever been given for that and the Soviet Union has said solemnly that it has 50,000 tonnes. Whatever it is, Conservative Members may laugh, but the Soviet Union is keen to get a deal. We should be taking the Russians up on it to ensure that they get rid of chemical weapons.

The foot-dragging has come about because on 16 December the United States resumed its supply of chemical weapons—in particular the new binary and big-eye weapons. It already has enormous stocks even without the new binary systems. According to my information, the United States has over 1 million GB nerve gas artillery rounds, 13,000 GB nerve gas bombs, 300,000 nerve gas artillery rounds and over 1 million mustard gas artillery rounds. They must be in good condition because the West German Government have said that there have been no accidents or leakages in West Germany where they have been stored. The United States ambassador once said that many of the weapons could strike into Soviet territory. The Americans have stocks, although the United States has not published figures. If the Government are pushing for the release of true information from the Soviet Union, they should do the same with the United States; they should ask what its stocks are.

The Foreign Office says that the United States provides information about the composition and location of its stockpile in order to build the confidence needed to underpin a comprehensive ban. Yet the Select Committee on Defence said that the United States had not published the figures to show the size of its chemical stockpile. The Secretary of State for Defence said to that Select Committee:

"There is no agreed NATO strategy covering the circumstances in which chemical weapons may be used."

The Committee said:

"From the evidence we have received, it seems that the arrangements for moving US chemical weapons to Europe or authorising their release has still not been adequately clarified within the Alliance. Until this is done, chemical retaliation in kind hardly remains a viable option for the Alliance; and a lack of clarity about the procedures involved carries with it other dangers. The urgency for progress to be made in this area remains undiminished."

The Select Committee says that the urgency is undiminished, but the Government have actually slowed down. Now the Secretary of State has said that chemical weapons fall within the flexible response strategy, so he is even contemplating their use.

The Government should get a move on and start getting together with the Soviet Union for a realistic ban on chemical weapons. We should get an agreement and get the United States involved as well.

This foot-dragging has had appalling consequences because we have seen in the middle east, in the Iran-Iraq war, the use of chemical weapons. Unfortunately, the combatants have had some success with these weapons —success in war terms though terrible in human terms —and this will result in other countries wanting chemical weapons and being prepared to use them. That is why we need an immediate global ban on chemical weapons. The British Government do not seem to be aware of the need to take urgent action in this matter.

In terms of conventional arms, there is a chance for agreement to be reached on a degree of disarmament at all levels. Following a meeting of the Warsaw pact on 16 July, the pact renewed its initiative for sizeable cuts in conventional armaments in Europe, from the Atlantic to the Urals. It called

"for early talks to leave NATO and the Warsaw Treaty countries with forces and systems needed for defence but insufficient for a surprise attack or offensive operations, with a corresponding curtailment in military spending."

Three areas were covered in that initiative. The first was

"to achieve equal, lowered levels—roughly equal and balanced collective levels—in troop strength and conventional weaponry"—

certainly lower than currently exist on both sides—

"mutually eliminating imbalances and asymmetries."

That was achieved in INF terms for one category of nuclear weapons, so it could be achieved as well for conventional forces.

The second point was designed to prevent a surprise attack, and it referred to

"lowered arms level strips . . . zones created along the line of contact between the military/political alliance, again ensuring only a defensive capability; and confidence-building measures which would limit military activity in those zones."

It went on to say that there should be a ban on major exercises and restrictions on troop movements.

The third part of the initiative on conventional weapons was for data exchange and verification. That would, naturally, involve the exchange of information on both sides, with on-site inspections and possibly an international verification commission to check that all was working properly.

Those were the main aspects of the initiative—

"to strengthen stability and lower the levels of armed forces and armaments, with the principles of equality and equal security being observed and being verified."

I make no apology for quoting at length from that text because it is an important initiative that is now on the

[Mr. Harry Cohen]

NATO stocks. It has been welcomed—in terms of a pan-European summit—by President Mitterrand, who is reported as having said that

"the reduction of conventional arms was an absolute priority which should take precedence over any reinforcement of short or very short-range nuclear weapons."

That was a direct snub to the British Government, who take the opposite view and who do not seem to be interested in that aspect. They seem interested only in increasing that type of short-range weaponry.

The West German Government have welcomed the idea of new talks on lowering conventional arms levels. They have every reason to take that line because, demographically, the numbers in the West German conscript army will be 40 per cent. lower in the coming decade, so they desperately need reductions in conventional arms.

The British Government do not seem to be worried about the concerns of our allies in this matter. We seem prepared to allow them in the coming 10 years to be in a perilous position, which we have already done in terms of short-range nuclear weapons, a subject to which I will come shortly. So, again, the British Government are foot-dragging. They are among the few Common Market Governments not to have welcomed the idea of a pan-European summit. The block is the weapons with dual capability, conventional and nuclear, which the Government refuse to include in any conventional arms reduction talks. That is what is stopping NATO getting a mandate together and getting realistic talks started. Dual capability weapons should be part of the negotiations. Why should a whole category of weapons not be subject to arms control or even negotiations? In this area, as in any other, asymmetry can apply, with cuts in different types of weapons on each side. If such weapons are not included in conventional arms talks, they should be the subject of separate but simultaneous talks.

The Government must take up those initiatives in a big way. The right hon. and learned Member for Richmond, Yorks (Mr. Brittan), who was recently appointed to a post in Europe, wrote a pamphlet supporting the idea of a demilitarised zone free from tanks, heavy artillery and nuclear weapons. That would create greater stability. Only the Government seem to believe the opposite. At Defence Question Time the Secretary of State spoke ominously of having nothing to do with demilitarised zones, but NATO must take up those initiatives as well as getting rid of all tactical nuclear weapons systems and limiting the total number of heavy battle tanks in Europe. Those initiatives could release money from defence to be used for social purposes.

I shall deal briefly with the nuclear aspects as others may wish to participate and I want to leave plenty of time for the Minister. The INF agreement is to be welcomed, although it represents only about 3 per cent. of the world nuclear stockpile, following a huge build-up of such weapons before the talks, so it is not such an amazing achievement. The Russians have issued a postage stamp commemorating it, and that is about what it amounts to proportionately in terms of the total number of nuclear weapons. Nevertheless, it is welcome.

Short-range nuclear weapons should have been included in that agreement. We should have had the triple zero. The West German Government wanted that because they realise that blowing up part of one's own territory is self-defeating. That should have been taken into account and we shall have to come back to it in future talks. Strategic arms reduction talks are going on for a 50 per cent. cut in strategic weapons, but I do not believe that it will really be 50 per cent. on a strict count. They are already fiddling with the arithmetic so that short-range attack missiles count as only one, and so on. Nevertheless, an agreement would be extremely welcome.

There are two blocks in the way of such a development. The major block is star wars, to which I shall come in a moment, but the other is the sea-launched nuclear weapons. It is shocking that the United Kingdom's Trident and Polaris missiles are not on the negotiating table. In my view, they should be in the negotiations. Sea-launched nuclear weapons could get in the way of strategic arms reduction talks. If they remain uncontrolled —there are now 16,000 weapons at sea—they could destroy a START agreement. They must be brought within the limitation and verification procedures. I appreciate that verification would be difficult, but the Government should insist that the super-powers start talking about sea-launched nuclear weapons and should put their own on the table, as it were.

Star wars—SDI—is a dangerous development. It is a first-strike capability and an enormous continuation of the arms race. It breaches the ABM treaty and it is a block to START. I have heard it said that the Russians are unlikely to agree to START while the star wars development remains in being. That could be the position. At Congress, the office of technical assessement has said that technically SDI is not feasible. It is wrong that the Government should be acquiescing to star wars. They are pursuing every contract that they can get and giving the impression, with the memorandum of understanding, that they are in favour of the project. They should come out against it so that we can secure a START treaty.

The Government seem still to take the view that a limited nuclear war could be fought and won. They are still wedded to the possibility of first use of nuclear weapons. They are still wedded to the modernisation of nuclear weapons when the world wants to see countries getting rid of these weapons. Modernisation would cheat on the INF and on a START.

The Government should be pressing for a comprehensive test ban treaty and a non-proliferation treaty. Unfortunately, the Government are still wedded to nuclear weapons for whatever and for ever. That seems to be their attitude, and that is a block to disarmament. They should wake up to the new world attitude. The peoples of the world are not interested in nuclear weapons and ever-increasing military spending. They are interested in life, health and the progress of mankind. They want more social spending. The Tory Government are a dinosaur. It seems that they are incapable of recognising world opinion. The British public want disarmament. They understand that world-wide agreements are necessary, and they will be angry when they realise that it is the British Government who are blocking these agreements at every turn.

7.38 am

Miss Ann Widdecombe (Maidstone): I am grateful for the opportunity to speak in the debate, especially as there is now litte chance that the debate in my name will be

reached. As I can find no way, even with the greatest ingenuinty, of introducing the financing of the University of London into a defence debate, I shall turn to what has been said by the hon. Member for Leyton (Mr. Cohen).

Before taking up the remarks of the hon. Member for Leyton, I add my congratulations to those that have been offered to my hon. Friend the Minister. I wish him well in his new role, to which I am sure he will bring the distinction that he has brought to other roles in his career in government.

Before the hon. Member for Leyton commenced his oration, if it could be called that, we were all in great suspense waiting for him to wake up and get here. Having listened to his speech, I am still waiting for him to wake up. He appears to have no appreciation of the true state of affairs when it comes to arms negotiations and of who has been giving the lead in arms reductions.

The hon. Gentleman paints NATO as the dragon of the picture. He ignores the unilateral withdrawal of 1,400 warheads, the destruction of the United Kingdom's stocks of chemical weapons, President Reagan's initial zero-zero option, and the long lag before NATO introduced updated weapons to match the Russian SS20s in the form of cruise. None of those actions of restraint met with any reaction of equal restraint from the Soviet Union. Rather, they resulted in an escalation on the part of the Soviet Union. It is very much to the credit of the British Government and, indeed, the United States that they insisted on negotiating from a position of strength, which has brought about the very arms agreements that we have been seeking for so long.

Perhaps it is somewhat unfair to refer to the Soviet Union before the days of Mr. Gorbachev. Perhaps we should now try to look at the Soviets in a rather more trusting light. The position has changed, and we now have the prospect of major arms agreements. That, however, leaves us in a position completely ignored by the hon. Member for Leyton, in which we still face overwhelming conventional superiority on the part of the Soviet Union. We also face the prospect of severe cuts in land-based nuclear missiles.

Because the nuclear missile has always been designed to deter not only a nuclear but a conventional attack, it is doubly important for us to ensure, when reducing our nuclear stockpile and still facing conventional superiority, that we have the most modern and effective weapons in those categories that are still left to us. That is the purpose of the modernisation so derided by the hon. Gentleman. It should be seen not as an escalation, but rather as making effective what we have left and could use.

It is easy to say that we are wedded to first use. We are not, but it would be totally ineffective to set something up as a deterrent and say, "This is what we could use," and then deny that we would use it. The hon. Gentleman knows that as well as I do. He is well aware that for a deterrent to be effective a potential enemy must understand that we would actually use it. He is also well aware that nothing that NATO has done has met with much response from the Soviet Union, that the present cuts have been brought about as much from economic pressure within the Soviet Union as from some great enlightenment, that we are still faced with overwhelming conventional superiority and that we are pursuing an enlightened policy of gradual, verifiable and mutual arms reductions. That policy is the surest method of retaining peace, as it has done for the past 40 years.

7.43 am

The Minister of State, Foreign and Commonwealth Office (Mr. William Waldegrave): I am grateful to the hon. Member for Leyton (Mr. Cohen) both for his kind words and for enabling me to address the House—although not a packed House—on such important matters so early after my new appointment. I am not sure that it is entirely truthful to say that I wished to speak about them first at this time of day, but one must not complain.

I am also grateful to my hon. Friend the Member for Maidstone (Miss Widdecombe). It would hardly be an exaggeration to say that she has answered the debate very thoroughly herself, and she made a number of sensible points, some of which I shall echo.

I could not forbear from a wry internal smile when the hon. Member for Leyton teased NATO for not having got its mandate together. There may be clear mandates in some parts of his party's activities, but it must be said that, in whatever order I read the words in which the leader of his party expresses his mandate, they do not seem any clearer. I have tried the moving interview that he gave to my good friend John Mortimer, but I think that it must have been printed backwards, because it did not seem to make much sense. I had some difficulty in understanding the exact thrust of the right hon. Gentleman's mandate. I found the speech of the hon. Member for Leyton a great deal clearer and I pay tribute to him for that, but it is not a great competition to have won.

Within the first week of my appointment to an extremely important portfolio I am sure that the hon. Member for Leyton will not expect me to have sketched out any new directions or to say anything that will surprise him. However, I am grateful to him for allowing me the opportunity to put certain things on the record.

The range of the hon. Gentleman's speech was wide, and he covered the subject comprehensively. I shall try to cover some of that ground. The North Atlantic Council meeting in June 1987 at Reykjavik is a good place to start. At that meeting we and our allies set out our future arms control priorities. We strongly refute the idea that it is the Soviet Union that has set the agenda. To be fair, the hon. Gentleman should agree that it was the West that suggested the zero proposal on INF. I am grateful to the hon. Gentleman for what he said about the contribution of the Foreign Office and its efforts to eliminate chemical weapons. The West also took the lead in that respect.

After Reykjavik, the agenda set out for the future meant 50 per cent. cuts in United States and Soviet strategic nuclear weapons, the global elimination of chemical weapons and the elimination of the imbalance in conventional forces in Europe. I shall survey the progress that has been made in each of those areas since last year.

It is worth considering the implications of the word "disarmament", which is the title of the debate. The Government consider that the agenda is about arms control. The Government support balanced and verifiable arms control agreements which are consistent with maintaining our security. We must beware of proposals for wholesale disarmament which see the reduction of weapons as an end in itself. That is not the end. The end is greater security, and that is an important distinction.

The Government believe that nuclear weapons will continue to be necessary for the foreseeable future for maintaining deterrence. We take a different view from the hon. Gentleman. We shall continue to support NATO's

[Mr. William Waldegrave]

policy of keeping only the minimum number of nuclear weapons necessary to achieve that. My hon. Friend the Member for Maidstone said that the Alliance has reduced its stockpile of nuclear warheads in Europe by 35 per cent. since 1979. However, we must record the fact that there has not been a comparable reduction in the Soviet Union.

Reducing the numbers of our weapons to the minimum necessary is one side of the coin: the other side is the requirement to keep them up to date. If they are to provide an effective deterrent, our nuclear weapons must be credible. So we firmly endorse the determination, expressed by NATO Heads of Government at their meeting in Brussels in March, to ensure that all the Alliance's forces, conventional and nuclear, are kept up to date.

Two of the arms control priorities I mentioned earlier related to nuclear weapons. Since Reykjavik, the INF agreement has been finally accepted by the Russians, and the INF treaty entered into force on 1 June 1988. That was a major step. The significance of the treaty and the credit which the achievement of it reflects on the Alliance have been, as my hon. Friend for Maidstone has said, fully discussed in this House on earlier occasions. I need not dwell further on it today.

As the hon. Member for Leyton said, the negotiations between the Americans and the Russians about reductions in their strategic nuclear weapons are continuing in Geneva. The Government warmly endorse the determination shown by the United States Administration to negotiate carefully on the many difficult areas still to be resolved. We are convinced that there should be no question of allowing political time tables to dictate our security requirements. If anyone is tempted to become impatient at what may seem slow progress in Geneva, he should consider—the hon. Gentleman has considered the subject in detail and is similarly aware—how complicated the issues are that are being discussed. The verification regime for a START agreement, for instance, would be far more complicated even than that established under the INF treaty, as the hon. Gentleman acknowledged. After the two nuclear parities are achieved, the nuclear situation in Europe will have received enough attention for the time being and the spotlight should focus on the conventional and chemical theatres.

Despite our welcome for the hope for the world that the regime of Mr. Gorbachev represents—and I would not underplay that—it is our duty to be careful about the security of our own peoples, and we must be on our guard against any attractively-packaged offers to denuclearise Europe. Whenever attention shifts to conventional forces, the Russians try to divert it back to denuclearisation. We must not let that ploy succeed, and it will not. History has shown that, tragically, even a complete balance of conventional forces has not been enough to guarantee peace.

The hon. Gentleman mentioned the shorter-range nuclear forces. NATO is united in rejecting a zero solution on SNF, which would be the third zero. We and our allies are currently engaged in considering what the Alliance's future SNF requirements will be. We are determined to keep our holdings to a minimum—again, in contrast to the Soviet Union which now has a 14 to one advantage in SNF missile launchers—but we are sure that NATO must retain an effective SNF capability.

Arms control is not just about nuclear weapons. Progress in the nuclear area increases the importance of improving conventional security. Britain and Europe have suffered dreadfully from conventional wars during this century, and modern conventional weapons are many times more destructive than those of 40 years ago. The present concentration of conventional forces in Europe of NATO and of the Warsaw pact comprises the greatest conventional destructive potential ever assembled. That is why we must insist that nuclear arms control must not make Europe safe for conventional war and why we attach so much importance to redressing the imbalances between NATO and Warsaw pact conventional forces.

In Europe, the Warsaw pact has three times as many tanks as NATO, more than three times as much artillery and nearly twice as many tactical aircraft. Furthermore, its forces are configured and deployed in ways which would permit them to initiate a surprise attack and to undertake large-scale offensive action.

That is why the elimination of that imbalance, which so favours the Warsaw pact, is the Government's major arms control priority, now that the INF treaty has been concluded and START negotiations are in train. To that end, we and our allies are discussing with representatives of the Warsaw pact in Vienna the terms of reference for new negotiations on conventional stability which would cover an area from the Atlantic to the Urals. The aim of the negotiations will be to establish a stable and secure balance of conventional forces at lower than the present levels. We shall also seek to eliminate disparities of forces which are prejudicial to stability and security. We want to eliminate the capacity to launch surprise attacks and initiate large-scale offensive action. That is very important. Mr. Gorbachev's proposals of 16 July are a welcome move towards the Western approach. We need more detail, but the proper place for the deployment of the detail is the conventional stability talks.

The Government hope that the negotiations will start during this year. They will take place within the framework of the CSCE process. The outcome of the current CSCE review meeting in Vienna must be balanced. We cannot conclude agreement on that section of the review without progress in other areas, notably in respect of human rights. Hence, our concern to make progress in all the sectors of the review.

I now turn to the hon. Gentleman's comments on chemical weapons. He was generous in saying that, over the years, the British Government have played a real part in the pursuit of a verifiable, comprehensive and global ban on all chemical weapons. We have submitted detailed technical papers to the conference on disarmament in Geneva. Two years ago we chaired the negotiations. Last year my predecessor set out in Geneva the detailed steps that remained to be taken to make the chemical weapons ban effective.

We are both pleased that during the past two years there have been some real signs of progress. The issues are complex, and much effort will be required if we are to develop effective solutions. We seek a convention that will enhance and will be seen to enhance security. To do that, once again there will be a need for reliable verification. I

assure the hon. Gentleman that there is no foot-dragging here. The nearer one gets to a substantive agreement, the more complex things become.

All countries must have confidence in such verification. There is still some way to go, because unless the small print of verification can be seen by all to work in practice countries will not sign an agreement, even if one can be reached. The urgency of achieving a meaningful treaty which we could press others to join is only re-emphasised by recent events of the Gulf war. The negotiations have not, therefore, been a matter only for East and West, as the latest tragic events have shown.

Proliferation underlines the vital need for the convention to be global, yet that raises is own problems. Even the modest provisions of the 1925 Geneva protocol have yet to be universally agreed to. At the United Nations special session in June, my hon. and learned Friend the Foreign Secretary called for renewed impetus to be given to the 1925 protocol. Countries which have not yet signed it—50 in all—should now do so. He called also for prompt international investigation of allegations of the use of chemical weapons. When use had been demonstrated, he said that there should be effective action by the international community. We are working to build on that call.

Openness is crucial. The United Kingdom unilaterally gave up its chemical warfare capability in the 1950s, as the hon. Member for Leyton mentioned. The Soviet Union possesses a substantial chemical weapons capability—but it did not acknowledge that until last year. In fact, no more than three countries admit to possessing chemical weapons. That shows how far there is still to go. If all countries are committed to a ban, as they say they are, why are they so reluctant to come clean? How could we be confident that a ban would work unless there was certainty about what it covered?

The hon. Gentleman may be interested to hear that we have just conducted a significant experiment. In May this year a Soviet delegation visited the United Kingdom chemical defence establishment at Porton Down. There, chemical weapons experts discussed the full range of chemical weapons related activity. Many of these issues were directly related to the work of the conference on disarmament. Other discussions ranged more widely.

At the beginning of this month the Soviet Union reciprocated with an invitation to Britain to visit its chemical plant at Shikhany. We were pleased to have had that opportunity, but it was evident from the exchanges that attitudes to secrecy remain different in the Soviet Union. Glasnost has not yet reached all the parts of Soviet military thinking.

Many questions and concerns about Soviet capability remain. We have a long way to go in the chemical weapons negotiations. The Government are determined to continue to work energetically for the goal that we have set ourselves over many years. It is important to remember that that goal is a convention with robust verification which adds to our security, not a rushed, skimped exercise that would leave crucial problems unresolved.

A ban that works is a prize for which the world has striven ever since chemical weapons were first invented. The progress that we are making now must not cause us to rush in any way that would let that major prize slip from our grasp.

The hon. Member for Leyton repeated the argument, sometimes advanced, that the SDI breaches the ABM treaty. No doubt he has debated this subject often before and will know that we strongly believe that to be wrong. We think that SDI, as a research programme, is allowed under the ABM treaty. The Soviet Union has admitted that it is conducting similar types of research.

As for modernisation, NATO is not in the business of building up stocks of nuclear weapons for their own sake, but in order to deter, and our deterrent must be modern and known to be effective. A threadbare deterrent is perhaps the most dangerous thing of all.

The hon. Member for Leyton said that all the disarmament initiatives had come from the other side. That is not fair, and it is easy to refute by reference to the list that was given by my hon. Friend the Member for Maidstone. The arms control agenda has been set by the West and by the democracies, as one would expect. The INF zero proposal was made by the West, and Mr. Gorbachev is coming round to our conventional arms approach. The West is taking the lead in conventional arms reductions.

In the short time available, I have been able only to refer briefly to the Government's objectives in arms control, in which traditionally we have played a prominent role and will continue to do so. The problems are often intractable, partly because we are seeking not simply to reduce weapons but to improve security, which is not necessarily the same.

It being Eight o'clock, the motion for the Adjournment of the House lapsed, without Question put.

Warehouse Fires

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Durant.]*

8 am

Mr. Terry Fields (Liverpool, Broadgreen): I apologise in advance to the Minister if I do not allow him the customary amount of time to reply. My speech is so extensive that I could have done with an hour and a half. I hope that the Minister will understand that I do not expect a detailed reply. I shall give him a document and ask him or his Department to write to me about it.

The specific problems facing the fire service that I want to deal with concern warehousing. Uncharacteristically, perhaps, the only political statement I wish to make is that Britain used to be the workshop of the world, but we are fast becoming the warehouse of the world. The proliferation of warehouses up and down the country is there for all to see.

Warehouses, by the nature of their use, can pose extreme problems in the event of fire for the people working in them, the firefighters attending them and the population living around or working in them. There has been an upsurge in the warehouse industry in recent years. As the growth of imports has risen, so the number of warehouses has similarly increased.

The growth in the warehousing industry has led to an increase in large and costly fires in warehouses, many of which have been extremely costly—often more than £250,000 and, with increasing frequency, they are in the multi-million pound category.

The two fires at the Ministry of Defence establishment at Donnington in Shropshire are conservatively estimated to have cost £265 million. As that loss is borne by the taxpayer, central Government budgets must be cut and savings must be made in other expenditure. Fires in private warehousing mean an increase in insurance costs for all insurance customers. This scenario deals only with direct losses and takes no account of consequential losses, which often can be equal to the direct loss and, in certain circumstances when contracts are lost or default clauses operate, they exceed the direct loss. A company's long-term viability and profitability may also be affected. When foreign goods are lost, effectively imports are doubled, which may be reflected in the balance-of-trade figures.

The Fire Protection Association's figures for the period December 1986 to November 1987, which were published this year in its "Fire Prevention" magazine, show that of more than 250,000 fires, 20 occurred in warehouses totalling a direct loss of £25,269,000. That was 9 per cent. of the total for all fires in that cost bracket and accounted for 11·46 per cent. of total cost figures.

Another article published by the Fire Protection Association in 1985, "The Warehouse Fire Scandal", by Dr. R. B. Ward, showed that, between 1979 and 1984, 11 warehouse fires occurred in the £5 million cost bracket totalling £377 million, a rough average of £34·25 million per fire.

The same article shows that between July 1983 and June 1984 there were 213 fires, approximately 17 per month, in storage premises, which cost the country £137,302,000. In 20 fires in sprinklered warehouses, the cost was £12,981,000, and one fire alone cost £10 million because of inadequate provision of sprinklers. That means that the remaining 19 fires cost a total of £2,981,000, which is absolute peanuts compared to unsprinklered losses.

I shall deal with five particular fires. I will list them chronologically and explain the lack of control over the warehouse industry in the past decade.

In Braehead container depot in Renfrew on 4 January 1977 there was a fire in a warehouse used for transport and storage. The fire spread to a bonded warehouse and the fire and explosions caused by the storage of commercially pure sodium chlorate destroyed properties and caused widespread damage to domestic, commercial, industrial and public buildings within a one-mile radius. Twelve members of the public and one watchman were treated for shock and minor injuries. Burning debris from the explosion fell on fuel tanks at a nearby power station. Fortunately, they did not ignite. In that instance, no fire safety legislation was applicable on the site.

In February 1980, at the Permaflex company in Stoke-on-Trent, there was a fire and a series of explosions. The fire originated from arcing on a fork-lift truck in an area where flammable gas, LPG—liquefied petroleum gas —was present. The warehouse was used for storing cartridges and aerosols, containing 49 tonnes of LPG. The aerosol and butane fuel containers were exploding and being violently expelled from the building. Local residents and commercial and industrial premises were evacuated. Five hours later the fire seemed to be under control. Then, two massive explosions occurred causing damage to adjacent property. That led to a re-evacuation of the area. The fire burned for a further 60 hours—2·5 days. The local authority concluded that the Fire Precautions Act 1971 did not apply.

A fire at B and R Hauliers in Salford in 1982 involved a warehouse where some 2,000 tonnes of chemicals stored included 25 tonnes of sodium chlorate. Sixty people attended the local hospital after inhaling smoke and fumes and suffering from shock. One person was admitted with breathing difficulties, nine were treated for cuts and lacerations, one for eye injuries and four for nausea and vomiting. Later, 100 people attended the Salford Royal hospital with chest ailments, sore throats and so on. Surrounding properties suffered varying degrees of damage. Several hundred people were evacuated. A cloud of hydrogen chloride—hydrochloric acid—formed around the area but, because of the nature of the premises, the Fire Precautions Act did not apply yet again.

In 1982 there was a fire and explosions in Cary's warehouse in Ipswich. The warehouse stored wickerware, ammonium nitrate fertilisers, compound fertilisers and potassium nitrate. Between 750 and 1,000 people were evacuated from local housing estates, shops, old people's homes and a primary school in an area three quarters of a mile long and half a mile wide. Five people were rescued by firefighters. The explosions were so powerful that they ejected burning materials and lethal sized pieces of corrugated iron and glass into adjoining premises within 100 m of the incident. Again, the Fire Precautions Act did not apply.

In the Brightside lane warehouse in Sheffield in 1984 a fire started in a furniture repository. The repository formed one unit of a large building sub-divided into five smaller units. In two days the fire destroyed the whole warehouse complex with the exception of one unit. That survived due to the effectiveness of fire separation between it and the rest of the complex. The building was not

dissimilar to Braehead and the fire was similar to that which occurred there in 1977. It is obvious from the catalogue of fires I have listed that the lessons have not been learned. The Fire Precautions Act did apply in that case, but only to one of the units which was put to a "designated use".

The risks in all those cases are covered by many pieces of legislation and regulations. There is the Town and Country Planning Act 1971, the Building Act 1984, the Fire Certificate (Special Premises) Regulations 1976, the Notification of Installations (Handling of Hazardous Substances) Regulations 1982, the Control of Industrial Major Accident Hazards Regulations 1984, the Fire Precautions Act 1971, the Fire Services Act 1947, the Storage of Flammable Liquids Regulations, and the Health and Safety at Work, etc. Act 1974.

None of those pieces of legislation had any real effect on the control of what was stored in those premises, nor did they put any responsibility on the owner or occupier to take the course of action which the fire service would demand. For instance, should someone want to develop a new site or redevelop an existing building for warehousing, it seems politic to examine what controls the planners would or would not have over such a development. By virtue of the Town and Country Planning (Use Classes) Order 1987, the Town and Country Planning Act 1984 classifies warehouses as class B8 storage and distribution. That means that if the development of a site is new, planning permission would be required. If, however, the site is an existing one and is already classed as the same usage group, no planning permission is required.

However, nowhere in the planning legislation is there a requirement for the fire authorities to be consulted, nor is the fire authority given any power to act as an objector to a proposal. Hazardous sites which do not fall within the scope of the Health and Safety Executive Regulations 1982 and therefore the 1987 order can gain automatic planning permission where there is no change of use. The Fire Precautions Act 1971 and the 1987 order made by virtue of it have one serious failing. They fail to differentiate between risk, and nowhere more so than where a class B8 building or site is under consideration. In effect, that means that a low fire risk-load warehouse, for exampie, steel stockholders, can be transformed overnight into a high risk-load premises, for example, for the storage of foam plastics, without any requirement for any form of planning consent and, therefore, no facility for local population objections.

The Building Act 1984 and the regulations made by virtue of it deal with fire safety in two ways. One is life safety in the form of means of escape from fire, and the second is the ability of a building, structure or fabric to resist the effects of fire. I shall deal primarily with the second aspect. Warehouses, for the purpose of the building regulations, are classed in the purpose group identification system as "other non-residential". As with the planning controls, the building regulations fail to differentiate between user risk. The final anomaly with the building regulations is that there is no on-going control so that, as with the planning control, once a building is within a purpose group no account is taken of the risk that the building poses. Therefore, a change of occupier or risk causes no reassessment of the building.

There is no reason to believe that certain warehouses, used purely for the storage of agricultural products—for example, fertilisers—would be exempt from any building regulation control by virtue of definition as an agricultural building. Bearing in mind that fertilisers have played a significant part in some warehouse fires, that is not a happy scenario. The Fire Certificate (Special Premises) Regulations 1976 also apply to warehouses, but the quantities of hazardous substances to be specified are such that there would almost certainly be an overlap with the next two regulations with which I want to deal.

The first is the Notification of Installations Handling Hazardous Substances Regulations 1982. It should be noted that these regulations rely on notification being given to the Health and Safety Executive by a premises or site occupier. Of course, in many instances, such people can be shady characters who refuse or neglect to give information to the Health and Safety Executive and, as a consequence, stuff is stored there which should not be there. No controls or regulations cover that.

The second piece of legislation in that category is the Control of Industrial Major Accidents Hazards Regulations 1984, which rely for application on the storage or use of quantities of specified hazardous substances. There are certain areas of overlap so that both sets of regulations may apply simultaneously. In effect, that means that only specific commodities stored in a particular warehouse are covered by the legislation. The legislation would not apply to other goods which could be stored in the warehouses without any controls and as a consequence the warehouses would be a danger to the public and to the fire service.

The fire service prepared the Fire Precautions Act 1971 which is a major piece of legislation. Its main thrust is to provide for life safety for persons within premises to which the Act applies. Two separate premise types have been designated so far. The first covers hotels and boarding houses and the other covers places at work. However, the designated titles serve to deceive because under the heading of "places of work" only premises to which the definitions contained in the Factories Act 1961 and the Offices, Shops and Railway Premises Act 1963 are put to what is called a designated use.

The two definitions under the 1961 and the 1963 Acts apply only to certain types of warehouses. There is a range of warehouse types which do not fall neatly into definitions in the Factories Act 1961 or the Offices, Shops and Railway Premises Act 1963. Therefore, while certain provisions in the 1971 Act apply, the main fire safety sections do not simply because the building is not put to what is called a designated use.

Section 12 of the 1971 Act enables the Secretary of State to make regulations relating to any matter that appears to him to have an effect on fire safety. That power has been exercised only once to make certain regulations relating to fire safety in small places of work which, while they are put to a designated use, because of the small number of persons employed, do not require a fire certificate.

The 1971 Act is at present in the first phase of four-year alteration due to the provisions of the Fire Safety and Safety of Places of Sport Act 1987. It is generally understood that in other areas the status quo could be maintained.

The Fire Services Act 1947 is rather important to firemen, particularly section 1(1)*(d)* which gives licence to fire authorities and requires that the fire authority make

[Mr. Terry Fields]

"efficient arrangements for obtaining, by inspection or otherwise, information required for fire-fighting purposes with respect to the character of the buildings and other property in the area of the fire authority".

However, even with those wide sweeping powers under the 1947 Act, the only restriction is that entry cannot be demanded unless 24-hour notice is given.

To the layman, quoting all this legislation is absolutely meaningless. My point is that there are warehouses that may be covered by specific areas in all the legislation to which I have referred, but without sufficient clarity to give the fire service any confidence that a proper job is being done, looking after the interests of the general public, of fire service personnel, and property in close proximity to some of the buildings that store these dangerous commodities.

There are regulations covering the storage of flammable liquids and the Petroleum (Regulations) Acts of 1928 and 1936 and the Highly Inflammable Liquids and Liquified Petroleum Gas Regulations 1972 apply. However, warehouses that store flammable liquids could fall within the arena of that legislation. However, it should be understood that the regulations are very specific in application and will apply only in certain specified conditions which are fairly detailed. They are beyond the scope of what I want to say.

If we compare the five warehouse sites to which I have referred with current legislation and assess the control of, planning and building regulations purposes, three of the sites would not require planning permission by virtue of the fact that the Notification of Installations Handling Hazardous Substances Regulations 1982 would apply. No building regulation application for three of the warehouses would be necessary. The Health and Safety at Work, etc. Act 1974 would apply generally to all the sites and did at the time of the incidents. It is therefore a matter for anxiety that it appears to have failed, because, despite the Health and Safety at Work, etc. Act, fires of a major magnitude did take place, with severe damage to property and with severe risk to people and firefighters in the area.

It must cause anxiety that in the majority of the cases that I have detailed, which are but the tip of a very big iceberg, there was fragmented control over the sites and little effort to deal with the risks that the sites posed. The dangers of the sites were very real. It could almost be said that it was by divine intervention that no one was killed in those incidents rather than by the efforts of those bodies charged with looking after the public good.

Even more worrying is the fact that in two of the instances—40 per cent. of the instances—analysed the sites would still be bereft of legislative control and could be in business today. There appears to be no common goal of the safety enforcers. The controls, such as they are, are not complementary and do not inspire confidence. There is no interplay between the enforcers who operate independently of each other and have very little input into each other's areas of control. The anomaly in the Fire Precautions Act 1971 whereby certain warehouses are classified as "designated" and others are not is indefensible, as is the anomaly that only factory buildings that store or use highly flammable or explosive materials require a fire certificate, irrespective of the numbers employed.

The fact that the public purse in the form of the fire authority must always pay the cost of the provision of adequate water supplies for fire-fighting purposes is an antiquated and dangerous precedent in times of restricted budgets.

The failure of both planning and building regulation controls to differentiate between the potential risk of a building or a site because of the use of blanket purpose group headings is worrying in the extreme. The hypothesis that a steel stock warehouse in the middle of a residential area could be changed overnight into a chemical storage depot without any form of control is worrying.

I shall provide the Minister with a list of 12 recommendations, but I shall briefly mention them now. I shall be demanding—and the fire service through the Fire Brigades Union will be demanding—the classification and grading of warehouses. There will need to be notification of change of storage and planning and building regulation consent will be required. There would be a need for designation of warehouses for the purposes of the Fire Precautions Act 1971. There would need to be fire protection measures for warehouses, because I believe I have demonstrated that a sprinkler at warehouses can give fire protection. There needs to be a draft marking of building regulations, which I believe that the Health and Safety Executive is circulating for discussion. On non-public sites, water supplies should be paid for by the developer or the user of the site, and not by the local authority whose finances are presently a little strapped. Fire certificates and annual inspections with reports should be mandatory, so too should be the keeping of an up-to-date list of all materials stored at a site, which should be accessible to firefighters.

I apologise for going on so long, but this is a detailed and complex matter which needs to go on record. I was a fire officer for 26 years. We must protect the firefighters who are entering unknown territory in certain factories. We must protect the general public and ensure that we make a contribution to fire safety and reduce fire losses.

8.23 am

The Minister of State, Home Office (Mr. John Patten): I understand the wish of the hon. Member for Liverpool, Broadgreen (Mr. Fields) to set out his points in some detail. I know he will realise that, because of the lack of time, I shall not be able to go into all of his points in as much detail as I should have liked. I am sure the House will agree that we should listen with care to what the hon. Gentleman says about the fire service, because, as he said, he was a member of the fire service between 1957 and 1983. He has great experience in these matters and I am grateful to him for the way in which he has spoken this morning. I shall ensure that the document that he passes to me is examined in detail in the Home Office.

While I agree that we should listen carefully to the hon. Gentleman about firefighting, I am not sure that we should listen to him quite so carefully when it comes to the national economy. The country is certainly not one great warehouse now. It has a lot of warehouses, but it also has a lot of workshops, a lot of innovation, and a lot of technical expertise. There is much selling of that expertise and of financial services abroad, which makes Britain one of the economic leaders of the Western world. We have begun the eighth successive year of economic growth. That is an unparalleled record in recent history.

I am grateful to the hon. Gentleman for giving me this opportunity, albeit briefly, to pay tribute to the fire service,

which frequently combines with other emergency services to provide an invaluable source of help and assurance for the public when disasters occur. It occasionally rescues people from terrible situations and deals with warehouse fires, which can sometimes be considerable conflagrations.

Firefighters are sometimes led into the unknown. It is a sad fact of life that the demand on their services shows no sign of diminishing. The hon. Gentleman has some detailed suggestions to make on how the work of the fire services in dealing with warehouse fires can be improved. It is perhaps appropriate, even at this early hour, to say something about finance as a background to my remarks about the fire service and warehousing.

The Government are committed to the maintenance of an efficient and effective fire service. They provide support through the block grant mechanism of the rate support grant settlement. Support will continue in the form of revenue support grant under the new local government finance system, which comes into operation in 1990. Since 1982-83 the Government have increased by 12 per cent. expenditure on the fire service. Some of the money and the effort of the fire service goes on fighting fires in warehouses. I agree that warehouse fires have often been a cause of concern, but, happily, the fire service has always risen to the occasion—as we have all grown to expect and appreciate.

All brigades take account of warehouses and other special risks, such as chemical plants and others that the hon. Member mentioned, when arranging fire cover in their areas. Fire service resources are also deployed to meet the risk categorisation of plants, factories and warehouses. Brigades ensure that they deploy appliances so that if some disaster should occur it is dealt with as quickly as possible.

The Central Fire Brigades Advisory Council keeps all new risks under review and gives operational advice to the fire service. It can also recommend to the Government any changes in law that are thought appropriate. The hon. Gentleman told the House about some of the 12 recommendations that he will let me have after the debate so that I can ensure that my noble Friend Lord Ferrers, who has ministerial responsibility for these matters in the Home Office, can consider them.

I expect that the Home Office and the Department of the Environment will examine the important matters that the hon. Gentleman has raised about building regulations and planning, as well as about the fire brigade, so that we can send him a consolidated reply as soon as possible. I do not know whether that reply will reach the hon. Gentleman before, or after, the summer holiday. I wish him well for the holiday, which I hope gives him rather less time for what "DOD's Parliamentary Companion" lists as his special interest, which is working-class struggle, and rather more for his recreation, which is wine making.

Question put and agreed to.

Adjourned accordingly at twenty-nine minutes past Eight o'clock on Friday morning.

House of Commons

Friday 29 July 1988

The House met at half-past Nine o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

PETITION

West London Hospitals (Closure)

9.35 am

Mr. Clive Soley (Hammersmith): With your permission, Mr. Speaker, I beg to ask leave to present a petition signed by no fewer than 50,000 people in the west London area complaining about the closure of four hospitals in west London.

The petition is organised by CAMDOR—the campaign for the defence of Riverside. Carol McDonagh was one of its organisers, and it reads:

"That we object to the plans by Riverside health authority to totally demolish St. Stephens hospital in order to make way for a new hospital which, if built, will lead to the permanent closure of Westminster hospital, West London hospital, St. Mary Abbots hospital and Westminster Children's hospital.

Wherefore our Petitioners pray that your honourable House will call upon members of Riverside health authority, North West Thames regional health authority and the Health Ministers to call a halt to these proposals and to argue that Riverside health authority be properly resourced to ensure a free and comprehensive Health Service, serving both the local community and the many visitors to the area."

It is estimated that £25 million would have prevented this proposal from going ahead. The petition shows the extent of the concern in my area.

To lie upon the Table.

South Yorkshire (Economic and Environmental Problems)

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Neubert.]*

9.36 am

Mr. Peter Hardy (Wentworth): I am delighted to have this opportunity to raise the environmental and economic needs of south Yorkshire. It would be inappropriate to go into recess without the House having some idea of the grave problems and difficulties that my constituency and neighbouring constituencies face.

The matters that I seek to raise fall within the responsibility of three Government Departments. I suggested that it would be appropriate for three Ministers to be present this morning. The enormity of our difficulties would have justified their presence. Perhaps it would have been unrealistic to expect three Ministers to be here, but I am relieved that the Under-Secretary of State for the Environment, the hon. Member for Rossendale and Darwen (Mr. Trippier), is here. I intend to refer to a matter that I raised last week at Question Time and to the answer that he gave, which appeared to suggest that the door may not be firmly locked. That door needs to be opened rather wide and rather quickly.

The debate is about the economic and environmental problems of south Yorkshire. I shall deal with the problems in my own constituency, which is in the centre of the former metropolitan county. Barnsley is to the west, Doncaster is to the east and my constituency is largely to the north and east of Rotherham. Sheffield is to the south. I understand that Sheffield's case was presented yesterday at considerable length, so I shall not stray too far in that direction.

The northern part of my constituency includes part of the Dearne valley. It is a geographical area that, as its parliamentary representatives, I share with my hon. Friends the Members for Barnsley, East (Mr. Patchett) and for Don Valley (Mr. Redmond), who support the case that I shall be presenting today. I am grateful for their support and encouragement.

I welcome the debate. The scale of the problem and the intensity of the need that we face requires parliamentary attention and high ministerial priority. My constituency and several parts of south Yorkshire suffer from some of the worst unemployment problems that are to be found in England. I understand that of all the travel-to-work areas, the Rotherham and Mexborough travel-to-work area's unemployment ranks about seventh. Our unemployment levels are dreadful.

I do not propose to refer to precise figures because an obsession with detail may cloud the issue. There is also the suspicion that the official statistics are somewhat less than accurate. I believe that in areas of high unemployment the numbers that are excluded from the official figures are much higher than average.

One third of the unemployed in my constituency and in neighbouring areas are young people and 40 per cent. of the unemployed in the unemployment black spots in south Yorkshire have been out of work for over a year and, in many cases, for over three years. There are about 30 or 40 unemployed for each vacancy in most of the south Yorkshire area.

[Mr. Peter Hardy]

I suggested not long ago that the unemployment figures, grave as they are, do not represent fully the reality. It might be highly desirable to look not at the statistics for those who are unemployed, but at the statistics for those who are economically active, who are in full-time employment. Such statistics show that the position in south Yorkshire is grave. Unfortunately, the employment statistics are not available, apart from the 1981 census, which presents in detail the proportion of the population in full-time work. However, in south Yorkshire we have suffered many grave economic blows since 1981 and that census is not relevant to the present position. I should hate to have to wait until 1991 and then find that we have not made the progress that is so desperately needed.

The situation is deteriorating. The Minister may tell the House that, as a result of local and public and private initiatives, a number of jobs have been created. Indeed they have. Several part-time jobs and low-paid full-time jobs have been created, reducing the net disposable income of south Yorkshire because those part-time jobs are counted as having replaced full-time jobs in better-paid and traditional industry.

There has been a dreadful deterioration in my constituency this year. I have lost two collieries and the Canning Town glass works so far this year. That represents over 1,000 jobs. On several occasions in the House I have told the deplorable story of the closure of Canning Town Glass—a story of deceit which shows the integrity of British commerce in a poor light. Canning Town Glass was closed despite my constituents and me having been given firm assurances and although the local authority was persuaded properly and lawfully to make grants from the rate fund towards the maintenance of those works. Yet 500 jobs went. At the same time, Manvers colliery and shortly afterwards Kilnhurst colliery were closed. Those are not the only two collieries that have gone in south Yorkshire. Two or three months ago, in Prime Minister's Question Time, I recited a list of colliery closures in recent years.

I now have one colliery in my constituency, Silverwood, a successful colliery with a long and profitable record. It demonstrates what wise investment and good leadership can achieve. Although the prospects for that colliery, which has substantial reserves, should be satisfactory, the demoralisation in the industry leads some people to suspect that it may be in danger. Recently I looked at the plans for the colliery. I do not share that anxiety, although if the plans to develop ports on the Humber come to fruition successful and potentially profitable collieries are likely to be in peril.

That anxiety follows the rapid contraction of the coal industry in the central part of south Yorkshire and the Dearne valley. That valley was once green. As I have said before in the House, if one looks at the early ordnance survey maps published in the middle of the 19th century, one can detect the attractive quality of that valley, with osier beds, duck decoys and a fish population that included an abundance of salmon and trout. Although there have been modest attempts to improve the river Dearne, like the Rother and the Don, it is still more like an open sewer than a satisfactory water course. I am concerned about that because in the early 1970s, when I first became a Member of the House and campaigned to secure a much higher priority for the rivers of south Yorkshire, I was assured that I could expect them to be brought up to recreational standard by the mid-1980s. Last year I was told that they might reach that standard by the year 2000, so we seem to have made remarkably little progress.

As I live within my constituency, in the middle of south Yorkshire, and as I was a local representative in the Dearne valley area before I became a Member of Parliament, I have long been convinced of the fact that we need to ensure that our environment is properly protected and improved. I now believe it to be an urgent necessity. If we do not improve our environment, we shall not attract the incoming investment that is now an absolute necessity. For that reason, I was pleased when the planning department of Rotherham borough council, which is extremely competent, as the Minister may know, produced its concept for the improvement of derelict land in our part of the Dearne valley. The Minister has seen that plan and I believe it to be not merely desirable but absolutely essential.

As the Minister knows, there are 675 acres of land associated with Manvers and Wath collieries that are now derelict. Under the present rules governing the application of derelict land grant, there is no prospect whatever of one square inch of that land being improved. The land adjoins a substantial acreage occupied by the former railway marshalling yards close to Brampton Bierlow but within Wath-upon-Dearne. The area borders the constituency of my hon. Friend the Member for Barnsley, East (Mr. Patchett). It was a hive of activity when the coalfield was centred more towards the east. On several occasions during the war, the German English-language broadcasts promised to obliterate the Wath hump, as it was popularly called. It is now a wasteland.

Under the derelict land grant rules, it seems that the area would be unlikely to qualify for grant, although I was relieved to learn in a letter from the Prime Minister the other day—I shall refer to that correspondence—that the recent application from Rotherham borough council for derelict land grant to treat the Wath marshalling yards has not been absolutely rejected. Under the derelict land grant, I had thought that there was a possibility that the application would be approved because the council could demonstrate that some of the land at least would be subject to hard use after the dereliction had been cleared.

I understand that the Minister may tell the House that the Government have helped Rotherham by supporting the Temple borough project in the constituency of my hon. Friend the Member for Rotherham (Mr. Crowther). I wholeheartedly support it because it will clear up some of the appalling dereliction between Sheffield and Rotherham. Once, 25,000 or 30,000 men worked in the steelworks area between Sheffield and Rotherham. Now there may be more estate agents' notices than jobs. It is an area which provided the sinews of material during the first and second world wars. We could certainly not have won those wars—if anyone can win a war—if we had not had the output from those plants. It is necessary for the project, of which the Minister is well aware, to go ahead, but it would not be helpful, for it to go ahead and other projects of equal necessity to be delayed.

People who read my speech may think that I am asking for a great deal, but I believe that we are one nation. That may not be a fashionable concept and Conservative Members may not endorse it entirely, but the country has a profound obligation to these areas.

I recall in the 1960s, when I was a young councillor, the chairman of my party in Wath-upon-Dearne and a schoolmaster, being extremely angry that the girls whom I taught and whom I represented had to travel by coach to work in the woollen mills in Bradford and Halifax. Girls who left school had to get up at 5 or 6 o'clock in the morning and would not get home until 8 or 9 o'clock at night. That was the only work available because there was a substantial lack of jobs for women in those days.

The local authority made efforts to stimulate and diversify the economy, but not enough was achieved, although we made some contribution. We were up against an almost structured disadvantage in that from the 1950s to the early 1970s the national strategy was that areas such as mine should not be encouraged to engage in economic diversification because the coal industry was far too important. The National Coal Board, as it was then known, built several housing estates in south Yorkshire to accommodate miners from other areas in order to guarantee south Yorkshire's coal output. We were up against objections and difficulties in seeking to ensure that we had rather more eggs in our economic basket, and we were prevented from doing so.

Then in the 1970s, when some of us were worried about the age of some of our collieries and saw how, as a result of investment, technological advance was demonstrably successful in the steel industry, although jobs were beginning to go, we pressed the case for greater economic assistance to stimulate the economy. We were told that the Department of Trade and Industry was absolutely confident that Yorkshire could generate its own prosperity from within, that we did not share the same economic difficulties as other parts, and that internal generation of wealth would meet the regional need. That was certainly not the case. With about 100,000 people unemployed on the Government's figures, the need is demonstrable.

Earlier I referred to correspondence with the Prime Minister. About four years ago I sent her a carefully considered assessment of the plight of my area. She dismissed it rather lightly and suggested that I should see about 2,800 new jobs in the mining industry. Far more jobs have gone in the period since that correspondence and we have had other blows and difficulties. About four months ago I again wrote to the Prime Minister urging her to pursue a multi-departmental study of the Dearne valley and the surrounding areas. Her letter in reply was somewhat careless—that may be a gentle word to use—and said that unemployment was falling. She was using the March rather than the April figures which was just before we lost jobs in the Canning Town Glass plant. She said that we were enjoying special priority under the urban programme. That was quickly checked and we discovered that we were not. I hope that the Minister is not unduly bored because he is aware of my point.

On balance, the three metropolitan districts of Barnsley, Doncaster and Rotherham are receiving about £6 a head in the current year under the urban programme, whereas other areas with less than half our unemployment are receiving urban programme funding twice or three times as much. If that is special priority, I would rather not have it. I do not mean that I would rather not have the fund—*[Laughter.]* The Minister must not misinterpret my comment. I would rather not have special priority if it will give us only a third as much as areas with a third or half our unemployment.

The Minister should also bear in mind that the value of our urban programme has been affected by inflation. Since inflation may be rising, albeit not vastly at this stage, the urban programme may not be as good as it should be. I was rather relieved last Wednesday when, in answer to my question, and without bidding, the Minister provided additional funding for a housing scheme in the Rawmarsh area of my constituency. If I have to ask a question a week to elicit that sort of response, I shall be happy to do so.

I am concerned about the need to enhance our environment because we shall not see economic recovery without that. My local authority, Rotherham, has not taken an absolutely hostile view to opencast mining. Several projects in Yorkshire are proceeding and some, such as the Rother valley country park, can make a useful contribution in the end. I am worried that the environmental problems are severe. We should not allow any opencast mining, whether for the benefit of British Coal or for the Government to pursue their reckless way of private profit, if it brings serious disturbance and environmental difficulties for my area.

To the north of the Wath-upon-Dearne-Rawmarsh-Swinton area we have the Dearne valley, with 1,000 acres of derelict land. If immediately to the south of Wath and Swinton and close by Rawmarsh we see the Warren House opencast site development, we would be placed between the upper and nether millstones of ugliness and squalor which would bring the population into a state of fury which I would certainly share. I hope that Conservative Members who are often concerned about the environment in the south-east—I sought to speak in a debate about housing development in the south-east merely to point out the environmental needs in other areas—will have some sympathy with the view that we should not be surrounded by dereliction from 19th century industry on one side and ill-considered insensitive development of opencast mining on the other.

In recent weeks my attention has been drawn to the case for a long-term study about the health effects of opencast mining. The other day I noticed an article in the *New Statesman* and correspondence in *The Times* which suggested that that study should begin without further delay.

Other urgent needs, which relate to environmental requirements, concern the infrastructure, and transport in particular. I know that the Minister is in the Department of the Environment, but I hope that the Department of Transport has provided him with some briefings on my next point. A new A1-M1 motorway link is needed to give the northern half of south Yorkshire a chance of achieving economic growth, development and, perhaps, eventual prosperity. I believe that it is not high enough in the programme and it does not command sufficient priority from central Government. However, I consider that that development is a necessity. I qualify that by saying that, if and when the road is built, it must be built in such a way that existing or potential railway lines are not rendered valueless by a failure to provide an adequate number of bridges. There is at least one potential railway line that would justify building a bridge where the road goes over the course of the proposed railway. We must maintain adequate rail and road networks. I hope that the Department of Transport will consider that point in due course and give it much higher priority.

[Mr. Peter Hardy]

The case for Sheffield was made at length in the House last night, so I shall not deal with that. However, the four local authorities in south Yorkshire—Barnsley, Rotherham, Sheffield and Doncaster metropolitan authorities—have together produced a document that I should like to draw to the Minister's attention, although it would not be appropriate to read out great chunks of it today. I hope that the Department of the Environment and any other relevant Departments are aware of the document, which was produced by the planning departments of the four local authorities and is entitled "Unitary Development Plans in South Yorkshire: Advice on Strategic Guidance from the the South Yorkshire Planning Conference". We have identified the needs of the area, which are acute, grave and vast.

I believe that we have at least begun to convince Ministers of the appalling conditions that face the area as a result of the movement of the coal industry to the east and the technological change—despite record-breaking achievement—within the steel industry. Our economy needs to be diversified if our environment is to be enormously improved. That improvement must be on a generous scale and it must be pursued with enthusiasm and without further delay.

10.3 am

The Parliamentary Under-Secretary of State for the Environment (Mr. David Trippier): I am delighted to respond to the matters raised by the hon. Member for Wentworth (Mr. Hardy), and I congratulate him sincerely on obtaining the opportunity to air again his concern about the economic and environmental problems suffered in south Yorkshire, particularly by his constituents and others living in the Dearne valley. I know that he is an able advocate for those whom he represents.

The hon Gentleman's concern is shared by the Government. We are, and shall remain, fully committed to helping local communities tackle the problems of unmployment and environmental deprivation by maximising whatever mechanisms are available—not only through measures targeted specifically at the area, but through policies being pursued generally throughout the United Kingdom, some of which I now intend to cover in more detail.

Before I move on to that detail, I must say that it occurred to me while the hon. Gentleman was speaking that it might be appropriate for me to pay yet another official visit to Rotherham or the nearby area, perhaps later in the year—if the hon. Gentleman would like that. Such a visit could be helpful for both of us and perhaps for the local authority. I visited the area about two months ago, as the hon. Gentleman knows. It is no great hardship for me because the journey only takes me an hour and a half from my home. I am a Lancastrian, but that does not seem to bother south Yorkshire people, and from my point of view I would see such a visit as missionary work.

Mr. Hardy: It was remiss of me not to have conveyed an invitation in my speech. I intended to do so and to ask the Minister to visit the site where we should like to see the garden festival held in the 1990s. My only reason for hesitating is that most of the Ministers in the Department of the Environment who have been up to see us seem to have lost their jobs shortly afterwards and I would not want that fate to befall this Minister.

Mr. Trippier: I have visited the area before and I am still in the same job after the recent reshuffle. I shall be delighted to respond to the invitation. Such a visit is no hardship to me and I should like the hon. Gentleman to be there as well as representatives of the local authorities.

The level of derelict land grant assistance is, I know, a subject that much concerns the hon. Gentleman and which I know more than a little about. At Question Time recently, I undertook to look agan at the criteria which govern the derelict land grant regime.

I fully appreciate, as the hon. Gentleman knows, that there will be cases where hard end use schemes are, for one reason or another, not appropriate to particular locations such as areas of colliery dereliction and areas where greening is considered essential to create the quality of environment to attract investment in development. I thought that what the hon. Gentleman said on that was right. I told the hon. Gentleman at Question Time that once I have the results of the derelict land survey which will come out after I visit his constituency, if it is appropriately timed I shall be in a much better position to undertake the review of the derelict land grant guidelines.

The local authorities are, as the hon. Gentleman knows, responsible for the collation of the derelict land information which, for the Yorkshire and Humberside authorities, is due back to my regional office in Leeds by 31 October 1988. It would therefore help if the hon. Gentleman could ensure that for the Dearne valley authorities, with whom he has close contact, these important survey returns are not delayed unnecessarily. The sooner I have the facts about the current state of dereliction the sooner my officials and I can begin to analyse them and consider whatever policy changes may be necessary.

The Yorkshire and Humberside region has received an initial public sector derelict land grant allocation of £7·2 million for 1988-89. Of this, almost £4 million has already been earmarked for the four south Yorkshire authorities. Rotherham alone has been granted rolling programme status for the Templeborough regeneration project, which the hon. Gentleman mentioned, and £2 million has been earmarked for this year and again for next. I hope, therefore, that the hon. Gentleman accepts that the area is receiving a very considerable level of financial assistance through DLG although, no doubt, he will press me for more when I visit him. I should also add that invitations to local authority chief executives to make their bids for DLG resources for 1988-90 schemes will go out shortly. I suggest that those bid documents might be a useful vehicle for putting the fullest possible case of increased DLG assistance.

There will, however, always be a limit on the amount of DLG resources. The hon. Gentleman would expect me to say that. He would say the same if he were standing here. It is important that other means of funding the reclamation of despoiled land should be fully explored. The private sector can help and is willing to help, often in partnership with central and local government. A number of major private sector schemes have had financial assistance from my Department, such as the Parkgate retail centre in Rotherham, and I recently announced a private sector derelict land grant of almost £3 million for

the Meadowhall retail complex in Sheffield, with which the hon. Gentleman is familiar. The Government have, moreover, recently simplified the grant assistance available to the private sector in the 57 programme authority areas.

It is important that I should stress that the reply given by my right hon. Friend the Prime Minister to the hon. Gentleman made the point that, of some 450 local authorities, only 57 attract the additional form of resource through the Department of the Environment's urban block. That was the special assistance that was made available to those areas—which is denied to the other areas. Four south Yorkshire local authorities are among the 57 authorities. Their inclusion must be justifiable otherwise they would not have been shortlisted in the first place.

City grant was introduced on 2 May this year and my officials are already dealing with several applications from south Yorkshire. This is a golden opportunity for me to suggest that the hon. Gentleman might try to act as a catalyst to attract interest from the private sector, with the support of the local authority, for city grant applications. Such an application would have to meet certain criteria, but I would consider it as favourably as possible. The hon. Gentleman will be aware that we have already approved a number of schemes for urban regeneration grant and city grant.

With regard to the urban programme, in 1987-88 the three authorities straddling the Dearne received £5·5 million, plus an end-of-year windfall of £210,000. Their initial allocation in 1988-89 is again £5·5 million. It is, of course, for the local authorities to decide where they wish to target those resources. The hon. Gentleman will be most concerned about his own constituency, which lies within the Dearne valley, and I leave it to him to press the authorities there.

Doncaster, in particular, has decided to focus on the Dearne, especially the towns of Mexborough and Conisbrough. These received considerable help last year and there are more good schemes in the pipeline which should greatly benefit the local economy. For example, in 1987-88, £200,000 was allocated to create a tourist centre at Conisbrough's impressive 12th century castle. Work there is now well under way and is complemented by English Heritage funding and a massive tree planting scheme undertaken by the Countryside Commission at the former Cadeby colliery.

This year, I approved more than £300,000 for the first stage of the conversion of the former Mexborough grammar school to workshop and business units. It is expected that this scheme will create some 250 jobs and help the local entrepreneurial talent to stimulate the economy. A recent small grant to a local business man under the urban programme is expected to create another 50 jobs in Mexborough as the former Royal Electric theatre is converted into a restaurant and leisure centre.

I am endeavouring to explain that the environment has not been neglected. Mexborough town centre will benefit greatly from a £250,000 pedestrianisation scheme. The urban programme also supports two members of staff co-ordinating British Trust for Conservation Volunteers initiatives in Mexborough and Conisbrough. This not only improves the local environment but offers useful training and experience to young people in the area.

Support for projects in Rotherham's part of the Dearne valley has been going on for some time as well, both under the urban programme and before, when Rotherham was classified as an ODD, or other designated district. Very substantial amounts of money have been put into large economic schemes. For example, £1 million went into the Swinton bridge at the edge of the Dearne which, with derelict land grant, opened up industrial land and safeguarded hundreds of jobs at Morphy Richards as well as allowing valuable new developments. Again, at Brampton Ellis, over the past two years well over £500,000 has gone into converting a former school into some 68 small and medium-sized units for new and expanding businesses which offer the hope of real jobs for hundreds of people in the area.

In Barnsley, the story is much the same, with particular emphasis being placed on the environmental schemes and with more than £200,000 in the past two years going into the Dearne valley park—a major project which has also received funding in previous years. The latest stage involves the landscaping of a former maggot farm, and applications for further schemes are still arriving in our regional office in Leeds.

I repeat that we can approve schemes within the Dearne only if they are submitted to us. It is up to local authorities to prioritise, but it is as well not to be too parochial as the Dearne will also gain from the the new initiatives in nearby Sheffield. The urban programme funded science park and new employment park, the improvements which will follow rapidly now that the urban development corporation has been established in the lower Don valley and private sector projects such as the one at Meadowhall will all improve the economy of the whole of south Yorkshire. I am sure that the hon. Gentleman accepts that there will be a knock-on effect. Especially heartening for me are the two major developments at either end of the lower Don valley, the urban development corporation giving the area a head start in the type of urban regeneration that we wish to see, with the physical transformation of the landscape and the reduction of the unacceptably high unemployment in the area. I genuinely hope that the hon. Gentleman's constituency will benefit as a result.

Although the hon. Gentleman asked for higher ministerial priorities, I have attempted to show that the area already receives high priority. As a result of the important oral answer that I gave last week and my offer to revisit the hon. Gentleman's constituency, I am endeavouring to meet his request.

Middle East

10.15 am

Mr. David Atkinson (Bournemouth, East): I am grateful for this opportunity to refer to the situation in Palestine and to congratulate my hon. Friend the Minister on his new appointment, which I know he will enjoy and in which he will certainly excel.

It is now eight months since the commencement of the current unrest in the occupied territories of the West Bank and Gaza—the "intifada" as it is known by the Palestinians. The unrest in December was spontaneous, but it had been long predicted. Since Israel replaced Jordan and Egypt as the occupying power in 1967, the Palestinians have become increasingly frustrated by the lack of any prospect of a settlement which would respect their right to self-determination. Demonstrations, the detention of young Palestinians and curfews in the refugee camps were nothing new, but when last year's Arab summit in Amman and the super-power summit in Washington appeared totally to ignore the Palestinian cause, the situation was ripe to explode.

Today, following 200 deaths, thousands of injuries and thousands more people detained without trial, the uprising is becoming organised—by Palestinians internally, by the Palestine Liberation Organisation externally, but more worrying in terms of the future stability of the middle east, by Islamic fundamentalist groups for whom this is the beginning of a long overdue Jihad, or holy war, inspired by the Ayatollah and aimed at the destruction not just of the Jewish state of Israel but of King Hussein, President Mubarak and the Arab kings, most of whom were touring the capitals of the world earlier this year urging a settlement. The need for a settlement has never been greater. Ironically, despite the failure of the Shultz initiative, the prospects for success has never been greater because it is in everyone's interests.

While the intifada has kept Palestinian demands in the forefront of the world media, as it is designed to do, the situation of the real, innocent victims of the Arab-Israeli conflict—the 2·2 million registered refugees—has remained much the same for the past 40 years. These are the families who were first displaced in 1948. Some of them have been displaced several times since. They inhabit the most basic accommodation—shelters which can be regarded only as temporary—and are therefore homeless and stateless. They are denied effective freedom of travel, to the continuing distress of families who remain divided. Their situation can be described only as a continuing international scandal and immediate responsibility lies with the countries involved which have failed to make a settlement possible.

Last year, the Council of Europe committee for migration, refugees and demography appointed me its rapporteur on the subject of the Palestinian refugees and the United Nations Relief and Works Agency. In March this year I visited 10 refugee camps in Syria, Jordan, the West Bank and Gaza. A visit to Lebanon was clearly impossible at that time. I had meetings with Israeli and Jordanian Ministers and officials, the International Committee of the Red Cross, officers of the Israeli defence forces, who are the civil administration in the occupied territories, the PLO representative in Amman, as well as numerous briefings from UNRWA staff in the host countries and later at its headquarters in Vienna. I also had informal meetings with other Israelis and Palestinians and with the Latin Patriarch in Jerusalem. I visited the Maqassed hospital on the mount of olives in east Jerusalem and the Ahli Arab hospital in Gaza, where the victims of the violence are being treated. Earlier this month, I presented my report to the committee. My hon. Friend the Minister has a copy of it. Its recommendations will be discussed in September and put to the parliamentary assembly of the Council of Europe in October.

Needless to say, during my visit to Palestine I was able to see at first hand the results of the uprising in the occupied territories, and I did not like what I saw. I saw the hardship experienced by refugee families. The curfews are causing unemployment, loss of income, shortages of food and acute pressure on the United Nations Relief and Works Agency's relief services. The prevention of out-patient services leads, for example, to the denial of medical treatment for diabetics, or psychiatric services or other social support for families who are suffering from understandable anxiety and depression. The breakdown of municipal services in the camps, such as refuse and sewage collection, is leading to growing squalor, and that is threatening hygiene.

The schools on the West Bank were closed in February and opened briefly in June, only to be closed again. The closure is keeping children at home, and anyone seen looking out of a window at curfew risks a beating or worse. In the hospitals, there are patients with broken arms and other limbs as a result of beatings. The victims include young children. In the hospitals one sees the effects of rubber bullets with metal cores that have disfigured babies. There are shattered limbs and paralysed bodies of young men who have been struck by high-velocity M16 bullets. One sees the effects of CS gas on mothers, such as premature births or abortions. For babies there is death by asphyxiation or the longer term fear of paralysis.

Many of the victims are people who have chosen to demonstrate or who are being exploited to demonstrate and who know what they risk. I am aware of that. The others are innocents who merely got in the way. I saw for myself how quickly a demonstration could explode into violence, but for the prompt action of UNRWA officials. It was an extremely frightening experience, and it is one that is happening every day. I have some sympathy for the Israeli soldiers who face these conditions. Soldiers in that sort of environment require proper training in riot control and the right equipment. It requires immense discipline and self-control. As we know, that is not always evident.

In my report, I have no hesitation in paying tribute to the professionalism and dedication of UNRWA, without which the situation for the refugees would undoubtedly be many times worse. Without its stabilising influence, the presence of so many Palestinians in the host countries would be the cause of even greater tension and confrontation, especially in the Lebanon and the occupied territories. I look forward to learning whether my hon. Friend the Member for Bexleyheath (Mr. Townsend) shares my views, should he catch your eye during the debate, Mr. Deputy Speaker.

There are four other observations that are highly relevant to any political solution to the Palestinian problem but which appear to be overlooked. First, in the occupied territories and in Jordan, 40 per cent. of the population is under 20 years of age. Unemployment is rising and job opportunities are falling. This is caused in

the West Bank and Gaza by the unrest, and in Jordan by the effects of the recession in neighbouring Arab oil-producing countries. Moreover, the Arab birth rate is 3·5 per cent. That means that there is a demographic time-bomb ticking away, which Israel especially ignores at its peril. Thus, there is an immediate need for international economic aid and initiatives for the area.

Secondly, I was extremely impressed by the experience and professionalism of UNRWA's Palestinian staff, which represents by far the majority of its work force. These are the administrators, teachers, doctors, nurses, medical officers, social workers and engineers. Thus, there exist, together with those Palestinians who operate the Israeli agriculture and rural development services, and those Palestinians who undertake the non-military activities of the PLO, such as education and health programmes, and others who run the factories in the Lebanon, many thousands of experienced personnel who would be available immediately to run the civil services and local government services of any new Palestinian state, autonomous, demilitarised or otherwise, that arises from a settlement.

Thirdly, during the past 20 years of occupation, Israel has improved the education, health and employment opportunities of the Palestinians which it had inherited from Jordan and Egypt. Israel has encouraged the Palestinians to administer the municipalities. It has pursued, without much recognition, a programme of resettlement for refugees with the aim of replacing the camps. However, I could not fail to note the stark contrast between the affluence of the recently established Jewish settlements and the poverty of the refugee camps nearby. To me, that was not acceptable. I look forward to hearing my hon. Friend the Member for Bosworth (Mr. Tredinnick), who has visited the area, should he catch your eye, Mr. Deputy Speaker.

Finally, I cannot ignore what I have heard from every Palestinian whom I have met, refugee or resident, or UNRWA official in Syria, Jordan, Gaza and the West Bank. It is said that the PLO, for all its faults, speaks for them, and that only the PLO will be allowed to speak for them and to represent them at any attempt to produce a settlement. In other words, the PLO is the key to any settlement; and, if it is sincere, it should publicly abandon its covenant and commitment to terrorism and accept Israel's right to exist, from which so much can follow. I shall be glad to learn the views of the hon. and learned Member for Leicester, West (Mr. Janner) on this issue, should he catch your eye during the debate, Mr. Deputy Speaker.

What now are the prospects for a settlement? Regrettably, it appears that the Shultz initiative has failed. We should pay tribute to the dogged refusal of the American Secretary of State to accept defeat, and the tireless energy and diplomacy he has displayed during his many visits between Amman, Cairo, Damascus and Jerusalem. It would seem now that there can be no progress until Israel's general election in November, following which a new American Administration will be elected, which is bound to have other priorities next year. The immediate humanitarian problem cannot wait that long. There are initiatives that can be taken now to relieve the situation for the refugees, which my report recommends.

First, there should be immediate support for UNRWA's plans to improve infrastructure, such as drains, roads, health services and relief for hardship families in the camps in the Lebanon, the West Bank and Gaza, which the United Nations Secretary-General urged on 21 January.

Secondly, there should be an immediate response to the Secretary-General's request for a commitment on the part of United Nations member states to a small but regular increase in their contributions to UNRWA's budget so that it can plan ahead more effectively. Council of Europe member states, the United States and Canada contribute almost 70 per cent. of UNRWA's budget. We should be urging the Arab oil-producing states to increase their contributions, which now total 2 per cent., and appeal to the Soviet Union, to Eastern Europe and to all the other industrial states which contribute nothing to recognise the current situation and to reverse their policy on humanitarian grounds.

Thirdly, we should urge Israel to accept the de jure applicability of the Geneva convention of 12 August 1949, to which it is a high contracting party, fully to comply with its obligations to ensure the protection of civilians, including UNRWA staff, in the occupied territories.

None of this, of course, can be any substitute for that comprehensive and lasting political judgment that is necessary for a just resolution of the refugee problem, or, indeed, for peace, security, stability and co-operation to be established in Palestine for the first time.

Earlier this year, the standing committee of the Council of Europe agreed to the holding of a parliamentary conference in Strasbourg early next year, with representatives of all the countries that would be participating in a possible middle east peace conference. Employing as it would the Council of Europe's own special parliamentary relations with the Knesset, the United States Congress, its long established contacts with Arab states and organisations and its recently established relationship with the supreme Soviet, it was felt that such a European initiative could overcome existing reservations and help to create a climate of confidence necessary for talks to convene.

It is the policy of all parties in this House that such talks should take place within the context of an international conference, but, of course, for that to take place the presence of Israel is required. We should not ignore the reasons for the Israeli Prime Minister's refusal to put his country in such a dock of world opinion or not even to contemplate the withdrawal from the occupied territories. After all, he may well remain Israel's Prime Minister after November.

We should not ignore that what the Camp David process achieved before, when it brought peace between Israel and Egypt and withdrawal from Sinai, can be achieved again as it already provides for peace with Jordan and an autonomous state of Palestine.

If an international conference proves impossible, let us recognise that a prospect for success exists through lower profile, low-level negotiations between Isreal, Jordan and Palestinians, acceptable to Israel and the PLO—such people exist—to produce a programme of measures to bring the present unrest to an end. Such a programme would restore Palestinian administration to the area and replace the present Israeli civil administration—the Israeli defence forces—with a United Nations one. We should remember that the UN is already present in the area because of UNRWA. The negotiations should seek to establish an economic development area with international aid and support from which a confederation of states

[Mr. David Atkinson]

could be built. I believe that that may well prove to be the practical way forward to restore confidence between Arab and Jew which will, in due course, lead to a lasting peace in the middle east.

10.31 am

Mr. Greville Janner (Leicester, West): I extend my thanks to the hon. Member for Bournemouth, East (Mr. Atkinson) not only for raising this matter, but especially for kindly sparing me a little of his time to put a case that might otherwise not be heard and to raise a voice from the Labour Benches.

First, I join the hon. Member for Bournemouth, East in welcoming the appointment of the new Minister of State, Foreign and Commonwealth Office. I, too, believe that he will approach middle east problems with the recognition that they are complex, difficult and anxious. At the same time, I express my unreserved delight at the departure of the hon. and learned Member for Putney (Mr. Mellor) from the same job. His going is greatly welcomed by all who are friends of Israel. If a Minister wishes to contribute to diplomacy, he must do so with understanding, with tact and even with a little affection for the country and for the area. When dealing with Israel, the hon. and learned Member for Putney showed that he had none of those qualities.

I join the hon. Member for Bournemouth, East in expressing my anguish at the misery of the people who live on the West Bank and in Gaza. I am glad that the hon. Gentleman recognises that the refugee camps in which Palestinians are condemned to be born, to live and often to die, were not the creation of Israel. The continuation of the camps is not the wish of Israel and their operation is not in Israel's hands. I wish that something had been said about the absorption of many thousands of Jewish refugees from Arab countries by and in Israel. I echo his call for Arab nations to provide far more aid for their own brethren than they have seen fit to do in the past. I share the hon. Gentleman's concern at the riots that have taken place, but I am sure that, in fairness, he would recognise that no country, including our own, could allow unbridled riots to continue within any country, area, or territory under its control, for whatever reason. Certainly, we are not in a good position to preach to others about the control of riots and death when we have signally failed to do so in Northern Ireland, part of our own United Kingdom.

I agree with the hon. Gentleman that it is right to seek for peace in the region and to do what we can to contribute towards it. As the hon. Gentleman hinted, he understands that one needs partners to a peace process, that all must be prepared to speak to the others. As the hon. Gentleman has said, the PLO can expect to be a partner in the peace process only if it is prepared to recognise the right of Israel to exist in security and if it will renounce violence against civilians as part of its policy. No country, including our own, would negotiate with any organisation which was not prepared to behave in that way. We will not negotiate with the IRA for precisely that reason.

The hon. Member for Bournemouth, East was right to point out the problems created in any country by elections and, not least, by the forthcoming ones in Israel. Elections produce results that a nation must accept, even if—in common with the British Labour party—we do not like what we have got.

I am aware that Conservative Members in the Chamber have visited the West Bank. When the House rises, I shall go to Jerusalem to the wedding of my daughter to a young Israeli. They and all who live there want peace more than anyone else. They, as much as anyone else, are anguished by the miseries of those who live on the West Bank and in Gaza. But they, as well as myself and the rest of the House, wish that an understanding of the complexity of the position should permeate our debates. In that way an understanding of the problems of Israel should follow in the speeches made in this House as it did not do in the speeches or in the behaviour of the previous Minister of State when he visited that area.

10.36 am

Mr. Cyril D. Townsend (Bexleyheath): How singularly appropriate that the House of Commons should have this chance to debate this grave issue before rising for the long summer recess, and how appropriate it is that my hon. Friend the Member for Bristol, West (Mr. Waldegrave) should have an early chance to sample the flavour of the biggest problem that faces him at the Foreign Office. His Conservative predecessors were noted for the clarity of their perception and the boldness of their speech regarding intolerance, oppression and injustice. I have faith that my hon. Friend will follow that admirable tradition.

I am grateful to my hon. Friend the Member for Bournemouth, East (Mr. Atkinson) for kindly giving me a few moments in this debate. I congratulate him on the rational, sensible way in which he set about preparing his report. It was no easy task, as some of us know. I also congratulate him on the admirable way in which he addressed the House this morning, and I agreed with so much of what he said.

Edmund Burke wrote:

"The use of force alone is but temporary. It may subdue for a moment; but it does not remove the necessity of subduing again; and a nation is not governed, which is perpetually to be conquered."

I believe that, at this time, Palestine is perpetually being reconquered. The House is aware that Britain has a special responsibility in this matter because our predecessors twice promised the land. We are now faced with a double tragedy—the plight of the Palestinians and the present enormous damage being done to the reputation of the Jewish people.

I visited the West Bank and Gaza two years ago. The despair and degradation, mud and misery, and the loss of hope amid those sorry shacks of exile, made a very deep impression on me, particularly when I spoke to the extremely well-educated people I met there. UNRWA has done a marvellous job in that direction. The people there did not believe that they or their contemporaries had any future, apart from following the sorry path of violence.

I cannot claim to be surprised at recent events on the West Bank and Gaza where 270 people have been killed. The explosion had become inevitable. It so happened that the year I visited the West Bank and Gaza I also visited South Africa. In both countries there was dreadful repression of one community by another, the laws were framed to discriminate and that discrimination was backed with brutal force. I commend the work of UNRWA to the new Minister. Britain has a good record

of supporting it financially. We supply many of its staff, some in high places. I hope that we will continue to fund it, perhaps on an increased basis.

I wish my hon. Friend the Minister good luck in achieving a slightly more realistic attitude towards the PLO. I blame the politicians, not the Foreign Office. I know that one of my hon. Friend's predecessors actually met the so-called Foreign Minister of the PLO. But whether I, my hon. Friend or the House like it or not, nine out of 10 Palestinians look to the PLO for support. If Britain is to play a serious part in the peace process, we must understand the arguments put forward by the representatives of the Palestinian people.

We would be wise to distance ourselves further from the United States in this matter. I am a great supporter of the United States, but its record on Palestine is most unfortunate. Without the vast sums of money which it gives to the state of Israel, particularly in regard to defence, that country would have had to design a foreign policy that encouraged it to talk to the Arabs on a proper and peaceful basis.

Finally, this seems to be a year in which peace is breaking out in Afghanistan and hopefully in the Gulf and in southern Africa. I hope that Britain will play a part in encouraging peace to break out in this area and that a Palestinian homeland will be created.

10.42 am

Mr. David Tredinnick (Bosworth): I join other hon. Members in thanking my hon. Friend the Member for Bournemouth, East (Mr. Atkinson) for allowing me some time. I am very grateful to him. I also extend my congratulations to my hon. Friend the Minister, with whom I spent 175 hours on the Housing Bill Committee earlier this year. I am delighted to see him on the Front Bench.

My interest in the problems of Palestine began soon after my election. Before then I had very little interest in the matter, and I have tried to approach it in an objective way. I went to the occupied territory in February and saw things there that I did not like. When I came back I went to the Israeli embassy and said to the deputy ambassador that I would be happy to go out to Israel and see things from Israel's point of view. I am very disappointed that he did not take up my offer.

During my trip to the occupied territories I saw a great deal of misery. I cannot report anything else. The group of hon. Members from both sides of the House with whom I travelled were attacked and stoned in Gaza when we were mistaken for Israelis. A rock smashed against the windscreen, and I believe that had the window been open one of us easily could have been killed. We were held up by road blocks, and the general feeling in the occupied territories was of repression and fear. It was a most unpleasant experience.

I am delighted to hear that the daughter of the hon. and learned Member for Leicester, West (Mr. Janner) is getting married in Jerusalem. I extend congratulations to a colleague from Leicestershire. I fear that he will not be able to take his daughter to many parts of Jerusalem. Because of the situation there, Israelis fear to venture into some parts of the city.

Many comparisons have been made. The hon. and learned Member for Leicester, West made a comparison with the situaton in Northern Ireland. I served in Northern Ireland in the late 1960s and I was there a few weeks ago. The situation there is entirely different. The community is basically peaceful, with a few exceptions. The cities are beautiful and people can move around freely. In Northern Ireland there are local elections and hon. Members represent Northern Ireland in the House. That is more than can be said for the occupied territories. Hon. Members may recall that the last elections held in Gaza were in 1945 under the British mandate.

I was in East Germany last year. One could draw a comparison there, but I found the movement of personnel around East Germany a great deal easier than it was in the occupied territories. The predecessor of my hon. Friend the Minister referred to South Africa and drew some comparison there. I thought that that was misguided. I went to university in South Africa. I was at business school there in the 1970s, and my friends there tell me that the situation has eased enormously. Hillbrow district in Johannesburg and parts of Cape Town are now multi-racial. That is in stark contrast to the situation in Israel and the occupied territories, where the demarcation lines are tighter than ever. When I was there, the demarcation line was rigidly enforced and only so called "settlers" from Israel crossed into the occupied territories.

Does the occupation make any sense for Israel? It costs a fortune and it stretches Israeli forces. The military increasingly believe that it is unnecessary. Indeed, 75 to 80 per cent. of the present general staff believe "that the danger to Israel from maintaining control of the territories and their population is much greater than the risk involved in surrendering them." The long-term implications are disastrous for Israel. Demographically, if Israel hangs on to greater Israel it will be outnumbered and, of course, that will create a very serious problem for it. If it reduces that demographic imbalance it will have to "transfer" Palestinians. "Transfer" is a euphemism for transportation, and I should have thought that that was deeply repugnant to anyone with any Jewish sympathies.

Altogether, the negative impact on Israel at home is far outweighed by the negative impact that has been created for Israel abroad. Never mind what is happening in the occupied territories; consider what it has done to Israel's reputation abroad. I am told that at Foreign Office Question Time in the House Israel used to make all the running, but now most Members believe that Israel is wrong.

The British press is respected worldwide and its attitude permeates across the world. I spoke to a senior British diplomat serving in our Washington embassy and asked him about the state of opinion in the Jewish community in America. He said that it was one of "anguish."

I believe that a Right-wing Government will be elected in Israel. In the short term that will be bad for the occupied territory, but in the long term it may be for the best. Only a Right-wing Government can commit the disastrous policies necessary to generate the kind of change of American public opinion that is needed to force a solution for the West Bank. That has to be the withdrawal of Israeli forces.

10.47 am

The Minister of State, Foreign and Commonwealth Office (Mr. William Waldegrave): I am grateful to my hon. Friend the Member for Bournemouth, East (Mr. Atkinson) for initiating the debate and giving me such an

[Mr. William Waldegrave]

early opportunity to join this passionate discussion. I must be forgiven just a touch of nostalgia as I listened to my hon. Friend the Member for Rossendale and Darwen (Mr. Trippier) winding-up the previous debate for the Department in which I served for five years, and expatiating on the redevelopment of maggot farms in Wakefield—a very different matter from the debate to which I now have the privilege to contribute.

My Department greatly values the work of my hon. Friend the Member for Bournemouth, East in the Council of Europe. The debate will be a very useful part of my education in these matters, and I warmly commend it to the House. I am grateful for his careful and constructive analysis. My hon. Friends and the hon. and learned Member for Leicester, West (Mr. Janner), have with admirable brevity, outlined the underlying issues and the passions that lie behind them. I cannot yet match their knowledge and experience, but I look forward to visiting the region before too long.

All right hon. and hon. Members who visited the occupied territories—the hon. and learned Member for Leicester, West will not disagree with this—were shocked by the conditions there, especially on the Gaza strip and in the camps. The Government share the concerns that have been expressed.

My hon. Friend the Member for Bournemouth, East was right to acknowledge that matters have improved in some respects since the Israeli occupation began in 1967. Universities have been established on the West Bank and health services have been extended. Despite the evident need and misery in the occupied territories, the Israeli authorities have allocated land—including one third of the area of the Gaza strip—and immense resources to the establishment and expansion of illegal settlements. My hon. Friend referred to the stark contrast between the Israelis' affluence and the neighbouring camps' poverty.

I join hon. Members in paying tribute to the vital work done by the United Nations Relief and Works Agency in providing services—mainly health and education—to the 2 million registered refugees and the professionalism and dedication of its staff, which includes, as my hon. Friend the Member for Bexleyheath (Mr. Townsend) said, many Britons. They have carried out their duties faithfully in extremely difficult and often dangerous conditions, notably in Lebanon and more recently in Gaza and the West Bank.

We fully support the recommendation of the United Nations Secretary-General for an expansion of UNRWA's work, and we shall be establishing a new unit in UNRWA to assess that requirement. New resources will be required. We have increased our direct contribution to UNRWA's annual budget to £5·25 million, in addition to our contribution of almost £5 million through the European Community.

Our main objective, during our presidency of the UNRWA Advisory Commission, which began this month, will be to encourage others to contribute generously and to support the efforts of the commissioner-general to persuade those who do not contribute to do so.

As my hon. Friend the Member for Bournemouth, East knows, we are already giving bilateral aid, which last year amounted to about £840,000, to the occupied territories through non-governmental organisations of one kind or another, and we are contributing to European Community programmes. Our focus has been on the training of Palestinians and health and welfare projects in co-operation with NGOs. My hon. Friend the Minister for Overseas Development has announced a new grant of £100,000 to the St. John's eye hospital, to which my hon. Friend referred. That has been made for outreach services in Gaza.

We are encouraging Palestinian businesses by supporting a programme run by the non-governmental organisation, Cooperation for Development, to provide loans for small businesses. The organisers report that demand for loans has increased as conventional commercial sources of finance have dried up.

We should, however, like to do more. The disturbances in the occupied territories have delayed our plans to disburse additional aid through Jordanian institutions. We are reviewing how that aid can be effectively disbursed.

We played a leading role in promoting preferential access to the European Community for Palestinian producers. We welcome the assurances that Mr. Peres gave at the Europan Co-operation Council in May that the remaining difficulties have been resolved. Some contracts have been signed to supply produce from the occupied territories to outlets in Europe. We shall monitor closely how these arrangements work in practice.

Although those improvements in economic conditions are important, they will not reduce the deep despair and frustration of Palestinians in the occupied territories, which led to the present disturbances. No one doubts that the stifling of economic activity, to protect Israeli industry, and the innumerable restrictions and petty humiliations —which my hon. Friend the Member for Bournemouth, East said were being inflicted on people who are regarded as second class; in short, the occupation itself—provoked the inevitable reaction. We do not believe that the uprising was organised from the outside, and the extent of outside influence should not be exaggerated. It was a spontaneous and inevitable upsurge of protest aganst the occupation. Its momentum is maintaned primarily by young people in the occupied territories. This problem has been compounded by Israeli tactics, such as excessive use of force by soldiers who are not trained for such tasks and deportations and collective punishment contrary to international law. We surely all condemn such measures.

We acknowledge Israel's responsibility, pending its withdrawal, to maintain order in the occupied territories, but the responsibility must be discharged in accordance with international law and human rights standards. The Geneva convention applies to the occupied territories, and Israel should observe its provisions. I assure my hon. Friend the Member for Bournemouth, East that we have raised these problems with the Israelis on many occasions and they are well aware of our views. It is ironic that the Israelis should campaign, with our full support, for the human rights of Soviet Jews—I am aware of the honourable role that the hon. and learned Member for Leicester, West has played in the campaign—but Israel must surely apply the same criteria to its treatment of Palestinians.

The suffering must be ended. Over 230 Palestinians and three Israelis have been killed since the uprising began. Many more have been injured, and my hon. Friend the Member for Bournemouth, East gave a graphic account of the horrors that he saw.

Thousands of Palestinians have been detained without trial. Personal grievances and hatreds are multiplying; violence breeds violence. If the extremists have their way, violence will continue. Violence and repression will never solve the underlying problems of the region.

The uprising has surely forced all concerned to accept that the status quo is unsustainable. Israelis and Palestinians are fated by history and geography to live together. If they are to do so in peace, it will have to be on a basis of mutual recognition and respect. Each side must be prepared to accord the other the rights that it claims for itself.

Nothing could make a greater contribution at this stage —I agree with the hon. and learned Member for Leicester, West about this—than unambiguous acceptance by the PLO leadership of Israel's right to a secure existence, of Security Council resolutions 242 and 338, and of the renunciation of violence. We welcome the recent paper by Bassam Abu Sherif, who is a PLO spokesman, as a constructive move in the right direction, especially its acceptance of Israel's right to exist and, conditionally, the Security Council's resolutions. We regret that it has not yet been endorsed.

We hope that the PLO and the leaders of the uprising will grasp the nettle and commit themselves wholeheartedly to the search for a negotiated solution. We recognise that the PLO commands widespread suppport among Palestinians, and we said in the Venice declaration that it should be associated with the peace negotiations. The Israelis cannot be expected to accept the PLO as a negotiating partner while the PLO's policies on the key issues of violence and Israel's right to a secure existence remain ambiguous.

We look to the Israeli leadership to develop forward-looking and constructive policies that will lay the foundations for a proper and peaceful relationship between the people of the region. The electorate will shortly have an opportunity to signal a clear interest in peace; it is vital that they take it.

Our own views are well known. A just and lasting settlement of the Arab-Israel conflict must be based on the right of all states in the region, including Israel, to a secure existence within recognised borders and of the right of the Palestinian people to self-determination. We continue to believe that the best way forward is an international conference, under United Nations auspices, as a framework for the necessary negotiations between the parties directly concerned. It should not have the power to impose solutions or to veto agreements between the parties. Such a conference would offer an opportunity to negotiate a just and lasting settlement. It is not a trap and no man of good will need fear it.

The understanding last year between Mr. Peres and King Hussein offers a good foundation. The need is to build on that and to persuade others in Israel and the Arab world not to squander the opportunity. King Hussein's commitment to the search for peace is not in doubt and Jordan's role, given the length of her border with Israel, will remain crucial. A lasting peace will require Palestinian and Syrian participation. The time has come for both to accept the challenge of making peace.

Israelis must be prepared to make some concession and accept the principle of territory for peace. Peace will require compromise from both sides, and both will have to give up long-cherished but unattainable objectives. Neither historical Palestine nor Eretz Israel can be the basis of a modern state, except at the price of perpetual conflict.

The American role—in this context, I disagree with my hon. Friend the Member for Bournemouth, East to some extent—is clearly vital. We warmly welcomed its active re-engagement in the peace process earlier this year. There are many constructive elements in Mr. Schultz's proposals, including a commitment to an international conference and proposals for early elections in the occupied territories. His proposed timetable for negotiations was rightly ambitious, and has not been implemented.

I welcome the initiative by the Council of Europe to hold a parliamentary conference in Strasbourg next year. Such contacts between parties can only be helpful. We affirmed as long ago as the Venice declaration in June 1980 our willingness to participate in guaranteeing an eventual settlement. We stand by that commitment. In the last resort, peace must be made by those directly involved. They will have our full support as they face that challenge. We know how difficult it will be, but that difficulty is no reason to postpone the necessary action.

Mr. Janner: On a point of order, Mr. Deputy Speaker. Have you received notification of an application for a statement from the Secretary of State for Employment concerning the employment implications of the announcement made this morning of further redundancies and closures at Corah plc, which is a major employer in my constituency? Corah announced 750 redundancies just a short time ago, it has announced 200 more today, and there is no guarantee that there will not be further redundancies in the future. As that major company, which was once a great and stable family company, is suffering in a way that is symptomatic of the general misery and continued recession in the hosiery and knitwear trades and industries in the east midlands, surely there must be some statement from the Government before the House rises.

Mr. Deputy Speaker (Sir Paul Dean): Mr. Speaker has received no application for a statement to be made. However, I have no doubt that the hon. and learned Gentleman's points will be noted.

Mr. Tredinnick: Further to that point of order, Mr. Deputy Speaker. I should like to draw your attention to the fact that employees at Corah in Leicestershire come from areas beyond Leicester city. My constituency of Bosworth, with its principal town of Hinckley, has many hosiery and knitwear workers who share the concern about circumstances at Corah. I am concerned that there may be a disturbing ripple effect in Hinckley.

Mr. Deputy Speaker: I am sure that the hon. Gentleman's points will be noted.

Philosophy (University Teaching)

11.1 am

Mr. Kevin McNamara (Kingston upon Hull, North): It is with regret that, as a graduate of Hull university, I am raising this subject today. It is also a matter of regret for my hon. Friend the Member for Derbyshire, North-East (Mr. Barnes). It is a duty imposed upon me by virtue of the fact that Hull university is in my constituency and that one of the characters involved in the tragedy is one of my constituents.

It has been a feature of British universities for many years that each institution is able to offer its students a wide choice of major academic disciplines. From the time of Socrates and Plato one of those major disciplines has been the study of philosophy, and it is natural to expect each university to have a philosophy department that offers teaching and research to the highest levels.

The Government's successive cuts in university funding began in 1981 and have continued, regrettably, ever since. They have taken a heavy toll of such academic traditions. Several universities have lost their philosophy departments. Most universities have lost eminent philosophers, and many degree programmes have been curtailed or closed completely.

That situation is duplicated in many other academic disciplines, particularly the humanities, but also, to some extent, in the sciences. For example, the department of earth sciences at Hull university is about to close. That has forced the University Grants Committee to undertake far-reaching national reviews of many subject areas. In all cases, that has led to departmental closures and a reduction in the choice of courses for students.

The UGC has pursued a policy of "concentration" of resources. More often than not that has worked to the detriment of smaller universities, which have lost one department after another. It has also frequently accelerated early retirement among academic staff in those departments, and for many younger staff the reviews have produced virtually enforced transfers between institutions.

Earlier this year the UGC instituted a national review of the teaching of philosophy, led by Professor Hepburn of Edinburgh university. The review committee is due to report by the end of the year. Professor Hepburn has already expressed his concern that because so many philosophers have retired early or left the country his review will suffer from a lack of "spare bodies" available for transfer between universities, which would help to facilitate the closure of some departments in order to strengthen others.

Professor Hepburn's comment is particularly ironic, since it is a philosopher who has recently become the first tenured academic in the United Kingdom to be given notice of dismissal because he has been declared compulsorily redundant. It appears that, in universities with serious financial problems the imminence of UGC reviews can place staff, particularly the older ones, in a form of double jeopardy. They are not allowed to remain in their posts and, while the review is in progress, they cannot transfer to another university.

The present case, which occurred on 30 June at Hull university, has attracted wide attention and carries grave implications for the future of contracts of employment for many academics and also for reviews of courses by UGC committees. In its action, Hull university goes even further in its attack on academic tenure than the Government have gone in the Education Reform Bill, which regrettably receives its Royal Assent today. The council of Hull university is attempting, retrospectively, to deny tenure to its existing staff.

The need for academic tenure as the most effective means of protecting academic freedom in our institutions of higher learning is recognised in all civilised countries. That is apparent from the horror and amazement with which overseas academics have reacted to the Government's proposals to abolish tenure in the United Kingdom. Academics representing professional organisations in the United States, Canada, Germany and the Scandinavian countries have filled the letter columns of the press with their anxious protests. The president of the Canadian Association of University Teachers said in *The Times* on 16 May that his members

"can see no good reason why our British colleagues should have any less protection"

than Canadian academics. He said that Canada found it easy to provide contracts that contain a legal definition of academic freedom—something that the Secretary of State conceded only when beaten in the other place.

The president of the American Association of University Professors went further. On 27 June Professor Julius Getman, a distinguished labour lawyer, contrasted the curtailment of academic freedom inherent in the Education Reform Bill with the extension of freedom now apparent in the Soviet Union and called tenure

"an important safeguard of the integrity of the academic profession."

He said that it remains the best protection of the academic freedom so eloquently described by Lord Jenkins's successful amendment of the Bill. That is one of the few words of praise that I shall ever have for the Chancellor of Oxford university. He warns of a renewed brain drain that could result from the destruction of tenure and from the

"cavalier attitude to higher education exhibited by the British Government."

He insists that

"neither Britain nor the global university community can easily afford the losses this entails."

The Government have certainly been cavalier in their treatment of the anxieties of many of the groups that have warned of the damage that the Education Reform Bill will do, and of the organisations that represent academic staff in particular. They have even ignored the UGC's concern that the removal of tenure from staff who transfer between universities under the committee's various subject "rationalisation" schemes would seriously threaten the planned restructuring of our universities, to which the Government are supposedly committed. They were deaf to the arguments from the Association of University Teachers, which said that to remove tenure from staff when they are promoted would lead only to bitterness and frustration and would further encourage able staff to leave Britain.

None the less, despite their determination to end tenure as rapidly as possible, the Government stopped short of attacking the tenure granted to academics under existing contracts. Among those who called for retroactive legislation to wipe out all job security for all existing academics were several university vice-chancellors. No doubt they needed to out-Thatcher the Secretary of State and were eager to use the opportunity to restructure their institutions in their own images or that of the Prime Minister.

The vice-chancellor of Hull university, Professor William Taylor, has now persuaded Hull university council to act as if tenure never existed at Hull, despite the provisions of the charter and statutes of that university. The council decided, that the staff of the department of philosophy had to be reduced by one during 1987-88 while the UGC review was taking place. The only sin that the unfortunate philosopher lecturer concerned, Mr. Edgar Page, had committed was to be 57 years old. That is a sin which some of us may yet hope to commit, and which some of us may have already committed. One wonders how Socrates or Plato would have fared if they had been teaching in the department of philosophy at Hull university in their advanced years.

Mr. Page was singled out in what is euphemistically called an academic plan designed by the vice-chancellor, who at the age of 58 is at the peak of his career. Mr. Page was told to take early retirement by the end of the current academic year or be dismissed. It would appear that the vice-chancellor has committed the same offence of being over 50.

Mr. Page made it clear that he would not consider early retirement under the threat of dismissal. Professor Taylor then persuaded Hull university council, at a special meeting hastily convened on 29 June, to authorise Mr. Page's dismissal. At a meeting of the committee of vice-chancellors and principals on 1 July, the implication of Professor Taylor's actions were not lost on his colleagues, who were all anxious to shed staff at minimal cost.

The continued decline of university funding by the Government has driven vice-chancellors to the point where they are willing to renege on binding contracts made with their staff many years ago. None of them wanted to be the first over the brink; one might even say over the cliff edge. However, many are now watching the position at Hull very closely, hoping that Hull will suffer all the damage, ignominy and shame that comes from being the first to remove tenure from existing staff while others reap the benefits of Professor Taylor's foolish and precipitate action.

Professor Taylor's action is foolish, because it is clearly quite unnecessary. While Hull university, like other universities, has had financial problems, the sacrifices of a great number of staff who have retired early since 1981 have considerably eased the problem. Under the previous vice-chancellor, Sir Roy Marshall, well over 100 academics retired early. From 1985, under Professor Taylor, the academic plan called for a further 139 staff losses, most of them academic, by 1989. At the same time, Professor Taylor is now actively recruiting new staff. Nine new professors are currently being appointed and several lectureships are being filled. More than 60 academics aged over 50 were individually targeted last year to lose their jobs under the Taylor plan because they were in subject areas which he wished to contract. Most of them retired early, though many would have preferred to stay.

Professor Taylor's hire-and-fire policy has caused great unease and bitterness among the staff at Hull. In the case of Mr. Page, it reached a logical conclusion. Mr. Page was sacked, not because Hull could not afford to keep him, but because the managerial style with which Professor Taylor expects to impress the Prime Minister demanded it. In fact, Hull university seemed to be keen to keep Mr. Page's expertise in his field of medical ethics and offered to re-employ him after compulsorily retiring him, with the proviso that he would develop money-spinning courses from which the university would pay his salary. It wanted to sack him today and re-employ him tomorrow. Mr. Page argued that he was pleased, delighted, happy, ecstatic to develop such courses, but while in his present permanent post, not on a basis where the university had transferred the cost of his salary to his pension fund and the UGC restructuring scheme.

It is clear that Mr. Page's expertise is highly sought after. The University of Bradford, which has suffered as badly as Hull under the Government's cuts, was nevertheless keen that Mr. Page should be transferred to Bradford to develop new courses. Here Mr. Page became the victim of Professor Taylor's rigidity and the chaotic state of our university system which the Government have managed to create. Because of the current UGC review of provision in philosphy, no UGC-funded transfers can take place. Therefore, an immediate transfer was impossible to arrange. On the other hand, Professor Taylor insisted that Mr. Page be off the pay roll by the end of the session. There was a stalemate, or "Catch-22."

Through his Association of University Teachers representatives, Mr. Page sought to persuade Professor Taylor that no final decision should be made until after the review of the provision of philosophy at universities had been conducted by Professor Hepburn. That should be completed at the end of year. Professor Taylor would agree only to defer the implementation of an application —if such it might be called—for early retirement until that date. He insisted that Mr. Page had to sign for early retirement there and then, at the last meeting, and that the university should have total discretion whether it would accept any transfer proposal after the review. The only parliamentary parallel to that would be members of the old Irish party who, when they were elected, gave their dated application for the Chiltern Hundreds to Parnell.

Mr. Page declined Professor Taylor's proposal because it constituted a second "Catch-22". He knew that Hull, among all United Kingdom universities, operates a curious form of age discrimination. Any staff over 50 who wish to transfer can do so only if the transfer results in the full saving of the salary costs. Transfers between institutions, so vital for the UGC's restructuring plans, cannot take place on that basis if the member of staff to be transferred is over 50. That is a new academic criterion for appointments on an age basis.

A member of staff from a university normally takes eight funded students with him or her on transfer, that being the unit of currency in the UGC funding formula. Because of Mr. Page's eminence in his field, Bradford was willing to accept Mr. Page with fewer funded students, since it hoped for income-generating forces arising from the appointment of Mr. Page at Bradford. Professor Taylor's insistence that no funded student numbers could be afforded would therefore probably scupper any future transfers. There is a precedent involving not only the removal of tenure, but the transfer at an age over 50 and the removal of the UGC currency formula of funded students places with the transfer.

Professor Taylor's reasons for his actions are simple. He calculates that the UGC currently pays the full cost of early retirement of all staff who leave under approved academic plans. It therefore costs Hull university nothing to sack such staff or to pressure them to leave voluntarily, as Mr. Page's colleagues have done at Hull.

[Mr. Kevin McNamara]

It therefore benefits Hull university to sack staff rather than to transfer them, as the latter involves the notional loss of students. It is easy to see the origins of this distorted logic in the Government's efficiency drive in the universities. It is equally clear that such a policy leads to needless conflict and serious losses of experienced academics—losses that Hull university and the rest of the country can ill-afford.

The conflict which this managerial disaster has caused in Hull and in the universities generally is considerable. Mr. Page has referred the matter to the University Visitor, the Lord President of the Council, as the civil courts are still barred to academics in such disputes. Mr. Page expects to be reinstated, and he is represented in his petition by the solicitors acting for the Association of University Teachers.

The association has also called for an effective academic boycott of Hull university until the university council decision is reversed. Already serious damage has been done to Hull's academic reputation by the Council's action. Several external examiners have resigned, at least one national conference due in Septermber has been cancelled, public lectures may need to be cancelled and several job applicants who were shortlisted have withdrawn. The boycott will be taken seriously by the many academics who are appalled at Professor Taylor's action and who recognise that their own job security is now threatened by this case. Hull academics are planning prolonged industrial action to persuade the council to change its mind.

Academics do not take such action lightly. Indeed, it is difficult in any university common room to get them all to agree on one set course of action, without the writing of half a dozen theses and about 500 footnotes. Nevertheless, they are united in their action in Hull on this matter. They are concerned at the damage that their students will suffer, but they are determined that the Government's dirty work will not be executed by hyperactive vice-chancellors, who seem unconcerned at the damage to academic standards that such heavy handed management will cause.

National officers and officials of the Association of University Teachers met the university management on 20 July in a last effort to avoid this confrontation, but Professor Taylor's position remains unchanged. It now looks as if Hull university will damage itself quite needlessly, because of a combination of managerial inflexibility and the constraints imposed by UGC reviews and Government under-funding.

I am sure that Socrates would have had scathing words to describe the harsh treatment that his fellow philosopher has received. As Professor Getman of the American Association of Professors has pointed out, Britain and the world academic community are the losers from this Government's careless stewardship of our intellectual heritage.

I should therefore like to put the following proposals to the Minister. First, he should write to all universities where subject provision is the subject of UGC decisions and review, saying that nothing should be done to prejudice those subject departments or people in post until the completion of such a review. That already meets the problems that Professor Hepburn has identified in his review of the teaching of philosophy in these islands. That would ensure that Mr. Page's position was protected until the end of the review, and the argument over tenure could then be overcome if there were a satisfactory resolution of the matter by Professor Taylor, the university council altering its decision or by a transfer to Bradford university.

Secondly, the UGC should look at the arbitrary insistence on the age limit concerning transfer between universities' staff proposed by Professor Taylor, to consider whether it is both a restraint on trade and a breach of normal good practice between universities. It is certainly an amazing decision for a university to take that the age of 50 prevents transfers between universities if one is teaching, but if one is a vice-chancellor, such as Professor Taylor, one can transfer willingly to another position as vice chancellor above that age.

Thirdly, if the Minister is not prepared to take any of those courses of action, he should write to the UGC and Hull university pointing out that Mr. Page's case is now before the University Visitor and no action should be taken by the university until the University Visitor has made a judgment on the issue.

I was lucky enough to be awarded the Adjournment debate, but it is with great sorrow that I raise this issue. I never thought that a university which had been a place of great academic freedom, which had a great reputation among universities in this country, and which has sent many of its members to grace the Benches of the House —quite amazing in number compared with the age of the university—should be the first university to deal with a member of its staff, guaranteed by contract tenure, by dismissing him in such an arbitrary and high-handed fashion because of one single error on his part—his age of 57.

11.23 am

Mr. Harry Barnes (Derbyshire, North-East): I declare an interest in the debate, especially relating to tenure, as, before coming to Parliament, just over a year ago, I was a lecturer at Sheffield university, and have just under two years before I may return to the university if I wish. At that time I will be almost 54, so the points that have been made about Hull's policy, if transferred to Sheffield, would affect me.

My university branch, which is the academic section of MFS, is also a body that fights to preserve tenure, as does the Association of University Teachers. Furthermore, as my hon. Friend the Member for Kingston upon Hull, North (Mr. McNamara) said, I studied at Hull university in the politics and philosophy departments. Part of my teaching on access courses at Sheffield university was in philosophy, and one of the last students that I taught attained a place at Hull university as an adult student to study in its philosophy department.

Tenure is not the same thing as a sinecure. There are high standards of research, publication, administration and teaching that need to be met by university lecturers to comply and continue with their contracts. Those standards are supervised by university authorities and they are seriously examined. It is a life that calls for people who have a commitment to intellectual pursuits and, who, unless they come to Parliament, normally devote their lives to such activities. The atmosphere of the market place and of the stock exchange is quite inappropriate to such a lifestyle of study. The pressures of one's peer group are

also considerable in an academic institution and mean that standards are maintained collectively by members of the academic community.

It is especially typical of our enterprise culture—a culture of Philistines—that the first move against tenure is to take place in a philosophy department. Philosophy is not some esoteric activity. It is not a matter of people contemplating their intellectual navels. Modern philosophy is about the development of reasoning skills. It concerns areas such as logic, the implication of arguments and consistency between arguments. It is concerned with crucial distinctions between analytic, empirical and evaluative forms of reasoning. It investigates and, above all, questions those distinctions.

Philosophy is the antithesis of teaching by rote, by dogma and by pre-packaged building blocks of information. Unfortunately, the Government in their education plans and their attitudes towards universities advance exactly those dogmatic pre-packaged positions that philosophy asks us to question and challenge. Philosophy is needed in society generally, so that it can develop its educational skills.

Those with a philosophical bent are less likely to make dogmatic, all-or-nothing statements about the characteristics of nations, races and social classes. The making of qualified statements is easier to defend in argument than absolute claims, unless those absolute claims are in the sphere of mathematics or the physical sciences.

Politicians would benefit from regular acquaintance with the modern philosophical techniques of language analysis. So, for that matter, could university students and other academics. Rather than cutting back on philosophy, it should be our major intellectual growth industry. I suggest that all students should come into contact with some of the language analysis techniques of modern philosophy within foundation courses. Whichever area of study people are engaged in—history, the sciences, religion or mathematics—there is a philosophy that is appropriate for the language, the skills and the arguments that are used in those areas.

11.29 am

The Parliamentary Under-Secretary of State for Education and Science (Mr. Robert Jackson): I congratulate the hon. Member for Kingston upon Hull, North (Mr. McNamara) on raising this important and interesting subject on the Adjournment. I also congratulate the hon. Member for Derbyshire, North-East (Mr. Barnes) on his thoughtful contribution to the debate.

I shall start by emphasising the importance of the study of philosophy. I draw the attention of the House to a speech that the Secretary of State recently made to the British Academy on the subject of the humanities. It was a speech which, unlike so many of our orations, really deserves reading, because in that speech he set out the grounds for his personal belief, and the Government's belief, in the importance of this branch of study.

Philosophy is an important intellectual discipline in its own right. It is fundamental to the higher level study of all disciplines, because the role of philosophy, as described by the hon. Member for Derbyshire, North-East, is identifying and analysing presuppositions of all forms of knowledge.

Philosophy is, or at least ought to be, a valuable training for life and work. The achievement of intellectual coherence should lead to that coherence and integration of personality and judgment which is the highest fruit of high culture and high learning. I hope that that is a consideration that modern philosophers have well in mind. At a more mundane level, philosophy gives rise, as the hon. Member for Derbyshire, North-East said, to skills in analysis and argument which are necessary in many areas of work.

Strictly speaking, however, none of this is the Government's business, and rightly so. The hon. Member for Kingston upon Hull, North, will find, and I hope he appreciates, that it is this conviction, and the constitutional conventions associated with it, that will prevent me from giving him full satisfaction on some of the points that he has raised.

We are living in the tercentenary of the so-called Glorious Revolution of 1688. It was an event in which philosophers played an eminent part in every party and on every side. One of the chief consequences of 1688 was the replacement in Britain of a form of state associated, as we can see from the continent, with an ambitious and wide-ranging concept of the role of the state in controlling and determining the life of the arts and the intellect.

In 1688, we in Britain rejected absolutism in the political and cultural spheres, whether in the form of Catholic integralism or in the form of Protestant Faustianism. The concept of the state which prevailed in 1688, and which established the British tradition in these matters—which happily continues to reign—was that of a limited state with a limited role in relation to great institutions of civil society, not last in relation to those associated with the life of culture and of the intellect.

We have inherited, and will continue to live within, a tradition in which, apart from generalised good will and respect for the plurality of ideas, the Government have no especially strong view about philosophy and its study. Rather, in our tradition, these are matters for civil society, for our autonomous culture and especially for our autonomous institutions of higher learning.

I am arguing that responsibility for the pursuit and development of philosophical studies in Britain has been, and should remain, with the academic community and the republic of letters. The role and responsibility of the Government is rightly very limited. In essence, in this century, that role has been to levy the taxpayer to provide public support for the work of our universities and colleges. That support is not, and I hope never will be, directed by the Government in such a highly specific way as will require the Government to develop their own policy about, for example, the academic study of philosophy.

It would not be appropriate for the Government, in the light of what I am saying, to take up a position on the case of an individual such as has been raised by the hon. Member for Kingston upon Hull, North. Our role is simply to provide financial support for the republic of letters on whatever scale seems appropriate and within the limits of affordability—a central matter of political argument. We do that. After the Netherlands Britain spends the highest proportion in Western Europe of national product on higher education. Conditions in our universities and colleges in terms of, for example, the staff-student ratio are among the most generous in the world.

I recognise the force of what the hon. Member for Kingston upon Hull, North, is saying—that all is not well today in the study of philosophy in Britain. We recognise

[Mr. Robert Jackson]

that. On the credit side, however, it is worth observing that the number of students who study philosophy as their main subject has risen from 1,296 in 1979 to 1,349 in 1986. The number of new entrants to philosophy courses has increased by 9·3 per cent. during the same period. That is an impressive increase.

I suppose it could be said that there is a debit side, in that the number of academics who teach philosophy has dropped from 425 in 1981-82 to about 374 in 1986. It would be fair for me to say, however, that there are probably about as many full-time philosophers practising in 1988 as there were during the whole of the 17th and 18th centuries, when Britain made her greatest contribution so far in this branch of study.

At the same time as the quite small, but nevertheless significant, reduction in the number of staff who are teaching philosophy, accompanied by a substantial increase in the number of students of philosophy—what in industry would be regarded as an improvement in efficiency—there has been a weakening in the processes of academic renewal. This is the most important problem. There has been a steady rise in the average age of our academic philosophers, and there have been few opportunities for new entrants to bring new blood and, perhaps, we hope, new ideas to the study of the subject.

There has been a tendency, from which I do not think the hon. Member for Kingston upon Hull, North escaped, to approach this problem mainly in terms of blaming. There are those who say, and I think that the hon. Gentleman said it, that the problem would never have arisen if the Government had poured in the money—taxpayers' money—to keep everything going at its highest possible level to enable people to recruit their successors at the highest possible level.

I have to reply, quite smartly, that resources have always been limited—even when the hon. Gentleman supported a Government of his own persuasion. I have already demonstrated that resources continue to be generously provided, but the central point of my speech is that matters remain as they always have been. It is the responsibility of the academic community to sustain and carry forward the disciplines it professes, of which it is the custodian and with which it has been charged.

In short, responsibility for the effective management of the resources that are available for higher study cannot be evaded. It is not for me, a member of the Government, to specify the measures of which more effective management will consist. These matters are the responsibility of our autonomous, self-governing and self-directing academic institutions.

I should like to say something about some of the features which, happily, are emerging and to which the hon. Gentleman referred. First, there is a recognition that the more effective stewardship of the public resources provided for scholarship require a reduction in the job protections that have built up excessively—notably during the 1960s, when too little regard was paid to these matters.

I must say in response to the hon. Gentleman's quotations of overseas critics of our abolition of strict academic tenure—I say it charitably—that they struck me as typically ill-informed. Recognition of the need to reduce the level of job protections is reflected in the Education Reform Act, as I think I may now call it. It is this morning that Her Majesty signs it or, rather, I believe, taps it with a wand saying, "La Reine le veult." That need is also reflected in the policies that are now being pursued by universities and colleges, which are seeking greater flexibility. They are reviewing the quality of their academic staff. I hope the hon. Gentleman was not suggesting that that is not a relevant consideration. They are also reviewing their priorities in teaching and research.

I should like to offer my congratulations to the University of Hull and its vice-chancellor on the determined and effective way in which they are attempting to tackle their problems.

A second feature of this more effective stewardship by the academic community has been the recognition that the health of certain branches of study depends not only on institutional pluralism and initiative—these are important considerations, to which I fear the hon. Gentleman's proposals pay too little regard—but on such features as the size of academic departments, or what might be called their critical mass, their relationship with other departments, and the condition of a branch of study when viewed in a national perspective. That is the basis of the series of subject reviews that have been launched by the University Grants Committee. Those reviews are being carried out by the academic community, as is appropriate to the philosophy that I have set out, and they aim at the nationwide redeployment of resources between institutions, to enhance the overall quality of our national contributions to each subject.

The hon. Member for Kingston upon Hull, North told the House that it had recently been decided that philosophy should be the subject of one of the reviews. It was set up in March under the chairmanship of Professor Hepburn of the University of Edinburgh. The House and the Government will want to wish Professor Hepburn and his colleagues well in their sensitive and important task. We look forward to their considered conclusions.

It has sometimes been said that the Government have an exclusively utilitarian and materialistic approach to higher education. There was more than a hint of that in the speeches of the hon. Members for Kingston upon Hull, North and for Derbyshire, North-East. That accusation is often associated with a good deal of muddled thinking. Do those who make that accusation think that considerations of utility and return on investment should have no place in the Government's thinking about how to make best use of taxpayers' money?

If it is accepted that such considerations are appropriate and relevant, on what principles would those who assail us propose to establish a balance between the values of utility and other values that we all agree to be important? As one who has tried to think as deeply as I can about these matters, I do not believe that our critics could do better than we have done, but I have an interest in making that assertion. Perhaps the most convincing statement that I can make in the Government's defence is that for my part I should be happy to remit the question to the highest court of philosophy.

Soviet Union (Prisoners of Conscience)

11.40 am

Mr. David Ames (Basildon): I congratulate my hon. Friend the Member for Bristol, West (Mr. Waldegrave) on his promotion to the Foreign and Commonwealth Office. He deployed considerable skills when he was responsible for housing matters in the Department of the Environment and I have no doubt that he will bring his many fine qualities to his new post. I am also pleased that my hon. Friend the Member for Bournemouth, East (Mr. Atkinson) is to join us shortly. I hope that he and my hon. Friend the Member for Leeds, North-East (Mr. Kirkhope) and the hon. and learned Member for Leicester, West (Mr. Janner) will catch your eye, Mr. Deputy Speaker, later in the debate.

Last week I took part in a joint Anglo-American delegation to the Soviet Union, with the express purpose of trying to persuade the Government and officials to release religious prisoners of conscience. The trip was organised by that most excellent organisation, Christian Solidarity International, under the United Kingdom chairmanship of Mr. Mervyn Thomas and the American chairmanship of Mr. Stephen Snyder. The American delegation was superbly led by Congressman Frank Wolf and his wife. We were joined by Robert Pittenger, Michael Farris and Scott Flipsy.

I had never visted the Soviety Union, and Moscow came as a great culture shock to me. That feeling was heightened when I learned from what I believe to be a reliable source that the Soviets spend on average 70 billion hours a year queueing and that—again on average—every woman in the Soviet Union has three abortions.

One of the longest queues was for Lenin's mausoleum, a queue that I joined. I shall always remember seeing the never-ending queue of people waiting to see the wax figure of a man who died in 1924. Many brides and bridegrooms found time during their wedding day to take flowers to his tomb. That picture was often in my mind during our many meetings with Soviet Ministers and officials, since I believe that life for the average citizen in the Soviet Union is very tough. It struck me as extraordinary that people could so easily be pleased. Also, I did not forget that during the last war the Russian nation lost about 20 million people, a most terrible price to pay.

I shall give the House some details of the various meetings that we had during our week in Moscow and what we asked the Soviet authorities to do—and what I shall now ask my hon. Friend the Minister to do. We were given great assistance by both the American and British embassies. Unfortunately, our ambassador was in London that week, but his staff were extremely helpful to us during our stay. The American ambassador, Mr. Matlock, who I believe speaks better Russian than the Russians themselves, gave a dinner party for Soviet Ministers and officials, at which a number of very important, hard-hitting speeches were made. However, I felt at the end of the evening that the thoughts of all three parties had drawn much closer together.

At our meeting I stressed that we had absolutely no right to interfere in the internal affairs of the Soviet Union. However, we had come on a special mission to express the concern of Christians about the plight of fellow Christians who are being held in prison. I argued that Christianity transcends international boundaries. I believe that that point was accepted. A number of attacks were made on the Americans' record in that area. From the British point of view, I was quick to point out that we long to solve the problems in Ireland and that the British Government would welcome any sensible, practical suggestions that might help us to solve that difficult problem.

Our delegation was invited to the Soviet Union by Mr. Burlatsky. He is the vice-president of the Soviet Political Sciences Association and chairman of the Commission on Humanitarian Co-operation and Human Rights. He is one of the key figures in the glasnost process. Our meeting with him was one of the highlights of our week in Moscow. We wanted to obtain information about certain prisoners of conscience and we presented him with a list of approximately 200 prisoners of conscience whom we believe are being detained in the Soviet Union. We also wanted to obtain information about new laws that are being introduced by the Soviet Government for the protection of individual human rights. We wanted information, too, about the functioning and the property of churches and religious associations.

On 15 June, Mr. Burlatsky made an important speech in which he said that, 70 years after the revolution, there is a need to establish a stable constitutional order. He said that there was a need to reconstruct the political system so as to set up reliable guarantees against the revival of

"an authoritarian regime of personal power and the mass reprisals which would follow it."

Mr. Burlatsky went on to say that to make the state an efficient instrument of accelerated development is to overcome what Lenin called the bureaucratic distortion of Soviet power. He said that it was important to guarantee not only socio-economic but human and political rights and freedoms. Mr. Burlatsky sympathised with many of the points that we made about prisoners of conscience and suggested that we should take up our points with the Ministers whom we were to meet during our week in Moscow.

Our list of prisoners was disputed at practically every meeting that we attended. The point was made that many prisoners had already been released and that a number of those who remained in prison were there for charges unconnected with their religious beliefs. I made a commitment that I would publicly apologise if, after consultation with Keston college, the Soviets verified that the prisoners in the list that we gave them were not being detained in prison as a result of their religious beliefs.

However, there was one prisoner about whom there was no controversy—I refer to Deacon Vladimir Rusak, who graduated from the Moscow Theological Academy and became a deacon in the Russian Orthodox Church. He worked for many years in the editorial office of the *Journal of the Patriarchate of Moscow*, the official journal of the Russian Orthodox Church in the Soviet Union. In 1982, Rusak was removed from the clergy list by the Council for Religious Affairs for preaching a sermon analysing the Russian Orthodox Church before and after the revolution, mentioning the heavy losses that the Church sustained in the 1920s and 1930s. Deacon Rusak had already been removed from his place of work when it was discovered that he was writing a three-volume history of the Orthodox Church in the Soviet Union.

In 1983, Rusak entered Western consciousness with an open letter to the assembly of the World Council of Churches, which was meeting in Vancouver. On 22 April 1986, Vladimir Rusak was arrested. He was tried on 27

[Mr. David Amess]

September and sentenced to seven years' strict regime camp followed by five years of internal exile, the maximum sentence possible under article 70 of the criminal code of the Russian republic, for allegedly distributing anti-Soviet religious literature in the Belorussian town of Gomel. Rusak was sent to a Labour camp for political prisoners in the Perm region of the Ural mountains. He is frequently put under intense pressure to renounce his Christian faith. In 1987, when partial amnesty was announced for those sentenced under article 70, Rusak was pressurised by the authorities to sign a statement of recantation to secure his release. He refused.

We raised Father Rusak's case at subsequent discussions with Konstantin Kharchev, the chairman of the Soviet Council for Religious Affairs, with Boris Kravtsov, the Soviet Minister of Justice and with Alexander Vlasov, the Soviet Minister of the Interior. We were led to believe by all those to whom we spoke that shortly we could look forward to a positive outcome concerning Father Rusak.

I was especially pleased to meet Alexander Ogorodnikov because I and other hon. Members had an Adjournment debate on his imprisonment only last year and we had adopted him as a prisoner of faith. The Under-Secretary of State, my hon. Friend the Member for Enfield, North (Mr. Eggar), responded to the debate. Many Christians throughout the country prayed for his release. In late 1987 I visited someone who had been fasting in a London church for Alexander's release.

Alexander became a member of the Russian Orthodox Church. He was arrested in 1978 because he participated in the publication of a religious journal and in organising a religious philosophical seminar. He was re-arrested in 1979. He was sentenced to six years in a Labour camp and to five years in exile. He was re-arrested in 1985 and became a prisoner in the notorious camp 36. Alexander, who, when I met him, did not look in the best of health, described terrible conditions in camp 36. It is a great wonder that any of those prisoners survive the severe climatic conditions in the winter.

We all celebrated Alexander's release in February 1987. Hon. Members can imagine my slight amusement when I sat with Alexander in a KGB car which was doubling up as a taxi to earn a little bit of money on the side.

We also had the pleasure of meeting Father Gleb Yakunin, a Russian Orthodox priest, who was suspended in 1966. In 1975, he appealed to EEC delegates in Nairobi, giving details of the situation faced by the Russian Orthodox Church and the believers. In 1976 he founded the unofficial Christian Committee for the Defence of Believers' Rights in the Soviet Union. He was arrested in 1979 and sentenced in 1980 to five years in labour camps and five years in exile. I am delighted to say that he was released in 1987, reinstated and given a parish in a Moscow region in August 1987. Father Yakunin was absolutely overjoyed when we met him in a tiny apartment and he was presented with a Bible. It is a miracle that he survived his time in camp and I am delighted to say that his spirit has certainly not been destroyed.

The case which I particularly want to bring to the attention of the House is that of Vasili and Galina Barats. I had adopted them as prisoners of faith and with my constituents celebrated their release. The House can imagine my horror when I arrived in Moscow and found I had been given inaccurate information. Vasili had been sent into exile and Galina was being held under house arrest. I have photographic proof that on 4 July, pentecostal emigration activist Vasili Barats was removed from a train bound for Moscow and detained for several hours. Barats who was forcibly taken from Moscow to the western Ukrainian Trans-Carpathian region on 8 May, was attempting to rejoin his wife in Moscow. Although she was also ordered to leave Moscow, she has refused to leave the flat there she is staying with friends and so far the militia has not attempted to remove her by force, although the flat is under constant surveillance. The ticket to Moscow was confiscated from Vasili and the KGB told him that he would be prevented from leaving, although there was no legal ground for his enforced exile in the western Ukraine. He is now under 24-hour surveillance by the militia and the KGB and he is unable to make even the shortest telephone call to his wife.

Barats has appealed to Mikhail Gorbachev to allow him to return to his wife in Moscow and for both to emigrate. In the late 1970s, Vasili and Galina were prevented from emigrating, on the grounds that they had no close relatives in the West. Now it is said that Vasili is party to military secrets which he acquired in the early 1970s when he was an army officer. Vasili denies that he has any knowledge that would be of any use whatever to a foreign power as all the equipment he used is now obsolete. Vasili was invited to petition for release from his labour camp sentence early in 1987 and he specifically stated that he was asking to be released to emigrate and Galina signed a similar statement, but all their attempts to emigrate have been frustrated and they have remained in an extremely precarious position ever since.

On 27 May, the United States Assistant Secretary of State for Human Rights, Richard Shifter, was able to visit Galina, who handed him a statement for President Reagan containing the list of 4,000 pentecostals who wish to emigrate from the Soviet Union. When Congressman Frank Wolf visited Galina, the KGB scattered from outside her flat. I visited her separately and found her in a highly emotional state. She has not been out of her flat, which is on the 25th floor of a depressing tower block, for two and a half months.

Galina is under virtual house arrest. Crazy as it seems, on many occasions food has to be raised in a bucket up to the 25th floor of the tower block. She is staying with a young couple whose 10-month-old child died last year. They have one remaining child, a five-year-old daughter named Lisa, who has a heart complaint, and the operation to rectify that can be carried out only in the West.

At every meeting we attended, we put the Barats's case. The American delegation wanted to take Galina home with them when we left last Friday. Unfortunately, we were not given entirely satisfactory answers to the questions that we posed about the plight of the Barats family. The other members of the delegation and I are determined to obtain the release of the couple and ensure that they should be allowed to emigrate. We had a meeting with several pentecostals who—except for one person—are all emigrating to America. That one person needs all our help and support in the West.

During our first visit, we were taken to the Danolov monastery, where President Reagan gave his now-famous address. We were warmly welcomed by the clergy, but I

must tell the House that I left with the feeling that the monks were overdependent on the state and that the monastery had somehow been compromised.

Most prisoners are detained under article 70, which concerns anti-Soviet agitation and propaganda, or article 190. Soviet law states that sentences are not only imposed as chastisement for the crime but are a time for correction and re-education in which the state will try to alter the moral outlook of the prisoner and his or her attitude to society and to work.

We are told that glasnost has resulted in a reduction in the number of religious prisoners from 380 in January 1987 to 177 today. However, it is suspected that many of the prisoners are re-arrested on various civilian charges. The number of new arrests on religious grounds has, I am pleased to say, been reduced to five this year. According to Soviet law, all religious groups must be registered with the state. The only type of actitivity that is officially allowed is the holding of services of worship in a building that must be registered officially for that purpose. Other activities are generally forbidden, such as Sunday schools, bible classes and evangelical events. It is hardly surprising that many Christians feel unable to abide by such restrictive practices.

At meetings with Ministers and officials, we emphasised the Helsinki accord and said that they should comply with it. We asked for bibles to be made freely available, and the Americans have offered to send 1 million bibles. We also asked that religious education be given to young people because there is a marked absence of children in the churches that we visited.

Keston college has done excellent work in supplying information about prisoners of conscience in the Soviet Union. We are also indebted to Hans Stuckelberger the president of Christian Solidarity International, who was, unfortunately, refused a visa to join us on the delegation. I also pay a warm tribute to the Foreign and Commonwealth Office, which has worked so very hard for human rights in the past few years.

It was clear to me that the Prime Minister's stand on these matters has produced positive results and is widely respected in the Soviet Union. I met Mr. Gorbachev when he visited the United Kingdom three years ago. I was impressed by him; to echo the words of my right hon. Friend the Prime Minister, he is someone with whom we feel we could do business.

I want finally to quote the words of four people whom we met during that week.

Father Gleb Yakunin said:

"This improved situation for believers in the Soviet Union is due to continuous prayers and protests of Western Christians over the last 10 years."

Alexander Ogorodnikov said:

"please keep the pressure up it is definitely working."

Mrs. Barats said:

"Yes there is glasnost, yes there is perestroika, yes there is democratisation, but only for a few."

Perhaps the most telling remark of all was made by Mr. Bulabsky, who said:

"we are continually looking in the mirror of our conscience, and that mirror is the West."

I hope that the Soviets will read and act upon the remarks that I and other colleagues make.

12.5 pm

Mr. Greville Janner (Leicester, West): With the leave of the House, Mr. Deputy Speaker, I congratulate the hon. Member for Basildon (Mr. Amess) on raising this matter in the House and on his very moving speech. I hope that what he has said will be heard and acted upon. I know that the families whom he has mentioned will find out that he has done so, and what he has said will perhaps help to assure and reassure them, which is our common purpose.

I thank the hon. Gentleman for raising during his visit to Moscow the Soviet authorities' refusal to allow me and other hon. Members on both sides of the House to enter the Soviet Union. I am a frequent refusenik—they will not let me in because they say that I interfere in their affairs, so glasnost and perestroika have not reached me. I regret that, but at least last week I achieved the next best thing to getting to Moscow. After 18 years in the House, I actually received a letter from the Soviet ambassador. Unfortunately, it contained an implied refusal to see me for a private chat, but perhaps even that attitude may melt in due course. Meanwhile, as a founder member of the Commission for Human Rights in the USSR I associate myself with the campaign for freedom of people of all religions and for the rights of the dissidents.

I begin by quoting from a marvellous book called "Fear No Evil" by Natan Sharansky, in the front of which I have written a dedication to the Minister, expressing my congratulations to him and the wish that he should read the book during the recess as it will interest him. It is gripping and it will do him good, as it did me.

In the preface, the recently released Mr. Sharansky says:

"During the long months of interrogation and isolation before my trial and for all the years that followed, my captors were determined to break me—to make me confess to crimes I had never committed and then to parade me before the world. They wanted to use me to destroy the two groups I worked for—Jews who hoped to leave for Israel and dissidents who spoke out on behalf of human rights."

I, too, work for both groups. The campaigns are separate because the Jews who wish to leave are not trying to change the regime in the Soviet Union but simply to get out. Sharansky, however, provides a magnificent bridge both in his work and now in his book, which I hope many hon. Members will read. Speaking of his time in prison, he says that there are many people of all religions in prison today for having said yesterday what Mikhail Gorbachev is saying today. All of them should be released—and they should be released now.

The all-party parliamentary committee for the release of Soviet Jewry was established some 17 years ago and I pay tribute to Members of all parties and to all Governments since then for the kindly, humanitarian help and co-operation that they have given us, not least on behalf of the three categories of people with whom we are concerned today—first, those still in prison; secondly, those who have been released but are still being harassed and persecuted; thirdly, those who dwell on the dangerous edge of imprisonment in the Soviet Union.

Sharansky refers in his book to a man called Leonid Lubman, who has been seeking to leave the Soviet Union for many years but who in August 1977 was sentenced to 13 years' imprisonment, just as Sharansky was, for writings critical of the Soviet Union. In his book, Mr. Sharansky describes him as

[Mr. Greville Janner]

"another imprisoned Jew who was picked on at every opportunity and literally never left the punishment cell along with his neighbours Vazif Meilanov and others."

So he, Leonid Lubman, is still in prison as a Jewish prisoner of conscience.

There are other ex-prisoners, prisoners who have not been allowed out of the Soviet Union. For example, Rowald Zelichenok has been waiting to leave for about 20 years. Like the man referred to by the hon. Member for Basildon (Mr. Amess), he is accused of having secrets. That is a travesty and a poor excuse. He was told only three or four days ago not to re-apply for a visa until 1999. There is Yeugeny Lein, Lein Kislik and Chernobilski. There is Kosharowsky, who has been enduring great perils. He has been refused leave to apply for a visa until 1992, again on the spurious ground of secrecy. He left his job 20 years ago. There are split families such as the Luries. There are those who are being kept from leaving because of spurious financial dependencies. All this in a country where it is alleged that freedom has re-emerged.

In June 1979, 4,350 Jewish people were allowed to leave the Soviet Union. In June of this year, 1,493 left that country—in other words, far fewer than half of those who left in June 1979. In 1979, 51,300 Jews were allowed to leave. So far this year, only 6,188 have left the country.

From this House, we appeal to the Soviet Union to release prisoners and to allow those who wish to leave, to join their families, and to do so in accordance with their own constitution, with the universal declaration of human rights and with the Helsinki declaration.

Finally, I mention with appreciation a statement made only yesterday by the Prime Minister concerning Raoul Wallenberg, the most noble prisoner of all time. He was a non-Jewish diplomat who single-handed, saved over 100,000 Jewish lives in Hungary, and to whom, I pay my tribute. He disappeared after going to the Soviet authorities after the liberation, to explain what had happened in Hungary and to seek the help of Soviet officials. The Soviets say that he was not in the Soviet Union, but left and was sighted. His family have been pleading and campaigning for true information, and for his release, if he lived. The statement by the Soviets that they had held him in their hands and that he had died of a heart attack in prison was patently untrue.

We appeal for Wallenberg and for all those referred to by the hon. Member for Basildon. We appeal for all those who have been campaigned for by hon. Members on both sides of the House and who are currently suffering in the Soviet Union. These are prisoners, ex-prisoners and those who wish to be free but are not permitted their freedom.

12.13 pm

Mr. David Atkinson (Bournemouth, East) *rose*——

Mr. Deputy Speaker: (Sir Paul Dean): Order. Does the hon. Gentleman have the leave of the House?

Mr. Atkinson: I have, Mr. Deputy Speaker.

I am grateful to my hon. Friend the Member for Basildon (Mr. Amess) for offering me this opportunity to participate in an important debate. I am pleased to congratulate him on initiating it. It must be right for the House to remind itself as we depart for a period of relaxation that, despite glasnost, there remain in the gulag hundreds of prisoners of conscience who deserve our attention for as long as they remain there.

I was extremely interested in the visit of my hon. Friend the Member for Basildon to Moscow last week, which was organised by Christian Solidarity International. As he knows, I have the honour to be the president of the CSI in the United Kingdom. I had hoped to join my hon. Friend's group, but I was unable to go.

I was especially interested to learn of my hon. Friend's meeting with Father Gleb Yakunin. I met him when I was in Moscow in 1979 researching for a report on freedom of religion for the Council of Europe. I shall never forget meeting with him and his colleagues on the Committee for Defence of Believers' Rights.

As my hon. Friend the Member for Basildon has reported, Father Gleb Yakunin was released last year. He was one of the three former dissidents who addressed President Reagan at the American embassy in Moscow on 30 May. He used that opportunity in front of the world's press to remind us, as my hon. Friend the Member for Basildon (Mr. Amess) has done, that there remain many prisoners of conscience. In particular he referred, like my hon. Friend, to Deacon Vladimir Rusak. Those people are still languishing in prison, labour camps, in exile and in psychiatric hospitals because of their religious activities. They have been convicted under the infamous article 70 of the Soviet criminal code, which is Orwellian.

As Father Gleb has testified the reason why he was released and the reason why Georgie Vins, the Siberian seven, Shcharansky, Orlov, Ratushinskaya, Senderov, Ognorodnikov—whom my hon. Friend met—Yevdokimov, Anna Chertkova, and, most recently, Vasili Shipilov, have all been released is that we in the West made them household names as a result of our campaigns on their behalf. We demonstrated outside Soviet embassies, we held vigils and encouraged mountains of mail urging their release. As a result, they became a continual embarrassment to the Kremlin. Thus they were released as an indicator of Soviet foreign policy like the number of visas issued to Jewish refuseniks—a measure for detente.

What a callous way of using people in response to the efforts and perseverance of the thousands of campaigners all over the world. However, there remains no alternative for us while hundreds more remain in prison. I draw the attention of the House to early-day motions 1415 and 1416, which list the names of 175 Soviet Christians who remain in prison for religious reasons.

What we all want in this House is a time in the Soviet Union when to be an active Christian, Jew or Moslem does not risk intimidation, bureaucratic harassment, discrimination or persecution, which has happened many times in post-revolutionary Russia.

We must be encouraged by what my hon. Friend learned from those he met in Moscow—that the reform movement is leading to greater openness, tolerance and respect for human rights, including freedom of religion. Such changes must not be cosmetic changes merely to encourage a reduction in arms or more western trade, technology and credits to improve the Soviet economy and to support perestroika. That would mean that we have learned nothing from the lessons of detente of the 1970s, when we gave much but received so little in return.

I urge upon my hon. Friend the Minister, whose responsibilities include the conference on security and co-operation in Europe, those recommendations for which

I am seeking support from the Council of Europe in October as the result of my report on Freedom of Religion in eastern Europe and the Soviet Union, of which he has a copy and which is to be debated by the parliamentary assembly in October.

12.17 pm

Mr. Timothy Kirkhope (Leeds, North-East): I also congratulate my hon. Friend the Member for Basildon (Mr. Amess) on raising this important matter. I have not had the advantage of visiting the Soviet Union, although since I came to the House last year I have been involved, in common with many other hon. Members, in the causes of a number of families who wish to obtain visas and who wish to leave the Soviet Union.

What has impressed me most is the new cosmetic approach adopted by the Soviet Authorities towards such activities. Nearly a year ago, I wrote to the Soviet ambassador, Mr. Zamyatin, about one particular family. The letter that I received in reply was starchy and in some respects offensive, as it sought to remind me of the human rights record of my country. One had to assume from that that the Soviets were talking about Ireland, Scotland or Wales or even the entire north of England. It was a curt and unhelpful letter. Since that time, however, glasnost and perestroika have developed.

Only recently I took up the cause of the Chernobilsky family in Moscow. About two weeks ago I led a small delegation to the Soviet embassy. This time we had an appointment at the embassy and we did not have to poke a letter through the box at the gates. This time, we were invited in and given half an hour of the first secretary's time. We were treated with great courtesy and sympathy. That is not enough, but it is a suggestion of the public image that the Soviet Union is now trying to put across.

We do not want the respective Foreign Offices to exchange lists; what we want is action. We want to see many people, not just the names that we select, and important though they may be, obtain the visas that they wish. The Chernobilskys and all the other Jewish families who want the freedom to practise their religion in Israel should be afforded that right. Those who are in prison because of religious beliefs, or in mental institutions because their beliefs do not comply precisely with the state's, should be released and given freedom.

The public face that I and other colleagues are now experiencing—the friendly, courteous and even generous attitude—must be changed into the reality of the release of people and the increase of freedom in the Soviet Union. Mr. Zamyatin and his colleagues know that. They know that we are watching carefully the development of glasnost and perestroika and that we want to see those results. I am very grateful to my hon. Friend the Member for Basildon for raising the issue. He has given us an invaluable opportunity to discuss a matter which is of great importance to everyone.

Mr. Deputy Speaker (Sir Paul Dean): With the leave of the House, Mr. Waldegrave.

12.20 pm

The Minister of State, Foreign and Commonwealth Office (Mr. William Waldegrave): I am grateful to my hon. Friend the Member for Basildon (Mr. Amess) for giving me an opportunity, very early in my responsibility, to put some words on record about the third of the three great areas of which my portfolio consists. I have had the privilege today of answering a debate on each of those issues.

I was very interested to hear about my hon. Friend's visit to the Soviet Union, and I shall pass on his kind remarks to our embassy staff there. Many of the words spoken across the Chamber have a ritual quality. In other debates we know that we have to play our parts, but in debates such as this, in the activities represented in this House and by voluntary organisations outside such as PEN and Amnesty International, it is more than words. We know that the concentration on particular families and the publicity that they receive has a particular effect in the real world and can be a powerful weapon for protection. Therefore, occasions such as today are important.

However optimistic we are about the changes which are affecting the Soviet Union, had it not been for the efforts of people such as my hon. Friend and the hon. and learned Member for Leicester, West (Mr. Janner) during the years when the atmosphere was not so favourable, it would not now be so near the top of the list of priorities that progress should be made on these issues. We must be vigilant, because we are aware that there are elements of public relations in some of the things being said at the moment. As my hon. Friend the Member for Leeds, North-East (Mr. Kirkhope) said, we are seeking the actuality and not the words.

I have not long to speak and I cannot refer to all the cases which hon. Members have raised. I welcome the way in which the debate has extended beyond prisoners of conscience in a narrow sense to wider human rights issues in the Soviet Union. I shall say just one word about a figure in a very different category—Wallenberg, members of whose family I know. I can say to the hon. and learned Member for Leicester, West that many unresolved questions remain about that case, and we hope that the spirit of glasnost will reach into that tragic story, which is a major one in the history of the 20th century.

I have a particular family reason for welcoming my hon. Friend's introduction of the subject. He may not be aware that a very major figure in the carrying of evangelical Christianity to the Soviet Union in the 19th century was a member of my family, Lord Radstock. Occasionally, I receive letters from the descendants of those whom he introduced to his particular strand of Christianity in the Soviet Union. Investigations would show that some of those whom my hon. Friend met would be able to trace their roots back to the missions that he established in the 1850s and 1860s.

The horror with which we in the western world regard any attempt to limit religious freedom has been expressed on all sides of the House today, and it is intolerable that those pressures and persecution should still exist.

The Soviet Union, like the United Kingdom, is a signatory of the United Nations covenant on civil and political rights, and of the Helsinki Final Act. In signing those documents, it accepted certain responsibilities concerning the attitude of a state to its citizens. Among them is a pledge to respect

"human rights and fundamental freedoms, including the freedom of thought, conscience, religion or belief".

Yet experience has shown that the Soviet authorities have failed lamentably to observe this pledge in practice.

We have every right to be concerned about that. The Final Act was agreed by states working together as equals, and it has equal significance for each of them; there is no

[Mr. William Waldegrave]

escaping this fact. When we deal with the Soviet Union as an equal, we expect it to honour commitments freely entered into, as we do.

The Soviet Union has no grounds for special pleading. It cannot claim that the commitment to respect human rights and fundamental freedoms somehow applies less to it than to others. Article 52 of the Soviet constitution guarantees freedom of conscience to Soviet citizens. If the Soviet Union wants to be taken seriously as a responsible interlocutor in the community of nations, it must be prepared to behave like one, and to face criticism if it does not.

All the names mentioned by the hon. and learned Member for Leicester, West are on the list of cases that we are pressing. Several of my hon. Friends mentioned Vladimir Rusak, who has been imprisoned since 1986. He had the temerity to write a book on Church history since the revolution—a subject which is now being openly discussed in the Soviet press. He was sentenced for anti-Soviet agitation and propaganda. How depressingly familiar that meaningless phrase must be to students of Soviet human rights abuse. Deacon Rusak has displayed courage and fortitude throughout his ordeal. The House expects the Soviet Union to bring that ordeal to a speedy conclusion.

Another prisoner of conscience is not, however, imprisoned for religious reasons. Mykola Horbal, who is a Ukrainian, dared to join a group of Soviet citizens monitoring the Soviet Union's adherence to its commitments under the Helsinki Final Act. For this, and his samizdat writings, he was arrested in 1979 and sentenced to five years' imprisonment. Without being released, he was charged again at the expiry of this period and sentenced further to eight years' imprisonment and three years' exile for, to use that phrase again, "anti-Soviet agitation and propaganda". He, too, is in poor health. There is no justification for failing to restore Mykola Horbal's freedom. His crime was to seek to monitor the commitments into which his Government had freely entered.

Vladimir Korfidov is a victim of the most chilling of human rights abuses—the detention of a sane person in a psychiatric hospital. Mr. Korfidov was a factory worker and was arrested in 1979 after trying to cross the border into Finland without permission. He was sentenced to be detained indefinitely. We understand that his case may have been reviewed recently, but we have no firm news of his present circumstances. The abuse of psychiatric hospitals has improved, which is welcome, and I shall press his case further.

The hon. and learned Member for Leicester, West mentioned a further category of prisoner—those for whom the Soviet Union itself is a prison, such as Jewish refuseniks, Germans, Armenians and others. We shall strongly press the cases of those people.

The Government are aware of the case of the Barats family, whom my hon. Friend the Member for Basildon mentioned so eloquently. I understand that the Netherlands and Canada have offered them entry visas. We very much hope that they will be allowed to emigrate, and we shall add their case to the list of those on which we shall press.

I recently received details of the harrowing case of the Vais family of Leningrad. Semian and Sara, 21-year-old son Dima and grandmother Galina have been trying to emigrate to Israel since 1978. Permission has been consistently refused, for the catch-all reason that it would be prejudicial to state interests. Both parents have lost their jobs and Mrs. Vais supports the family by working in a boiler house. Mr. Vais has had a series of strokes and is very ill. His most recent stroke was on 23 June, he having again been refused exit permission on 29 May. The authorities have called up Dima for military service, but his mother and grandmother badly need his support. That is perhaps not a typical catalogue of the distress that can be involved. We recognise that Mr. Gorbachev seems to be making changes but we focus still on those for whom the changes are not coming speedily enough.

As I have said, it is the deeds and not merely the words that we want. We lose no opportunity to bring individual names and the principles behind what I am saying to the attention of those at the highest level. My right hon. and learned Friend the Foreign Secretary and my right hon. Friend the Prime Minister have pressed the cases of many of those I have mentioned. Within the context of the CSCE and elsewhere, we miss no opportunity to press towards the release of many from the remains of the gulag and many who wish to rejoin their families or simply to exercise their basic human right of free exit from one country to live in another country of their choice.

Royal Assent

Mr. Deputy Speaker (Sir Paul Dean): I have to notify the House, in accordance with the Royal Assent Act 1967, that the Queen has signified her Royal Assent to the following Acts and measure:

Appropriation Act 1988
Finance Act 1988
Community Health Councils (Access to Information) Act 1988
Licensing (Retail Sales) Act 1988
Landlord and Tenant Act 1988
Malicious Communications Act 1988
Access to Medical Reports Act 1988
Protection of Animals (Amendment) Act 1988
Environment and Safety Information Act 1988
Protection against Cruel Tethering Act 1988
Civil Evidence (Scotland) Act 1988
Criminal Justice Act 1988
Legal Aid Act 1988
British Steel Act 1988
Court of Session Act 1988
Electricity (Financial Provisions) (Scotland) Act 1988
Education Reform Act 1988
Local Government Finance Act 1988
Solicitors (Scotland) Act 1988
Bredero (Bon Accord Centre, Aberdeen) Order Confirmation Act 1988

Housing (Waltham Forest)

12.32 pm

Mr. Harry Cohen (Leyton): This debate is about public housing in Waltham Forest. I have to confirm that it is public housing in which people live, not public houses where drinks are consumed.

I congratulate the Minister on his new role. I assume that it is a promotion. I wish him success, not least because we wish to see decent housing in Britain. I shall draw to his attention a comment made by the previous Under-Secretary of State before she was given the chop by the Prime Minister. In a letter to me dated 21 July she said:

> "I do appreciate the housing problems in Waltham Forest, and in particular I applaud the efforts of the Council to avoid use of bed and breakfast in meeting their obligation towards those who are homeless."

There are severe housing problems in my area. Many local people are in desperate need of proper housing. They face immense overcrowding and stress and that is reflected in the high figures for homelessness, the housing waiting list and the transfer list. I have to deal with innumerable cases in my advice surgery. I receive many letters and telephone calls, and if I went through them all we would be here all day.

I want to deal with the issues in general. In 1987-88, 2,201 households presented themselves to the local authority as homeless, 801 of which were regarded as priority need. That was a 33 per cent. increase on the year before. The trend this year is still substantially upwards. I have some of the latest figures. They show that 520 families out of a total of 828 allocations were rehoused in July. Of those 826 dwellings, 386, were one-bedroomed properties which are not suitable for families. Four hundred and forty two were two-bedroom or larger properties. Therefore, 91 per cent. of the available family homes went to homeless families. The projection is that 950 dwellings this year will go to homeless cases. On a projection of 1,400 allocations, 600 are likely to be one-bedroomed and 700 to be family units. There will be a shortfall of between 200 and 250 family homes for 1988-89 for the homeless.

The council has avoided using bed-and-breakfast accommodation, and should be praised for that, despite the huge increase in homelessness at a time when many other councils have been forced into using it. As I have said, nearly 90 per cent. of all lettings go to priority homeless families. This year, for the first time, the council has had to put 100 families into one-bedroomed, high-rise tower block flats. That is not satisfactory. The council has also reduced its voids enormously. The empty properties have been reduced to only 337 as at 25 July. That represents 1·6 per cent. of the total council stock, an incredibly low proportion.

There will always be some void dwellings as properties stand empty for minor or major repairs. However, if we compare that level of vacancies with the private housing association sectors in Waltham Forest, we find that the council figure is an efficient one. As I have said, council vacancies are 1.6 per cent. of total stock. Housing association empties are 3·9 per cent., while in the private sector nearly 3,000 properties are empty, and that is 4·6 per cent. of the total stock.

That burden of homelessness eating up the available dwellings means that the current waiting list and transfer list are effectively frozen. Only 15 families were housed from the housing waiting list over last year's figure and

[Mr. Harry Cohen]

every one of those families was extreme in the extreme. The 10,362 families on the waiting list and the 4,000 plus families on the transfer list are bearing the brunt. They are in a trap of misery. In addition, 1,500 elderly people need special housing in the area and we have only 600 sheltered homes in Waltham Forest. That is one of the lowest figures in London.

We have a large number of low-income families for whom owner-occupation is not an option. We also have many serious harassment cases, including racial harassment, and many families need rehousing. There are road decants in the area. The M11 link road has caused 270 families to need rehousing. Seventy of the best family homes had to come down during the construction of the north circular road. There are system-built homes on the large estates and 3,500 of them need improvement and redevelopment. The previous Minister visited those estates and acknowledged that there was a case.

More than 16,000 houses need repair and improvement at a cost of £180 million over 10 years. Even the Audit Commission said:

"Put simply, a further £10 million is required in each of the next 10 years if the council is to carry out its traditional housing elemental repair plan. Moreover, the cost of future maintenance and work revealed by the outstanding surveys will add further to the shortfall . . . Waltham Forest has all the information needed to put forward a reasoned argument in support of a request for a supplementary allocation."

There is also disrepair in the private sector where more than 22,000 homes are considered to be in need of substantial repair. Many of them need some local authority assistance. However, improvement grants have been stopped in my area because of the cut in the housing investment programme.

The borough's strategy is to spend more to provide new homes for the homeless and to repair and redevelop its homes and those homes in the private sector. It has calculated its HIP bid at £63 million, which is based on accurately costed figures from private consultants. However, last year the council received only £7 million. That was topped up by allocations and £15·3 million of its capital receipts to £24 million, which was for this year's programme. Even that has been hindered by the Government. For example, the Secretary of State's statement in March blocked a lot of schemes, including schemes involving the private sector.

The council had a deal with the Samuel Lewis housing trust to provide 32 homes for the homeless. They were to be built by a private contractor, Hastingwood Estates, on private land, funded by a private merchant bank, Brown Shipley and Co. Ltd. That was in my constituency at the old Leytonstone football ground. With other schemes, that would have provided 200 homes for the homeless. The scheme was shot down when the Secretary of State announced his restrictions on leaseback deals on 9 March.

The Government have realised that it was wrong to pull the rug from under the feet of many local authorities in regard to such schemes without announcement. They have invited bids for additional applications to cover the cost of some of those schemes. Waltham Forest has made an application, and I hope that the Minister will take its application seriously and will provide the supplementary allocation.

It was deeply unjust that those schemes were stopped, especially the one on the Leytonstone site, because the housing association was already fully committed. It had signed contracts, it had borrowed the money from the bank, and it had even handed over 10 of the properties before 9 March. Twenty-two of the 32 properties have been counted as prescribed expenditure for the local authority, despite there being no prior notice and the fact that the local authority processing levels were within the rules at that time. That denied the local authority the opportunity to spend the money on other homes, as it had intended to do. I hope that the Government will reconsider that aspect of their policy.

On transforming the estates, the council has a major programme which affects many of my constituents living in Cathall Road, Oliver Close and Beaumont road. Many of those properties have major structural problems that need repairing. Reports have gone to the Government Building Research Establishment and to the Department of the Environment, whose surveyors have looked at them. However, for just a little more than it would cost to repair those blocks—which would even then leave a lot of problems—we could have new homes and flats, virtually all of which would be low-rise and many of which would have gardens.

The Government should give additional support to those schemes. Because of the enormous sums involved and the void rate being so low, it cannot be done privately without throwing out the tenants, but they have nowhere to go. Only the council can do that, and it should be supported by the Government. The Government should start by giving sufficient Estate Action funding for those specific schemes. I hope that the Minister will look at that, too.

I want to refer to the subject of disabled people's homes, because the way in which the Government have dealt with the Suffield Hatch site in Waltham Forest raises questions about how serious the Secretary of State is about providing such homes. It is a council-owned site which the council wanted to sell to a housing association called Habinteg, to build 18 units for the physically disabled, including wheelchair-bound people. The housing association agreed the funds. The council needed approval from the Secretary of State to sell it at below market value. It submitted its application for approval in 1987, and in November approval was given but was based on the wrong figures.

In February 1988 approval was based on the right figures, but in that year the property value had virtually doubled and by the time the authority went back to the housing association—it resubmitted the figures in April this year—it was told that it had to go through the whole process again. The Secretary of State's delay in giving approval has put a block on those disabled people's homes because of the price rise since. It is a Catch-22 situation —land prices rise while the Secretary of State delays.

The Government's proposals seem to be for a strict financial regime with no flexibility or room for the local authority to deal with its housing problems. People's misery will be made worse as the borough's problems are worsened. The Government recently produced their consultation paper, "Capital Expenditure and Finance" which will force local authorities to direct 75 per cent. of their capital receipts to pay off historical loan charges. That would be disastrous for Waltham Forest—it would mean a 40 per cent. cut and bed-and-breakfast accommodation on an enormous scale immediately. The borough has tried hard to avoid that option.

Just the other day the Government produced another consultation paper, "The New Financial Regime for Local Authority Housing", which says that housing revenue accounts will have to be self-financing. That proposal takes absolutely no account of the poor quality of housing which many people have to live with and for which the council has to pay out of the housing revenue account because of its duty as a landlord. It also takes no account of high debt charges, which are running at £20 million a year for my borough. If the Government's suggestions were put into effect, there would be a £6 a week rent increase. There would be a 30 per cent. increase for no improvement in services in 1990—exactly the same time as the poll tax hits local families.

The Housing Bill is no answer. More than 2,000 tenants have inundated the town hall and been to public meetings saying that they do not want private landlords. I have a letter from the Leyton Grange community association, which polled its estate and found that 85 per cent. of tenants wanted to remain council tenants. People want the council to be their landlord, and forcing tenants out seems to be the Government's alternative. That is not right.

I urge the Minister to give the local authority the supplementary approvals that it needs and a bigger housing investment programme allocation to help house my local people decently.

The Parliamentary Under-Secretary of State for the Environment (Mr. David Trippier) *rose*——

Mr. Deputy Speaker (Mr. Harold Walker): Order. Does the hon. Gentleman have the leave of the House to speak again?

Hon. Members: Yes.

12.47 pm

Mr. Trippier: I congratulate the hon. Member for Leyton (Mr. Cohen) on securing this debate on so important a topic, and thank him for his kind comments about my new responsibilities for housing. His remarks were typical of him. Although we do not share many political views, it is established fact that the hon. Gentleman is a very popular hon. Member. I do not say that to damage his chances of reselection—I say it sincerely.

The hon. Gentleman has described in great detail the problems that confront his borough. I assure him that neither my right hon. Friend the Secretary of State nor I underestimate their scale. My hon. Friend the Member for Broxbourne (Mrs. Roe) visited the borough earlier this year—as the hon. Gentleman suggested, to get first-hand knowledge of local housing conditions. I know that she had a most useful discussion with representatives of the council and had a tour of the borough.

What the hon. Gentleman said about the delay in the housing scheme for the disabled worried me, and I should like to examine the matter and write to him.

Mr. Cohen: I am grateful.

Mr. Trippier: I shall summarise the main features of housing conditions in Waltham Forest. Nearly one quarter of the housing stock is owned by the council. The remainder is in private ownership. The council's stock includes many flats—about 3,500—in large panel concrete construction. The problems found in buildings of that type are well known. As well as having structural defects, they are badly laid out and unattractively designed. I shall return to what can be done about that.

The council owns a lot of houses that were built before the war. They are now showing signs of age. New roofs and windows are often needed and heating and kitchen equipment need to be brought up to date. There are also problems with many of the post-war flats and houses. Many of the problems are structural and extensive remedial work is required.

Demand in the borough comes from those who are registered on the council's waiting list and from those who are accepted by the council as homeless and in priority need. In 1986-87, 586 homeless families were accepted by the council. I echo the tribute that has been paid to the council for avoiding the use of bed-and-breakfast hotels to accommodate homeless families. That is an extravagant use of resources. Bed-and-breakfast hotels provide unsuitable accommodation for families, except for short periods in an emergency. The council has managed to avoid using bed and breakfast by reducing the number of empty dwellings in its housing stock. Its efforts and resourcefulness deserve credit. I am happy to put that on record.

Overcrowding is a problem, especially where there are insufficient larger dwellings in the existing housing stock. Further demands arise both from decanting families to allow improvement work to be done on housing estates and from road works. The hon. Gentleman mentioned that work on the A406 is to start soon. He also referred to the M11 extension.

Capital expenditure for local authority housing is based on the council's housing investment programme. Every local authority makes a bid for its share of the national allocation for expenditure on housing. The total amount available is always over-subscribed, and bids from local authorities have to be considered very carefully. We have already received Waltham Forest's housing investment programme bid and its housing investment strategy statement. Every year we have meetings with each of the local authorities to discuss their programmes. This year's round of meetings will start in about a couple of months.

I can understand that, with so much work needing to be done to the housing stock, the borough may think that allocations in past years have not been large enough. I reassert that they have been made as carefully as possible and that they have been dealt with as fairly as is humanly possible. We shall study its new statement with close interest and we shall listen to what the council has to say to us when it comes to see us.

I understand that the council is disappointed that the borough is included in group B for the admissible cost limits in the tables used to calculate housing subsidy entitlement. Group A includes mainly inner London boroughs where land and property values and works costs are highest. These groupings were made on the basis of available cost data and they will be reviewed annually. Any representations that the council may care to make will certainly be taken into account in the next review.

Waltham Forest's allocation for 1988-89 was increased from that for the previous year. It was one of only eight London boroughs whose allocation was increased. It also received two supplementary allocations. The first is to help it to meet its obligations to the owners of pre-cast reinforced concrete houses that were originally owned by the council. They were then bought by the tenants. If

[Mr. Trippier]

defects occur in these houses, the council is required either to pay a grant towards the cost of reinstatement or, in extreme cases, to buy them back. The other supplementary allocation is to help the council with the cost of meeting its obligations towards the homeless. The allocation should enable the council to make some of its empty houses fit for use, as well as providing a hostel.

The housing investment programme allocation can be augmented by other resources—for example, capital receipts, including the sale of council houses and flats where the tenants have exercised their right to buy. We have received no recent figures from the council regarding its progress in dealing with right-to-buy applications, but anecdotal evidence suggests that that work is in arrears. If that were so, we should take a very serious view of it. It is frustrating the tenants' right, conferred by law, to become the owners of their own homes. Furthermore, it means that the council does not have the benefit of those capital receipts.

Many local authorities enter into leasing arrangements with housing associations and other bodies. There is no fundamental objection to that practice, provided that it helps authorities to meet their needs and represents good value for money. For example, it may make sense to take a two or three year lease of a house while the owner is abroad and to use it as temporary accommodation for homeless families. However, it has recently become apparent that the arrangement whereby leasing costs do not count as prescribed expenditure is being abused by certain authorities, who have signed lease and lease-back deals for 20 years that amount to new build council estates by the back door.

My right hon. Friend the Secretary of State therefore announced on 9 March that leases for longer than three years would, in general, count as prescribed expenditure. A later announcement provided that authorities could apply for additional allocations of prescribed expenditure for schemes that were both genuinely in the pipeline and did not result in an overall increase in the housing stock controlled by the council. Applications are due for that by the end of this month. I understand that the London borough of Waltham Forest has submitted applications in respect of schemes at Trinity close, Larkswood mews and Cogan avenue. I received them only very recently. They will be considered carefully and a decision will be conveyed to the council in due course.

I suggest that the council should think seriously about selling any surplus land so that it can be developed without the use of public funds and create a receipt for the council. The council has disposed of some 60 acres of surplus land entered on the Land Register, which is reasonable progress. Those registers were set up to ensure that unused public sector land that has a potential use is made available for development. That is most important in areas such as greater London where land for development is at a premium.

The Secretary of State has powers to give directions to authorities to dispose of Land Register sites where they could reasonably have put them on the market. Some directions have already been given. I understand that Waltham Forest still has sites on the register amounting to some 45 acres, so I urge the council to review those sites to see which of them can now be released. The council may also find that when tenant's choice comes into effect the tenants may wish their estates to be transferred to other ownership. The council would then be relieved of the burden of having to manage and renovate those estates.

Another way in which the council can increase its spending power is by bringing forward projects as part of the Department's Estate Action initiative. It has completed or is working on four projects which, together, have earned special allocations of about £350,000. The schemes include a controlled access system at All Saints tower on the Beaumont road estate. That is successful and has been well received by the tenants. It is no exaggeration to say that their lives have been transformed by the sense of security that it has brought about.

Mr. Cohen *indicated assent.*

Mr. Trippier: I am glad to see the hon. Gentleman nodding assent. The project is one of those listed in our booklet "Better Reception". We were delighted to include it.

That type of entry is being or will be provided for the other tower blocks at Beaumont road. No doubt the council will extend it to other estates. Other projects include new or relocated estate offices. They may be more mundane, but local management on estates is a key part of the Estate Action approach and fundamental to revitalising estates that have become run down.

We are now looking at four further projects from the council with a potential Estate Action allocation of £1·5 million. I emphasise that Estate Action is not just a way of getting extra spending. Successful projects are a balanced package of proposals that embrace all aspects of the management of the housing estates. We usually expect them to include an innovative feature that would not have been provided otherwise. I do not have to tell Waltham Forest that because it knows it already. I am glad to say that we have a good working relationship with the council on Estate Action.

The hon. Member for Leyton referred in general to public housing in Waltham Forest, but the council's responsibilities also involve it with the private sector. That will happen increasingly as councils move from being major providers of housing to enablers working with other agencies. One of the main ways in which councils are at present involved with the private sector is in making grants for the improvement of older houses. They may be given on application, although some types of grants are made at the council's discretion. However, sometimes it is more effective to target assistance on defined areas. I see that the council has adopted that strategy. With Circle 33 and Nationwide, it has also been working to provide a neighbourhood home improvement agency, to help those who might not understand the improvement grant system or who may not have funds available to pay for their share of the cost of the work.

It may interest the hon. Gentleman to know that I dealt in Standing Committee earlier this week with proposals for changing the improvement grant structure. I gave an undertaking that when parliamentary time allows, it is our intention to repackage the number of grants that are available. I am the first to admit, having taken on these new responsibilities only recently, that perhaps we are in danger of confusing the very people whom we are seeking to encourage, with a catalogue of improvement grants. We are determined to repackage them.

One aspect of management where the council could do better is in reducing rent arrears. The latest figure put them at £2·7 million, or 14·1 per cent. of the rent roll, which is the eighth highest in London and the tenth highest in the country.

Mr. Cohen: That figure has come down from £5 million.

Mr. Trippier: That certainly is progress, and I do not ignore it, but much more could be done. We know that the council has problems and, obviously, these are not unique to Waltham Forest. It could adopt further initiatives to its advantage and I have outlined some of them today. I hope that the council will heed seriously what has been said this afternoon.

Search and Rescue Services (South-west England)

1 pm

Mr. Tony Speller (Devon, North): Today, as the Session ends and the holiday season in the south-west gets into full swing—I am not looking forward to the drive back to north Devon this afternoon—I have secured this debate to talk about the cost of the search and rescue services in the south-west. The matter concerns costs as well as services. The services are superb and the cost is high.

I am delighted to see on the Government Front Bench my good Friend the Parliamentary Under-Secretary of State for the Armed Forces, who has a special place of respect in north Devon for the interest he has taken in our helicopter service and the work of RAF Chivenor. I am surprised to see him since the thrust of my argument is more suitable for reply by my right hon. Friend the Secretary of State for Transport, but he may well be on the sands at his Southend constituency. I know that my hon. Friend's chieftan has departed for Ayr, which is good news for him, but I am somewhat worried that I shall not be answered by a Minister from the Department of Transport.

While the Royal Air Force and Royal Navy helicopters play a most effective role in search and rescue, most of their work involves saving our civilian population, which means tourists and natives of the west country. Inevitably, if 90 per cent. of the work is carried out for civilians, it is unreasonable that the defence budget should stand all the strain. I am well aware that if nine out of 10 rescue missions are not related to the services they could manage with fewer helicopters in the south-west than we have at present.

While I fully accept the problem, I wish to bring to the attention of the House some of the problems that we see in the south-west as our roads improve, tourist numbers increase, more footpaths open—often along the coasts and shores, for example, the south-western coastal footpath —and more and more people walk or ride on Exmoor, Bodmin moor and Dartmoor, and play in boats or along the beaches. Wherever one is in this world there is always a risk, and at present we are superbly served by so many organisations.

We have the coastguard—a professional body of full-time officers run and controlled by the Department of Transport who operate a good and satisfactory service. We have the auxiliary coastguards—a voluntary body of hourly-paid civilians who are trained to a high standard and who provide help under the instruction of the coastguard. We have the cliff rescue teams and beach patrols, which are paid for by local authorities, and mountain rescue teams, some of which are funded by the services but many of whom are civilians and volunteers. We have the Royal National Lifeboat Institution on the coast, a professional body of full-time and part-time experts, funded by voluntary contribution. I have already talked about funding from the state, local authorities, volunteers and from the private as opposed to the public purse. Other voluntary agencies include pot-holers and first-aiders; and then we come to the big stuff—the expensive matter of helicopters, which are mainly provided by the Royal Air Force, Royal Navy and civilian

[Mr. Tony Speller]

contractors. Heavier still are the long-range maritime search and rescue fixed-wing aircraft funded by the RAF and operating far from our shores. All these work via the rescue co-ordinating centres at Plymouth and Pitreavie, which are manned by RAF personnel who co-ordinate the search and rescue requirements for all the agencies I have listed. But here we have the problem. Surely the time has come to study this hotchpotch of finance and control, and I am not using the word "hotchpotch" pejoratively. There is nothing wrong with a good stew or casserole but the ingredients in terms of cost and control are so mixed that we have a genuine problem. I speak for the south-west, but I am sure it is true for the rest of the country. Clearly there is a problem for the taxpayer, who is paying a great deal out of a tax pocket and he or she cares not which pocket it is. All we care about is that the excellent service continues. I realise that the defence budget is stretched and I do not blame the Ministry of Defence for looking to the Department of Transport and saying, "As we are dealing mostly with civilian transport responsibilities, the Department of Transport should bear some of the costs." To me, as an hon. Member representing the west country, the question of where the money comes from is irrelevant, as long as we keep our service.

We have had the most amazing public response to the suggestion—or fear—that the RAF Chivenor helicopters might be moved to Brawdy. I fully understand the reasons behind that concern and I hope that my hon. Friend the Minister will be able to reassure me that no precipitate announcement is likely.

The best announcement would be an announcement that there is to be no change in the system, and I look to my hon. Friend to tell me how things will go. There is much concern locally. District and parish councils, the Ilfracombe round table and our local press have all done wonders in alerting the community. Many who enjoy their surfing know Georgeham, a lovely village down on the sands by Saunton, and Woolacombe and Croyde bay. Vast numbers of tourists come there each year. A tourist is at risk every time he goes on a cliff path, tries to climb down a cliff or floats out to sea on his air bed. I know that accidents should be prevented, but they will and do happen. Georgeham parish council wrote to the Home Office about the closure of the coastguard station at Hartland in the constituency of my hon. Friend the Member for Torridge and Devon, West (Miss Nicholson). The council received a remarkable reply from Her Majesty's coastguard at the Department of Transport.

It described the excellent system that operates and said that there would be little change when the service was transferred from Hartland, in my hon. Friend's constituency, across the water to Swansea. There was a sting in the tail. The letter said:

"Regarding helicopter coverage, about which there has been much speculation, I can offer you some reassurance."

The House must listen on:

"Specific criteria have been agreed for provision for civil maritime use"—

nine out of 10 are civil cases.

"By day, it should be possible to reach any point within 40 nautical miles of the coast within one hour of alert".

If one is clinging to the cliffs or swimming for one's life, an hour is not a great deal of help. Perhaps we could fire a rocket with a message attached saying, "Don't worry. Another 58 minutes and you'll be all right." I found the letter from the chief coastguard very depressing. It continued:

"At night or in thick weather it should be possible to reach any point . . . within two hours."

That I understand; it is a totally different matter at night for obvious reasons.

Georgeham council had asked the simple question, what will happen if the coastguard station is moved and, incidentally, what of the helicopters? The answer was that a person could still be reached within an hour. In the past few weeks, we have had cases in which people have been saved when within minutes of losing their lives. The Royal Air Force at RAF Chivenor can get to most areas of north Devon in four, 10 or 12 minutes. If the service were located across the water at RAF Brawdy—I do not seek in any way to reduce coverage there—an extra 35 minutes' flying time would be involved. In other words, the chief coastguard's one hour criterion will be followed, and it is an unacceptable criterion. It is said that there is no intention of departing from the standards in the Bristol channel. I do not suppose that anyone who is floating in a small boat or on something solid will worry about the hour. People may survive this hour but not in rough seas, not if they are on the rocks and certainly not if they are clinging to the cliffs.

My constituents find it hard to accept this kind of change when for years we have had a 10 to 15 minute service, given gladly, highly efficiently and commanding great respect from the community.

Worrying about the future of the service, I spoke to my right hon. Friend the Secretary of State for Transport and later met my noble Friend Lord Brabazon of Tara to draw attention to the problem about which a lady constituent wrote:

"It has shocked me too, at the thought of helicopters being transferred to Wales."

We are all shocked. I do not know whether the chief coastguard in question is in the House, but my constituent continued:

"I would like to throw Captain Harris into the sea off Baggy Point in bad weather, without a life belt or raft and say, 'Will be back for you in an hour, old boy.' Lord Brabazon —put him on the rocks off Hangman, with the tide coming in plus lashing wind and rain."

The lady asks simply:

"Has he no idea of the vicious weather we get here?"

I appreciate that no one wishes to reduce the quality of service, but the reference to 60 minutes means that the quality of service will be reduced by about three quarters of an hour.

Since the flight at RAF Chivenor was established in November 1958, about 4,000 searches and 2,000 rescues have been carried out. Many sorties are false alarms, or the people manage to save themselves. Nevertheless, those figures are impressive. The *Western Morning News* yesterday reported two cases in my constituency of people who had got into trouble and fortunately got out of it before the helicopters arrived, but what a reassurance it was for all of us to know that the helicopters were coming. People often do not appreciate how many brave folk there are who will risk their lives trying to help. With the helicopter service, we know that by the time we attempt the dangerous or the impossible, the professionals will be there to help—and I hope that they always will be. Scramble time is about four minutes to my coastline from RAF Chivenor compared with 35 minutes from Brawdy.

I emphasise that we in the west country are proud of everything in our area. We know that it is beautiful and a part of the country to which tourists wise enough to holiday in Britain will always come. But we cannot always guarantee the weather, and when the weather is bad there is danger. There can also be danger when the weather is good if people take a windsurfer too far out or go fishing from a dinghy. It is one of the oddities of our society that one may not take a car or motorcycle on the road without a licence and then a test but anyone can take out a boat, which is far more dangerous. The many boats for hire rightly contain life preservers, but danger is still obvious and inevitable. Our rescue services are thus not something added on but an integral part of the tourist season, and people expect and deserve those services.

Thanks to the Government, to whom I pay tribute, we have a good new road—the north Devon link road—which will be open from the Tiverton M5 up to South Molton in a couple of months and from South Molton up to Barnstaple and on to Bideford by this time next year. The purpose of good roads is to make travel safer and to carry more traffic. There will be more tourists, and that is good. There will be more people coming to live with us. That is excellent. We welcome all of them, but we cannot accept a lowering of safety standards at the very time when improved facilities to reach north Devon become available.

West country Members do not feel neglected. We are well looked after and kindly spoken to, but then these little points are thrown in showing that, although we are to have good roads—the excellent Okehampton bypass is being opened—and all the other good things that will make us more viable commercially, the dangers will remain and may even get worse.

I therefore put three main points to my hon. Friend the Minister. First, I accept that the purpose of Ministry of Defence helicopters is defence and their priority must be to help service men in difficulty. I suppose that their origins lie with the launches that used to go out into the Channel to pick up aircraft crew who had ditched during the second world war.

Modern aircraft are safe and modern flyers are excellent, so, happily, we have few defence emergencies. Unfortunately, we have many civilian emergencies. I ask for an assurance that there will be no danger of change in the immediate future, by which I mean this year or next year, of anything happening to the defence helicopters that look after us so well.

Secondly, if the Royal Air Force and Royal Navy, for their own logical reasons, have to reduce their commitment, will there be an overlapping of rescue services? I believe that an interdepartmental committee is currently examining these issues. If the Royal Air Force had to diminish or dilute its support for whatever reason, would another organisation take its place? I understand that that could be a civil operation, and I am neither for nor against that. All that I want is protection for our people. If the Ministry of Defence cannot continue to meet its commitment, then my right hon. Friend the Secretary of State for Transport must take the next step.

Children, my own have been among them, take part each year in what is called the 10 tors competition. It is an exercise that is organised extremely well by the forces. Sometimes the youngsters suffer heatstroke. Sometimes a youngster will break his ankle or leg. In the past we have always had the support of the services to get any injured competitor off the moor. There are other things that go wrong on the moors and problems are not confined to the 10 tors competition. When the weather is bad—it can be extraordinarily bad on occasions—we have always had the support of the services. The Royal Air Force has flown in food for families and fodder for beasts. Without that support we would be extremely hard put. It is not just a matter of providing an extra helicopter for the four, five or six months of summer. There must be a total commitment year round.

I have figures that show how many people are carried from accidents by helicopter. Many of those who are injured in road accidents are motor cyclists. When youngsters damage their head or their legs, they are lifted from north Devon to the hospital at Barnstaple, which has a helicopter pad, or might be taken on to Plymouth. We are not dealing with the odd occasion when an injury takes place or when an idiot takes out a boat in dangerous conditions with a lack of experience. There is a day-to-day need to supplement the wonderful service of the Royal National Lifeboat Institution and the superb service that is provided by our coastguards. These services must be co-ordinated. All the individual bits and pieces are working wonderfully well, but more and more demands will be placed upon them as the years pass. There are times when we cannot rely entirely on the voluntary sector and the time is coming when there will have to be some form of service that goes beyond the central co-ordinating centres, which we already have and which work well. We shall have to co-ordinate the cash wihin the public purse so that the public are protected, our services continue and we can continue as happily and as fruitfully as in the past.

It is a great pleasure to represent a part of the west country which so many people visit and it gives great satisfaction to read so often in the press that someone has been saved. I know that everyone is grateful to the services but the need will always be present, and it is our job in Parliament to ensure that the means are available as well.

1.18 pm

The Parliamentary Under-Secretary of State for the Armed Forces (Mr. Roger Freeman): I apologise to my hon. Friend the Member for Devon, North (Mr. Speller) for the fact that a humble Defence Minister rather than a Transport Minister is standing at the Dispatch Box to answer the questions that he has put. I read the Prime Minister's reshuffle list carefully and I am not aware that I have been moved. I am sure that he will accept that any comments that are made in this debate will be conveyed to my colleagues not only at the Ministry of Defence, but at the Department of Transport.

May I also congratulate my hon. Friend on securing this debate. He has been a valiant champion of his constituents' interests concerning not only RAF Chivenor, but the search and rescue service provided from that RAF base. He has written to me on numerous occasions about this matter and has brought delegations from the North Devon district council to visit me. I was thus able to hear at first hand their views about the future of the search and rescue services in the south-west. I have also visited RAF Chivenor with my hon. Friend.

I have been extremely impressed by the response from the community, including the Ilfracombe Round Table, the local Royal National Lifeboat Institution and the local press—if one can pay a tribute to the press gallery—

[Mr. Roger Freeman]

especially the *North Devon Gazette*. All my hon. Friend's constituents have adopted a positive and responsible attitude to campaigning and have drawn the attention of the Ministry to local concerns about the search and rescue services.

Many people in this country have good reason to be grateful for the excellence of the search and rescue service—for them it has made literally the difference between life and death. It is understandable, therefore, that when there is any prospect of change in any part of that service it arouses strong feelings among those who believe that they may be affected.

I should like to state at the outset, therefore, that in considering any changes that are within the province of Government we have had the interests of all users of the services in mind. We would not contemplate changes which we believed would not continue to provide a level of service across the country acceptable to the Government.

The search and rescue service is provided by the Government and other agencies and it is a matter of teamwork. The Royal Air Force and the Royal Navy provide helicopters; the RAF also provides long-range maritime patrol aircraft and mountain rescue teams and rescue co-ordination centres, which co-ordinate all air search and rescue assets. Her Majesty's coastguard co-ordinates civil maritime search and rescue operations within the United Kingdom's search and rescue region and provides boats and helicopters of its own. The Royal National Lifeboat Institution provides a whole range of rescue boats and, of course, the extremely brave men who crew them—I pay particular tribute to them.

My hon. Friend has drawn attention to the wide range of agencies that contribute to search and rescue. When we pay tribute to the skills of RAF and Royal Navy pilots of the search and rescue helicopters we should remember that many other agencies assist. I join my hon. Friend in paying tribute to their bravery. Together, the services give a comprehensive range of cover enabling them to assist at the multiplicity of emergencies that arise around our coastline and in our mountains—emergencies which range from the massive tragedy of the Piper Alpha oil rig to the plight of civilians cut off by the tide, or the pregnant woman who needs emergency evacuation to hospital.

The spread of the search and rescue assets is reflected in the division of departmental responsibilities, and perhaps it would be helpful if I explained those briefly to the House—not least because the perception of many is that search and rescue is wholly provided by the Ministry of Defence. For example my right hon. Friend the Secretary of State for Transport is responsible for civil maritime and aviation rescue, whilst the Ministry of Defence is responsible for military rescue. Naturally, departments work closely together, and Ministry of Defence assets are available to assist civilians in distress in peace time. It follows, however that some of the issues raised today by my hon. Friend fall within the purview of the Department of Transport, and I know that my hon. Friend understands that and has expressed his anxieties to Ministers in that Department. I will convey his remarks to those Ministers.

In the past 12 months, we have undertaken a review of the deployment of RAF and Royal Navy helicopters around our coastline with a view to deploying those assets as effectively as possible. It has been a major undertaking. I have already told my hon. Friend that decisions on the remaining parts of the study, including those that affect the south-west, have not yet been taken and we shall not make an announcement on those aspects until after the summer recess. I assure my hon. Friend that no precipitous decision or announcement will be made. The Ministry of Defence will take all the time necessary to consider representations made to it when examining the complicated issues involving inter-departmental co-ordination and other considerations.

The primary purpose of the search and rescue service provided by the Royal Navy and the RAF is the rescue of military personnel in peacetime and war. That is why a military service was established and that remains its raison d'etre. Therefore, I must be certain that our military search and rescue needs are met and continue to be met as effectively and efficiently as possible.

We have also taken account of the recommendations of the helicopter coverage group set up by the United Kingdom search and rescue committee, which reports to the Department of Transport. It is our aim significantly to improve the national coverage we shall provide against helicopter coverage group criteria and I can assure the House that final decisions on the deployment of our assets will not be taken without the concurrence of my right hon. Friend the Secretary of State for Transport.

Of course, I recognise that it is in the area of civil needs that the most public concern is felt, particularly in my hon. Friend's constituency, with its large number of holiday-makers—a number likely to increase, as my hon. Friend has reminded the House this afternoon, with the building of the new road into north Devon. I am well aware of the extensive leisure pursuits undertaken by holidaymakers and residents in the area, particularly with the ever-increasing popularity of sailing and windsurfing, and the scope for people to get into difficulties while undertaking such pursuits. Nor do we forget that people get into difficulties on land as well—in this area Exmoor and Dartmoor spring naturally to mind—and I remind the House that the RAF has a mountain rescue team stationed at St. Athan whose area of cover includes south-west England. I pay particular tribute to them; they work very closely with the police.

I emphasise that the Government are paying close attention to the needs of civilians who undertake enjoyable but potentially dangerous leisure pursuits. We will take the fullest account of the representations we have received concerning the future deployment of search and rescue helicopters.

My hon. Friend has suggested that we consider setting up a single comprehensive agency to meet our search and rescue needs. It is not for the Ministry of Defence alone to comment on that idea. However, there already exists a United Kingdom search and rescue committee advising the Department of Transport on which all the principal contributors to, and many of the users of, the search and rescue services are represented. It includes representatives of the Department of Transport, Her Majesty's coastguard, the Royal National Lifeboat Institution and such users as the Cornish fish producers organisation and the Royal Yachting Association. The members of that committee agree to support the collective effort by contributing in ways most appropriate to them.

The United Kingdom search and rescue operation has developed from precedents which we still believe are valid on the basis of contributions from various authorities,

which my hon. Friend has mentioned. By concentrating on developing teamwork, we believe that we have a greater capacity than would be the case if one single body attempted to provide everything. A single body might inevitably find itself aiming only to meet the minimum requirements, as can be seen in other countries with such a system. Continued reliance on the many agencies, all of which take pride in their contribution, produces a service that is second to none in the world.

Our review of military helicopter search and rescue services is designed to ensure that they are deployed as effectively as possible. This is not a penny-pinching exercise, designed to save a few pounds here or a few pounds there. But we have to be certain in this area, as in any other, that we are obtaining the best value for money whilst meeting our military requirements and, as I have explained, taking account of civil needs. If we were to deploy search and rescue helicopters every 25 miles around the coast we could ensure that delays in reaching any incident would be minimal, but such an organisation would be neither financially practicable nor necessary. Equally, if we were to base helicopters at only, say, four sites around the country we could not provide a service which would be adequate to meet either military or civil needs. Our aim is therefore to ensure that our basing policy strikes the right balance between the available resources and the tasks to be undertaken.

I have explained that decisions about helicopter search and rescue deployment as it affects the west country have not yet been taken, and will not be taken until the autumn. I undertake to consider again the points made in this debate when reaching those decisions. I assure the House that the Government would not contemplate any changes to the present deployment if it was not convinced that anything other than a service which met the needs of the military and civil communities would result.

I hope that I have covered most of the questions that my hon. Friend has asked me. He asked for three assurances, and I hope that I have covered them. The first was that no precipitous decision will be taken and no announcement will be made on defence helicopter deployment. I hope that I have convinced him that, following our very full representations, we will take all the necessary time to review those and reach a conclusion.

Secondly, my hon. Friend asked whether, if the Royal Air Force did not provide a service at Chivenor or at any other station, his constituents would not be left in the lurch. The Government intend to ensure that the national criteria for search and rescue and cover for those in difficulties at sea are met. I assure my hon. Friend that the Government will ensure that those criteria are met.

Thirdly, my hon. Friend mentioned those who are caught in the open or suffer injury on Exmoor during the winter. They will not be forgotten, as the House should not foreget the men of the search and rescue service.

Community programme schemes

1.30 pm

Mr. Graham Allen (Nottingham, North): It is wholly inappropriate for the House to adjourn for three months while the massive and crushing problem of the long-term unemployed remains. That problem becomes worse as every day goes by, particularly in the context of the economic crisis facing the Government. Halfway through the year, there is already a massive trade deficit that is far higher than the Chancellor predicted for the whole year. Interest rates are increasing almost by the day. Investment in manufacturing industry still has not returned to the levels that were enjoyed a number of years ago, and inflation is rising, as the Chancellor said in his goodbye letter for the recess to his colleagues.

Those appear to be problems of success, without defining clearly what that success is. They have a considerable knock-on effect on the long-term unemployed. Unemployment has been used as an economic philisophy and tool by the Government to drive down wages and to constrain and repress trade union organisation. The Government refuse, even today, to set a target date for when unemployment will return to the levels of 1979. Instead, there has been manipulating and massaging of the figures. We are now on the 20th adulteration of the unemployment figures since the Government came to power; job creation and other schemes are included in the calculation of the number of people enjoying employment.

In the latest finesse, the community programme is to be jettisoned and replaced by employment training. This will have a profound effect on my constituency, Nottingham in general, and the rest of the country. Almost every good aspect of the CP is under threat. In Nottingham, not only do hundreds of CP workers face a return to the dole queue, but the failure to replace the work done by CP schemes will hit hard the elderly, the disabled and other needy groups.

The penny-pinching Tory council in Nottingham has a particularly appalling record and is copping out of its local responsibilities by refusing to become a training manager. A revealing report to the Tory city council in June stated:

> "Many of the Council's current CP placements are project based, for example those on environmental works. The new emphasis on vocational training together with the individual action plan approach is likely to make it impractical for all of the current CP projects to continue in their current form. Furthermore the Training Commission has indicated a wish to phase out such project-based placements."

In correspondence with myself, the Under-Secretary of State for Employment stated

> "that community benefit will not be a main priority of the new programme."

Glib phrases are used by Tories locally and nationally, but I shall explain what they mean. The following schemes will be affected in Nottingham, North. The Nottingham women's centre will lose two centre co-ordinators and two play scheme co-ordinators. The Nottingham centre for the unemployed will lose two welfare workers, two outreach workers, one clerk typist, a warden and a manager. The Rainbow centre will lose a librarian and an information officer, an exhibition organiser and the development worker for recycling. The voluntary projects programme based in Bulwell in my constituency, will lose two full-timers and one part-timer who work with the long-term unemployed and the rehabilitated mentally ill.

[Mr. Graham Allen]

The Nottingham community arts project will lose a printer, reducing the number of courses for printing, photography and arts. MIND will lose one activities organiser. Even Bulwell toy library looks forward to an uncertain future.

One of the worst features is the attack upon the elderly and disabled. The dial-a-ride scheme in Nottingham, along with community transport, will lose 14 drivers and workers. It will be decimated and wholly dependent for a much reduced service on volunteers.

Perhaps many of those projects should enjoy permanent employment and should not have been dependent on the schemes. However, there was not permanent employment and to a large extent those caring projects were filled through the community programme. I hold out little prospect of real investment by the Government to replace the jobs that will disappear with real jobs, perhaps with the local authority or through other auspices.

The list continues. At the Norwich gardens community centre for the elderly, the warden feels that there is insufficient time to undertake what the Government call "training" for the workers. The nature conservancy programme in Nottingham will be severely affected. Brilliant local initiatives such as those taking place at the Bestwood advice centre will be crushed. A total of 39 community programme workers attached to that centre will no longer be in place under employment training. Those workers do the gardening and painting for elderly people, assist with welfare rights, produce community newsletters and so on.

The Top Valley community centre is equally threatened. Shelter, an organisation with a high reputation in the city and nationally will lose three workers in the city. The Broxtowe advice centre will lose welfare and advice workers. The list goes on.

The areas in which there is high social need and where the indicators of deprivation are among the highest in my constituency are those where we will lose extra pairs of hands and extra skills that are essential if the people who benefit from the community based schemes are still to help that community.

The training burden placed upon senior people in the establishments I have mentioned means that they cannot fulfil the needs outlined under employment training. An advice worker, under stress and working hard, cannot put aside the time to take 40 per cent. of a trainee's time under direct supervision. It is impossible to imagine that people under such stress will be able to put aside such time. That is one reason why the schemes cannot work and the numbers will go down.

Adventure playgrounds, tutors for creches and keep fit classes will be hit. In addition, the skilled team of community programme administrators and supervisors who run the city council's community programme schemes face an uncertain future and will perhaps be out of work. That is the profit in one constituency from the change from the community programme to employment training. I am afraid that that profit is repeated in constituencies throughout the land. The unseen and unheard-of problems will hit voluntary organisations in particular over the next few weeks.

How could there be other than massive consequences when £500 million, which is effectively earmarked under the community programme for community-based schemes and projects, is suddenly turned off? There are bound to be massive detrimental effects. In addition, the £86 million taken from schemes associated with and related to disabled people will obviously have a major effect. According to the Spastics Society, that is equivalent to 10 per cent. of the whole community care budget being taken from the disabled in one fell swoop.

Who will fill the gaps? In many ways, the CP has been used to paper over the cracks. The Department of Health and Social Security and local authorities have not been able to fulfil all the social needs that are laid upon them and the CP has very often filled the gap. Will the burdens fall ever more on social service departments at council level and on the new Department of Social Security? Who will look after and make good the shortfalls? I suspect that the answer is no one. In the free enterprise culture, the old lady who cannot get her hedge cut or her garden dug will just have to go and whistle. I suspect that the disabled person who relies on the dial-a-ride scheme to get out and do some shopping will just have to hope that somehow a good neighbour will fill in and do right by him.

The community programme scheme has also enabled voluntary work to be initiated in response to local demands and needs. One of the problems about ET—employment training—is that there must be a position of strength before it can begin. There must be workers and a training infrastructure to kick off the new schemes, not least because money is not provided to meet the running costs of the schemes. The small-scale local initiative arising from local demand will find it harder to surface and meet that local demand.

Even those employment training schemes that go ahead will average just six months per person instead of the one year per person under CP schemes. After six months' training, the trainee can put back into the scheme a degree of skill and experience. However, that is exactly when the training period is likely to cease. That effective contribution will cease.

All that I have outlined in one particular constituency flies in the face of the Government's assurances to voluntary organisations. After meeting representatives of the National Council for Voluntary Organisations, the Secretary of State, who I can only assume regards ET as his child—the organ grinder rather than the monkey—said:

> "Every existing Community Programme provider who wishes to offer to provide employment training opportunities of a comparable quality will be able to do so . . . all projects could move into employment training."

That point has since been repeated by the Secretary of State's officials.

Those statements are at total variance with the experience of the schemes in Nottingham, which help the elderly and the disabled and offer advice and support which will now close because of the change. The Government's promises and statements are nothing less than downright lies which are hurting some of the most vulnerable people in my constituency.

The lack of seriousness about training is also shown by the amount of money allocated to training managers. The White Paper announced that, in addition to the basic grant, the average supplementary grant would be £20 a week. In fact, it is nearer £15 per trainee. That is leading

training managers to cut their schemes to reduce the quality of training and the number of trainees. In many cases, ET will give substantially less than was available under the community programme. If the Government are serious about training, the training costs in a training programme must be higher than in a programme which allegedly did very little training. As a result, with just four weeks to the launch of ET, many voluntary organisations are desperate and uncertain about the future.

That leaves aside those people who are being trained. If the Government were serious about training the long-term unemployed, the trainees would receive a decent wage which should attract trainees, rather than one on which they can barely exist. Also the threat which still hangs over them would be lifted—they may lose their dole money, or people coming on the schemes at a later point may lose their dole money, if they come off scheme. Proper training is about high-quality programmes—not threats. Intimidation is no answer to the long-term unemployment problem. All that the people on employment training will receive is their benefit, plus £10 on their Giro. Some may receive a top-up or have their travel and meal costs met by some training managers. Rather than serious training, that still resembles the latest in a long line of attempts to massage and manipulate the unemployment figures and to keep down wage costs.

In my constituency, the real level of unemployment is calculated not by the Department, with its 20 additions, but by the unemployment unit. Unemployment is still around 16 per cent. in real terms—16 out of every 100 people in Nottingham, North are without work.

While the number of wages inspectors—whose regional office is in my constituency—has been reduced, and while employers who are discovered to be paying low wages are rarely prosecuted, we heard this morning that the clerical and manual grades in the east midlands have received the lowest increase in wages in the United Kingdom this year.

The employment training programme does nothing to assist those individuals who are so desperate to return to work, to make a contribution, and to be constructive rather than hopeless at home. It merely aggravates the position of the long-term unemployed.

For all its faults, the community programme will be desperately missed by those individuals who have been on its schemes and, even more so, by the needy, the vulnerable, the elderly, the disabled, the welfare advice seekers and all those who have benefited from many of the community programme schemes. In my opinion, ET should go home.

1.48 pm

The Parliamentary Under-Secretary of State for Employment (Mr. Patrick Nicholls): I do not entirely agree with the analysis by the hon. Member for Nottingham, North (Mr. Allen) of the economic situation; nor do I agree with his analysis of the prospects for ET. I would probably embarrass the hon. Gentleman if I did agree with that analysis. He has put this debate firmly in the context of the plight of the long-term unemployed, and I am sure that he is right to do that. Even at this late stage in this Session of Parliament, in doing so he performs a valuable service, both to the House and to the country, in giving us the opportunity to debate this issue, for which I am grateful.

I am anxious in the time available to try to respond to the hon. Gentleman's specific points, but I should like to say the briefest of words about the economic situation. The hon. Gentleman is right that in time of recession it is the vulnerable who will suffer most. Certainly in a time of recession, it will be the long-term unemployed who will suffer from that vulnerability.

The hon. Gentleman is worried about inflation, but I advise him—because of the respect that we have for him, I warn him that it is a trick question—to name one month under the last Labour Government when inflation was as low as its present relatively high level under this Government. Dealing with problems as they arise and counting inflation and the threat posed by it is preferable to Secretaries of State being turned around in their motor cars on the way to the airport and having to take a begging bowl to the International Monetary Fund. History, which I am sure will take great account of the hon. Gentleman's speeches and mine, will have to make up its mind about that.

The hon. Gentleman mentioned schemes in his constituency which he feels are under threat. I am sure that he will not take it amiss if I say that it would be better if we could follow this debate up by the hon. Gentleman writing to me about his worries so that I can consider them.

It is sometimes assumed that community programme providers who are not in the business of training cannot function under the new scheme. We plan to have about 194,000 project places under the new adult training programme, which is broadly what already exists. It is somewhat ironic to hear the praise that has recently been heaped on the community programme, as, when the Government introduced it in 1983, Opposition Members universally derided it. One of the constant criticisms of it was that it was only a makework scheme and not a training programme. It is somewhat ironic that we are now being criticised for building on the community programme and trying to ensure that it has a training content.

I do not apologise for the fact that we have developed the valuable work done by the community programme to ensure that there is a training content in future. The hon. Gentleman is entirely right to draw attention to the fact that many community programme providers will not want to be training managers. They may not be equipped to be training managers. Just as there is more than one way to salvation, so there is more than one way in which the community programme can play its part in the new programme. Many training managers will be responsible for delivering training, and they will need project places. In many parts of the country, CP providers will contract or subcontract to provide project placements for training managers. That process is beginning to take shape.

I bear in mind experience from my constituency. Several consortia are getting together. They are often made up of people who are unable to provide direct training, but know that they can provide project places. They team up with those who are able to provide training. That is another way in which the community programme can pass into the new programme. It is a mistake and overly pessimistic to think that, simply because a CP provider cannot become a training manager in his own right, he cannot take part in the new programme.

The hon. Gentleman drew the House's attention to commitments given by my right hon. Friend the Secretary of State, and, I dare say, by my right hon. Friend the

[Mr. Patrick Nicholls]

Minister of State. I, too, have been saying it throughout the country. The Government are anxious that voluntary organisations should play their full part in providing training, but I am aware from my private office correspondence and from representations that have been made to me that some voluntary organisations are worried about how they will fit into the new scheme of things. That is entirely understandable. The Training Commission and Employment Ministers do their best to resolve such problems.

Some 300,000 places will have to be contracted for under the new programme. About 270,000 contracts have been sent or are in the final stages. I do not underestimate the difficulties that may have been experienced in some areas. Broadly speaking, the community programme is working. Many community programme providers throughout the country have found that they can bring themselves within the new programme. About 270,000 of the 300,000 places are already contracted for.

The hon. Gentleman is also concerned about the amount of time that will be spent on the new programme. He made the point that it will be six months on this programme, whereas it was 12 months on the community programme. I appreciate that the constraints of time apply just as much to the hon. Gentleman as they do to me and that in short debates we all to some extent talk in shorthand. We suspect that six months will be the norm, but if a trainee needs more than six months for his particular circumstances the programme can be for up to a year. Unlike the community programme, the idea is that it will be full-time training. The possibility of full-time training for 12 months, if that is needed, is a better bet than any form of community programme that would involve merely part-time training. When the hon. Gentleman thinks about it, as I know he will in the light of our exchanges, I think he will recognise that that fact needs to be borne in mind.

The hon. Gentleman is also concerned about the funding of the programme. He takes particular exception to the concept of benefit-plus. Although the Government have emphasised the advantages of a training programme, we have to bear in mind that it was designed not by the Government but by the Manpower Services Commission, which is now the Training Commission. It put unanimous recommendations to the Government about the way in which it wanted the scheme to be set up. The recommendations included the funding arrangements and the concept of benefit plus.

I could enliven the debate massively by telling the House about some MSC representations that were not absolutely what we wanted to hear. However, my right hon. Friend the Secretary of State for Employment greatly valued the fact that the training commissioners, including the three trade union commissioners, one of whom was Mr. Todd, who is noted for his recent job initiative in Dundee, were all in favour of the scheme. The fact that this was to be a training allowance rather than a rate for the job was put to us, and we accepted the recommendation.

Bearing in mind the criticism that has been levelled against benefit-plus, it is interesting to see who has criticised it. One has to bear in mind the sweet words of the hon. Member for Birmingham, Ladywood (Ms. Short) about the training programme. She is the Labour party's Front Bench spokesman on these matters. The hon. Lady has been eloquent and vocal about benefit-plus, yet when she was a director of Youth Aid in 1982 she referred to the future of the community enterprise programme, the forerunner of the community programme, and said:

"Consideration should also be given to the possibility of payment on CEP calculated on a 'Benefit plus' basis."

I agree, and that is what we are doing. It is a little sad that, having accepted the MSC's recommendations to that effect, and having done what the hon. Member for Ladywood wanted, we are being criticised for it.

The hon. Gentleman has done the House a service by questioning the voluntary nature of the scheme, if only to give me the chance for the umpteenth time to try to shoot down that idea. There is no question of this being other than a voluntary scheme. I put it as low as that to pander to every evil thought that the hon. Gentleman has ever harboured towards the Conservative party. To try to force people into training would not work. The programme will succeed only if the long-term unemployed regard it as an effective mechanism for getting them back into the main stream of British working life so that they can enjoy some of the benefits that the rest of us have enjoyed in recent years. That is what the programme is about. If it succeeds in that way, who needs to make it compulsory? Even if it does not succeed, the idea that we can forcibly train people will not work.

From our exchanges on the Employment Bill, I suspect that the hon. Gentleman is not always absolutely persuaded by everything that I say. I should like to think that he does not doubt my motives but he may think that I am a trifle naive. Mr. Norman Willis, the general secretary of the TUC, is not naive, nor is he an uncritical supporter of Her Majesty's Government. Two weeks ago the *Financial Times* said that Mr. Willis had reaffirmed his conditional support for the Government's employment training programme. He said:

"There is no viable alternative."

In *The Times* of the same day, Mr. Willis was quoted as saying that should the programme fail, the whole trades union movement would deserve condemnation as well. Mr. Willis has got it right. He has given the programme his conditional support. He believes that it may yet be a mechanism that can help the long-term unemployed back to work. All that I would say to the hon. Gentleman is, if it is good enough for Mr. Willis to give it his conditional support, I am sure that it will satisfy the hon. Gentleman as well.

I shall respond to any letters that the hon. Gentleman may care to write about specific points.

Barn Elms Reservoir

2 pm

Mr. Jeremy Hanley (Richmond and Barnes): Almost everyone in London, and many beyond, know that as one crosses the river Thames from Hammersmith into Barnes there is a complete change of scenery, with wider tree-lined avenues leading to the open spaces of Barnes common and, further on, to Richmond park and Kew gardens. Only seven miles from Westminster, Barnes richly provides proof that Richmond upon Thames deserves to be known as the borough where the countryside comes to town. It is the balance of our love and respect for the environment, for green open spaces and for wildlife that makes Richmond and Barnes such a joy both to live in and to visit.

Barnes itself still possesses a village atmosphere in an ever more frenetic world. Although blighted by the incessant misery of aircraft noise, few residents know of a more pleasant urban environment. We fiercely hold on to our metropolitan open land and, in spite of high density housing, relief is at hand through the natural environment, with the river Thames on two sides, Barnes common in the south and Barn Elms reservoirs to the east. It is Barn Elms reservoirs about which I wish to speak, not only as the Member of Parliament for Richmond and Barnes but as a vice-president of the London Wildlife Trust.

It is a great delight to have as the Minister responding to the debate my hon. Friend the Member for Surrey, South-West (Mrs. Bottomley), who understands and appreciates the special nature of Richmond. I warmly thank her for being here today and congratulate her on her recent appointment. I apologise to her for her baptism of fire and having to answer two Adjournment debates in her first few days as Minister, particularly as her first debate was at 4 o'clock this morning. In spite of it, she is looking lovely.

Barn Elms comprises nearly 70 acres of reservoir, split into four almost equal quarters, and approximately 80 acres of surrounding land, including filter beds, allotments and recreational open land. It was declared a site of special scientific interest in June 1975 as it was decided by the Nature Conservancy Council to be one of the most important wintering sites in the London area for tufted duck, smew, pochard and other species. Between 1986 and 1987, the London Natural History Society recorded no fewer than 35 different species of bird in the area putting it sixth in greater London or 11th in the whole London Natural History Society recording area. In records taken since 1947-48, counts of national significance have also been recorded for gadwall and shovellers—the latter have greatly increased in numbers recently—in addition to pochard and tufted duck. It is a site that is loved by local residents and bird watchers alike. It would be a tragedy if it were to be filled in, bulldozed and turned into a housing estate of some 6,000 houses, totally changing the nature of Barnes. A site of major natural historic importance would be lost.

How does that fear come about? At present the site is controlled by Thames water authority, which has plans to terminate its interests at Barn Elms on the completion of the London ring main. As with any other public body, it has a duty to maximise its assets. A large site close to the centre of London must be a tempting prize. It would be harder, although admittedly not impossible, to achieve if that beautiful area retained its SSSI status. But that seems to be in danger as the number of birds seems to have fallen in recent years.

What are the reasons for the recent reductions in bird numbers? There are possibly four, but none is conclusive. It has been suggested that Thames Water, in managing the reservoirs, has introduced chlorinated water which has changed the birds' food source. That might have helped to accelerate a decline, but while the addition of such water has been recent, there is no proof that the decline in bird numbers corresponds with the first such introduction.

The second reason is possibly the activity of fishing in the immediate area. But fishing takes place during the summer months mainly when the ducks are more likely to be absent, and peak numbers of birds occur during winter months when it is the close season for fishing. It could well be, however, that the artificially introduced fish are competing with the birds for the same food source. Therefore, it is not conclusive that fishing is causing a deterioration in the number of birds, but there may be some related reasons which contribute to the reduction.

Another reason is that the River Thames once possessed rich food resources, but has become, as we all know and welcome, much cleaner. That can be shown by the appearance of salmon as high as Teddington in recent years. All Members of Parliament know that the Thames is much cleaner, but perhaps it is not generally known that the summer recess, which we shall enjoy in a few minutes' time, started because the river was so polluted and smelly that Members of Parliament could not stay here through the warmer months, so Parliament went into recess until the cold months arrived in the middle of October. The river is now clean and there is no smell, but we are fiercely proud of our tradition of a 10-week holiday. While the river is cleaner, food stocks will have declined and that could be a reason for the lack of numbers.

My conclusion is that none of those factors is likely to be of itself a conclusive reason for a permanent decline in bird stocks. Therefore, the numbers are as likely to be cyclical and are in any event only just below those used by the Nature Conservancy Council for judging SSSI status.

The current criteria for creating an SSSI in areas of water such as this are not officially published, but are generally known as threefold. First, the site must be of national or international importance, with its population of one or more bird species breeding, malting or wintering. Secondly, the site must have recent records of at least 70 breeding, 90 wintering or 150 passage species of birds. Thirdly, the site must have a total of more than 10,000 waterfowl, not including coots and grebes, regardless of the species regularly present. Clearly it is difficult for any urban site to qualify, but it is specifically because this is an urban site that the criteria should be widened.

At the third meeting of the RAMSAR convention, to which the United Kingdom is a signatory, the proposal for an addition to the criteria for identifying wetlands of international importance was made. The international criteria are published and there are three. A wetland should be considered internationally important if, first, it regularly supports 20,000 waterfowl; secondly, it regularly supports substantial numbers of individuals from particular groups of waterfowl, indicative of wetland values, productivity or diversity; and, thirdly, where data on populations are available, it regularly supports 1 per cent. of the individuals in a population of one species or sub-species of waterfowl.

[Mr. Jeremy Hanley]

Again, Barn Elms could not possibly qualify, certainly on the first or third of those international criteria, although it may do so on the second. The proposal was serious and far more interesting. It was:

"A Wetland should be considered internationally important if it is both a good example of the type and characteristic of its region and, either, offers special opportunities for promoting research, understanding and appreciation of Wetlands, open to people of several countries, or, is the source of past environmental or archeological information of international significance."

As it is in the centre of London, the site offers unique opportunities to promote research, understanding and appreciation of those lovely birds. The site is in the middle of the largest area of population in the country and is the closest to the biggest international airport in the world. It is precisely because it is unique in being in London that the Wildfowl Trust in Slimbridge has shown a great interest in the site.

Just six weeks ago, the Wildfowl Trust stated that it was examining the possibility of establishing a Wildfowl Trust site near London and, on hearing that the Thames water authority had plans to terminate its interest at Barn Elms, wondered if it could become involved in the development plans there. Of course, matters are at an early stage, but surely, if the Wildfowl Trust is showing an interest, it must be at least an important site. The fact that the trust considered opening a second branch shows that the site has crucial importance to those who know and understand ducks and birds generally.

I believe that the trust's view is proof positive that SSSI status should be retained and that the reservoirs should not be compared to other reservoirs outside London but should hold unique importance in their own right. There is little doubt that the local authority, under any political party that wanted to retain control, would refuse planning permission for residential or commercial use, not only because it would change the nature of Barnes entirely and would cause massive transport and environmental difficulties, but because the people of Richmond believe that this facility is what is wanted and needed desperately as an island in the middle of urban sprawl.

To have a Slimbridge in central London would not only introduce thousands of tourists to the work and wonders of the Wildfowl Trust, but would also be of tremendous educational benefit to children and adults alike. Tourists coming into London might be introduced to the Wildfowl Trust and then travel westward to Gloucestershire to see the original Slimbridge. It would therefore be an introduction of international significance.

To lose the site as an SSI would be not only an uncivilised act of material vandalism but a disaster to the local environment. I ask my hon. Friend the Minister to consider what Barnes would be if a large housing estate were built on the site at Barn Elms. The only exit from Barnes to the north is Hammersmith bridge, which has a severely restricted weight limit. A new crossing over the Thames would be needed—perhaps two new crossings. Already one has to wait up to half an hour to cross Hammersmith bridge on an ordinary morning. If the population of Barnes were doubled, the environmental considerations would be grotesque.

I fully recognise that removing SSSI status does not automatically mean that development will occur, but it would be one step on the road to development. To build a housing estate on the site would not, as some might say, be of benefit to those who cannot afford houses in the area. Houses built there would be extremely desirable and extremely expensive because of their riverside site, so I do not believe that development would benefit the local people or anybody other than those who can already afford expensive houses in the capital.

To summarise, we in Richmond believe that the criteria for judging SSSI status should be refined to take into account both the numbers and rarity of the birds recorded, which would better reflect the sites. The London ecology unit, under Dr. Dave Dawson and his excellent team, further believes that the geographical position of the site should be a criterion for its selection as an SSSI to ensure that no large areas of the country are left with their best sites unrecognised. Dr. Dawson also believes that Barn Elms reservoirs have not been evaluated correctly according to the Nature Conservancy Council's own published criteria because they may form one part of a series of wetlands, each part of which is required to conserve nationally important bird populations, and because an inappropriate area of search may have been employed when selecting London SSSIs for bird populations. Fluctuations in the number of birds on the reservoirs suggest that it would be prudent to allow a margin for future changes as none of the reasons for decline seems permanent.

When an SSSI is threatened with denotification, a formal consultation procedure with the local planning authority and certain other interests such as landowners provides an opportunity for any representations or objections to be made in writing to the Nature Conservancy Council within a period of not less than three months. These are then considered by the NCC in deciding whether to withdraw the proposal. I hope that the *Official Report* of this debate will be regarded as a written representation and a contribution towards the debate on whether Barn Elms should retain SSSI status. On environmental, conservational, educational, recreational, national and international grounds, I beg that Barn Elms should retain its designation as a site of special scientific interest.

2.16 pm

The Under-Secretary of State for the Environment (Mrs. Virginia Bottomley): First, I thank my hon. Friend the Member for Richmond and Barnes (Mr. Hanley) for his kind words about my new appointment. As he rightly said, I last spoke from the Dispatch Box at about 4.50 this morning, although in parliamentary terms that was yesterday.

I congratulate my hon. Friend on the clear, articulate and forceful way in which he has represented the interests of his constituents. As he well knows, I have personal knowledge of the area and am well aware of the concerns of people in the Hammersmith bridge area about their environment. My hon. Friend referred to the fear that if the necessary steps are not taken the area may end up being developed. I assure him that that is a very premature fear at this stage, although it is entirely understandable and right that people living in or near areas of wildlife interest wish those areas to be properly protected and looked after. That is especially true in urban areas, where opportunities to see and enjoy wildlife are greatly valued.

It is important to consider the particular site in the wider context of the overall objectives and arrangements for the SSSI system. My hon. Friend has presented many of the details very thoroughly, but I hope that he will bear with me if I go over some of the points. My hon. Friend also presented some proposals of his own as to the way in which the arrangements could be modified. I shall certainly study all those points in great detail and pass them on to the relevant authorities. My hon. Friend will appreciate, however, that there is no real prospect of such modifications being introduced in time to alter the situtation with regard to Barn Elms.

I pay tribute to the Nature Conservancy Council for its work in advising the Government on nature conservation in Great Britain which is widely respected. This is a growing area of public interest and concern. In a fast-moving world with more development and a greater threat to the environment, whether from excessive agricultural, urban or industrial development, all of us inevitably appreciate sites of special scientific interest and ways of protecting the natural heritage which is one of our richest and most diverse natural resources. In view of my new responsibilities, it is an honour and a privilege to have a particular interest in this area, which has been a prime concern of mine for many years.

Although SSSIs have existed since the enactment of the National Parks and Access to the Countryside Act 1949, it was the Wildlife and Countryside Act 1981—the cornerstone of our conservation policies and a great milestone in the development of care for our environment —that provided for the establishment of a new type of site of special scientific interest. The 1981 Act established a system of comprehensive protection for SSSIs against specific activities that the Nature Conservancy Council considered would be harmful for the conservation interests of the area. The NCC is required to notify owners and occupants of any land that it considers to be of special interest because of its flora, fauna or special features, and to advise owners or occupants of any potentially damaging operations, which are then subject to certain restrictions.

The NCC has had to renotify about 4,000 old-style SSSIs. This has involved a detailed review and reassessment of the scientific interest of all these sites in the light of changes that have occurred since they became SSSIs. Some, inevitably, are now less significant, while others have assumed a greater importance because of the inevitable movements and changes in the pattern of our native wildlife.

Before commenting in more detail on the background to the Barn Elms site, I should explain that it is the prerogative of the NCC to decide on the basis of scientific facts whether a particular site merits SSSI status. My right hon. Friend the Secretary of State may make representations to the NCC on particular sites if he considers it appropriate to do so. I can assure my hon. Friend that we have examined most carefully the background to the proposed denotification of the Barn Elms reservoir. I regret to say that we can find no reason to question the NCC's view in this instance.

The Barn Elms reservoir was originally notified as an SSSI in 1975. At that time, it was the most important wintering site in the London area for waterfowl, principally tufted duck and pochard. My hon. Friend has given an admirable description of the various forms of wildlife to be found there. In addition, it was a large winter gull roost.

When the scientific interest of the site was reassessed following the enactment of the 1981 Act, the NCC concluded that, for several reasons, there had been movements of waterfowl to other similar habitats in the area. Again, my hon. Friend gave a clear analysis of some of the reasons that were thought to be responsible for the movement of waterfowl. These included the loss of feeding grounds on the River Thames and changes in the management of the reservoir. The fact remains that the populations of these species has declined sharply since the site was first notified.

The NCC's decision to denotify the site was influenced also by the existence within the greater London area of a further 12 reservoirs supporting larger and more significant waterfowl populations than the Barn Elms site. In fact, the site is now ranked 13th out of 16 sites in the greater London area for its waterfowl population. The range and diversity of waterfowl species supported by reservoir sites in the London area would not be affected by the denotification of Barn Elms.

There should be no automatic assumption that denotification of the site will lead to a decline in its continuing wildlife interest, let alone the premature fears to which I have already referred that development might inevitably take place there. I understand, contrary to my hon. Friend, that the Thames water authority, which currently owns the reservoir, has no present plans to dispose of it. Even if it should decide subsequently to do so, I can reassure my hon. Friend that a change of ownership will not necessarily threaten the wildlife interest. The existing designation of the reservoir as metropolitan open land will help to ensure that the interest is maintained.

There are alternative ways to protect the site, including a number of steps that could be taken by the local authority, which I have considered in some detail. The local authority could follow the example of many other sites throughout the country that have been designated as local nature reserves which are owned or leased and managed and protected by the local authority or by local conservation groups. I know my hon. Friend's constituency quite well and I can imagine that a great deal of local resourcefulness and initiative would be displayed in such a situation.

If the water authority decides that Barn Elms reservoir is no longer required for operational purposes, it could still be managed positively for wildlife benefit by the local authority or a conservation group. The NCC is well able to assist with such arrangements as a result of its expertise and professionalism.

Alternatively, the site could become a reservoir under the control of a national conservation body such as the Wildfowl Trust. My hon. Friend has mentioned that prospect and I share his opinion that the location of Barn Elms makes that a promising idea. I understand that the trust has plans to establish a reserve in the greater London area and has looked at a number of possible sites, one of which is Barn Elms reservoir. I believe that the trust expects to make its final selection towards the end of the year.

Whatever the future ownership of the site, any proposals for a change in its current use would have to be considered in accordance with the guidance given in circular 27/87 entitled "Nature Conservation". That reinforces the advice given to local authorities that they should take full account of the needs of nature

[Mrs. Virginia Bottomley]

conservation not only in determining individual planning applications but in formulating general planning policies. An awareness of conservation should be built into the whole range of their activities affecting the use of land.

I hope that I have been able to reassure my hon. Friend that, even if the site should eventually be de-notified as an SSSI, there are a number of other ways of protecting its wildlife interest.

There is no doubt that the Government have demonstrated their commitment to conservation and wildlife in a number of demonstrable ways. Our record is a good one. We have, for example, increased the resources made available to the Nature Conservancy Council by some 170 per cent. in real terms since 1979—it has increased from £7·9 million to £38·95 million in the current year.

Our approach to conservation is based on the voluntary principle enshrined in the Wildlife and Countryside Act 1981. We believe that effective conservation can be achieved only with public consent, co-operation and support, and it is clearly most important that public confidence in the system should be maintained. That requires that NCC decisions on SSSI notifications should be seen to be based on an objective, dispassionate assessment of the scientific evidence in each case. In the Barn Elms case, that assessment led the NCC to the conclusion that the site was not, unfortunately, a sufficiently good, representative or unusual example of its type to merit SSSI status.

Having carefully considered the background to the case, I am satisfied, in the light of the NCC's assessment of the decline in the wildlife interest of the site, that the NCC was right to implement the de-notification procedures.

I cannot give any guarantees as to the future of the site, but a number of possible options may be followed. I have asked the NCC to discuss those possibilities with my hon. Friend, Thames water and the local authority in more detail. I hope that my hon. Friend will follow up that invitation.

The NCC will, of course, consider any representations or objections received before deciding whether the de-notification of Barn Elms should be confirmed. They have already received a number of such objections which will be rigorously considered by the NCC governing council after the deadline of 9 October. I understand that they expect to announce their final decision towards the end of the year.

I congratulate my hon. Friend on raising a matter of understandable concern in his constituency. I hope that the debate has served to allay the fears of his constituents about the future, to clarify the background to the question, and to make some helpful suggestions to be followed up. His constituents can be assured that as long as he is their Member of Parliament they will not want for a more able advocate of their interests.

It being half past Two o'clock, the motion for the Adjournment of the House lapsed, without Question put.

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Dorrell.]*

Mr. Frank Cook (Stockton, North): On a point of order, Mr. Deputy Speaker. At about 12 minutes past 11 this morning, I took possession of a document which gives graphic illustration of very serious defects now present in the No. 1 reactor at Trawsfynydd, in north Wales. I considered it so serious that I contacted my hon. Friend the Member for Kingston upon Hull, East (Mr. Prescott) and engaged the services of an independent engineering consultant who specialises in these matters. The defects relate to cracked welds, cracked nuts and sections of degraded metal that have fallen into the reactor and have not been removed. I shall be brief——

Mr. Deputy Speaker (Mr. Harold Walker): Order. What is the point of order for me?

Mr. Cook: As this is a very serious matter with grave potential consequences for Trawsfynydd, and as there are similar reactors at Bradwell, Hinkley, Dungeness, Sizewell and Hunterston the same defects could be present in those reactors. My point of order is this: in view of the fact that some Government Department must have knowledge of this, have you, Mr. Deputy Speaker, had a request for a statement to be made on the matter before we go into recess for 12 weeks?

Mr. Deputy Speaker: I can assure the hon. Gentleman that I have had no request from anyone to make a statement.

Mr. Cook: Further to that point of order, Mr. Deputy Speaker. Because of the special circumstances of today —we go into recess until 19 October—do you, Mr. Deputy Speaker, have any advice that might enable me to take this matter further?

Mr. Deputy Speaker: I can only suggest that the hon. Gentleman pursues the matter directly with the Government Department concerned. There is nothing that I can do about the matter this afternoon, nor have I any responsibility for it.

London Weighting

2.32 pm

Mr. Jacques Arnold (Gravesham): I should like to raise a subject of considerable interest to my constituents, the effect of London weighting on the public services in the adjacent areas. I am becoming increasingly concerned at the blight effect of London weighting on those areas which fall just outside the limits of London weighting.

My borough of Gravesham, in the expensive commuter belt of the south-east, is located at one remove from outer London from which it is separated by the borough of Dartford. Although there are many outstanding aspects which make Gravesham an exceptional place in which to live in terms of housing costs, and the price of food and other necessities, it has little to distinguish it from Dartford or the outer London borough of Bexley. Yet those who work in the public services in my borough are paid less than their opposite numbers in Dartford or Bexley, and indeed, get equal pay with those working in the low-cost living areas of the north. That is brought about by the bewildering hotchpotch of London allowances and assorted fringe allowances paid by the different services locally on top of national pay scales.

Someone working for the NHS in the Dartford and Gravesham district would get a fringe allowance of £149 per annum, a figure established by the Whitley council in 1984 and frozen since. Someone working in the Bexley borough of the DHA would get £718. On the other hand, teachers in the same district find that they sort the sheep from the goats. Teachers a couple of miles away in Swanscombe or Southfleet get a fringe allowance of £333 per annum, but their colleagues in Gravesend or Northfleet get nothing.

A fireman or local government worker will receive no extra allowance for working in Gravesham. An inner-fringe allowance is given if one works in Dartford. Even more odd, a fireman at the Thameside station, which covers large areas of Dartford, receives no extra allowance because the station is located in Northfleet.

Gravesend is located 24 miles from Westminster, yet staff are paid no extra allowance. Thurrock lies immediately across the River Thames, stretching downstream from Gravesend. An allowance is given in Thurrock because local government boundaries stretch greater London further out into Essex than into Kent.

This is a farcical state of affairs. This bureaucrats' beanfeast is not only having a devastating effect on valued public service employees in Gravesham but, even worse, is creating scores of unfilled posts for teachers, nurses and other vital people.

This year, north-west Kent has had 86 teaching vacancies. Despite vigorous advertising, 23 of the posts were still unfilled last week. Even headships of schools have proved difficult to fill, and the Gravesham association of head teachers puts that down to the lack of adequate financial incentives to work in the area.

Locally, the Health Service illustrates the problem even more graphically. Frequently candidates for jobs opt out and go to London in search of high allowances, and others leave their jobs. Out of a group of 12 Irish nursing staff recruited recently, 10 have left for employment with London health authorities. In the local health district, an average of 30 nurses per year from the mental illness unit are lost, largely to Bexley health authority.

To overcome those problems, the public authorities are resorting to complication and subterfuge. They are introducing a proliferation of restructured salary scales, merit payments and improved benefit packages, with wider distribution of company cars, private medical insurance and other sweeteners. That is largely futile when competing with private-sector solutions, notably bank staffs' London allowance of £3,000 per annum.

Is it not time that we got rid of this bureaucratic tangle in the public services and took an axe to national pay bargaining? Government and local government units should be funded to be able to do the job and in the light of local personnel and other costs of the area. The unit should shop for staff, goods and services at the local going rate for their specialisation. This would get rid of the artificial scarcities that create service backlogs and Health Service waiting lists.

If the Government find that approach too radical or, at least, premature, urgent steps should nevertheless be taken to redress the current acute problem. I ask my hon. Friend the Under-Secretary of State for Employment to get together with Whitley council, LACSAB and other employer bodies to find a short-term remedy. This should be the immediate extension of outer-London allowances for public services to the borough of Gravesham. Without doubt the care of our patients, schoolchildren and people demands nothing less.

2.38 pm

The Parliamentary Under-Secretary of State for Employment (Mr. Patrick Nicholls): I thank my hon. Friend the Member for Gravesham (Mr. Arnold) for giving us an opportunity to consider the problems caused by the effect of London weighting. It will not come as a surprise to my hon. Friend that I do not have a remedy to all these ills carefully tucked up my sleeve. My hon. Friend has given me a further opportunity to give the Government's attitude, which to a great extent will reinforce some of the points that my hon. Friend made.

London weighting is a topical and important feature of the labour market. As my hon. Friend implies, the subject goes wider than London and brings into focus labour market pressures throughout the south-east. At present, those pressures are competitive and symptomatic of our thriving economy. Despite an increase in the civilian work force, unemployment in the south-east has fallen from 8·5 per cent. in 1986 to its present level of 5·6 per cent., and it is continuing to decrease. Unfilled vacancies in the region have risen by about 30 per cent. over the past two years.

We are debating the problem of success and how to manage that success effectively.

I am aware that the boundaries drawn by employers to define their London weighting zones vary widely. That will inevitably cause anomalies. However, it would be wrong to set down standard geographical definitions which should be used throughout the public services. These must be determined by individual employing authorities according to their own assessment of labour supply and demand in the particular labour markets in which they operate.

Let me stress at the outset that all pay and conditions of employment, including London weighting or any other allowance, and the areas in which those allowances are paid, are a matter for employers and employees, or their representatives, to determine. The Government do not intervene and nor should they. It is only the parties to

[Mr. Patrick Nicholls]

agreements who can decide what they can afford, and need, in order to recruit and retrain staff with the right skills and experience in the areas concerned.

The role of the Government is to establish a sound economic framework within which business can flourish and to remove barriers that stand in the way of competition and labour market freedom.

It is precisely for that reason that the Government abolished the former London weighting indices, which were produced by my Department until 1982. Those indices annually updated the inner London allowance of £400 and the outer London allowance of £200 recommended by the Pay Board in 1974.

The whole concept underlying that formula was one of cost compensation. Its function was to establish and maintain statistical information on the additional cost of travel, housing, wear and tear and so on, incurred by staff working in London compared with the rest of the United Kingdom and therefore to suggest the level of London weighting which it would be appropriate to pay each year.

It also defined inner London as the area within a four-mile radius of Charing Cross and outer London as the remainder of the then Greater London council area. The indices were widely followed by employers in both the public and private sectors, generally with little regard to their own particular needs or circumstances.

The formula also embedded the concept of London weighting as a uniform allowance payable at the same level to all staff from the most junior to the most senior and as a separate and distinct element in their pay packet.

In announcing the discontinuation of the London weighting indices in October 1982 my right hon. Friend the Member for Chingford (Mr. Tebbit), then the Secretary of State for Employment, said:

"London differentials are a matter for employers and employees to determine according to the circumstances of each firm or industry. But, in the Government's view, the indices encourage negotiators to place too much emphasis on the need to compensate employees for the additional costs of working in London and too little on the need to set rates of pay which the employer can afford, and which are sufficient to recruit, retain and motivate employees in London".—[*Official Report*, 19 October 1982; Vol. 29, c. *100*.]

Since that announcement, employers have increasingly moved away from determining London weighting by reference to cost compensation alone. Allowances are being set more and more in line with the imperatives of the labour market and the needs of the business. There is now considerably more diversity both in the level of allowances and the zones they cover.

My hon. Friend the Member for Gravesham referred to the clearing banks and building societies, which have increased their inner London weighting to £3,000 per annum and introduced new geographical allowances of £750 throughout the whole of "Roselands"—the so-called "Rest of South-East".

That has clearly intensified pressure on other employers competing in those labour markets, in London and adjacent areas, and not least on the public services. That approach has not been widely emulated for other groups.

I will shortly say more about ways in which the public sector is tackling those problems. First, the debate gives me a chance to say why I believe that employers should increasingly question the nature and purpose of London weighting in its present form.

As I said earlier, we are dealing with a problem which now goes well beyond London itself. Improved communications—for example, with the M25 and the electrification of railway lines into East Anglia—have greatly improved access to the capital.

Secondly, the problems of recruiting and retaining staff are not only about money. It is right of course that relative pay levels should reward, among other things, the skills which employers need to compete efficiently. Otherwise, individuals would have no incentive to acquire the right skills, and firms would have no incentive to make a cost-effective training investment. An ever-increasing spiral in the level of London weighting payments to compete for a diminishing supply of Labour with the right skills and experience would, in the end, be self-defeating.

I am not convinced—and nor is the Confederation of British Industry—that employers have yet understood that those policies offer a more permanent and cost-effective approach to meeting skill demands over the medium term.

The massive demographic changes to which my right hon. Friend the Secretary of State for Employment has drawn wide public attention recently will also affect London and the south-east as much as other parts of the country. Meanwhile, the Government are making a huge investment in training through the existing YTS scheme and the new employment training programme. Our spending on training is up from £458 million in 1979 to a planned £3 billion in 1989-90. But employers themselves will need to look equally radically at their own approach to recruitment and to their policies for training and retraining.

Finally, as far as pay is concerned, the traditional nature of London weighting payments has been very broad brush. The same level of allowance is typically paid to all workers in the relevant zone, irrespective of their seniority, qualifications or experience. A newly recruited clerk straight from school usually receives the same allowance as an experienced senior manager. This can be costly and ineffective. Labour shortages are often confined to particular occupations or to particular areas.

I said earlier that the Government's role was to establish the conditions to enable businesses to compete effectively. I believe that the Government can also set an example as an employer. In the Civil Service we are making pay more responsive to labour market needs by targeting resources at specific problems. Additionally, along with this year's London weighting settlement, the Government and the unions have agreed to consider the whole question of the future of London weighting payments.

Finally, we have introduced new long-term pay arrangements for about a third of civil servants which incorporate a greater degree of flexibility enabling pay to vary according to both performance and local labour market conditions. Similar arrangements are being discussed with the unions representing most of the remaining Civil Service grades. For example, I know that some local authority employers in the south-east have responded to market pressures in a variety of ways including incentive recruitment packages targeted at particular occupations, by restructuring jobs and regrading posts, and by job share and other schemes to attract back experienced staff. Training and retraining is also playing an important part in their approach.

Those are all examples of the way in which the public services are responding selectively and flexibly to the

problems of localised recruitment and retention difficulties instead of by increasing or spreading existing London allowances indiscriminately. I think that their approach is a responsible and effective answer to current labour market constraints. As to the longer term, I believe that the way forward is for employers and employees in all parts of the economy increasingly to develop payment systems that are generally more flexible and better attuned both to performance and market conditions. In that way, pay can respond more individually and appropriately to the imperatives of local labour markets, be they in London, Liverpool, Llandudno, or, indeed, in my hon. Friend's constituency of Gravesham. The present concept of London weighting might well then become irrelevant.

I came to the House today with no easy solutions. I hope that I have given my hon. Friend some idea of where I believe the argument will go. I also note from our previous dealings on other matters that were of concern to my hon. Friend that if this is the first time that he has introduced this concern to me, I have every reason to suspect that it will not be the last.

Question put and agreed to.

Adjourned accordingly at thirteen minutes to Three o'clock, till Wednesday 19 October, pursuant to the Resolution of the House [28 July].

House of Commons

Wednesday 19 October 1988

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

Death of a Member

Mr. Speaker: I regret to have to inform the House of the death of Sir John Alec Biggs-Davison, Knight, Member for Epping Forest, and I desire on behalf of the House to express our sense of the loss we have sustained and our sympathy with the relatives of the hon. Member.

Imprisonment of a Member

Mr. Speaker: I have to inform the House that I have received a letter from the resident magistrate of the Belfast petty sessions informing me that Mr. Peter Robinson, the hon. Member for Belfast, East, was sentenced to a period of imprisonment of seven days.

I shall cause the text of the letter to be published in the Votes and Proceedings and in the *Official Report*.

Following is the letter:

Magistrates' Courts,
The Courthouse,
Chichester Street,
Belfast BT1 3JB.
24th August 1988.

Dear Mr. Speaker,

Peter David Robinson, Member of Parliament for Belfast East, was convicted by me at Belfast Petty Sessions on 9th February 1988 of taking part in a public procession, contrary to Article 3 of the Public Order (Northern Ireland) Order 1987 and fined £280·00.

Upon the hearing of an appeal the County Court for the division of Belfast reduced the fine to £50·00 payable in 28 days. As the fine has not been paid Mr. Robinson was today committed to prison for a period of 7 days.

Yours faithfully,
T. J. Travers.
Resident Magistrate.

Vice-Regal Chair (Australia)

Mr. Speaker: I have a short statement to make. On 18 January this year the House approved a motion relating to the presentation, on behalf of both Houses of Parliament, of a Vice-Regal Chair to the Parliament of the Commonwealth of Australia. The gift was to mark this year's bicentenary of the first European settlement of Australia and the opening of the new Parliament House in Canberra.

I should inform the House that, at the invitation of the President of the Australian Senate and the Speaker of the Australian House of Representatives, and in company with many other Presiding Officers from around the world, I attended the first sitting of the Australian Parliament in the new Parliament House on 22 August. The Vice-Regal Chair was in place for that occasion; and each House of the Australian Parliament adopted a resolution which, among other things, expressed

"thanks and appreciation to the Parliaments, Governments and peoples of those countries, states and territories and to those organisations which have so graciously presented gifts to Australia's new Parliament House."

NEW WRIT

For Glasgow, Govan, in the room of the right hon. Bruce Millan. (Chiltern Hundreds).—*[Mr. Foster.]*

Order for Second Reading read.
To be read a Second time tomorrow.

Oral Answers to Questions

FOREIGN AND COMMONWEALTH AFFAIRS

Bophuthatswana

1. **Mr. Knowles:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a further statement on Her Majesty's Government's policy towards recognition of Bophuthatswana.

The Minister of State, Foreign and Commonwealth Office (Mrs. Lynda Chalker): The creation of Bophuthatswana by the South African Government was a key element in the policy of separate development, to which we are wholly opposed. In common with all other states, except South Africa, we do not recognise Bophuthatswana as independent.

Mr. Knowles: I thank my right hon. Friend for her reply, but may I remind her of her comments earlier this year after the abortive coup in Bophuthatswana: that the intervention of South African forces proved that Bophuthatswana was not independent? In the light of recent events in Lesotho, is she reconsidering those earlier remarks or are the Government reconsidering their policy towards Lesotho?

Mrs. Chalker: I am well aware that the intervention by the South African Government in Bophuthatswana, which is part of the Republic of South Africa, concerned many hon. Members. It is true that Bophuthatswana and Lesotho depend in varying degrees on the South African economy, but Lesotho was never part of the South African union. Unlike Lesotho, Bophuthatswana and the other independent homelands—so called—are effectively dependent on South Africa in foreign policy. They also receive loans and grants from the South African Government, so their position is not the same.

Mr. Beggs: Is there not a democratically elected Government in Bophuthatswana, a multi-cultural society with a Christian ethos and a free enterprise economy? Does the Minister accept that it is striving to be completely

free financially from South Africa? What further evidence is required by Her Majesty's Government to grant recognition to Bophuthatswana?

Mrs. Chalker: There would be consideration of such a course only if the writ of the Republic of South Africa did not run in Bophuthatswana. It does, and that country is recognised only by the Republic of South Africa. I cannot see, as I know Her Majesty's ambassador to Pretoria told the hon. Gentleman when he met him on 4 October, that such a situation is ever likely to pertain.

Mr. Gardiner: Despite my right hon. Friend's answer, is it not essential that the staff of the British embassy in the Republic know what is going on in Bophuthatswana and that they should know the political views of its populace? To that end, will my right hon. Friend tell us how often members of our overseas staff visit Bophuthatswana, and to what kind of persons they talk?

Mrs. Chalker: My hon. Friend knows already that everybody in the embassy in South Africa charged with knowing the political circumstances of the whole of the Republic of South Africa visits different parts of that country, which includes Bophuthatswana. Sometimes members of staff may go more frequently than others to forward projects such as those that were described to a number of colleagues when they visited South Africa and Bophuthatswana in October this year. I know that in recent months, because of the number of projects coming forward—of which we hope there will be more—in Kuruman and other places, there have been slightly more visits, but staff go whenever they need, as well as on a regular basis.

Transylvania

2. **Mr. Flynn:** To ask the Secretary of State for Foreign and Commonwealth Affairs what information he has on tensions between Hungary and Romania; and what representations he has made about the proposed systemisation of villages in Transylvania.

The Minister of State, Foreign and Commonwealth Office (Mr. William Waldegrave): Tension between Romania and Hungary over the status of Transylvania has been exacerbated by Romania's policy of forced relocation of rural communities. My right hon. and learned Friend the Foreign Secretary has written to his Romanian counterpart to warn against human rights violations and damage to Europe's common cultural heritage.

Mr. Flynn I congratulate the Minister on his first appearance at the Dispatch Box in his present role. I hope that in this regard, as in many others, there will be common ground between both sides of the House.

Is not the Foreign Secretary's letter a first step in denouncing the barbarism of the planned demolition of 8,000 ancient villages in Romania and the erasure of 1,000 years of history? Will the Minister note the anger and despair felt by the victims of systemisation, one of whom has written to me saying that they must remain silent, and that they feel impotent in the face of this threat? Is this not a first step, and must we not now continue to use our voice? We must not remain silent. We must protest powerfully and repeatedly against the planned demolition, which will be a community and linguistic pogrom and an act of architectural vandalism and cultural genocide against communities there.

Mr. Waldegrave: I am happy to agree with the hon. Gentleman and to say that this issue unites not only Members on both sides of the House, but many people on both sides of the iron curtain. I know that the hon. Gentleman appeared on Hungarian television and discussed this matter. It is an entirely legitimate use of the power of the House to protest and to make the kind of remark that the hon. Gentleman has made, because there is some chance that the people who are running Romania may listen. We should redouble our efforts, as the European Community and many individual countries have done, to emphasise our disgust at what is going on.

Mr. Cyril D. Townsend: Is not what is going on in Transylvania outrageous in terms of both human life and European culture? Will my hon. Friend do all that he can to gather the strength of the European Community so that we can speak with a strong voice and monitor the position closely?

Mr. Waldegrave: I shall certainly do what my hon. Friend urges me to do. The Twelve made a protest to the Romanian Government on 7 September. Like the hon. Member for Newport, West (Mr. Flynn), I have been receiving first-hand accounts of what is happening, and the hardship and distress that will be faced there in the winter will be very dire.

Mr. James Lamond: Whatever feelings the Minister may have on behalf of Romanians of Hungarian origin, if he pays regard to the reports that he receives from the embassy in Bucharest he must know that the systemisation of villages is not an act of discrimination against Hungarians. I see the Minister nodding. He may dislike the act of the Romanians in modernising their villages—*[Interruption.]*—systemising their villages if the House prefers it—but I wonder what purpose the Minister has in making a protest about it.

Mr. Waldegrave: I am willing to confirm that the regime in Romania is equally unpleasant to all its citizens. The Hungarians are one group of sufferers, as are, equally, the people of Romanian origin. If the hon. Gentleman is presenting himself to the House, and perhaps to Western Europe, as the last unreformed Stalinist who wants to defend this policy, I do not think that he will find many of his hon. Friends with him on that matter. Perhaps I misunderstood him. I am sure that he will join us in opposing a policy which is causing widespread anxiety among countries in Eastern as well as Western Europe.

Britons Abroad

3. **Mr. Carrington:** To ask the Secretary of State for Foreign and Commonwealth Affairs what discussions he has had with foreign Governments about the behaviour of Britons travelling abroad.

The Parliamentary Under-Secretary of State for Foreign and Commonwealth Affairs (Mr. Tim Eggar): I have discussed the behaviour of Britons overseas with Government Ministers in Greece and Spain. The small minority of Britons who behave badly damage Britain's

reputation and ruin other people's holidays. We have made it clear that we support other Governments who deal firmly with offenders.

Mr. Carrington: When my hon. Friend next meets the Spanish and Greek Governments, will he assure them that the British Government treat such behaviour as seriously as they do soccer hooliganism and that we would support punishment for the offenders as severe as we would for soccer hooligans?

Mr. Eggar: Just as we welcome tougher action against such individuals at home, so we welcome tougher action by Governments overseas. When people go abroad they must recognise that they must obey the laws of the country in which they are based.

Mr. Heffer: As the Heysel stadium people have not been found guilty by anyone, as they were encouraged to be extradited by the Government, and as many who have gone to Belgium are unemployed and without any financial assistance, will the Government now reconsider their attitude towards assisting those who have gone there quite voluntarily when they could have tried to dodge going? I ask the Minister to reconsider the Government's attitude and give financial assistance to those who are now before the courts in Belgium.

Mr. Eggar: Those individuals chose to go to that football match and became involved, or did not become involved—*[Interruption.]* We cannot prejudge the results of the Belgian court hearing. It has never been the policy of any British Government to provide free board and lodging overseas for people to attend court hearings or to provide for legal assistance.

Dr. Michael Clark: Will my hon. Friend have discussions with the Spanish Government about the sale of semi-pornographic and obscene T-shirts on the island of Majorca? Is he aware that the wearing of those T-shirts in Majorca causes offence to other holidaymakers and to people in high streets in this country when they are brought back here?

Mr. Eggar: I was not aware of this particular problem. I look forward to having more details from my hon. Friend, but I will ask our consul in Malaga for a report.

Israel

4. **Mr. Ernie Ross:** To ask the Secretary of State for Foreign and Commonwealth Affairs when he last discussed with the Prime Minister of Israel the case for an international conference to resolve the Israeli-Palestinian question.

Mr. Waldegrave: My right hon. and learned Friend last met Mr. Shamir in September 1986. My hon. and learned Friend the Member for Putney (Mr. Mellor) discussed the Arab-Israeli dispute with him in January. The Israeli Government know that we continue to support an international conference.

Mr. Ross: Does the Minister agree that the most recent statement by Mr. Peres that an Israeli Labour Government would hold elections on the West Bank and in Gaza so that the Palestinian people could choose their own representatives, and his commitment to an international peace conference offer much more hope than Mr. Yitzhak Shamir, who seems impervious to international criticism and domestic acrimony about the policies that his party is producing in Israeli?

Mr. Waldegrave: It is true that the policy of the Labour party in Israel is much closer to that of Her Majesty's Government. We welcome that recent statement, but, of course, it would be quite wrong for me to comment on an election in another country.

Sir Dennis Walters: Has my hon. Friend recently made any representations to the Israeli Government about the brutality and repression in the occupied West Bank? Is he aware that the civilian toll of casualties among Palestinian adults and children is steadily growing? Is this not absolutely intolerable?

Mr. Waldegrave: I recently protested to the retiring Israeli ambassador, Mr. Avner, about the use of plastic bullets. I think my hon. Friend understands that these are not baton rounds, but plastic bullets fired by high explosive charges. We registered a protest, as did the United States Government, about the casualties caused by those plastic bullets. The Israeli Government know very well that Her Majesty's Government believe that they are sleep walking to disaster by their treatment of the people in the occupied territories.

Mr. Janner: Does the Minister accept that however much we may fervently hope for the election of one Prime Minister or one party or the other in Israel on 1 November, electors in a democracy, including our own, sometimes make mistakes? It is important to recognise that that is about the only country in the area where free elections are held and that our Government will have to get on and try to make peace with any Government whom the Israeli electors see fit to elect.

Mr. Waldegrave: Any group or any party in Israel that comes forward with practical plans for peace will get the full support of this Government.

Mr. Lawrence: Is it not more urgent and important than an international conference that the Arab states should be able to provide a leader who can guarantee security and peace for Israel in any peace settlement that is negotiated with the Israelis?

Mr. Waldegrave: I do not know whether waiting for leaders is relevant. What is impressive is the solidarity of the people in the occupied territories, which expresses very clearly their desire for self-determination.

Mr. Kaufman: In welcoming the hon. Gentleman to his new responsibilities and hoping that his statement of views on the middle east will not lead to his speedy removal from those responsibilities, may I put it to him that the flexibility now emanating from the Palestine Liberation Organisation and the voices of peace from Arab Governments are being prevented from achieving the possibility of an international conference and real peace by the obduracy of the Likud party in Israel? Will he join the Prime Minister, the United States Administration, President Mubarak and all other sensible people in every part of the world who believe that the only hope of breaking the deadlock and getting peace in the middle east is a Labour victory in Israel on 1 November?

Mr. Waldegrave: I noted that when addressing the Socialist group of the European Parliament Mr. Arafat

said that he hoped for the emergence of an Israeli de Gaulle. I hope that he and everyone else, including the hon. Member for Dundee, West (Mr. Ross), will respond to any practical proposals for peace, from whatever political spectrum they come.

Mr. Tredinnick: Does the Minister agree that a settlement in the occupied territories is very much in Israel's interests because of the increased birth rate among Arabs west of the Jordan, which will lead to the outnumbering of Jews early in the next century?

Mr. Waldegrave: I think that what my hon. Friend says is right. More profoundly, surely the tragedy for Israel is that those of us, many of whom are in this House, who have protested about the actions of Israel are her friends. The tragedy for Israel is the way in which it is corrupting itself by its treatment of people in the occupied territories.

Central America

5. **Mr. Flannery:** To ask the Secretary of State for Foreign and Commonwealth Affairs when he next expects to have discussions with the Government of the United States of America regarding the recent developments in the Central American peace process.

Mr. Eggar: We have regular discussions with the United States Administration on a wide range of issues, including developments in the Central American peace process.

Mr. Flannery: Does the Minister agree that the will towards peace of all the peoples, Governments and nations of Central America is now greater than it has ever been, as well as the chances and opportunities? Does he realise that the freely elected Government of Nicaragua, no matter what anyone says—this is attested to by people of this country who were in Nicaragua at the time of the election—are being harassed by the Contras? Is he aware of the new development that has resulted in more money being supplied to the Contras in the guise of certain forms of aid? Instead of producing generalised answers, such as his answer to the main question, will he realise that, if we are democratic, the British Government must talk to the American Government and try to persuade them not to send money to those who are led by people of the old Somoza regime? For 30 years that tyrannical group was brutal to the people of Nicaragua.

Mr. Eggar: I note what the hon. Gentleman says. However, his analysis is not widely shared, even within Central America. For example, I met President Arias of Costa Rica this morning. He urged that the Nicaraguans should take a stronger line on compliance with the Esquipulas accord. He stressed that, in his view, Nicaragua had failed to honour its commitments to democratise.

Sir Jim Spicer: Have any representations been made by Her Majesty's Government to the Nicaraguan Government about the plight of the leaders of the Conservative party, the Christian Democrats, the Socialist party and trade unionists, who, having taken part in a peaceful demonstration in the spring, were arrested and placed in gaol, and have remained there ever since?

Mr. Eggar: We were most concerned by that development and by the way in which democratic leaders of the Opposition were arrested. As my hon. Friend has said, some of them are still in gaol. I was amazed when I read a letter that the right hon. Gentleman the Leader of the Opposition wrote to President Ortega, which was published in June, in which he praised President Ortega's commitment and skill. I presume that the right hon. Gentleman was praising President Ortega's commitment to suppressing democratic opposition within Nicaragua and his skill in pulling the wool over the eyes of Opposition Members.

Mr. Tony Banks: One of these days the Minister might have the courage to visit Nicaragua. In the meantime, how can anyone hold him to be sincere in his view about wanting peace in Central America when the Government allowed Adolfo Calero, a terrorist from the Contras, to enter Britain and attend the Tory party conference? Why was that terrorist allowed into the country? What assistance did the Foreign Office give to him?

Mr. Eggar: The hon. Gentleman has a nerve. He arrived on Noriega's plane from Panama and stayed in Nicaragua for 24 hours before returning to the United Kingdom. That shows a great knowledge of what is going on in Nicaragua, as well as an interesting selection of friends and of ways to spend his holiday. As Mr. Calero went to Managua and had talks with the Sandinista Government, I do not see why he should not come to Britain.

Mr. Foulkes: Will the Minister calm down a little and recall the revelations made by the Speaker of the United States Congress, Jim Wright, of the CIA's involvement in destabilising Nicaragua? Will he give an assurance that there was no British complicity in that action? Given the constant repetition by the Government that we seek a peaceful solution to the problems of Central America, will he for once take his courage in his hands and condemn the American Government for unwarranted interference in the affairs of an autonomous country?

Mr. Eggar: As the hon. Gentleman knows, we support the Central American peace process. As I have said, President Arias made it clear this morning that he thinks that the Nicaraguan Government should and could do a great deal more to further the process and to move towards democracy within Nicaragua. United States policy is a matter for the United States.

Zimbabwe

6. **Mr. Bowis:** To ask the Secretary of State for Foreign and Commonwealth Affairs when he next intends to visit Zimbabwe; and what subjects he proposes to discuss.

Mrs. Chalker: My right hon. and learned Friend has no plans, at the present time, to visit Zimbabwe.

Mr. Bowis: When my right hon. Friend manages to get to Zimbabwe, will she remind Mr. Mugabe of the Pope's visit to that country, when he called for apartheid to be ended, not by sanctions and boycott, but by constructive discussion and pressures? Will my right hon. Friend also remind Mr. Mugabe of the recent visit to Harare of the South African white and black rugby organisers and express the hope that the conclusions that have come from those discussons are the way forward? Does she agree that Zimbabwe, the Western world and Africa should respond,

when such progress is made towards ending apartheid, by welcoming the South Africans back into the international fold?

Mrs. Chalker: When I next see President Mugabe I shall most certainly point out the importance of what the Pope said, and far more was said on that issue than was probably published in British newspapers. It is only through constructive discussion that apartheid will be brought to an end and a representative system of non-racial government effected in South Africa.

Although I welcome the reports of the meeting of the South African rugby board with various people in Harare, it would be premature to speculate about a change of policy. If the press reports that we have seen are confirmed, I shall agree with my hon. Friend that that change of policy is a worthwhile step in the long progress towards genuine non-racialism in sport in South Africa. We hope sincerely that that will happen.

Mr. Roger King: When my right hon. Friend goes to Zimbabwe, will she ensure that she takes with her—and does not leave any behind—some photographs that she can give to the Zimbabwean Government of notable members of our own political system, so that unfortunate incidents such as the one earlier in the year, when the Leader of Her Majesty's Opposition was not known, can be avoided?

Mrs. Chalker: I would recommend to the Zimbabweans that they should have an excellent book such as *The Times* "Guide to the House of Commons", so that they can recognise hon. Members. In case that is not ready in time, I shall see about a scrapbook that features photographs of members of the Opposition Front Bench.

United Nations

7. **Mr. Michael:** To ask the Secretary of State for Foreign and Commonwealth Affairs when he last met the Secretary-General of the United Nations; and what was discussed.

Mr. Eggar: My right hon. and learned Friend met the Secretary-General on 27 September during his visit to the General Assembly. They discussed Afghanistan, Iran-Iraq, Namibia and Cyprus. The following day the Secretary-General was present at a confidential meeting of the Foreign Ministers of the five permanent members of the United Nations Security Council.

Mr. Michael: Does the Minister accept that there is some concern that the subject of refugees was not higher on the agenda and that there are serious anxieties in parts of the world where Britain has a historic responsibility? I shall give two examples. What help and hope can the Minister offer to those who have to flee the savage internal war in Somalia? Is he aware that the United Nations High Commissioner for Refugees expressed concern at the false distinction drawn by Britain between political and so-called "economic" refugees? Will the Minister give us a straightforward reassurance that that false distinction will not govern decision-making? Will he ensure that those topics are high on the agenda the next time there is a meeting between British Ministers and the Secretary-General?

Mr. Eggar: There is, of course, a great deal of concern about the position of refugees, not only in the country that the hon. Gentleman has mentioned, but in a large number of others. We have recently made a major additional contribution to the UNHCR, particularly to assist it with the help it is giving to Hong Kong, and, as the hon. Gentleman is aware, there have been recent discussions with the Vietnamese authorities. I can assure him that I, other Ministers and my right hon. and learned Friend the Secretary of State for Foreign and Commonwealth Affairs raise the plight of refugees and general policy towards refugees on appropriate occasions.

Mr. Wells: Will my hon. Friend congratulate the Secretary-General on the effective reactivation of the Security Council, especially over the Iran-Iraq conflict and Afghanistan? We hope that the strengthening of the Security Council will lead to a settlement in Cyprus, and of other difficult problems. May I congratulate our representative and ambassador in the United Nations on the constructive role that he played in that process? Is my hon. Friend satisfied wth the rate of progress in reforming the administration of the United Nations in line with the effective way in which the Security Council has been reformed?

Mr. Eggar: I quite agree with my hon. Friend. There have been some major developments in the United Nations, especially in the Security Council. I join him in paying tribute to our permanent representative, Sir Crispin Tickell, who had a major role in co-ordinating the five members of the Security Council over Iran-Iraq.

On the more general question of the reform of the United Nations, my hon. Friend is quite right in saying that much progress still has to be made. We are working hard with other countries to make sure that sensible reforms are introduced.

Sir Russell Johnston: Is the Minister aware that many people will be surprised that apparently there have not been any discussions with the Secretary-General about the immediate and ghastly plight of the Kurdish refugees? Has the Minister raised, for example, the refusal of Turkey and Iraq to allow United Nations' observers to visit the camps of the Kurdish refugees? Has he taken any action following the bombing attacks, allegedly with chemical weapons, on the 11th and 14th of this month?

Mr. Eggar: The hon. Gentleman is right. This is a matter of concern. We have been in touch with the Turkish Government and with other Governments in the region, as well as with United Nations agencies, and those discussions continue.

Sir Bernard Braine: Were there any discussions with the Secretary-General of the United Nations about the use of chemical weapons against defenceless Kurdish villages by the Iraqi army, and at the same time the continuation of the mass murder of political opponents of the Khomeini regime in Iran, and about whether it is desirable that those atrocities should be reported to the assembly of the United Nations?

Mr. Eggar: I understand my right hon. Friend's concern. We have urged that there should be a United Nations investigation of those serious allegations and incidents, but I regret to say that the Iraqi Government have refused to co-operate.

Mr. Robertson: On the subject of the Iraqi attacks on the Kurdish population, may I commend the Government for their recognition, albeit belated, of the compelling evidence that now exists about those Iraqi attacks? As one who recently visited refugee camps at Diyarbakir and Mardin in Turkey, I can say that the evidence seems overwhelming. It seems remarkable only that the Government took so long to come to that conclusion. I am sure that there is considerable unanimity among hon. Members of all parties that Iraq's conduct is unacceptable and unspeakable, and that simply condemning Iraq is not enough. It is essential to take some action and, like the American Congress, to threaten punitive economic consequences if Iraq does not immediately stop the chemical bombing of its Kurdish population and allow United Nations' observers to ensure that that country returns as quickly as possible to civilised conduct.

Mr. Eggar: I understand the hon. Gentleman's concern. I know that he paid that important visit and that he has a great deal of personal knowledge of the circumstances. However, I advise him that we condemned the action as soon as we felt that we had adequate evidence on which to do so. We had to wait for that evidence to accumulate. Further investigations will be extremely difficult to carry out without the full co-operation of the Iraqi Government. We have asked for that co-operation and the United Nations has also asked for it, but unfortunately the Iraqi Government have refused to co-operate.

Angola

8. **Mr. Riddick:** To ask the Secretary of State for Foreign and Commonwealth Affairs whether his Department has played a direct or indirect role in recent negotiations to secure a peaceful settlement in Angola; and if he will make a statement.

Mrs. Chalker: Though not a direct participant in the negotiations on the withdrawal of foreign troops from Angola and independence for Namibia, we have given them our full support. In particular, we have urged both sides to show flexibility and a sense of urgency.

Mr. Riddick: I am sure that my right hon. Friend will join me in welcoming the positive moves that have been made in the Angolan peace talks. Does she agree that, for a lasting peace to be brought to that troubled country, all 55,000 Cuban troops, along with the South African troops, must be withdrawn urgently from Angola? Does she believe that the British Government should advocate that UNITA should be recognised as having a full and legitimate role to play in the future development of Angola?

Mrs. Chalker: I think that we must be careful to separate those two issues slightly. We have done all that we can to assist in the quadripartite talks by our discussions with other leaders of African countries who have more direct influence than we could possibly be expected to have. Of course we hope that there will soon be an acceptance of the proposals under discussion for full Cuban and South African troop withdrawal.

When it comes to the whole problem of internal reconciliation, however, which we believe to be essential to a regional settlement, we need to see a mediation that will be acceptable to both sides in Angola. We believe that the African states are best placed to bring that about and that process is complementary to the United States-led peace negotiations. We have full diplomatic relations with the Angolan Government and if we are asked to help in bringing about reconciliation, of course we will consider that. We have contacts at official level with UNITA, in addition to our official recognition of the Angolan Government. However, it is extremely important that the Cubans, Angolans and South Africans reach agreement on full troop withdrawal within a reasonable time and that the internal reconciliation is pursued alongside that. The two things cannot be mixed up. Otherwise, I fear that we may not get the solution that we all hope for, which is peace in Angola and independence in Namibia.

Mr. Tony Banks: How can we possibly hope to exert any influence over the Cuban presence in Angola after we have expelled the Cuban ambassador from this country, probably on instructions from the United States embassy? Can the Minister tell us what she is now trying to do to restore good relations between the United Kingdom and Cuba?

Mrs. Chalker: I am very surprised—but I suppose I should not be—that the hon. Gentleman seeks to raise a question of security and safety that occurred in this country in the context of a very serious matter—the peace that we are seeking in Angola. All I can say to him is that if he is prepared to be a member of a party that would not do exactly the same if guns were toted on London streets, I feel even more strongly that it will never be fit to be in government again.

Mr. Wilkinson: Is it not the case that South African troops have now actually withdrawn from Angola? If it is not the case, can my right hon. Friend clearly tell the House that? Is it not therefore important that the Cubans now get on with withdrawal at the earliest possible date so that the people of Angola can proceed to self-determination without external interference in their internal affairs?

Mrs. Chalker: I believe that the vast majority of South African troops have indeed withdrawn from Angola, but I cannot give my hon. Friend an absolute assurance on that because we are not there to see. All I would say is that I believe that it is right and proper that, as soon as it is possible, all foreign troops should withdraw from that country.

South Africa

9. **Mr. Pike:** To ask the Secretary of State for Foreign and Commonwealth Affairs what recent representations Her Majesty's Government has made to the Government of the Republic of South Africa; and on what subjects.

Mrs. Chalker: We have made representations to the South African Government, both bilaterally and with our European partners, on a wide range of issues.

Mr. Pike: Will the Minister recognise that in South Africa there is a growing opinion among whites that the ANC must be involved in negotiations about the future of that country? That is evidenced by business and now by sporting contacts. Will she do all in her power to urge the South African Government to accept that, if they want meaningful talks to achieve a just, peaceful and acceptable solution to the problems of apartheid in that country, they

must allow the blacks freely to appoint their own representatives to such negotiations and be involved in the formulation of the agenda for such meetings?

Mrs. Chalker: It would be most welcome if the Government of South Africa would involve the representatives of all groups of black people in meaningful negotiations in South Africa. Until such time as they do we shall continue to seek to persuade them through dialogue that this is the only way towards a peaceful transition.

Mr. John Carlisle: May I correct an earlier reply by my right hon. Friend to my hon. Friend the Member for Battersea (Mr. Bowis) about the South African rugby board—*[Interruption.]*

Mr. Speaker: Order. The hon. Member should ask a question.

Mr. Carlisle: It is leading to a question, Mr. Speaker. May I remind my right hon. Friend that the South African rugby board—*[Interruption.]*

Mr. Speaker: Order. The hon. Member should ask his right hon. Friend a question.

Mr. Carlisle: Does my right hon. Friend accept that some on the Government side will give a cautious welcome to the news that Dr. Daniël Craven and the ANC have come to some arrangements over the future of international rugby? Does my right hon. Friend also accept that many of us on the Government Benches remain deeply suspicious of the motives of the ANC and believe that unless they renounce violence and armed conflict such talks are worthless?

Mrs. Chalker: My hon. Friend knows that we have called upon the ANC to renounce violence. We call upon all those who are engaged in violence to cease that violence, because the use of violence is not the way to bring about a peaceful solution in South Africa. I shall look at what my hon. Friend the Member for Battersea (Mr. Bowis) said and what I said to him in reply, but I do not think anything was said that would give my hon. Friend real grounds for correcting me.

Mr. Steel: Will the Minister be a little warmer than she was this afternoon and a lot warmer than the Minister with responsibility for sport was yesterday in congratulating the ANC and Dr. Craven on getting together, at least to discuss the future of multi-racial rugby? Will she also assert that that would never have happened had it not been for the success of the various sports boycott campaigns over the years and the Gleneagles agreement?

Mrs. Chalker: I always welcome it when those who previously had not found it possible to agree come together with the object of agreeing on a matter such as this. If the reports of the discussions between the African National Congress, the South African rugby board and the rugby union are correct, and if they lead to the creation of a single non-racial governing body for rugby in South Africa, that will be an encouraging development.

Mr. Cormack: In the context of the remarks made by my hon. Friend the Member for Luton, North (Mr. Carlisle), is my right hon. Friend aware that there are more of us than there are of them?

Mrs. Chalker: That all depends on what the dividing line may be.

Miss Lestor: While supporting the question by my hon. Friend the Member for Burnley (Mr. Pike), and notwithstanding the earlier reply by the right hon. Lady, on Angola, may I ask whether it would be correct of her to support me in saying that there is considerable mistrust about the intentions of South Africa in that region, including Angola and other areas? Conservative Members refer to violence by the ANC, by if South Africa wants to establish any basis of credibility in that region ought not the right hon. Lady to put pressure on the South African Government immediately to cease the imminent political hangings in South Africa? If South Africa were to comply it would at least show that there is some degree of credibility in what it is saying rather than in what it is doing.

Mrs. Chalker: The hon. Lady knows that we have always been prepared to join appeals for clemency in cases that are clearly political and where there are strong humanitarian grounds for clemency. In respect of the last part of her question, if that should be needed, once the legal process has been concluded—as has been the case with the Sharpeville Six and others—that will be done. As for the earlier part of the question, we shall condemn now, and always, violence, wherever the source of that violence may be. Cross-border violence in southern Africa will do nothing to bring about peace in the region.

Mr. Neil Hamilton: Does my right hon. Friend accept that one of the major reasons for the rise of the so-called Conservative party in South Africa has been the important element of dismantling the apartheid system that President Botha has brought about in the last five or six years, and that continuing attempts to isolate insecurity of certain elements among the whites who support the Conservative party and make President Botha's task even more difficult?

Mrs. Chalker: We would welcome any moves towards meaningful reform. I fully accept that there have been some such moves, but they are not enough. There is still the Group Areas Act and the Population Registration Act, and the South African Government have put forward a Bill to promote so-called orderly internal politics. However, none of those can hasten the end of the division of the people.

As one hon. Gentleman said earlier, many people are now recognising the need of all races in South Africa to come together to discuss future systems of government. Unfortunately, those in the KP—the Conservative party in South Africa—are not presently among them.

Council of Ministers

10. **Mr. Spearing:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement relating to the overall outcome of meetings of the Council of Ministers of the European Economic Community which have occurred since 29 July last.

Mrs. Chalker: There has been one Foreign Affairs Council, on 26 September. I represented the United Kingdom, accompanied by my hon. Friend the Minister for Overseas Development. The main issue discussed was the Community's negotiating mandate for Lomé IV. With permission, Mr. Speaker, I will circulate a fuller statement in the *Official Report*.

My ministerial colleagues will, I am sure, be reporting to the House in the usual way on the outcome of councils for which they are responsible.

Mr. Spearing: Will the right hon. Lady tell us something about the Internal Market Council that met on 29 September? Cannot that council create legislation applicable to this country, even if it is against the wishes of the Government and the House, by virtue of qualified majority voting? Has not that highly centralised authority of the emerging European union come about only because in 1986 she, on behalf of the Government, signed the Single European Act, with the active encouragement and endorsement of the Prime Minister?

Mrs. Chalker: My hon. Friend the Under-Secretary attended the Internal Market Council and will report in detail on it. It is fair to say that during the past two years the Community would not have made such progress on the single market without qualified majority voting. That has been in the interests of the people of this country.

The Single European Act was the first update of the Treaty of Rome, and there is nothing in it to cause me anything like the elevated concern that the hon. Gentleman expresses, both in the House and elsewhere. Without the Single European Act and the qualified majority voting that applies to many internal market issues, this country's position would have been far worse on many occasions. To name but one, the Commission forwarded our views about the export of British-made Nissan cars to another Community country. That is one way in which we have made the internal market work better.

Mr. Gow: Has my right hon. Friend committed to memory the excellent speech of our right hon. Friend the Prime Minister at Bruges? Will she ensure that that speech is the first item on the agenda at the next meeting of the EEC Council of Ministers? Will she arrange for a signed copy to be sent to our right hon. Friend the Member for Old Bexley and Sidcup (Mr. Heath)?

Mrs. Chalker: In the knowledge that we are all fallible and that sometimes we all forget, I took the precaution of ensuring that I have with me a copy of my right hon. Friend the Prime Minister's speech. I commend it to every hon. Member. Any Prime Minister who speaks so clearly for the needs of this country, by saying that

"our destiny is in Europe as part of the Community,"

has our fullest support. I shall ensure that all those attending council meetings are aware of her speech, although I am sure that most of them are already aware of it.

Mr. Cryer: Are not the Prime Minister's words at variance with the deeds of the Government? Are not the Government capitulating to every demand of the Common Market, including the payment of £4·7 billion since 1984 and the development of a trade deficit in manufactured goods of £10 billion? Does she think that 1992 and the complete harmonisation of the internal market will help, or hinder, that?

Mrs. Chalker: The completion of the internal market will help this country no end. I am sorry that the hon. Gentleman has not learnt sufficient about it to know that already.

Mr. Aitken: In view of her warm endorsement of the Prime Minister's fine speech, would my right hon. Friend care to comment on today's rather puzzling report in the *Daily Express*? It stated that Mr. Delors' speech to the TUC conference was approved in advance and ticked as innocuous by Foreign Office representatives. Will my right hon. Friend assure us that, if there is any showdown between British and German interests at a future Council of Ministers, the Bruges speech will be the text of our foreign policy?

Mrs. Chalker: If there is any need to have a discussion with our colleagues at future councils—whatever councils they may be—if we have disagreements, we shall express them most clearly, as we always do. I tell my hon. Friend that when any TUC speaker shows his speech in advance to the Foreign Office, I will really think that he is living in never-never land.

Sir Russell Johnston: While we are on the subject of speeches, has the Minister noticed yesterday's speech by Dr. Helmut Kohl, the German Conservative Chancellor, who warmly commended European economic and monetary union and spoke of a social Europe? Is it not the case that, despite what the hon. Member for Eastbourne (Mr. Gow) said earlier, the Prime Minister's Bruges approach is a solitary one and is not supported by any other European leader?

Mrs. Chalker: I know of Chancellor Kohl's pragmatic approach to the Community, which he expressed quite fully in his speech yesterday. We do not agree with every word that every other European leader says, but we certainly have more in common with our German colleagues in pursuing the right path for Europe and for our respective countries than we shall ever have with the hon. Gentleman's party or the Labour party.

Mr. Ian Taylor: Has my right hon. Friend taken note of the various measures that the Government have already introduced, which are well ahead of those of our European friends in terms of showing our Europeanness? In particular, has she congratulated the Chancellor on introducing ecu-denominated debt in the summer, an issue that was so dramatically successful that other Governments are now thinking of following suit?

Mrs. Chalker: My hon. Friend is perfectly correct. The Chancellor of the Exchequer's proposals last year, earlier this year, and again at the meeting in Berlin have been fundamental in persuading a change of mind in some other Governments towards solving the problems of middle income debtors. It is interesting to note that Britain is the first country to contribute in full to the $75 billion of the general capital income increase in resources for lending to middle income debtors. All that has happened thanks to a Conservative Chancellor in Britain.

Mr. Kaufman: In her Bruges speech, which the right hon. Lady has commended, the Prime Minister stated her opposition to, the abolition of frontier controls, the creation of the European super-state, the centralisation of power in Brussels, with decisions taken by an appointed bureacracy and the concentration of power at the centre of a European conglomerate, and said that Britain's parliamentary powers must be preserved. As every one of those changes that the Prime Minister opposes is now entrenched in United Kingdom law through the European

Communities (Amendment) Act 1986, which the right hon. Lady forced through the House of Commons on a guillotine, will the right hon. Lady now apologise to the Prime Minister and introduce legislation to repeal the European Communities (Amendment) Act?

Mrs. Chalker: No, Sir.

European Free Trade Association

11. **Mr. Page:** To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement on the most recent discussions held with members of the European Free Trade Association on forging closer links with the European Community in the run up to the completion of the internal market in 1992.

Mrs. Chalker: We maintain close contacts with our EFTA friends on this important issue. Most recently, I visited Oslo and Helsinki between 4 and 9 October. Like their other EFTA colleagues, the Norwegians and Finns are pressing ahead with measures necessary to ensure that they can respond to the new challenges and opportunities of the single market.

Mr. Page: I thank my right hon. Friend for that reply. Does she agree that it is a tribute to the importance of the internal market of 1992 that people within the European free trade area are urging their countries to join the EEC? Is that not a message that every company engaged in industry, commerce and trade in the United Kingdom could take on board?

Mrs. Chalker: Indeed. I can tell my hon. Friend that in my discussions during the summer recess with representatives from many of the EFTA countries—indeed wider than EFTA—it was remarkable to discover how much they wish to participate in the policies that we are pursuing of the single market in the European Community and in the policies of sound growth, the creation of jobs and the reduction in unemployment, in which this country has been so successful.

Argentina

15. **Mr. Shersby:** To ask the Secretary of State for Foreign and Commonwealth Affairs what progress has been made in achieving a declaration from Argentina of a cessation of hostilities and in restoring diplomatic relations.

Mr. Eggar: Argentina still refuses to declare that she regards hostilities as being at an end, has made no response to a series of practical British initiatives to bring about more normal relations and maintains restrictions on United Kingdom exports. It is, therefore, premature to think in terms of restoring diplomatic relations.

Mr. Shersby: Does my hon. Friend agree that a declaration of cessation of hostilities is an essential prerequisite to the restoration of diplomatic relations with Argentina?

Mr. Eggar: Very much so, but, as I have already said to my hon. Friend, there are a number of other initiatives that we have taken with regard to Argentina on which we are still awaiting responses.

GCHQ Cheltenham

3.30 pm

Mr. Gerald Kaufman (Manchester, Gorton) *(by private notice)*: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement on the dismissal of and disciplinary action against trade unionists at GCHQ.

The Minister of State, Foreign and Commonwealth Office (Mr. William Waldegrave): Staff at GCHQ are permitted by their conditions of service to belong only to a departmental staff association approved by the director. The reasons for this were explained to the House by my right hon. and learned Friend on 25 January 1984. Every effort has been made since to accommodate the tiny minority who did not accept the new terms of service, including a lengthy search for other jobs or the offer of compensation. A number have indeed accepted alternative jobs. Our action now follows our assessment that nothing further realistically can be done to find alternative employment. Even at this late stage we would urge those who have refused the terms of service to change their minds and to stay at GCHQ. But to do nothing would be grossly unfair to the 99 per cent. of staff who accepted the new terms of service.

Mr. Kaufman: Is it not ironic that the Foreign Secretary is not here to answer this question today—[HON. MEMBERS: "Why?"]—because he is in attendance on the Queen in Spain, a country rightly praised for getting rid of a Right-wing regime that persecuted trade unionists?

While a British Government have for the first time sacked people for being members of a trade union, is it not a fact that in Britain a long string of proved traitors have been members, not of a free trade union, but of the Cambridge union? For example, is it not disgraceful that Mr. Brian Johnson is being sacked after being employed for 32 years at GCHQ, having given longer and more loyal service to his country than the Prime Minister or any other member of the Government? How can the Government justify the further disciplinary proceedings that are threatened against Mr. Clive Lloyd and others when they have already been made to pay fines? This kind of double jeopardy is another mark of the authoritarian state.

Why have the Government not accepted the GCHQ unions' long-standing offer to negotiate a no-strike deal, to divorce national pay questions from issues involving GCHQ and to accept security vetting of officials involved in bargaining at GCHQ?

When visiting Poland, would it not be utterly hypocritical for the Prime Minister to force her company on Lech Walesa, who is fighting for free and independent trade unions in Poland, while she is trampling on free and independent trade unions in Britain?

Mr. Waldegrave: The right hon. Member for Manchester, Gorton (Mr. Kaufman) bases his argument, perhaps characteristically, on a mixture of rather cheap debating points and mistakes.

The first mistake is the belief that there is anything unusual in having special terms of service in security installations in this country or in any other. If the right hon. Gentleman looks more carefully at the practices in other countries he will find that there is nothing unusual about those terms.

The right hon. Gentleman's second mistake is that we have not, at any point, doubted the loyalty of the people at GCHQ. The proof of that is that, even at this late hour, we would prefer those involved to stay there. It was the national trade union leaders who used GCHQ as a football in disputes that were nothing to do with that installation. They knew that the population at large were not inconvenienced by those disputes, and they knew also that only senior Ministers and senior officials knew how much damage had been done. They brought this on their own heads.

I am happy to say that GCHQ is now working very well indeed and that 99 per cent. and more of the people there have accepted the terms of service.

Sir Peter Blaker (Blackpool, South): Does not the effectiveness of GCHQ depend upon uninterrupted operation? Am I right in recalling that between 1979 and 1981 the number of man days lost through strikes at GCHQ—many of them called on issues totally unrelated to it—was about 10,000? Does not that figure provide a powerful endorsement of the Government's policies?

Mr. Waldegrave: My right hon. Friend is right. The number of hours lost at GCHQ during that period was about the figure that he mentioned. Those lost hours meant that, at key moments, that installation, which must run all the time if it is to protect our security, was working on a part-time basis. No responsible Government could possibly have put up with that.

Mr. James Wallace (Orkney and Shetland): By their actions, do not the Government diminish the role of GCHQ by undermining from within the very liberties that GCHQ and the other security services are intended to defend?

Mr. Waldegrave: That is a nonsensical argument. As the hon. Gentleman may or may not know, others involved in security have similar terms of service. The importance of GCHQ to the nation is second to no other security institution. It is not possible to allow it to be misused for arguments in which it has no part, and that was the situation that we faced when we came to power.

Sir Geoffrey Finsberg (Hampstead and Highgate): As the courts of this country and the European Court of Human Rights have made it clear that the Government have acted correctly in all these matters, will my hon. Friend say why it has taken so long to take this final step, which many of us believe is overdue?

Mr. Waldegrave: My hon. Friend is right. The lawfulness of our action has been confirmed by our courts, and at the European Court of Human Rights. It has taken so long because we have tried very hard to find alternative jobs for the people involved. Now we have to say that, realistically, there are no alternative jobs available. It is increasingly unfair to the great majority who have accepted the terms of service to leave a small minority operating without terms of service and without accepting what their colleagues have accepted.

Mr. Terry Davis (Birmingham, Hodge Hill): If the Minister is blaming national trade union leaders, why is he sacking individual trade unionists?

Mr. Waldegrave: That seems to be a curious question. The people are being dismissed from GCHQ because they are in breach of the terms and conditions of their service, and for no other reason.

Mr. Ivan Lawrence (Burton): In how many other countries, Socialist or otherwise, do the security and intelligence establishments permit either a trade union or the right to strike?

Mr. Waldegrave: I believe that my hon. and learned Friend would find that the number is very small. I know of none.

Mr. David Winnick (Walsall, North): Is the Minister aware that those who are now being victimised are to be congratulated on defending the principles of British democracy and fair play against an authoritarian Government? Now that the Government, at long last, have lost the Spycatcher case in the courts, when will they learn the basic principle that people have a democratic right to belong to a trade union? When will the Government stop penalising people who want to exercise that right?

Mr. Waldegrave: I must not be drawn on to Spycatcher, but clearly the hon. Gentleman has not read the judgment. He will find it a little different from what he expects. The reason why we had to take action, unwelcome though it is, has been clearly set before the House and supported by it. I do not apologise for it.

Mr. Tony Baldry (Banbury): Does my hon. Friend recall that during the last Parliament, when the Employment Select Committee investigated this matter, national Civil Service trade union leaders were unprepared to give an undertaking that civil servants who continued at GCHQ would not continue to disrupt the activities of that organisation?

Mr. Waldegrave: There was no undertaking to accept a no-strike agreement at GCHQ. When the subject was raised as a possibility, it was instantly repudiated by two of the unions concerned. What is more, it would have been ironic if it had not been, because the TUC is expelling trade unions which have been seeking to make no-strike deals.

Dr. John Reid (Motherwell, North): As the Minister has obviously given great consideration to the relationship between the undermining of security and trade union membership, can he tell the House and those who are listening how many traitors who have been convicted since 1945 for treacherously undermining our security were members of a trade union?

Mr. Waldegrave: There is no connection between membership of a trade union and people's loyalty to this country. *[Interruption.]* If there is a connection, it was the misuse of the strike weapon by national trade union leaders who did not know, and could not know, what they were doing by so interrupting the work of GCHQ as gravely to damage our security. That is what was damaging our security. I emphasise again the point that Opposition Members have missed from the beginning to the end of this controversy, which is that we have never at any time doubted the loyalty of individual people to this country. What has been doubted is the willingness of the national trade unions involved to understand the importance of that institution.

Sir John Stokes (Halesowen and Stourbridge): Is my hon. Friend aware that the public at large simply will not be able to understand all the fuss that the Opposition are making about this dispute? The dispute is wholly bogus, the Government's action is perfectly reasonable, and it is about time the whole matter was settled.

Mr. Waldegrave: Not for the first time, my hon. Friend has encapsulated good sense in the House.

Mr. Graham Allen (Nottingham, North): Who is next?

Mr. Waldegrave: If the hon. Gentleman means by that lapidary question is there any intention to extend such a ban outside those involved in security, the answer is that there is no such intention. What is more, if there were, I doubt whether it would be upheld by the courts. It is because these people are involved in security that the courts have upheld the Government's position.

Mr. Derek Conway (Shrewsbury and Atcham): Despite the wringing of hands by Labour Members—*[Laughter.]*—and despite their giggling, will my hon. Friend undertake to explain to the widest general public that the TUC targeted GCHQ during its day of action, and that such an irresponsible act on its part shows that it is wholly unconcerned for British security and is the action of a dying dinosaur, which should be suitably ignored?

Mr. Waldegrave: My hon. Friend is right. That was extremely irresponsible and was done deliberately, because only senior officials and Ministers knew the damage that was being done. It was a cheap action for the trade unions to take and grossly irresponsible. All the consequences have flowed from that.

Mr. D. N. Campbell-Savours (Workington): Who is damaging national security—the trade unionist who feels that he must take industrial action because he has a grievance, or the Tory Member who writes a book setting out in complex detail every aspect of GCHQ's operations? Who is being disloyal?

Mr. Waldegrave: I shall not get involved in the hon. Gentleman's characteristic conspiracy theories. I know for a fact that our security was damaged by interruptions at GCHQ and that no Government could have stood by and done nothing about that. I know, too, as do hon. Members on the Opposition Front Bench, that if they had been in the same position they would have acted in the same way.

Mr. Bill Walker (Tayside, North): Is my hon. Friend aware that the individuals who were named and who have been working all these years at GCHQ worked there when I represented them as a member of a trade union looking after their interests? At that time it was understood that GCHQ and the Air Ministry, where I worked, would never be included in industrial action because if they were the Government of the day, regardless of their colour, would change the rules because that work could not be interrupted. That is exactly what has happened. The rules have been changed, and trade union leaders knew from the beginning what would happen.

Mr. Waldegrave: My hon. Friend is right. This is an area, and it is not alone in modern Britain, where, because unspoken conventions have been breached, different steps have had to be taken. What my hon. Friend—who knows a great deal more about it than does the right hon. Member for Gorton—has said is correct.

Broadcasting and Terrorism

3.45 pm

The Secretary of State for the Home Department (Mr. Douglas Hurd): With permission, Mr. Speaker, I wish to make a statement about access to the broadcast media by certain organisations in Northern Ireland.

For some time, broadcast coverage of events in Northern Ireland has included the occasional appearance of representatives of paramilitary organisations and their political wings, who have used these opportunities as an attempt to justify their criminal activities. Such appearances have caused widespread offence to viewers and listeners throughout the United Kingdom, particularly just after a terrorist outrage.

The terrorists themselves draw support and sustenance from access to radio and television—from addressing their views more directly to the population at large than is possible through the press. The Government have decided that the time has come to deny this easy platform to those who use it to propagate terrorism. Accordingly, I have today issued to the chairmen of the BBC and the IBA a notice, under the licence and agreement and under the Broadcasting Act 1987 respectively, requiring them to refrain from broadcasting direct statements by representatives of organisations proscribed in Northern Ireland and Great Britain and by representatives of Sinn Fein, Republican Sinn Fein and the Ulster Defence Association. The notices will also prohibit the broadcasting of statements by any person which support or invite support for these organisations. The restrictions will not apply to the broadcast of proceedings in Parliament, and in order not to impair the obligation on the broadcasters to provide an impartial coverage of elections the notices will have a more limited effect during election periods. Copies of the notices have today been deposited in the Library, and further copies are available from the Vote Office so that hon. Members will be able to study their detailed effect.

These restrictions follow very closely the lines of similar provisions which have been operating in the Republic of Ireland for some years. Representatives of these organisations are prevented from appearing on Irish television, but because we have had no equivalent restrictions in the United Kingdom they can nevertheless be seen on BBC and ITV services in Northern Ireland, where their appearances cause the gravest offence, and in Great Britain. The Government's decision today means that both in the United Kingdom and in the Irish Republic such appearances will be prevented.

Broadcasters have a dangerous and unenviable task in reporting events in Northern Ireland. This step is no criticism of them. What concerns us is the use made of broadcasting facilities by supporters of terrorism. This is not a restriction on reporting. It is a restriction on direct appearances by those who use or support violence.

I believe that this step will be understood and welcomed by most people throughout the United Kingdom. It is a serious and important matter on which the House will wish to express its view. For that reason, we shall be putting in hand discussions through the usual channels so that a full debate on the matter can take place at an early date.

Mr. Roy Hattersley (Birmingham, Sparkbrook): Like the overwhelming majority of citizens in this country, the Labour party is dedicated to the defeat of terrorism, and we share the natural revulsion at the exhibition on television of support for terrorists and terrorist organisations. But the important task is not so much demonstrating disapproval as defeating the IRA and the UDA, and it is against that criterion, together with the consequences for freedom of speech and the practicality of the proposals, that the Home Secretary's statement must be judged.

Will the Home Secretary confirm that nothing that he now proposes reduces the opportunities for the opinions of terrorist organisations to be reported on television or in newspapers? All that he has done today is to prevent personal appearances. Why does the Home Secretary believe that the net effect of such a specific prohibition will be to damage terrorism and help in the defeat of terrorists? Has he considered the damaging way in which his proposal will be used at home and abroad, especially in the United States, to portray the Government as the enemy of free expression? Has he weighed that publicity coup for the IRA against the advantage of keeping its representatives off television? Does he not have enough faith in the British people to accept that such personal appearances only increase the revulsion and contempt felt by most British viewers for terrorism and terrorists?

Can the Home Secretary tell us how the law will define such general concepts as "representatives of" and "supporting"? Will he assure us that there will be a more objective test of those terms than simply the Government nominating individuals who must not be interviewed on television or radio? That would be an absolutely unacceptable power for any Government to possess.

What consequences does the Home Secretary foresee from his necessary exemptions of both the House and the period of parliamentary elections? Is there not something absurd in allowing the hon. Member for Belfast, West (Mr. Adams), were he to attend the House, to voice his views on "Yesterday in Parliament", while at the same time preventing him being interviewed on that speech as he left the building? What consequences does the right hon. Gentleman foresee for the impending parliamentary by-elections, other than the near certainty, for which the Government must take responsibility, of Sinn Fein candidates being nominated in all of them?

Does not an examination of the detailed results of the proposal demonstrate that it is trivial, worthless and almost certainly counter-productive in the real fight against terrorism? Today's statement is intended to create the illusion, rather than the reality, of activity. It will make the Government look simultaneously repressive and ridiculous.

Mr. Hurd: I am surprised—not wholly surprised—that the right hon. Gentleman takes that line, because I am afraid that it stands four square with the attitude that he has taken personally for some time now to the measures that we and the House have thought to be necessary in the fight against terrorism. The notice that I have given to the two chairmen today is, I believe, clear and precise. It specifies organisations, and I believe that it is as clear and precise as such a notice can reasonably be. Of course, it distinguishes between speech in the House and speech outside. If I had not done that, I should have been immersed in considerable argument about privilege, which I wish to avoid as that would have obscured the main issue.

The Broadcasting Act and the Representation of the People Acts lay certain obligations of impartiality on the broadcasting organisations during elections, and it was right that that should be respected when we drafted the notice. I have always regarded the obligation of impartiality as an important part of holding free elections, and, in turn, the holding of free elections in Northern Ireland as a crucial part of our stance there. I did not want to do anything that undermined that.

The right hon. Gentleman is right on his general point. This step will provoke an immediate flurry of protest from Sinn Fein and the supporters of terrorism, but it will deny them a weapon of which I believe they have made substantial use. I answer the right hon. Gentleman's main question in this way. I believe that the use that those people have made of direct access to radio and television has aroused the deepest outrage in Northern Ireland, as I said in my statement. People cannot understand how we are to be taken seriously in fighting terrorism if, after reading a statement by my right hon. Friend the Secretary of State for Northern Ireland, for example, the next thing that they see on the news is a supporter of terrorism using direct access to underline or deepen the impression that he wishes to create.

The airwaves are full of points of view with which we all disagree from time to time. In a free society it is our job to argue and, we hope, to out-argue in those discussions. However, we are not talking about that. We are talking about whether there should be a platform for those whose weapon is not argument but destruction and death.

Mr. Michael Mates (Hampshire, East): Is my right hon. Friend aware that only a few short weeks ago a television company was proposing to give two hours of air time so that the hon. Member for Belfast, West (Mr. Adams) could express his views? That would have caused the greatest disquiet and disgust among most decent people. Is it not because the media have collectively declined the opportunity that has been there to put their house in order in this matter that the Government have had to act? Having acted, will my right hon. Friend and his right hon. Friends continue to try to ensure that the same sorts of measures that have to be taken in the fight against terrorism are taken, as far as possible, on both sides of the border?

Mr. Hurd: I understand what my hon. Friend says. To be fair, as I said in my statement, the broadcasters have had a whole series of individually difficult decisions to take, and I am glad that they have recently taken some which illustrate the point that I have been making. From their point of view, it is more clear and straightforward for them to operate under a notice of this sort, for which I take responsibility and which the House will debate, than to have to operate at their discretion, sometimes in difficult circumstances.

Mr. Paddy Ashdown (Yeovil): Have not the Government's own standing advisory committee on human rights and Lord Colville advised against such bans? The Government seem to have taken the worst of all possible measures. They have given the IRA a propaganda coup. They have left it open to it to put its view through the newspapers; they have left Sinn Fein still a legal organisation which is denied the right of access to a free press; and they have established a dangerous precedent by using the Broadcasting Act in this manner.

If the Government are intent on taking serious action, why do they not strengthen the sanctions of the court against elected representatives who give comfort to terrorism, instead of taking this action, which is ill-conceived, ill-judged and almost certainly counter-productive?

Mr. Hurd: The hon. Gentleman has misunderstood the point about Lord Colville, who has made a recommendation about section 11 of the Prevention of Terrorism (Temporary Provisions) Act 1984. That is quite separate from the point that we are discussing. What we propose is within the bounds of the European convention on human rights, which is no doubt why it has been practised in the Republic of Ireland for some time without problems of this kind.

Although I take note of what the hon. Gentleman, who is the leader of his party, has said, unless the newspapers are wrong, I rejoice in the support of his colleague, the hon. Member for Liverpool, Mossley Hill (Mr. Alton).

Mr. Julian Amery (Brighton, Pavilion): Why was this decision not taken a long time ago?

Mr. Hurd: I thought that one of my right hon. Friends might ask that. A number of possibilities respecting Northern Ireland have been looked at from time to time. Since the last round of terrorist outrages—I am thinking particularly of Enniskillen—we have been looking again, as Governments should, at options—even at options which have not been adopted in the past. This is one of a series of decisions. As the House will recognise, some remain to be taken and announced by my right hon. Friend the Secretary of State for Northern Ireland, but as part of this reconsideration of all options we came to the conclusion that the time was right to take this step.

Mr. Ken Maginnis (Fermanagh and South Tyrone): Does the Home Secretary accept that my right hon. and hon. Friends and I welcome what he has done today? We believe that there is considerable merit in his belated action. The legislation is aimed at protecting, not the intelligent viewer, but young people who can be influenced by the likes of Gerry Adams and Danny Morrison on television.

Does the right hon. Gentleman accept, too, that it will not be particularly helpful if, during election time, members of constitutional parties must desist from making use of the media so as to prevent members of Provisional Sinn Fein from doing so? Has he consulted his right hon. Friend the Secretary of State, who is bringing forward legislation dealing with the repudiation of violence by those wishing to stand for council and other elections in Northern Ireland? That legislation is to fill the gap in the Home Secretary's measures so that in the final analysis something equivalent to the primary legislation in the Republic of Ireland—the amendment to section 31—will be provided. In that way, the purveyors of violence will never be able to appear on television.

Mr. Hurd: I am grateful to the hon. Gentleman for his support for what I have announced. I followed the rest of his argument. He knows that my right hon. Friend the Secretary of State for Northern Ireland published some ideas in a consultation paper on the subject that the hon. Gentleman mentioned—the possibility of asking candidates to renounce the use of force. My right hon. Friend is still considering the response to those ideas and,

[Mr. Hurd]

obviously, as he moves to a conclusion on that he will take into account the implications of and the connection, which certainly exists, between that measure and the measures that I have announced.

Mr. Peter Robinson (Belfast, East): Will the Home Secretary take it from me that the people of Northern Ireland will see that it was not he who banned Sinn Fein, but that it was Sinn Fein who excluded itself by its behaviour? Will he recognise that it would be illogical for him to take the decision that he has announced today alongside the fact that Ministers in the Northern Ireland Office refused to meet members of Sinn Fein? The Home Secretary is now refusing to allow Sinn Fein to appear on television and radio. Would it therefore be consistent to permit Sinn Fein to sit in our council chambers and expect Unionist politicians to sit with them?

Mr. Hurd: I am grateful to the hon. Gentleman for his general support. He will know that the further point that he raises has been argued and discussed many times and falls absolutely within the scope of the consultation exercise that I mentioned.

Mr. Seamus Mallon (Newry and Armagh): The Secretary of State has drawn attention to the thoughts and emotions of people who have been bereaved by the actions of paramilitary groupings as those bereaved people watch paramilitary spokesmen on television. Although that is an understandable sentiment, it is not a basis for legal or political decisions. Will the Secretary of State accept that the real damage will be done, not to the UDA or the Provisional IRA, but to the highest standards of judicial and legal practice in this country? Does he accept that he is doing exactly what the gangsters in the Provisional IRA and the UDA want him to do? Those organisations will be laughing all the way to the European election and the district council elections because they now have the street issue that they did not previously have. Would the Secretary of State care to speculate about how many of the hard-line activists in west Belfast, South Armagh and Derry will lay down their guns because they cannot watch Gerry Adams on television?

Mr. Hurd: I have never heard the hon. Gentleman inveigh with that eloquence against the provisions in the Republic of Ireland. I listened to the hon. Gentleman on the radio this morning and thought that he gave a very idealised version of what actually happens. His constituents and those of other Northern Ireland Members do not hear Sinn Fein supporters being grilled by challenging professional journalists. What they hear, and what I used to hear, are supporters of Sinn Fein having the skill to stay just within the law and using the right of direct access to the media to glory in violence and death. We propose to stop that. Of course, the measure in itself is not decisive, because no single measure can be decisive. It is part of the strengthening pattern of action against terrorism and it has an important part to play.

Mr. John Wheeler (Westminster, North): Does my right hon. Friend agree that the overwhelming majority of men and women of common sense in this country will fully understand and agree with the measures that he has proposed? Secondly, does he agree that the measures are not dissimilar to those that have operated for many years in the Republic of Ireland, save that they are considerably more liberal and that broadcasters, whether on television, radio or elsewhere in the media, will not be affected by the proposals when they are reporting events?

Mr. Hurd: My hon. Friend is on the crucial point. This is not censorship, because it does not deal with or prohibit the reporting of events. It deals with and prohibits direct access and its extra impact on terrorism and its supporters. Broadly, we are putting broadcasters on the same basis as representatives of the written press.

Mr. Gerald Bermingham (St. Helens, South): Bearing in mind the looseness of the term—I say that as politely as I can—"and supporters of", will the Home Secretary assure the House that before any organisation or its members are proscribed under the terms of this notice the House will be given details? If that is not done we will lay ourselves wide open to an ever-growing catch-all pool of persons or groups banned from commenting on radio or television.

Mr. Hurd: It would be very reasonable for the House to be kept informed of any variation in the two notices that I have issued.

Sir Giles Shaw (Pudsey): Does my right hon. Friend accept that the vast majority of people will undoubtedly agree with the step that he has taken? What other changes implemented by the Irish Republic in its handling of Sinn Fein might he consider? Will he consider advising those in the European Union of Broadcasting Nations about what he and his colleagues from the Irish Republic have done?

Mr. Hurd: We did not work out this proposal with the Irish Government, but we informed them yesterday of what we proposed. There is an increasing amount of consultation and discussion across this whole range of issues and, as my hon. Friend says, those discussions are not just between the Irish Government and Her Majesty's Government, but go right across Europe.

Mr. Peter Archer (Warley, West): Will the Secretary of State answer the question put to him by the hon. Member for Newry and Armagh (Mr. Mallon)? Have the paramilitaries not achieved one of their major purposes by maneouvring the Government into chipping away at the institutions of a free society? What precedents are there for proscribing the content of a broadcast, not on security grounds, but because the Government find unacceptable the opinions that are likely to be expressed?

Mr. Hurd: I do not agree with that classic statement of the Opposition case. We are not in the ordinary business of the tossing to and fro of arguments and controversy. We are dealing with two things that are different from the traditional arguments. They are the direct impact of access to the media, and the people who use that access, not to out-argue me or the right hon. and learned Gentleman, but to spread the aura of fear that surrounds their acitivities. *[Interruption.]* Conceivably we should have known before, but we think that it is now right to take this step.

Mr. Ivor Stanbrook (Orpington): Is my right hon. Friend aware that, although these measures are welcome, they do not go far enough? When may we expect a statement from our right hon. Friend the Secretary of State for Northern Ireland about further measures to be taken against the IRA, including the banning of Sinn Fein?

Mr. Hurd: My right hon. Friend the Secretary of State for Northern Ireland has been careful to say that my hon. Friend's last point is kept under review. My hon. Friend should not feel that this is an isolated measure. As I have said, some steps have already been announced. For example, we have announced the proposals that we intend to include in forthcoming legislation to get at the funds of the IRA. Other measures, of which I hope my hon. Friend will approve, will be announced in due course.

Mr. Tony Benn (Chesterfield): Is the Secretary of State aware that his statement will be seen as a massive extension of state control over the broadcasting authorities, and that it is precisely comparable to the ban on the Zircon film and the attempt to ban the Spycatcher book? Any attack on the rights of elected representatives has always historically been seen as an attack upon those who elect them, the people who have chosen to use the ballot to express their views. The powers that the right hon. Gentleman has used are so general that they could be extended to anybody. There is no limit to those powers. I once exercised them when I was Postmaster General. Is he also aware that, as Lord Scarman said on television, it is questionable whether broadcasters will be so timid as to obey the law? There is no moral obligation to obey an unjust law that attacks civil liberties and democracy.

Mr. Hurd: The legal standing of the power is as clear now as it was when the right hon. Gentleman exercised a parallel power.

Mr. Benn: I never did.

Mr. Hurd: The right hon. Gentleman has just told us that he did. There have been occasions, whether in his time or since, when this power has been used, and its legal status is not in question. What it does is to bring into the open, and state as clearly and precisely as we can, an obligation with which the broadcasters have been wrestling, case by case and programme by programme, with some difficulty for many years. We know, and I believe, that although the broadcasters will share some of the disquiet that has been expressed by the Opposition—they would not be human if they did not—as they reflect on it they will see that this gives them a clearer and better way to proceed than they have ever had.

Mr. James Kilfedder (North Down): Tomorrow I shall attend the funeral of a constituent who was blown bloodily asunder by an IRA car bomb. His wife, who was bespattered with the blood and flesh of her husband, had a miraculous escape, but both she and her two children are distraught to the point of extreme agony. Does the Home Secretary know that the IRA put out a statement immediately after that outrage in an attempt to justify its obscene crime—a statement that was a tissue of lies, but was broadcast by the media? Is there not, in addition to the right of free speech, the greater, fundamental right to life, which is being denied to a vast number in Northern Ireland by the IRA, which is the enemy of democracy, and will make use of democracy in order to defeat it?

Mr. Hurd: What the hon. Gentleman has said is necessary, because we find it easy to forget, this side of the water, the kind of emotions which are not manufactured but which are genuine, particularly in the aftermath of such outrages. I would draw a distinction, which I believe is crucial, between the right and duty of the media to report what happens, including the views of all kinds of people, and the right, which I do not accept, of people who support the kind of outrages which the hon. Gentleman mentioned to march into the studio and parade their support for terrorism. It is that which we are addressing.

Mr. Martin Flannery (Sheffield, Hillsborough): Does the Home Secretary not realise that the IRA, and probably the paramilitaries of the other side as well, will recognise this measure as being born of panic? What is new, or what is worse than it was some years ago when he or his predecessors did not introduce such a measure? Why is it being introduced now? They will construe it as their victory. Is the measure a capitulation to the ultra Right-wing of the right hon. Gentleman's party, as embodied in the Tory party conference—the floggers and hangers—which is demanding that he do something like this, which, it seems to me, is against his own essential nature?

Mr. Hurd: The conference was last week, so I do not think that it is entirely relevant to this. I have already answered the hon. Gentleman's question in answering my right hon. Friend the Member for Brighton, Pavilion (Mr. Amery). In a whole range of Northern Ireland policy issues there are several things lying around—issues and decisions that are possible and options that are conceivable. It is foolish for a Secretary of State or a Government to say never in these matters. There are several issues—the hon. Gentleman knows them as well as I do. It is foolish to say never, and it is sensible, as things change, to look again at the different options, to look at them afresh to see whether they make sense in the circumstances of 1988, although they did not make sense in the circumstances of 1986. That is what we have done, issue by issue, and option by option, and this decision is one of the results.

Mr. Tim Rathbone (Lewes): Will my right hon. Friend accept that anybody must welcome the actions of the Government to diminish the threat of terrorism, not only in this country, but anywhere in the world? Will he also accept that hon. Members, on both sides of the House, will welcome his commitment to have a debate on this question because of the real problems raised about the intervention into free speech, which is probably conceived as a short cut to the point raised by my hon. Friend the Member for Orpington (Mr. Stanbrook), who advocated the total banning of those whom my right hon. Friend now wishes to ban from the television sets? I hope that he will be able to develop that argument when we debate this question.

Mr. Hurd: That is an important point. When we come to a debate it will clearly be necessary, in a way which is not possible in a statement, to link the various strands to show how this fits into the pattern which several hon. Members have raised.

Mr. Jeff Rooker (Birmingham, Perry Barr): Is it the case that people will be banned even when it is not known what they will say if they are given the chance of an interview? Is the right hon. Gentleman aware that, unlike the situation in the Irish Republic, hardly a week goes by in this country without some local government by-election? What is to stop the propagandists of the IRA coming over here week by week to seek election in local government by-elections, using the excuse that they are

[Mr. Jeff Rooker]

prevented from talking in Northern Ireland? Has the Home Secretary considered the media circus that will go around if that comes about?

Mr. Hurd: That is an extraordinary unlikely supposition. People would soon tire of that game and find it extraordinarily unnewsworthy. The wording of the notice, in reply to the hon. Gentleman's first and serious point, is that we are talking about—to a large extent this is drawn from the Irish wording—words spoken by a person who appears or is heard on the programme on which the matter is broadcast where the person speaking the words represents, or purports to represent, one of the organisations specified.

Mr. Robert G. Hughes (Harrow, West): Will my right hon. Friend accept that the logic and explanation that he has used to advance his argument today will be appreciated and understood by the British people, as the arguments of the Labour Opposition will be misunderstood and deeply resented by the British people? Will he accept that the British people look to the editors of newspapers voluntarily to understand that they do not want newspapers to be used as a platform for the IRA and its apologists?

Mr. Hurd: The press certainly has a responsibility, just as the broadcasters have. We are not discriminating against the broadcasters. We are bringing them to the same level as the writing press by allowing them to report and by not encroaching on their ability to report, but denying some people the extra dimension of radio and television, by denying direct access to these media.

Mr. Ken Livingstone (Brent, East): Before taking this decision, did the Home Secretary receive any briefing from the intelligence services on the likely impact of this decision on the flow of funding from Canada and North America for the IRA? If he did not, why not? How was it that the IRA managed to sustain itself, decade after decade, from the 1922 bombing campaign through into the 1930s and 1950s, without access to television? Is this not simply a diversion in response to the increased level of violence in Northern Ireland during the summer? Has the Home Secretary not thrown this bauble into the House of Commons, where it will be debated at great length, and with which the media will be obsessed because it affects them, rather than deal with the real problem, which is to find the answer to the violence, either by defeating terrorism, or by negotiating a peace settlement?

Mr. Hurd: We considered this decision over a considerable period and I assure the hon. Gentleman that we took into account every consideration that could be relevant. The decision was not taken quickly or in a panic, as some people have suggested. Of course it is not the answer, as no single measure could be the answer, to the problems of terrorism or of Northern Ireland. What it does is to remove from the men of violence—we have been even-handed in this, as the hon. Member for Kingston upon Hull, North (Mr. McNamara) urged upon us—an extra weapon which the existence of direct access to the media has provided for them.

Rev. William McCrea (Mid-Ulster): No doubt the Home Secretary has heard the "do nothing against the mouthpiece of terrorism lest we offend" brigade. Will he take it from me that the vast majority of people in Northern Ireland, and within the United Kingdom, accept this as a step in the right direction and hope that it will be followed by many other steps to bring an end to the catalogue of violence that the people of Northern Ireland have suffered? Will he also accept that the people of Northern Ireland find it greatly offensive that the spokespersons for terrorism can parade themselves in front of the television screens and gloat over brutal acts of terrorism? It is about time that it stopped, and we welcome this proposal.

Mr. Hurd: I am grateful to the hon. Gentleman.

Mr. Harold McCusker (Upper Bann): Is the Home Secretary aware that the real welcome in Northern Ireland will be, not for the detail of what he has said today, but for what he subsequently confirmed, namely, that his statement heralds the beginning of an inevitable process designed to squeeze Sinn Fein out of the political system in Northern Ireland?

Mr. Hurd: The hon. Gentleman is paraphrasing boldly. I did not say anything that could reasonably bear that interpretation. I simply said that, as he knows very well, my right hon. Friend is considering a range of possibilities and has published a consultation document. No doubt the hon. Gentleman's party has responded copiously to the invitation, and my right hon. Friend will reach and announce his conclusions in due course.

Mr. Michael Morris (Northampton, South): Does not the evidence of history, such as our troubles in Malaya, and the experience of our European partners, such as West Germany with Bader Meinhof, demonstrate that the one thing that terrorists do not like, and will not accept, is being denied access to the media? What exactly are the sanctions available to my right hon. Friend for those who choose to flout the new regulations?

Mr. Hurd: The two notices are from me to the regulatory authorities, the BBC and the IBA. It is then for them, as regulatory authorities using their powers of discipline, to ensure that those notices are respected. If they are not respected, that is a matter for my action against the regulatory authorities.

Mr. Hattersley: I asked the Home Secretary about the definition of the individuals whose direct broadcasts will be prohibited under these regulations, and other hon. Members pressed him on that point. He said that it was individuals—he was quoting from the notice—who represent or purport to represent the listed organisations. What is the situation if people express equally unacceptable opinions, views on killing and murder, which would be unacceptable to everyone in the House and deeply offensive to the people of the United Kingdom, but can demonstrate that they are not attached formally, or in any way that can be demonstrated, to one of the proscribed organisations? Will they be allowed to broadcast?

Mr. Hurd: They would be caught by paragraph (b). The right hon. Gentleman has perhaps misunderstood the significance of the word "or". Let me re-read paragraphs (a) and (b) for the sake of clarity. They state:

"the person speaking the words represents or purports to represent an organisation specified in paragraph 2 below, or"—

this is the point about which the right hon. Gentleman asked me—

"the words support or solicit or invite support for such an organisation".

Mr. Hattersley *rose*——

Mr. Speaker: Order. There is a long list of right hon. and hon. Members who wish to participate in the next debate. We have had a good run on this statement and I have listened to what the Home Secretary has said. There is to be a debate later and I am sure that these matters can be raised then. I will ensure that those hon. Members who have not been called to put a question have some precedence when we come to that debate.

Scottish and Newcastle Breweries

4.23 pm

Mr. Alistair Darling (Edinburgh, Central): I beg to ask leave to move the Adjournment of the House, under Standing Order No. 20, for the purpose of discussing a specific and important matter that should have urgent consideration, namely,

"the proposed takeover of Scottish and Newcastle Breweries by Elders IXL."

The matter is urgent because the takeover bid was launched on Monday, and it has already caused widespread concern and opposition in Scotland and England. The Government's attitude must be made clear as quickly as possible.

The matter is important because Scottish and Newcastle is the second largest manufacturing company in Scotland and has 11 per cent. of the United Kingdom market. Elders has 9·5 per cent. Together they would account for 21 per cent. of the United Kingdom market. Scottish and Newcastle employs 24,000 people—4,000 in my constituency, 6,000 in Newcastle and others throughout the United Kingdom.

Scottish and Newcastle is a successful company. It is not a lame duck, but it is another in a line of companies which have been subject to hostile takeover bids, and this highlights the lack of effective Government policy on takeovers and mergers. The bid would be bad for Edinburgh and Scotland because decision-making would pass to the other side of the world. All that Elders offers is a wholly-owned subsidiary, but control would remain in Melbourne. All that it is offering is a brass plate on an Edinburgh door, and, despite all that Elders says in its glossy publicity and what its paid consultants say, the whole thing is reminiscent of the Guinness affair. It is vital that this United Kingdom company should remain based in Edinburgh. It is vital to Scotland's beleaguered industrial base and to jobs in Scotland and the north of England.

In a recent leaked Scottish Office report, it was made clear that Scottish companies were exposed because of the Government's lack of preparation for the European single market. We must make sure that Scottish and Newcastle does not fall victim to that, and we must protect those companies which have set up and flourished outside the south-east of England. We must not let Scotland and the north of England become backwaters of Europe. We cannot allow the short-term needs of the market to decide our long-term future. In those circumstances, I ask for an emergency debate to discuss the matter.

Mr. Speaker: The hon. Gentleman asks leave to move the Adjournment of the House, under Standing Order No. 20, for the purpose of discussing a specific and important matter that he believes should have urgent consideration, namely,

"the takeover bid made by Elders for Scottish and Newcastle Breweries."

I have listened with care to what the hon. Gentleman has said about this matter and I appreciate the likely possible impact upon his constituents, but I regret that I do not consider the matter appropriate for discussion under Standing Order No. 20 and I cannot therefore submit his application to the House.

Bradford Council

4.25 pm

Mr. Max Madden (Bradford, West): On a point of order, Mr. Speaker. I thank you and the Clerks for the guidance that I have been given on how I can refer to an announcement made by the Conservative-controlled Bradford council today that, at its full council meeting next Tuesday, it intends to restrict entry by the public to the council chamber. I understand that it intends to issue 118 tickets to members of the public who, in the council's view, are not considered to be trouble makers, and to allow a further 50 members of the public to listen to a broadcast of the council meeting in an adjoining room.

There are 45 items on the council's agenda. The council is seeking the ratification of 9,000 council redundancies, the selling of 15 homes for elderly people and the denial of funding to 25 voluntary organisations. I am sure you understand, Mr. Speaker, that there is a great desire on the part of people in Bradford to——

Mr. Speaker: Order. I well understand the hon. Gentleman's concern about this matter, but he must find another, more appropriate method of raising it before the House. It seems to me that it is a matter for the local council, not for the House of Commons. I understand his concern and I hope that he will follow the guidance that I gave him previously.

Mr. Madden: On a point of order, Mr. Speaker.

Mr. Speaker: I do not think that I can help the hon. Gentleman any further.

Mr. Pat Wall (Bradford, North): Further to that point of order, Mr. Speaker. Are we not devaluing the role of this House as the issue has been debated nationally and discussed in the press? The issue of Bradford can apparently be discussed everywhere but in this House. That is a deplorable situation.

Mr. Speaker: I must have regard to the rules of our House and we must discuss here matters which are within our rules and within ministerial responsibility. Both the hon. Gentleman and his hon. Friend the Member for Bradford, West (Mr. Madden) must try to find other ways of raising the matter.

Mr. Bob Cryer (Bradford, South): On a point of order, Mr. Speaker. May I ask you briefly whether you will keep an open mind on the question of applications under Standing Order No. 20 regarding the announcement of 9,000 sackings in Bradford by the Tory-controlled council? The situation continues to develop. Fresh announcements of serious cuts are being made. The whole council system is being gerrymandered on the mayor's casting vote, so I ask you to keep an open mind on this serious constitutional issue.

Mr. Speaker: I understand the significance of this to hon. Members who represent that important city, but, as the hon. Gentleman will be the first to appreciate, I must have regard to the rules of the House. The hon. Members concerned will have to seek other ways of raising the matter.

Defence Debate

Mr. Eric S. Heffer (Liverpool, Walton): On a point of order, Mr. Speaker. Before we come to the defence debate, I should like to ask your guidance. Two amendments have been tabled to the Government's motion.

Mr. Speaker: Order. It would be more appropriate if the hon. Gentleman raised that at the beginning of the debate. He does not yet know my decision.

North West Regional Assembly

4.30 pm

Mr. Ian McCartney (Makerfield): I beg to move,

That leave be given to bring in a Bill to provide for the establishment of an elected North West Regional Assembly as a regional authority and of a North West Development Agency, and to specify their functions and powers; and for other purposes.

When a devolution Bill was last introduced in the House it brought down the then Government. I sincerely hope that my personal proposal will have the same result.

The concept of devolved government for the regions of England, and the north-west especially, is not a publicity stunt. It is a genuine attempt fairly to redraw the political and industrial map of the United Kingdom. The north-west region comprises the counties of Cheshire and Lancashire and the industrial conurbations of Greater Manchester and Merseyside. It has a population of 7 million, and since the industrial revolution it has been one of the two great engines of the British economy. About 4 million people live in the Liverpool-Manchester industrial corridor, and last year they contributed over £31 billion to the nation's economy. That represented 11 per cent. of the wealth creation of the United Kingdom. We are the second most important wealth-creating region in the United Kingdom. Our contribution to the United Kingdom is larger than the income of Greece, which is an equal partner in the European Community.

It is tragic that under the present Government the people of the north-west have been prevented from participating in wealth creation. We are ruled over and bludgeoned by a Government of the south-east who are in and for the south-east. The Prime Minister talks of glasnost and perestroika, but these policies are not put into practice in Britain. Double standards are applied when it comes to listening to the needs of the northern parts of the nation. Since the Prime Minister came to power, unemployment in the north-west has shot up by 91 per cent. I congratulate my hon. Friend the Member for Eccles (Miss Lestor) and my other colleagues who have stood four square against the 1,200 redundancies announced at the Royal Ordnance factory at Patricroft. We shall not desert the work force or throw it to the asset-stripping wolves of the City of London who are growing fat on the Government's privatisation programme at the expense of the north-west industrial base.

Manufacturing employment in the north-west has fallen by more than 38 per cent. since the Government came to power. Over 350,000 of my fellow north-west citizens have been out of work since 1979. North-west weekly earnings are slipping behind those for the rest of the country. In 1979, male average weekly earnings were £9·30 less than those in the south-east. In 1987, the gap leaped to a staggering £41·60. Local services and democracy are suffering as well. Rate support grant for local authorities in the north-west has been cut by a staggering £1 billion by the Government. Housing improvement programmes have been cut by 80 per cent. Homelessness has increased by 200 per cent., and house building has declined by 35 per cent. There has been a net loss of 20,000 skilled jobs in the north-west construction industry. The Health Service within the region is also in crisis, with 96,000 of my fellow north-west citizens on waiting lists. About 25,000 of them have been on lists for over a year. Is the House aware that 6,400 hospital beds have been closed? The community care programme has been all but suspended.

Those of us who live in the north-west and who are committed to it are hitting back. Local government and private enterprise initiatives are trying to promote tourism, inward investment, alternative industries, improvement of the infrastructure, the utilisation of derelict land and the initiation of meaningful training programmes.

For ideological reasons the Government continue to undermine the most successful municipal airport in the world. Manchester International airport is under pressure in respect of second terminal investment, and the Government have refused to allow the airport to have additional air routes to Europe and the United States. That means that 1,100,000 north-westerners are forced each year to fly from Heathrow or Gatwick, at considerable extra expense, instead of from their own airport. Under the threat of privatisation, one of the great success stories of north-west industry has been put at risk. That is the result of the Government's ideology.

With the abolition of the strategic Greater Manchester council and Merseyside county council, the Government have almost wiped out strategic planning for two thirds of the region. My Bill is about bringing democratic government to the north-west, in the north-west and for the north-west. It would provide for the formation of a 158-member assembly on a four-year fixed term. It would be responsible for strategic social and economic policy initiatives.

The Bill provides for the establishment of a north-west regional development agency, which would be similar to the Scottish Development Agency. Its membership would come from local government, industry, banking and commerce, the trade unions and higher and further education. Its job would be to further economic development, maintain employment, promote industrial efficiency and competitiveness and improve the environment.

We want to create an office of the north-west to co-ordinate and administer the activities of all Government Departments in the region. We want a Minister for the north-west who will be accountable to Parliament and will report to the regional assembly.

The north-west is not looking for favours at the expense of the nations of Scotland and Wales or of other hard-pressed English regions. However, there is a growing feeling among the people—whether they be industrialists, community groups, local government officers, trade unionists or members of chambers of commerce—that there is sufficient talent, skill, ideas and vision to ensure that, if the region is given a chance and resources, those with ideas and vision can rebuild the north-west and govern it to the eternal benefit of the region and of the United Kingdom as a whole.

Question put and agreed to.

Bill ordered to be brought in by Mr. Ian McCartney, Mr. Keith Bradley, Mr. Allan Roberts, Mr. Roger Stott, Mr. Lawrence Cunliffe, Mr. Terry Lewis, Mr. Tony Lloyd, Miss Joan Lestor, Mr. Jim Callaghan, Mr. Eddie Loyden, Mr. Peter Pike and Mr. Ken Eastham.

North West Regional Assembly

Mr. Ian McCartney accordingly presented a Bill to provide for the establishment of an elected North West Regional Assembly as a regional authority and of a North

West Development Agency, and to specify their functions and powers; and for other purposes: And the same was read the First time; and ordered to be printed. [Bill 215.]

Orders of the Day

Defence Estimates

[First Day's Debate]

Mr. Speaker: I must announce to the House that I have selected the amendment in the name of the Leader of the Opposition. As I have said previously, many right hon. and hon. Members wish to participate in the debate. Although this is a two-day debate, I hope that we shall have brief speeches today.

Mr. Eric S. Heffer (Liverpool, Walton): On a point of order, Mr. Speaker. It is obvious that an amendment in the name of the Leader of the Opposition must be called. However, there is a further amendment on the Order Paper that has much support in the House and in the country as a whole. This support is not confined to the Labour party or any other party. It would seem right that hon. Members who agree with the amendment should be able to vote upon it. This has happened in the past. Amendments that were tabled on prices and incomes policy, for example, were debated and voted upon. I ask you, Mr. Speaker, to reconsider your decision not to select the amendment in the names of 13 of my hon. Friends and myself. We shall then be able in general terms to support the official Opposition's amendment and vote specifically on an amendment that some of us consider to be of the utmost importance.

Mr. Nicholas Bennett (Pembroke): Further to that point of order, Mr. Speaker. I wish to support the hon. Member for Liverpool, Walton (Mr. Heffer). It appears that the amendment in his name and those of his hon. Friends is closer to the policy that was approved at the Labour party conference two weeks ago. Is this not an example of the twin-track approach of the Labour party on defence policy?

Mr. Robert Hayward (Kingswood): Further to that point of order, Mr. Speaker. It is stated specifically on page 466 of "Erskine May" that Mr. Speaker will select the most important amendment. That was a ruling given by one of your predecessors in 1919, Mr. Speaker. Given the decision of the Labour party conference on defence policy, the comments of the hon. Member for Liverpool, Walton (Mr. Heffer) demonstrate that his amendment is more important than that of the official Opposition.

Mr. Speaker: "Erskine May" states also that Mr. Speaker makes his selection and gives no reason for doing so. I cannot help the hon. Gentleman in that respect, but I will try to help him by ensuring that he is able to make his case during the debate.

4.40 pm

The Secretary of State for Defence (Mr. George Younger): I beg to move,

That this House approves the Statement on the Defence Estimates 1988 contained in Cm. 344.

Due to pressure of other business in the House, today's debate on the statement takes place five months after it was published, but that has given hon. Members of all parties time to digest the report on the statement by the Select Committee on Defence. As we have come to expect,

the Committee has produced a thoughtful and thorough report, and I am sure that the whole House will wish to express its gratitude to my hon. Friend the Member for Hampshire, East (Mr. Mates) and all his colleagues on the Select Committee.

The theme of this year's statement on the Defence Estimates is the maintenance of security in a changing world. The House needs no reminders of the signs of change. Nineteen eighty-eight has seen the start at long last of a Soviet withdrawal from Afghanistan, and the beginning of the removal and destruction of a complete class of nuclear missile. We have witnessed the beginning, perhaps, of a new era in relationships between East and West.

Those momentous events present us with opportunities for greater security in Europe. They are opportunities we must grasp. Equally, we owe it to the people of this country to explain what the risks are, and to test the avowed intentions of the Soviet leadership by their deeds and not by their words. We owe it to our people to ensure that we do not sacrifice our hard-earned and long-term security for easy and deceptive short-term gains.

Over the past nine years, the Government have carried out our promise to strengthen Britain's defences and to achieve verifiable arms control agreements. If we had followed the siren call of the unilateralists, represented on several sides of the House, today there would have been no intermediate nuclear forces treaty and no removal of the SS20 missiles. In contrast, the Opposition parties have learned nothing and forgotten nothing. The Labour party's policy of unilateralism has guaranteed its defeat in two general elections. Today we find that the Labour party has not one but two defence policies.

I must confess that I have great sympathy with the point raised by the hon. Member for Liverpool, Walton (Mr. Heffer) a few moments ago because, as he rightly pointed out, two alternative amendments have been tabled in the proper way. There is the strange situation that the amendment which has been selected is supported by the Leader of the Opposition and his colleagues, but is not the official amendment of the Labour party of which the right hon. Member for Islwyn (Mr. Kinnock) is the leader, and that another amendment, which has not been selected, represents the official view of the Labour party. That puts hon. Members in considerable difficulty in knowing where questions should be raised and to whom their attacks should be directed.

The hon. Member for Clackmannan (Mr. O'Neill) has not helped very much, because in a speech to the North Atlantic Assembly a short time ago he pointed out that by the time the Labour party comes into office again—whenever that is, although he appears to know—there will be little money left to save on the Trident programme, even supposing that the right hon. Member for Islwyn carries out his undertaking to scrap it and decommission it right away. Unfortunately, that is in complete conflict with the second of the amendments which, as I understand it, is in tune with the official position of the Labour party, which is to scrap Trident and use the money saved on welfare.

I hope that it may be possible for discussions to take place during the next few weeks and before tomorrow between the various parts of the Opposition so that they can decide, and give us all some indication, which policy we are to counter in this debate, by whom it is supported, and the view of the Leader of the Opposition, who has been placed in an enormously uncomfortable position today.

Mr. Ian Gow (Eastbourne): Before my right hon. Friend leaves that point, will he draw the attention of the House to the fact that there is no amendment on the Order Paper in the name of the leader of the Liberal party? My right hon. Friend has rebuked the Labour party, but will he not add some further rebuke to the Liberal party, the position of which on defence is every bit as confused as that of the Labour party?

Mr. Younger: Not for the first time, I am greatly indebted to my hon. Friend for putting his finger unerringly on another difficulty, which I confess I had not noticed. He is right to say that no amendment has been tabled in the name of the Liberal party, but if I understand correctly, that party has ceased to exist—or it has ceased to exist until next year's conference of the Social and Liberal Democratic party decides on its name. That is one difficulty, but the other difficulty—I am grateful to my hon. Friend for bringing this to my attention—is that the official defence spokesman of the Social and Liberal Democratic party is not in his place. I hope that that does not mean that he is unable to be here or that he is ill. However, it is unusual for the official spokesman of any party represented in this House not to be present for a major debate—indeed, the only major debate that we have on the Estimates per year.

Mr. Frank Haynes (Ashfield): The Secretary of State for Defence is a joke today. He realises—and I realise—what my party's policy is on defence—*[Laughter.]* It is not a laughing matter. It is serious. People in this country are behind us and support what we want to see happen. Why does the Secretary of State not agree with the American and Soviet Union policies of getting rid of nuclear weapons, instead of hanging on to them like him and that woman at No. 10? The Soviets and the Americans are achieving Labour party policy.

Mr. Younger: I am greatly indebted to the hon. Gentleman for his joke this afternoon. It reminds me of the pleasant fact that I had the pleasure of speaking after him when he made his maiden speech. I recall saying then that I hoped very much that we would hear him often. I did not realise how important that was and how much I would appreciate it today. We can hear a great deal more from him on that subject and I am sure that the right hon. Member for Islwyn will be glad to hear from him on that.

Mr. Haynes: On a point of order, Mr. Deputy Speaker. I have listened to what the Secretary of State has said about the speeches I make here. I have made many speeches here, but he has not been present to hear them.

Mr. Deputy Speaker (Sir Paul Dean): The hon. Gentleman knows that that is not a point of order; it is a point of information.

Mr. Haynes: The Secretary of State should come here more often.

Mr. Deputy Speaker: Order. Mr. Younger.

Mr. Younger: The hon. Member for Ashfield (Mr. Haynes) is being unduly modest. I have heard many of his speeches and enjoyed all of them.

[Mr. Younger]

There is clearly a large unilateralist policy on the Left of the Labour party and we must recognise that. There is also still unilateralism by stealth among the leadership of the party that the right hon. Member for Islwyn represents. Neither of those two policies provides Britain with a credible defence policy in a changing world. Today, only the Government have any sound defence policy which balances the opportunities and the risks and ensures that we can meet the challenges of the 1990s effectively.

Mr. Bob Cryer (Bradford, South): The Secretary of State has said that he is meeting the challenges. How does he meet the challenge of the 132 non-nuclear nations which have signed the United Nations nuclear non-proliferation treaty and which have called on the United Kingdom to carry out the treaty that we signed under clause 6 to get rid of our nuclear weapons? Does the Secretary of State not support those 132 non-nuclear nations?

Mr. Younger: As the hon. Gentleman says, we are signatories to the non-proliferation treaty. We not only believe in it and support it: we actually implement it. We have been major supporters of the effort to make the first ever reduction in nuclear weapons, about which I will say more in a moment. That is an immense success and is due entirely to the policy followed by this Government and our allies abroad.

We need to be clear about the nature of the changes taking place in the Soviet Union. President Gorbachev has clearly decided that a lessening of external pressures and distractions is required if his programme of internal reform is to succeed. To that end, he must reduce the costs of Soviet foreign policy by abandoning the old and failed policy of intervention and confrontation. The Government have been unstinting in welcoming the greater signs of openness and reform within Soviet society. Unfortunately, we cannot infer from those signs that Soviet leaders have renounced their foreign policy ambitions.

Despite all the talk of interdependence and reasonable sufficiency, and despite the reductions in intermediate nuclear forces under way—which I welcome warmly—there has been no noticeable slowing down in any sector of Soviet military research, development or production. That is borne out today by the latest edition of "The Military Balance" produced by the International Institute for Strategic Studies, reports of which appear in this morning's newspapers.

For example, in the Soviet Union, new submarines are being completed at the rate of one every six weeks. Each day, two new aircraft and eight new tanks roll off the production lines. The Soviet chemical warfare capability remains the largest and most comprehensive in the world. Therefore, we ignore the Soviet Union's military capability at our peril. Soviet leaders may have ceased threatening to bury capitalism, but they show no signs yet of throwing away the spade.

Responding sensibly and safely to changes in Soviet policy is a major challenge for NATO, but the way to meet that challenge is clear. NATO has a well tried and tested security strategy supported, I remind the House, by all members of NATO, whatever may be the political complexion of their Governments. It remains solidly based on the twin and complementary principles of the Harmel report. They are that the Alliance should maintain sufficient military strength and political solidarity to deter aggression and that, at the same time, NATO should seek a more stable relationship with the East in which we can find political solutions to underlying problems. We should adhere to those principles. They have proved their worth. Indeed, the INF treaty is a triumphant vindication of our policy of negotiation from a position of adequate security.

The treaty was a major milestone in at least two ways. For the first time, an entire class of nuclear missile will be eliminated. Secondly, the Soviet Union has accepted the need for asymmetrical reductions to reflect imbalances in force levels and for intrusive verification as an essential part of arms control. To those who fall for the idea that the Soviet Union should get credit for the treaty, I commend the essay in the statement outlining the history of the negotiations.

The fact is that the treaty is very similar to that composed by NATO in 1981. We should not forget, for instance, the claims made early on by the Soviet Union that a rough equivalence in intermediate range systems existed. Similar claims, with as little basis in fact, are now being made in the preliminary rounds of the conventional stability talks. However, the Alliance held firm despite a succession of tactical ploys by the Soviet Union and despite the unceasing efforts in this country of the Labour and Liberal parties and CND to weaken our resolve and our negotiating position.

No amount of sophistry can disguise the fact that the INF treaty is a triumph for NATO and the result of a NATO initiative. Similarly, Western proposals have provided the basis and agenda for the other arms control negotiations. Our priorities are: a major reduction of 50 per cent. in the strategic nuclear arsenals of the United States and the Soviet Union; an agreement on the establishment of a stable and secure level of conventional forces in Europe, in which our aim is to concentrate on the dominating and destabilising Soviet military presence in Europe, with its capability for large-scale offensive action and its readiness for surprise attack; and not least, a global ban on chemical weapons, with adequate verification.

The arms control process depends crucially on openness about military activities. We therefore welcome the limited moves towards Western standards of openness shown by the Soviet Union. Those Western standards are exemplified by the United Kingdom's policy of maximum openness about chemical warfare. We abandoned our offensive chemical weapons capability in the late 1950s. Since then, we have provided detailed information about our former production and stocks of chemical weapons. The exchange of visits between the chemical defence establishment at Porton Down and the Soviet chemical weapons facility at Shikhany followed a British initiative and was a significant move forward.

However, many questions and concerns still remain. It is clear that the Soviet definition of openness remains, even now, very different from ours. In any arms control process, confidence is essential to underpin an effective agreement. We need much more frankness from the Soviet Union about its chemical weapons activities before we can say that we have that confidence.

The arms control journey will be long and complex, but we have a clear idea of our goals and priorities. Reducing the level of armaments cannot be safely an end in itself. Our objective must be to preserve, and if possible enhance, our security at lower levels of armaments. That will be

difficult enough as things stand in any of the areas under negotiation, but it will be impossible unless we as an Alliance maintain our defences, keep our forces—both nuclear and conventional—modern, effective and up to date, and provide the resources necessary to that end.

The NATO summit in March set that out in the clearest possible terms. The summit also reaffirmed the Alliance's continuing common purpose and solidarity. Ours is not a static Alliance. It has evolved over four decades. It was founded in the dark years immediately after the last war. The American military presence on this side of the Atlantic bolstered western Europe as a bulwark against Soviet military power and subversion, and it encouraged the Europeans to make a stand against Soviet ambitions.

At that time, European nations were emerging from the war with demobilised or shattered forces. They could barely scrape together at that time 15 divisions to face the 100 or so across the iron curtain. Those 100 were backed by war industries at full stretch and by the political will to use them to further Soviet aims.

Since then, the European members of the Alliance have expanded in number and in the forces that they contribute to the common defence. Today, we in the Western Alliance can muster about 80 divisions. Something like 90 per cent. of the military manpower and an overwhelming proportion of the tanks, artillery and aircraft stationed in Europe in peacetime and provided by the Europeans. Therefore, we have made major advances in strengthening what has come to be called the European pillar of NATO.

Nevertheless, recent pressures on the United States to reduce its trade and budget deficits have breathed new life into the debate about burden-sharing within the Alliance. Although we must expect the United States to look again at its range of commitments in the light of changes in the world, I am sure that the American commitment to the defence of western Europe will be maintained.

The American contribution of a strategic guarantee backed by a substantial military presence in Europe remains vital to the Alliance's security. Furthermore, it is no more provided out of charity than is our contribution to forward defence in Germany, for Europe represents a vital interest to the United States. Moreover, all our Alliance partners are agreed on the importance of relating any force reductions to solid progress in arms control negotiations.

But we must ensure that the costs and risks of Alliance membership, as well as the benefits, are shared fairly among its member nations. This principle has always been at the heart of NATO, and reflects the fact that it is a free partnership of 16 sovereign nations. We need to take further steps to strengthen the European pillar as a means of strengthening the Alliance as a whole—not, as some would propose, to create a European security identity distinct from the Alliance. That remains neither a desirable nor an achievable aim.

While there is no doubt of the commitment felt by European members of the Alliance, some member countries devote a disappointingly small share of their national wealth to defence. They should give particularly careful consideration to increasing it to levels closer to the NATO average, and we must all consider how we can further improve our contributions to the common defence from the resources available.

Mr. Keith Speed (Ashford): On the question of burden sharing, will my right hon. Friend ensure that the American Congress in particular is made aware of the contribution that this country and other European countries are making— by way, for example, of bases such as Diego Garcia, the sovereign base areas in Cyprus and out-of-area activities such as the Armilla patrol and many others? When I was in Washington, I found there a profound ignorance of what many European defence forces are doing around the world to help and bolster up their American allies.

Mr. Younger: I strongly agree with my hon. Friend. I, too, have found, whenever I have had the opportunity to talk about this in America, that audiences are usually amazed by how much Europe does for its own defence. I am grateful to my hon. Friend for raising that extremely important point. It suggests that, while expressing our efforts more clearly to Congress and to others in America, we must all consider how we can further improve our contributions to the common defence.

European nations are already striving to strengthen their contribution through the revitalised Western European Union and through the Independent European Programme Group. The United Kingdom assumed the presidency of the Western European Union in July. We shall use the period of our presidency to strengthen co-operation among European nations and encourage practical contributions to the common defence. We shall also work to secure a satisfactory outcome to the negotiations on the entry of Spain and Portugal into the organisation. The Western European Union also played a key role in co-ordinating the presence of European navies in the Gulf in the last year, as my hon. Friend the Member for Ashford (Mr. Speed) just mentioned.

We are also seeking actively to extend bilateral links with our European allies, as they can make an important contribution to strengthening the Alliance. In particular, we are examining a number of proposals for closer co-operation with France and the Federal Republic, covering a wide range of defence business, and we have recently agreed to establish a joint study with the Federal Republic to consider how the close links that already bind us can be further developed within the Alliance framework.

European nations have a special role to play in the basing of theatre nuclear forces. These forces give vital support to the Alliance strategy of flexible response. As with other forces, they must be kept properly structured and up to date. That is nothing new. It is part of the enduring responsibility which a full and active membership of the Alliance carries with it. Decisions on these matters will be taken as and when required, and will be reported to the House at the appropriate time.

Sir Peter Emery (Honiton): My right hon. Friend referred to the role of the Western European Union. Does he accept that the North Atlantic Assembly consists not just of the WEU nations but also of the Americans and the Canadians, which means that NATO as a whole is represented in that assembly, that it ought to be encouraged to reflect the political will of the Alliance to as great an extent as WEU and that it ought to play as great a part as WEU?

Mr. Younger: I agree with my hon. Friend. The North Atlantic Assembly is another useful forum in which to explain to our friends across the Atlantic how much the Europeans are doing, and vice versa.

Mr. John Wilkinson (Ruislip-Northwood): My right hon. Friend will remember that he and the British Government most kindly hosted a WEU symposium on research co-operation within Europe in the military sphere. Is my right hon. Friend able to report to the House that any progress has been made on implementing its recommendations, which were contained in the Vredeling report to the Independent European Programme Group —that there should be a single permanent secretariat for the IEPG and a common research fund for military research within the IEPG nations?

Mr. Younger: I am grateful to my hon. Friend. I remember the symposium very well. I shall be in a better position to answer his question in a fortnight's time. Another meeting of IEPG Ministers is to take place in Luxembourg in about two weeks' time. Good progress was made at the last meeting, but we are still awaiting final decisions. However, we are working very much along the lines that my hon. Friend has mentioned. I hope to be able to report to the House before very long that further progress has been made.

To get the greatest benefit from these developments and improvements, we need well trained and highly skilled people. We expect a great deal from our service men and women and from the civil servants who work with them. Happily, they always seem to be able to meet our expectations, but we must not take their efforts for granted.

Consider, for example, the range of professional skills that they must demonstrate—from the traditional skills of the battlefield to state-of-the-art knowledge of electronics and computers. The Army alone has no fewer than 150 different categories of employment. No other work force in the country can match the range of skills and of training available in today's armed forces.

Consider also the diverse tasks that we ask our service men and women to undertake, often in difficult and dangerous circumstances. We have had many occasions in the past year to admire the skill and efficiency with which they perform their operational duties. Nowhere are these qualities more apparent than among the personnel from all three services who support the Royal Ulster Constabulary in the fight against terrorism in Northern Ireland and elsewhere. These qualities have been demonstrated in the light of the recent upsurge in violence which has brought tragedy to so many families, both service and civilian.

We are all aware of the great personal courage that it takes for the security forces to discharge their duties in the hazardous circumstances of the Province, but we should not forget that these duties also require of them enormous patience, discipline and professional expertise. Our troops there face a ruthless enemy who deliberately brings death, destruction and misery to all the people in the Province, to their own community as much as anyone else. Our service men's contribution in enabling the ordinary law-abiding people of Northern Ireland to go about their daily lives in peace is beyond question. I am sure that the House will wish to join me in expressing our admiration and appreciation to those many thousands of service men and women who continue to serve us so well.

A similar level of professionalism has been shown by the men of the Royal Navy, the Royal Marines and the Royal Fleet Auxiliary who have been carrying out the Armilla patrol since 1980 in tense and trying circumstances. The reduced tension in the region means that conditions are now right for the Armilla patrol to move away from closely accompanying British merchant shipping to patrolling the areas of the Gulf most used by British shipping, but we are not reducing the size of our naval forces in the Gulf, and we shall continue to provide protection for British merchant shipping for as long as a significant threat to their safety remains.

Mr. Tony Banks (Newham, North-West): Does the Secretary of State still feel that there is a significant level of danger to British shipping in the Gulf, in view of the decisions taken by Iran and Iraq? How many foreign ships have re-flagged to the ensign in order to take advantage of the Armilla patrol, which many Opposition Members think has been using the British Navy as a mercenary force? Would it not be appropriate to ask some of those countries that have re-flagged to pay part of the cost of the Armilla patrol?

Mr. Younger: I am always grateful to anybody who offers to pay any part of the costs of what we do, but I must resist that temptation in this case. A very small number of countries have changed to British or to British dependent territory flags. The British Armilla patrol has been prepared to accompany only British-flagged or owned ships. In doing so, it is interesting to note that the Armilla patrol has escorted in and out of the Gulf more ships than all other countries added together. As the Armilla patrol is supporting only British shipping, that is a remarkable contribution to the British shipping industry, to our interests overseas and to the rights of world shipping to use international waters. It has been a very fine chapter in the long history of peacekeeping by the Royal Navy.

It is our duty to ensure that we provide the equipment and support that the services need to undertake their multifarious tasks, consistent with operational and value-for-money considerations.

Our defence budget, at £19,215 million this year, is among the highest in NATO, both in absolute terms and in the share it represents of our national wealth. The cash increases in planned provision published in the last public expenditure White Paper enable us to consolidate that post real growth and to maintain our defence spending at a level almost one fifth higher in real terms than 10 years ago. We can thus carry through the necessary modernisation of our strategic nuclear deterrent.

The Trident programme remains on course for entry into service in the mid-1990s. However, the bulk of the real increase in defence spending has been devoted to improving our conventional forces. Since 1978-79, we have spent some £21·5 billion more on defence than would have been the case if expenditure had been kept at 1978-79 levels. Of that increase, only £2·5 billion has been spent on strategic nuclear forces.

We have yet to reap the full benefits of that investment. I can cite various examples of major items of equipment ordered for delivery during the next few years. Twenty-seven of the 64 major vessels ordered for the Royal Navy since 1979, almost two thirds of the 200 aircraft ordered for the RAF since 1979, the bulk of the new armoured personnel carriers for the Army, a further regiment of Challenger tanks, three multiple-launch rocket system regiments and a new air defence regiment equipped

with the Starstreak high velocity missile have still to be delivered, although they have been ordered and are currently being produced.

Mr. A. E. P. Duffy (Sheffield, Attercliffe): The Secretary of State has made claims about the Government's shipbuilding programme that were made, again and again, by his predecessors. It is easy to make such claims—even in this House—and avoid close examination, much less analysis.

The plain fact remains that under this Government the ordering rate for new vessels has been only 1·6 per year. Because of the attention paid to the effectiveness and size of our fleet during recent years, all hon. Members must be aware that even to retain a reduced surface fleet of about 50 calls for an ordering rate of three ships per year. How can the right hon. Gentleman get around those two figures? The Government's record stands at 1·6, against the three ships required to carry out Government policy.

Mr. Younger: The hon. Gentleman knows a great deal about these important matters. It is not surprising that the ordering rate during the past few years has been lower than usual, because we are changing from one type of frigate to another, and there is always a pause when changing to a new type. Of course, the number of ships ordered per year is only one factor in keeping the size of the surface fleet at the required level, which is about 50 destroyers and frigates. The Select Committee clearly said that the required number was, in fact, 2·6 and not three as the hon. Gentleman suggested.

I assure the hon. Gentleman that, through a combination of new ordering of ships and keeping old ships operational until the end of their useful life, we intend to maintain the destroyer-frigate force at about 50 for the near future. I hope that that is the assurance that he seeks.

The fleet is benefiting from a substantial programme to keep our surface escort force up to date, with 10 frigates currently on order. Those include the three new type 23 frigates ordered in July from Yarrows. They will provide a major improvement in our anti-submarine warfare capabilities. We expect to invite tenders for more of those ships next year. Our ability to counter the submarine threat in the north Atlantic will be enhanced further by the three nuclear-powered fleet submarines and four type 2400 Upholder class conventionally powered submarines that are on order. Major programmes are continuing to update the fleet's air defence and mine countermeasure capabilities, and to improve underwater weapon systems and sonars.

The Army's contribution to forward defence in Germany is being strengthened by the formation of 24 Airmobile Brigade, bringing a new degree of flexibility to 1(BR) Corp's operations in NATO's central region. An additional Challenger regiment is in place, and Saxon and Warrior armoured fighting vehicles are being deployed. The most modern equipment, including the SA 80 rifle, the LAW 80 anti-tank weapon, the S10 respirator and battlefield thermal imaging systems, is steadily being introduced. That programme will greatly improve the Army's capability, especially its mobility and firepower. We are continuing to examine both an improved Challenger and foreign options as possible replacements for the Chieftain tank.

The RAF's major modernisation programme is well under way. Two thirds of the strike attack version of Tornado are now in service and the first two squadrons of the air defence variant have formed during the last year. The first squadron of the improved Harrier, the GR5, has started to form. Since the statement was published, the Government have signed a memorandum of understanding for the full development of the European fighter aircraft. That is a major step towards providing the RAF with the next generation of air defence and offensive support aircraft. The Government remain determined to continue to provide the resources necessary for effective defence and to ensure that we get the best value for these substantial sums of money.

During recent days, there has been a good deal of speculation and rather wild allegations in some parts of the press and from some Opposition Members about the sale of Royal Ordnance to British Aerospace last year. I should like to put the record straight. The fact is that we held an open competition and BAe won it. What it bought for £190 million was the business as a going concern, with its weaknesses as well as its strengths. It is all very well to speculate about the profits that BAe may or may not make from developing the sites at Enfield and Waltham Abbey, but the minuses must also be taken into account. For example, BAe faces substantial costs in reproviding the Enfield and Waltham Abbey facilities elsewhere; the company has embarked on a major rationalisation programme which will lead to costs for providing equipment and for redundancy; many of the sites being disposed of will need a good deal of decontamination work before they can be developed; and BAe also took on existing contracts at Royal Ordnance, whether profitable or not.

The benefits that might be derived from any property development depend very heavily on whether planning restrictions for the areas concerned are relaxed. All these factors have to be weighed together, and that was the commercial judgment made by BAe and the other competitors when framing their offers. The Government, as advised by their merchant bankers, Rothschild, believed that the price obtained was very fair. Indeed, it was almost twice the £100 million that Rothschilds advised would have been obtained had we floated the company. That is the answer to all those who try to take one aspect of a perfectly genuine sale while ignoring all the other facts that led to a balanced judgment, after competition, with the best price being obtained for the public purse.

Mr. Dick Douglas (Dunfermline, West): As the right hon. Gentleman knows, one of the important Royal Ordnance factories is in Scotland. Will he confirm that it was always open to the Government to reject any offer, even that made by British Aerospace? Therefore, the responsibility for losing finance and resources for the nation, which will now accrue either directly or indirectly to British Aerospace, lies with the Government.

Mr. Younger: There will be no such effect. It was, of course, the Government's decision to transfer Royal Ordnance to private ownership. It is well known how that was done—through competition, with the best price being taken. That fact cannot be denied. The hon. Gentleman knows that the objective—which looks like being attained—is to produce a more profitable, more successful Royal

[Mr. Younger]

Ordnance that can export more successfully. That will be of benefit not only to the country but to the company's employees.

Dr. John Reid (Motherwell, North): Will the right hon. Gentleman comment on the staggering difference between the value of the land when it was sold to British Aerospace and the value of such land if it is sold now? Will he confirm that the excuses that are being given—namely, the distinction between what is called the use value of the land and the market value of the land, which is the get-out for the Department now—are a step backwards for him a reconversion to Marxism?

Mr. Younger: I am not sure about the last point. The hon. Gentleman would be much more of an expert on that matter than I am. On the first point, the clear fact is that consideration of the value of the business as a whole took all that into account. Even if it had not, there was an open competition in which everybody knew all the facts, and the best price was taken.

On his second point about land values, I remind the hon. Gentleman that land values can be affected by many things, one of which is whether land has planning permission. Much speculation has centred upon making exotic calculations about land values without planning permission and assuming that planning permission might be granted. The disposal of land also depends on the condition of the land. Because of its condition, some of this land, if it were to be disposed of, would require quite a lot of money to be spent on it. I hope that that has answered the hon. Gentleman's question.

This year's statement outlines the measures in hand and the successes so far to ensure that resources are used effectively. Civilian staff numbers are now down by over 40 per cent. from 1979 levels. The Department is adopting a new management strategy. By the early 1990s, we shall have a system of budgets for running costs operating in all parts of the Department and in commands. Managers will have greater freedom with approved budgets to determine how best to meet their objectives, for which they will be accountable. We have set ourselves ambitious annual targets for improving the efficient use of resources. These improvements may be secured either by reduced input for the same output or increased output for the same input.

In response to the "next steps" initiative, we are examining two possible candidates for agency status—the Meteorological Office and the non-nuclear research establishments—and how they could provide us with a more responsive and more effective service. Another key element in our strategy is the continued pursuit of a more commercial approach to equipment procurement. The benefits of the more rigorous approach to competition are already apparent. An indication of the savings to be obtained is given by the 11 examples quoted in the statement, which will yield savings of over £100 million, and the competition for this year's order of type 23 frigates obtained significant savings over earlier prices.

We are also redeploying service manpower to enhance operational capabilities. Since 1981, the proportion of Royal Navy personnel serving in the front-line or immediately in its support has increased to 70 per cent. About half the savings of 4,000 uniformed support posts, under the Army's "lean look" programme, have now been achieved, to the benefit of front line units, and the RAF has saved some 1,700 uniformed posts in the support area over the past four years.

In its report on this year's statement, the Defence Committee expressed concern about the defence implications of reduced spending by my Department on research and development. I can assure the House that the primary objective will continue to be to ensure that sufficient R and D resources are provided to meet essential defence needs.

Mr. Tony Banks *rose*——

Mr. Younger: I should press on, to enable other hon. Members to speak. However——

Mr. Banks: I am grateful to the right hon. Gentleman. Perhaps if there had been a bit more R and D, scientists and military personnel would have known the size of rifles. I understand that 42 million bullets were bought from India, and it turns out that the rifle bore does not match the size of the bullet. Is that true? How much has that cost the British taxpayer? What is the shelf life of a bullet?

Mr. Younger: I understand that the ammunition in question is no longer satisfactory. I also think that the hon. Gentleman may unwittingly be scoring one of his celebrated own goals, because it was ordered and obtained by the last Labour Government.

The decisions earlier this year to participate in full development of two major collaborative programmes, the European fighter aircraft and the Trigat guided weapon system, are clear proof of the better use of R and D resources.

On the reduction, it has to be recognised that the nation's resources of qualified scientists and engineers, and of skilled manpower to support them, are not infinite. While meeting our essential defence requirements, we must also ensure that the successful working of the civil economy is not hampered. Appropriate restraints on Government-funded defence R and D spending are necessary to free resources for civil work, but companies will be encouraged to offer technology that they have developed for civil purposes when tendering for defence equipments. This approach implies no change in our criteria for selecting new equipment.

Our policy will continue to be to secure the best long-term value for money in national terms in procuring the equipment needed by the armed forces for their tasks. In most cases, that will involve national programmes of development and production or collaboration with our allies. In some cases, as in the past, we shall find that best value is obtained by turning to a foreign supplier.

I entirely share the Select Committee's view that the effects of the constraints on defence R and D spending must be carefully watched, and any disadvantages minimised. My Department fully recognises the need to support and to have access to sufficient R and D to maintain effective defence, while avoiding a situation where such demands might hinder the long-term economic development of the United Kingdom as a whole. Other Departments besides my own will play an appropriate part in this, in particular the Department of Trade and Industry as regards the impact on civil R and D effort.

The House will of course recall that British industry, with the energetic encouragement of the Government, has itself had notable export successes this year, particularly with the memoranda of understanding that we have

concluded with the Governments of Saudi Arabia and Malaysia. The total value of export contracts signed in 1987 was some £3·5 billion.

On the more general point about the defence budget, the House will understand that I can say nothing at this stage about the 1988 public expenditure survey, beyond reaffirming the Government's commitment to a strong and credible defence policy.

The Select Committee recognised that, in the 1987 survey, the Government allocated extra resources to defence over those planned in previous years. This provided broadly level funding in real terms until 1990-91, and some necessary room for manoeuvre in the programme. But there will always be, as we have said, difficult decisions about priorities, of the sort faced every year, and by all Governments, in the course of the usual planning cycle. It may be necessary to make changes at the margins of the programme, to allow for cash pressures, to offset necessary enhancements in capability elsewhere in order to construct a sustainable, balanced programme.

Mr. Derek Conway (Shrewsbury and Atcham): I am grateful to my right hon. Friend for giving way. I shall not delay his concluding remarks. In view of what he has said, and in view of the fact that 50,000 Territorial Army troops are committed to the British Army of the Rhine, will my right hon. Friend tell the House whether the phase 2 enhancements for the Territorial Army are progressing well and are safe from cuts or whether they, too, will be within the remit of "further consideration"?

Mr. Younger: All items in the programme are under consideration at all times, but the expansion of the Territorial Army has gone extremely well. We should like to see it go further, but we require better recruitment and better retention of people in the Territorial Army to get the numbers that we wish.

We have already had to face some difficult choices. We would have preferred, for instance, to buy eight AWACS aircraft, but we had to conclude that we could afford only seven at this stage. We have had to conclude that we should not fit a 360-deg radar to Royal Navy Lynx mark 8 helicopters. Undoubtedly there will be other difficult choices, but we shall maintain all our main defence roles and commitments, as this year's statement makes clear.

Mr. Douglas: Surely the Secretary of State will make some comment about armed forces' pay and the fact that, in 1989, in Scotland in particular the armed forces will have to pay the poll tax. What provisions are being made for some consideration of that and the removal of the anomalies involved?

Mr. Younger: The hon. Gentleman has raised a point that has nothing to do with armed forces pay. The armed forces will be treated the same as every other citizen with regard to the community charge. I do not think that they are likely to be treated in the same way as the hon. Gentleman appears to be planning to treat himself—by not paying it.

The world is changing with regard to arms control. It is changing in a way which presents this country and NATO with new challenges and opportunities. The best means of pursuing those opportunities is to remain faithful to policies which have proved their worth and develop them to meet the new challenges ahead.

We will seek, as we have done, to move to lower force levels, but the journey will be a long one and will be undertaken with caution. The West's need to maintain its security by preserving and modernising the structure, range and equipment of its forces will continue.

In their first defence White Paper, the Government pledged to restore our defence effort to the level needed to give the best possible guarantee of safety and peace, using the most economical means possible. In this one, the Government continue to pursue a programme which has been proved to be successful and has been designed to fulfil that pledge.

5.31 pm

Mr. Martin O'Neill (Clackmannan): I beg to move, to leave out from "House" to the end of the Question and to add instead thereof:

'believes that the plans outlined in the Statement on Defence Estimates, Cm. 344, and in particular the Government's acquisition of Trident which is neither British nor independent, are already having a deleterious effect on the conventional defences of the United Kingdom, especially the Royal Navy surface fleet, and on related defence procurement industries; calls upon the Government to cancel Trident and use resources to secure our non-nuclear defences and to work actively for the reduction and abolition of nuclear weapons in Britain and elsewhere and the adoption by NATO of a strategy of No First Use; applauds the signing of the Intermediate Nuclear Forces Treaty by the Governments of the United States and the Soviet Union and would be opposed to any nuclear arms deployment which would undermine the effectiveness of that Treaty; welcomes the progress being made towards a Chemical and Biological Weapons Ban Treaty, and the anticipated 50 per cent. cuts in ballistic missiles which would result from the Strategic Arms Reduction Talks; and further believes that the Conventional Stability Talks will provide the means whereby NATO and Warsaw Pact troop numbers can be asymmetrically reduced, forward troop deployments can be withdrawn, and short-range ground and air-launched dual capable systems can be eliminated.'.

This debate is long overdue. It is five months since the White Paper was published and we are now more than half way through the period of estimated expenditure. I realise that part of the delay is due to the time required for the Select Committee to prepare its report and its commentary on the report. We welcome the report and the helpful, if at times somewhat understated, criticisms that have been made.

Our contention is that after nine and a half years of Government the time has come for a comprehensive defence review that will take account of the budgetary crisis that the Secretary of State skated over in his closing remarks. The review should assess the impact of the cost of Trident on the rest of our defence provision and place Trident in the context of the emerging arms control consensus between the two alliances. It should also consider how we should respond to the challenges made to many of the assumptions upon which the flexible response theory and nuclear deterrent are based.

In the light of the INF treaty and the confusion that exists between the Government and the Government of the Federal Republic of Germany about the time and nature of the modernisation of short-range systems, these matters must be looked at in a cool way. We will endeavour to raise them this afternoon, but I hope that the Secretary of State will bear in mind the words of one of his predecessors, when he said:

"We have a choice. Either we can continue to pretend that there is no problem, that we can wish away the threat or

[Mr. Martin O'Neill]

imagine that the United Kingdom can somehow sustain, replace and enhance its operational effectiveness without a fresh look at how we perform our tasks—what we are doing, and why—or we can continue to drift down the path that led. . . to cuts".—[*Official Report*, 19 May 1981; Vol. 5, c. 160.]

That statement was made in the House by the former Secretary of State for Defence, Sir John Nott. The task which he set himself, and from which he had to back down, is one that the Government, nine and a half years into their period of rule, should look at again. There are a number of problems which must be dealt with and which would strengthen the hand of the Secretary of State in his battle with the real chief of defence at the moment, namely, the Financial Secretary to the Treasury.

Mr. Edward Leigh (Gainsborough and Horncastle) *rose*——

Mr. O'Neill: I should like to carry on, but I shall be happy to let the hon. Gentleman speak in a moment or two.

Since 1984-85, and including this year, 1988-89, defence spending has fallen by 7·1 per cent. in real terms. That may be greater if inflation continues to rise above 4·5 per cent. and the spending outturn falls below the planned level. It is likely that the real reduction over the past five years will be about 8 per cent. I quote those figures from the work of such people as Professor Greenwood at Aberdeen and Dr. Channers at the University of Bradford. They are people from varying positions in the political spectrum but who, as defence economists, come to pretty much the same conclusions. Their work has suggested that up to 1991 the budget will stabilise around its current level, but that will depend upon the Treasury allowing an increase in the MOD cash limit to compensate for higher than expected inflation projections. If that does not happen, we can expect defence cuts during the next three or four years of about 1 per cent. per annum in real terms.

Mr. Jonathan Sayeed (Bristol, East): Will the hon. Gentleman confirm that defence spending by the Government since 1979 in real terms has increased by 20 per cent.? Will he tell the House whether the Labour party, if it were ever elected, would continue defence spending at the same level?

Mr. O'Neill: I confirm the first question. I shall reply to the second question in the course of my remarks.

The decline in certain critiical areas of the budget is in large measure due to the expemditure on Trident during the past three or four years. As expenditure on Trident increases, with the accompamying rise in personnel costs, the funds for conventional equipment will continue to fall. Non-Trident expenditure om new equipment will have fallen by 26 per cent. between 1984-85 and 1988-89, and is likely to fall by a further 10 per cent. up to 1992. Spending on spares and repairs, excludling Trident, will have fallen by 15 per cent. in the five years up to 1989. By June 1991 more than 50 per cent. of the Trident budget will have been spent, with another 10 to 20 per cent. contractually committed. By 1992 it will be in excess of 60 per cent., with savings from the cancellatiom amounting to between £1 billion and £3 billion. Even in those circumstances, the saving will depend upon the contract interpretation.

I say to my hon. Friends who have an alternative amendment that they are deluding themselves if they believe that cancellation of Trident would release countless billions for social expenditure. My contention is that the deleterious effect that Trident spending will have on our conventional defences will require such a response that little of this money could be released from the defence budget in the early years of a Labour Government.

The Select Committee on Defence has pointed out that the difficulties of measuring the cost of replacing equipment in terms of generation-on-generation costs are often far in excess of what even the most sophisticated statistical tools at our disposal can predict. I shall repeat the examples quoted in the Committee's report. A type 22 frigate costs four times the price of the Leander that it replaced. The Challenger tank costs two and a quarter times the price of a Chieftain, and the Sea Wolf costs three and a quarter times the price of Sea Cat. In paragraph 2.11 of its seventh report the Select Committee says:

"There is no reason to think that the effect of this phenomenon is declining; indeed, in the areas of highest technology there is every reason to believe that it is increasing substantially."

It is not the equipment that forms the basis of our defence; it is the quality and morale of our service personnel.

Mr. Leigh: The hon. Gentleman spoke of the need for a review of defence policies. Will he review his own defence policy? Does he recall writing in 1988 in the "Journal of European Disarmament" that he was opposed to END's over-emphasis on human rights in eastern Europe? He said that if it came to a choice between reducing the threat of war and defending human rights in eastern Europe, he knew which course he would take. Will the hon. Gentleman also tell us whether he still believes that the Labour party's commitment to nuclear disarmament is greater than ever? Does he belong to that wing of the Labour party that wishes to consult the British people, or to that wing that wishes to ignore the wishes of the British people? Perhaps he could come clean.

Mr. O'Neill: I was mistaken in letting the hon. Gentleman intervene. I appreciate that, as a lawyer, his capacity wilfully to misrepresent statements is a way of life. My first point is that I do not believe that the process of disarmament negotiations should be unnecessarily involved in questions of freedom and civil liberties at the same time. That is a dangerous precedent that clutters up discussions, and that is something that is accepted by all those who are seriously concerned about the prospects for arms control. I am whole-heartedly behind the present moves to reduce the threat of nuclear war on the continent and throughout the world.

The hon. Member for Gainsborough and Horncastle (Mr. Leigh) interrupted me as I was trying to raise the matter of the pay and conditions of service men, to which the Minister did not refer. I welcome the Government's implementation of the pay review board award. That was necessary, and it is desirable that we seek to treat our troops as fairly as possible. However, it should be borne in mind that, under the new budgetary arrangements, any increase in the amount contained in the Supply Estimates, over and above that increase estimated for inflation, will have to be borne within the defence budget. An inflation

rate of 6·5 per cent. is mentioned, and that means that we are talking of an RPI of 4·5 per cent. We know that that is a gross under-estimate of the ultimate rate of inflation.

This year the Ministry has already overspent its budget for food and accommodation by some £230 million. An ever-increasing element of the defence budget will be accounted for by enhancements to pay and conditions. Unfortunately, such enhancements will be paid for by resulting inadequate equipment and reductions in supplies. Such enhancements must be found within the budget, and they will be at the expense of the kit and conditions under which service people must work. Since 1983 the pay awards to the services have been underfunded by the MOD to the tune of £725 million.

Such is the disenchantment with service life that, in certain critical areas, such as air crews, we are training fewer pilots than are leaving the service. All too many high-grade technicians are leaving the naval technical staff and they are exactly the type of people whom we wish to retain to man our high-tech frigates in the 1990s.

I am surprised that no one has referred to the previous Labour Government and the days when recruitment was lower and resignations were higher. I accept that that took place, but unemployment is now twice as high as it was in 1979, yet we still see valuable people leaving the services at an alarming rate. In constituencies such as mine, male unemployment is still sticking at around 20 per cent., and in some of the villages young adult male unemployment stands at 40 per cent. We do not need to be reminded that unemployment is still the best recruiting sergeant.

We look to the future with some concern, because the Government have not properly taken into account the fact that that cohort of the population between the ages of 16 and 19, who account for about 80 per cent. of recruitment into our forces, will fall from 1·8 million, as recorded in 1987, to around 1·3 million in 1994. I concede that in Germany the population change is more dramatic, but it has established a plan that will take it through to the year 2000 that will accommodate that change. Germany already operates a system of conscription, and we are not talking about such a system. The Government must take into account the changes in the age groups within the population and the reduction in the birth rate, not only in terms of military planning, but because of their effect on the labour market. The cost of such planning must be borne by the defence budget.

Mr. Bill Walker (Tayside, North): I wish to refer to what the hon. Gentleman said about the problem as it affects Royal Air Force pilots. Does he accept that the requirements for a modern fast jet pilot are much higher than they were some years ago? The numbers volunteering have not dropped. The problem is finding sufficient numbers of the right quality, and that means aptitude as well as everything else, and included within that is attitude. It has been most difficult to find sufficient numbers with the right attitude. This is a qualitative problem rather than a quantitative one.

Mr. O'Neill: I appreciate the hon. Gentleman's great interest in the works of W. E. Johns, and I recognise his experience in such matters. However, fewer pilots are joining the RAF than are leaving it. It is not just a qualitative problem, and I believe that the hon. Gentleman's comments are a slur on those recruits that are taken on. I accept that the rigour of the training is considerable, but we should consider how to keep those men on whom we have spent so much money and training and who are so valuable to our defence effort.

Population figures are important and the Ministry should anticipate that problem. Perhaps we shall hear something about this in the debate. The pay and conditions of the armed forces are important, and will become increasingly so as there are greater and greater pressures on the labour market.

We recognise and welcome the work that has been done in the "tail to teeth" programme, which is a useful and helpful enhancement of the armed forces. We also recognise and pay tribute to the work of the Territorial Army. We hope that the programme that the Secretary of State instituted a couple of weeks ago will be a success. There have been problems with the TA, and research has shown that its image and conditions have not been as good as they might have been. The Government are now learning a lesson that has been spelt out to them by Members on both sides of the House since they took office.

Mr. Conway: The hon. Member has been reasonable in his remarks, and I am grateful to him for giving way. During the course of the recent election campaign his leader made a commitment to expand conventional forces to counteract what his party was saying to the public about nuclear forces. Given that that commitment still stands —notwithstanding the other amendment tabled by some of the hon. Gentleman's recalcitrant hon. Friends—and bearing in mind the reduction in the number of adult males available for military service, how does the hon. Gentleman marry those two precepts? He rightly says that the Ministry must think about this problem, but, given the commitment that the leader of his party has made, where will those young service men come from? Is he not actively saying to the young British public that the Labour party stands for the reintroduction of conscription?

Mr. O'Neill: I do not believe that there is any basis for that argument. I believe that it is the Government's responsibility to anticipate the dramatic drop in the number of young people who will be available for recruitment within the next five years. That drop will, I hope, be accompanied by a change in the labour market, and any Government taking office in 1992 will have to address that problem. It is incumbent upon the present Government to consider it.

Some of our allies have had to extend conscription and that is fair enough as they have more pressing problems than our own. That has been the German solution, but it is not the British solution. It is not one that I would advocate, and I do not believe that any of my hon. Friends would be prepared to support such a solution. I am not suggesting that the Labour party considers that there is any possibility of the reintroduction of conscription, but the Government have a responsibility to come up with a solution. The Government are making estimates about what they want to spend within the next three to four years, and we are entitled to know what plans they have regarding recruitment. We do not know their plans at present, and surely it is one of the items that should be included in a defence review.

Mr. Duffy: In the face of inquiries from Conservative Members about what a Labour Government would do, is it not helpful to put on record what the Labour Government did in 1978-79 in respect of these two matters

[Mr. Duffy]

with which my hon. Friend has dealt at length? The Secretary of State for Defence is smiling, but I wonder whether he is aware that the Labour Government removed the pay claim from the defence budget. They entered into a commitment to increase defence spending by 2 per cent. I know that that was a NATO sanction, but the understanding was that it would be for conventional equipment. That is the record.

Hon. Members: Answer.

Mr. O'Neill: One must take refuge when one can.

I have dwelt on the cost of personnel, where economies cannot be made. Greatest savings can be made in procurement, and the Government's solution, as I am sure we shall hear tomorrow if not later today, is competitive tendering. That means that, instead of the old cosy relationship between defence manufacturers and the Ministry, where a figure was set for a contract and an additional percentage provision made for increased costs —the cost-plus approach, as it was known—we now have competition between suppliers, and the lowest tender wins. Naturally, if the Government continue to think that the cost is too high, they re-tender, forcing the price down further. That happened with the contract for the latest batch of type 23 frigates.

But that is only half the story. When the Secretary of State does not have the money, or when it is earmarked for something else, it is only too convenient for him to delay the process by requiring a new round of bids. That has the effect of forcing companies into corners, and in shipbuilding it leads to a beggar-my-neighbour, and ultimately a beggar-myself, approach. That is evidenced by the difficulties that both Yarrow and Swan Hunter had in meeting the challenge of the contracting process for the type 23. As a consequence, both the design teams and the work force must be declared redundant.

That tough value-for-money approach is seen in other areas where competitive tendering is inappropriate. The recent contract with British Aerospace for the ROFs' munitions and supplies showed that macho-negotiating can reduce a price from £700 million to £400 million. It could be argued that since British Aerospace is a monopoly supplier it is reasonable to protect the taxpayer, but it is neither reasonable nor prudent for the Government to impose a price and cost regime on a supplier such that the surplus capacity—it was recognised that the ordnance factories were always required to meet increases in demand in time of crisis—would be threatened. That is yet another example of the shortsighted short-termism that so characterises the Government's approach to our industrial base and to procurement generally.

It is certainly true that the way in which the privatisation deal with British Aerospace was finally concluded resulted in an improper valuation of the real estate. We are told that the possibility of getting changes in planning permission was not taken into account. I defy the Secretary of State to give us more than 10 instances from the period when the present Secretary of State for the Environment has had planning appeals before him for the change of use of development land and he has refused it. If there has ever been a Government who are a soft touch for property developers, it is this one. For the Secretary of State for Defence to hide behind such a feeble excuse ill becomes his office and his responsibilities.

Mr. Keith Mans (Wyre) *rose*——

Mr. O'Neill: I have already given way four times, which is a reasonable amount, and I must proceed.

I hope that the Public Accounts Committee will investigate the propriety of the whole privatisation and that the Select Committee will examine the impact of a reduction in capacity on the ability of British Aerospace —the only realistic supplier—to meet our needs in a time of hostility. According to the White Paper, the Navy has sufficient stocks of fuel, spare parts and ammunition to meet NATO requirements, but even now plans exist to eliminate shortfalls. In the somewhat convoluted language of paragraph 310 of the White Paper we read that, although we meet NATO requirements, we do not satisfy the MOD. The Army's performance is not set out so explicitly, but it is stated that substantial resources are devoted to ensuring that adequate supplies of war materials can be obtained. Does that mean that targets are being met? The RAF already meets NATO requirements for virtually all war stocks and has plans to remove the remaining shortfalls.

British Aerospace is being required to cut its capacity because of the strictures of a contract which in the short term may be of advantage to taxpayers, but in the long term may be our undoing. If we strip away the gloss of the Secretary of State's remarks, clearly there are shortages in all the services, and we can only shudder at the problems that could arise. The RAF is merely another example of where the Government pursue value for money in the short term, but will sacrifice the defence of the country in

The Secretary of State gave cast-iron assurances in the House to the work force of the ROFs that their jobs would be safe after privatisation, but he now says that that is not his concern but the responsibility of management. If the management alone were to blame, perhaps we could expect some condemnation from him about the way in which those to be made redundant heard that they would lose their jobs. At six in the evening they switched on their television sets to discover that their jobs were to disappear. Neither the trade unions nor the work force, in any shape or form, were informed on 6 October. The Secretary of State says that it is not his fault or responsibility, but he was responsible for privatisation, for selling the factories to British Aerospace, for the price he accepted and for the deal which enabled the company to reduce capacity and sell the land. He will be responsible, too, for the lives of the service men, which could be endangered if the forces do not get the munitions that they will require in times of hostility.

The picture is similar for other MOD privatisations. We have seen disastrous job losses at Devonport, where more than 5,000 people will have to leave the yard by 1990. The Secretary of State knows my concern and that of the whole work force on this issue. The unions and I appreciate his willingness to meet us and hear the case, but I must say to him what we said in his office: urgent attention must be given to the diversion of additional work to the yard—the Southampton is an obvious case. I realise that it is still somewhat early, but I hope that the work that Devonport has done in the past will be taken into account and that it will be given a fair chance of getting a share of

the work. The Secretary of State must take another look at the docking and rental charges, which he conceded were unreasonably high and impose an unfair burden on that yard.

Mr. Younger *indicated assent.*

Mr. O'Neill: Despite the Secretary of State's nods and sympathetic noises, action must be forthcoming speedily, because a yawning gap will open between the time of the new development and the need to close existing facilities quickly. He owes it not only to the Navy, which has been served so well by the yard, but to the work force and the people of the south-west who have depended on the yard for so long.

The problems that procurement presents for the Government are primarily due to the absence of any coherent strategy. Sadly, the only threat that can be discerned is the attempt to postpone decisions for as long as possible. The MOD is the biggest single customer of Britain's manufacturing industry. It has three responsibilities: to ensure that taxpayers' money is wisely spent and to obtain the best possible kit, to ensure that British industry gets the best possible chance, consistent with taxpayers' interests to meet the needs of the armed forces, and to enable United Kingdom suppliers to plan ahead and so arrange their research and development and productive capacity as to meet future demands in peacetime and war.

We read in *The Sunday Telegraph*, which on defence matters is never 100 miles away from the truth, that we are considering the purchase of a tank from the United States. Will the Minister who is to reply to the debate tonight deny that the Abram M1 tank will be bought off the shelf without even the prospect of production under licence? Will the Secretary of State tell us whether he is satisfied with the fact that AEG and Ferranti are competing over the contract for the European fighter aircraft radar, which is not so much a fight between AEG and Ferranti, but a fight to the death between Marconi and Ferranti, and possibly our last opportunity to have a presence in the new generation of radar systems? Would the Germans or the French behave in that way? I very much doubt it. They have a sense of what one may call undue nationalism about the defence of their industries. But they certainly do not sell the pass in defence procurement, as the British Government do.

The British defence industry is demoralised, despite its success in selling abroad, which success we welcome. The first thing that defence contractors tell us about is the difficulty of obtaining consistency and forward planning from the Government. Just as the deployment of our men and materials requires planning and the development of our new equipment requires foresight and research, so we need strategic thinking for the defence industry to restore the confidence of the managers who run it, the people who work there and the armed forces, whose lives will depend on it.

Behind all the distortions to the budget lies Trident—the weapons system that we do not need, that we cannot afford and that will hardly be ours if it arrives. We know from the Select Committee report that problems have arisen with the capital works at Aldermaston, which will be two years late. The Committee was worried about the implications of those problems for the Trident warhead programme, which would have repercussions for the three other SSBNs that will enter service in the second half of the 1990s.

Equally important is the problem of staffing at Aldermaston and Burghfield because of low rates of pay. The Committee concluded in paragraph 90, in the light of all the prevarication, the misleading statements, the half truths and the economies with the truth from the mouths of officials and others:

"We consider that the MoD can have little cause for complaint if future assurances are not taken at face value."

Trident is the most prestigious programme which the Government are backing, we believe wrongheadedly, but the watchdog of the House—the Select Committee—has said, in the light of the assurances that it has received from the Government, enough is enough and that it will no longer easily take their word for it.

Mr. Michael Mates (Hampshire, East) *indicated dissent.*

Mr. O'Neill: The hon. Member for Hampshire, East (Mr. Mates) shakes his head. Perhaps the Chairman of the Select Committee chooses his words injudiciously when trying to achieve ambiguity in his reports and in trying to ensure unanimity. The hon. Gentleman may not understand what he is saying, but I understand the report all too clearly to mean that he and his colleagues are sick and tired of the short change that they have been getting from the Government in respect of that area of the Trident programme.

The production of the warhead is the only part of the programme that is distinctly British. In almost every other area the work is done under licence from the United States. Last year the Secretary of State said that the warhead was made entirely in Britain, although the Select Committee states at page 22:

"The purchase of elements of the re-entry body and certain warhead-related components within it are mainly incurred in the U.S."

Not only are the missiles American, but the guidance system has been purchased from the United States. The only part that is British built will be the fissile material, which we are having difficulty obtaining at present. Sadly, we are years behind with the construction of buildings and the recruitment of staff, and although we may have the boats we shall certainly have to wait for the warheads.

As my right hon. Friend the Member for Manchester, Gorton (Mr. Kaufman) discovered when he visited King's Bay in Georgia earlier this year, the Trident D5 missile pool will provide us with "drawing rights". We shall be able to obtain equipment as and when required, but we shall have to take missiles back there for servicing and the whole process will take about 18 days. If there is a war —I sincerely hope not—we can only hope that the Russians give us three weeks' notice before launching any nuclear weapons.

So much for our independent deterrent. Apart from the problems that are being caused to the services as a whole, the problems of the Navy are manifest in the declining size of the fleet. I had hoped that the Secretary of State would give us the latest figure. In a previous debate we had a running total on a daily basis. One day officials gave the Select Committee a figure, and the next day junior Ministers told us that the figure was slightly more, but that it might be slightly less depending on what happened. Perhaps the Secretary of State will tell us whether it is about 50 or under 40.

[Mr. O'Neill]

We must take account of the Armilla patrol, on which I welcome the Secretary of State's remarks. It has done an outstanding job in difficult circumstances. It is no secret that that is not the easiest place in the world in which to work. I hope that in the very near future, when circumstances allow it, the Secretary of State will consider bringing back some of our men, because the conditions in which they operate are not only dangerous but, in the context of the climate, extremely uncomfortable. We owe that much to the men who have displayed such fortitude and professionalism throughout the operation.

The size of the fleet was the subject of a major report from the Select Committee this year. Referring to the previous report "The Way Forward", the Select Committee said:

"The philosophy underlying that paper has been quietly discarded without being replaced by a Ministerially approved coherent long-term plan for the Navy."

It came out in evidence to the Committee that the confusion derived from the fact that if the Navy wished to participate in a forward maritime strategy, its contribution in more traditional terms to the campaign in the south-western approaches might be limited to a surprising extent.

Yet the entire purpose of the northern maritime strategy has been the highly provacative aim of taking out a large section of the Soviet fleet that is based in the Kola peninsula. It was somewhat inelegantly described by a former Under-Secretary for the Navy in the United States as bearding the bear in its lair. There are grave doubts in the mind of the Norwegian Government about the good sense of having this highly provocative presence in northern waters.

Mr. Julian Brazier (Canterbury): Will the hon. Gentleman give way?

Mr. O'Neill: The hon. Gentleman has experience in some matters relating to the armed forces, but the Navy is not his specialist subject, so I shall not give way.

The White Paper seems to suggest that the Soviet threat is reducing in the northern waters, because it says that Soviet naval deployments away from home have been reduced steadily during the past two years. It is time for NATO to reconsider that provocative and potentially destabilising strategy which, in purely national terms, debilitates and confuses our contribution to the overall maritime strategy of the Alliance and causes alarm and misgivings among the people whom it is supposed to protect—the Norwegians.

NATO is reconsidering its approach to the modernisation of short-range weapons. The March meeting of the NATO Heads of Government was somewhat confused in its intentions. The Prime Minister's view of what was decided was very different from that of Chancellor Kohl. Perhaps that was because he got to President Reagan the week previously and stitched up the entire deal. He said that there would be no modernisation of short-range weapons in the foreseeable future, which means beyond the West German elections in 1990 and well into the 1990s.

Furthermore, the Germans are most reluctant to replace theatre or tactical weapons. The reasoning for that is clear. No one who lives in either of the two Germanies wants nuclear weapons which, if fired, could either land in his own country or endanger the lives of his family who live on the other side of the border. Even the French, whom we normally associate with the level of bellicosity to which the Prime Minister seeks to aspire, have now recognised that the use of such weapons from within France could result only in their landing in the Federal Republic. The fallout from Chernobyl in central Europe has left an indelible mark on the minds of the people who live there. They now recognise the dangers of blitzkrieg, whether nuclear or conventional.

It appears, from what we have heard from the Secretary of State today, and from repeated statements by the Prime Minister, that they do not begin to realise the political sensitivity of the issue on the continent of Europe. The simplistic and wrong-headed notion that the use of small nuclear artillery shells in the face of massing troop formations will result in the troops' withdrawal, and not retaliation, is incredible.

As we approach the conventional stability talks, the Government should open up a debate on the concept of flexible response. When the upper rungs of the ladder are about to be reduced by half because of the strategic arms reduction talks, when the middle rungs have already been removed, and when many do not want the obsolete bottom rungs replaced, should not Britain, which has its own strategic missiles and 55,000 troops in the firing line in Germany, take a lead in making the first step towards European disarmament by advocating a policy of no first use of weapons for our Alliance? If such steps were taken, we should be seen as a nation that was interested in disarmament.

It is becoming all too obvious that in the management of the post-INF environment Britain is collaborating with the United States in the building up of compensatory systems in Britain. An article in tomorrow's edition of the *New Statesman* will show that the F 111 will be kept in this country for the foreseeable future and that it will soon be equipped with long-range air-launched systems. Indeed, on 5 March this year, the *Washington Post* carried a report that some 50 F 111Gs will be based in Britain under an agreement between the United States and Britain, which was made at a private meeting in Norway last year following the NATO meeting there.

That is contrary to what the Secretary of State told the Select Committee on Defence on 18 May, in paragraph 58:

"no . . . proposals have yet been made".

I realise that when the article appears tomorrow that will be the time for someone to respond, but we in the House are all too well aware that the last people who ever get to know about the deployment of other people's weapons in this country seem to be Members of Parliament. It seems that the first to know are those in the United States, who enjoy the benefits of freedom of information legislation and a press that is a great deal freer and more independent than are sections of the British press.

We are seeing the undermining of the spirit, if not the wording, of the INF treaty. That shows a form of irresponsibility that could endanger many of the discussions on which so many of us place such optimism and hope. Instead of rehearsing the old arguments about the Soviet build-up, does the Secretary of State agree that he cannot have it both ways when he complains about increases in Warsaw pact armaments while at the same time he does nothing about the offers and overtures that Mr. Gorbachev continually makes and to which the Prime Minister never responds? Surely we do not have to wait

until we have a good grip of the United States' skirts before we start talking to the Soviet Union. We should be doing it now.

Mr. Gorbachev has pulled off one propaganda coup after another, while we are cast in the role of warmongers. Of the 13 initiatives that Mr. Gorbachev has taken since 1985, some are important and some are irrelevant, but none should have been rejected out of hand. For example, the offer to look at Krasnoyarsk in return for Fylingdales may be absurd, but when we start obtaining serious discussions about listening stations one would think that it would be of some interest to the country that is the host for that facility in our Alliance.

A NATO Assembly paper of September 1987, written by one of my colleagues in the SPD, Karsten Voigt, stated:

"Like it or not the initiative in arms control is being taken by Secretary Gorbachev. It is therefore incumbent on the Western Alliance that as a matter of urgency it

(a) determine what it actually wants from Arms Control
(b) exploit every avenue with the Soviet Union on how to get there."

As another German, Hans-Dietrich Genscher, said:

"If there is a chance after 40 years of confrontation there could be a turning point in East-West relations, it would be a mistake of historic dimensions to let it slip away because of habits of thought which expect only the worst from the Soviet Union."

Discussions on the conventional stability talks mandate will soon be complete. I hope that we shall play our full role in those sessions and that both sides will take the lessons of the mutual balanced force reduction experience.

With regard to the chemical and biological weapons ban talks, some flexibility would stand us in good stead. One of the interesting points about the White Paper is that it makes no reference, in the area of the chemical and biological weapons ban, to the role of the United States. It is as if the Government do not wish to mention the United States' reluctance to accept our proposals on unchallenged inspections. I hope that credit is given to the sincerity of Soviet intent on that matter and that the Government will find ways of taking advantage of Soviet willingness. If we cannot get a global ban on chemical weapons, at least we should try to proceed to a NATO-Warsaw pact agreement. If we dig in our heels too deeply for a global ban, we could be in danger of allowing the best to become the enemy of the good.

In other areas, the Soviets have shown a willingness to consider asymmetrical cuts. The first display of such cuts was the INF treaty, when the Soviet Union gave up far more than we did. Superiority in numerical terms would appear to be in the Soviets' favour, but in force comparisons we must avoid bean counting. The threat assessment paper provided by the Western European Union stated:

"Sometimes divergent, even contradictory, estimates of Soviet forces or equipment used in public statements by different allied national authorities can only detract from the credibility of the estimates".

That did not come from anyone on the peace wing of the Labour party; it did not come from anyone on the war wing of the Labour party, if one wants to designate it in that way; it came from one of the coolest of the cold warriors in the House, the hon. Member for Halesowen and Stourbridge (Sir J. Stokes) who, unfortunately, is not here, but who, as rapporteur for that WEU committee, made a reasonable and fair point.

Perhaps it is unfortunate that the International Institute for Strategic Studies report, voluminous and valuable as it is, was published today, so that we did not have enough time to look at the nature of the balance. We should avoid over-simplistic bean counting. We should seek the publication of the net assessments, which are presently classified but which are available to NATO Council members, so that we can find out the true picture of the balance between East and West. We should avoid the mistakes of the tank counting, where we still include 23,000 Soviet tanks built before 1947.

We need to look not only at the quantitative matters, but for qualitative contributions to arms reduction that can be seen by the Warsaw pact, by showing willingness to modify and progressively eliminate many of our provocative forward strategies such as the air-land battle plan and deep strike. Those suggestions are being made in a context that involves the UK both independently and as a member of the Alliance. We in the Opposition recognise that there are opportunities for initiatives and new thinking.

The ownership of nuclear weapons and the substantial contribution that we make to NATO are supposed to give us a seat at the top table. In his speech to the Tory party conference the Secretary of State praised the Prime Minister as the leading statesman of the free world. If that is so, she can claim credit for a great deal: the sorry state of Britain's defences, the underfunding of our conventional defences, our distorted Trident-led priorities and our slavish commitment to outdated doctrines of flexible response—all of which stand in the way of lasting peace and disarmament.

I ask those of my hon. Friends who have signed the other amendment to support the official Opposition amendment. If they do not, they will show themselves to be out of touch with the feelings of the breadth of the Labour party and of the millions of our supporters across the country. They will be cast in the same position as the Conservatives, who refuse to participate in the process of disarmament unless it suits their purposes and their distorted view of the world.

In Scandinavia, in central Europe, in the two Germanies and in the Warsaw pact an historic opportunity is opening up. That is why the outdated and outmoded thinking that lies at the heart of these Estimates must be changed by our amendment and why, before next year, the Secretary of State or his successor must institute a wide-ranging review of our defence commitments and of where we shall find the resources to meet them.

6.20 pm

Mr. Michael Mates (Hampshire, East): This is the first defence White Paper debate to take place since the hon. Member for Clackmannan (Mr. O'Neill) was catapulted into his present office by the somewhat quixotic early-morning departure of his predecessor. I congratulate him on the way in which he has mastered some of the complexities of a wide-ranging subject. I should like to say that he has mastered his brief, but, nice chap though he is, it is beyond him or, I suspect, anyone else. To speak for the Labour party on defence matters is an almost unmasterable brief. Nevertheless, I wish him well in what must be the most uncomfortable seat in the shadow Cabinet.

Before I come to the substance of my remarks, I want to say a word about the rationalisation of the Royal Ordnance. I am not surprised that the hon. Member for

[Mr. Michael Mates]

Clackmannan spent so much time talking about that, or that the loutish tendency behind him shouted and screamed at him—anything rather than talk about Labour's defence policy. There has been no foul or fix. I think that I am right in saying that it was Sir John Nott who first tried to move Royal Ordnance in this direction when he was Secretary of State. My right hon. Friend the Member for Henley (Mr. Heseltine) had a go at it, too. Nobody wanted it then because it was unsuccessful, unprofitable and inefficent. The changes made over the years were enough to persuade some people that it was worth buying. It was put out to competitive tender and went to the highest bidder. One or two of the other bidders might well have been preferable customers, but the going rate was assessed in fair competition and paid.

That is the end of the matter, except to say that, sad as it is when jobs are lost—that is always sad—the following must be said. The Ministry of Defence has just let another contract of about the same quantity, guaranteeing the same amount of procurement over the next five years; Royal Ordnance, in private management, will do that with 2,000 fewer people. There is a moral in that for us all: under public ownership industry is not efficiently run, and that is the beginning and the end of it.

I am grateful to my right hon. Friend for the kind remarks that he made about my Committee and the report that we produced on the White Paper. As the hon. Member for Clackmannan constructed most of the first half of his speech around what we said, it seems that the Committee got the balance about right. In the nine months of its existence in this Parliament the Select Committee on Defence has had a busy year. We produced nine reports on a wide range of subjects. I hope that they are of help to the House and show that we are genuinely trying to do the job that we were set up to do. We have visited troops in Northern Ireland and in Belize. We have been on a carrier in the North sea that was taking part in an exercise, and, most recently, we visited exercise Teamwork in north Norway—a large NATO amphibious exercise. That was all in addition to introductory visits to the three headquarters—Wilton, Northwood and High Wycombe. So it has been a busy year for the Committee, and I am grateful to my colleagues on it for the extra work that they put in to make all the visits and reports possible. I know that I speak for them all when I say that we are grateful to the staff who worked so hard to allow us to produce the amount and quality of reports that we have issued.

There have been nine reports, some more controversial than others. I suppose that the one that hit the headlines the most was the one about the surface fleet. A number of my hon. Friends will no doubt speak about the Royal Navy's capacity, so I shall confine myself to saying that, despite the MOD's reply to that report, I see no reason to change a word of it. I hope that the fruits of what we have done, culminating in the acknowledgment by the Secretary of State that our estimate of the ordering rate required was correct, and his commitment to meet it mean that what was a challenge—it was not a crisis—to the Government's intent has been properly met.

I shall confine my remarks to the widest issue in the White Paper and the report that we wrote on it—the size of the budget and its forward commitment. That obviously presents the greatest difficulty. It will not have been lost on the House that certain talks have been taking place in seaside towns—perhaps even in London—in the past week or so. I do not believe everything that I read in the press, but I am sure that my right hon. Friend has had to fight robustly for the funds that he thinks he needs to carry out the job that the Government have given him. If my spies are correct, I think that he is not doing too bad a job fighting defence's corner.—[An HON. MEMBER: "Could do better."] Let us wait and see what emerges. Time will tell how successful he has been. This is a serious matter and we should not laugh about it.

If my right hon. Friend has been locked in mortal combat with the Chief Secretary, I hope that when he went to see him he took with him not Mr. Gorbachev's statements but some of the reports that our Committee has produced over the years. We are establishing a track record of making forecasts that are more often right than wrong. In our report on the White Paper of 1985-86 we said:

> "The principal conclusions we draw from our survey of the defence budget . . . to 1988-89 are:—
>
> —that following the ending of the commitment to annual growth of 3 per cent."

there would be a slight reduction. That is now common knowledge. We further said

> "that management of the budget and improved efficiency alone will not avoid consequent cuts or delays, particularly on equipment;
>
> —that there is a risk of an adverse effect on operational capability, but not in itself amounting to the ending of a major role or commitment;
>
> —that any further economies will have a direct effect on capability".

Some of us suggested that from about 1989 onwards the hard decisions about which the Secretary of State has told us almost every time he has visited the Committee would become pressing and would have to be taken.

That is why it is so important that, even though the atmosphere is better and siren voices are saying and will say in this debate that now is the time to stop spending on defence, that Mr. Gorbachev is a nice man and that the Russians do not intend to threaten us further, we must still look at what they do, not at what they say. It is against the background of my right hon. Friend's remarks about the Russians' rate of build and their daily increasing offensive capability that we must set our needs for a defence budget. Although my right hon. Friend could never have said that to us, this was a crunch year.

It is important for all of us who care about our country's defence not to slip from the very high standards that we have set ourselves for nearly a decade. That is why I am certain that common sense will prevail, if it has not already prevailed. We look forward to hearing that our commitments will be met not because of some arbitrary increase or decrease in budget but because the Ministry of Defence is determined to get the best value for money. The procurement executive is doing that and saving millions of pounds. We have a team of Ministers determined to see our commitments, some of which are growing while others, mercifully, are receding, carried out by fighting troops of all three services backed by a Government who are really behind the job that they are doing.

That is the criterion by which I feel sure my right hon. Friend carried on discussions with his colleagues. It is axiomatic to say that they have listened to a sensible argument. The worst argument of all, the worst decision, would be for us to come down from our plateau of efficient

operation of defence forces for the sake of a ha'porth of tar. We must allow the defence budget the money that it needs to fulfil these commitments.

6.31 pm

Mr. Eric S. Heffer (Liverpool, Walton): I regret, Mr. Speaker, that you were unable to select the amendment standing in my name and the names of some of my right hon. and hon. Friends. Some Conservative Members may think that, because some of us are passionately in favour of unilateral nuclear disarmament, we want to leave our country without defences. I have great memories of what war did to my family. I had an uncle in the first world war who refused to fight with weapons and decided to become a medical man in the war. He was killed in battle and received the Military Medal as a result. My father was wounded three times in the first world war. His leg was shattered and to his dying day he had difficulties with that war wound. Many of my uncles were involved. None of my brothers were involved in the second world war, because they were dead by the time it started.

Not unlike some other hon. Members, I did not have a gallant and wonderful war. I spent four and a quarter years in the RAF and like many others I was lucky to survive. I have always regarded the time since the end of the war as borrowed time. It has been a bonus to continue to be alive. I make those points because many people who take the stand that I take have been accused of not believing in the defence of our people and our country. That is absolutely untrue. I was proud to be in the Royal Air Force and I am proud to have been in the Royal Air Force Association since the war. I am not saying that we are not concerned about the future of our people. It is precisely because we are concerned about it and about the future of mankind that we take our point of view.

I think it was Arthur Koestler who said that once the atomic bomb was dropped the whole nature and character of war was changed. He said that we no longer lived in the situation that we had before that bomb was dropped. That is true. I do not know what hon. Members who were alive at the time felt when that bomb was dropped. I remember the horror that people felt about a whole city being practically wiped out and about all the people who were killed or maimed. I remember the horror of the second bomb. From that time, we have lived under the shadow of the atomic bomb and we must think in those terms.

I note that the Government clearly see the changes that are taking place in the Soviet Union. Their White Paper says:

> "We are now at last beginning to see signs of change in the Soviet Union, reflected elsewhere in Eastern Europe. At home, Mr. Gorbachev has set in train a series of wide-ranging reforms. Abroad, he has argued the need for 'new political thinking' in the nuclear and space age, and has laid stress on the growing interdependence of the countries of the world community."

That is right, but I have never believed that the Soviet Union wants to dominate the world. Over the years I have been one of the greatest critics of the internal regime in the Soviet Union. I would never have wanted to live in a society where the state apparatus and the party machine dominate the lives of everyone, and in which there is no free discussion, dissent and argument. If I had lived in such a society, I would probably have been one of the first people to find out what the inside of a Russian concentration camp was like, because I believe passionately in free debate and discussion. If we do not have that, life is not worth living.

As I say, I have never believed that the Soviet Union wants to dominate the world. We have reached the present position precisely because over the years people in the West took the view that Soviet troops and armour were ready at any moment to march into and dominate western Europe. The Soviet Union marched into various parts of eastern Europe because it wanted to create buffer states. The Soviet Union suffered—my God, how it suffered—in the second world war, in which 20 million of its people were destroyed. The Soviet Union will never forget that war. We would not be here now—certainly I would not be here—if the Soviets had not lost so many people, because we would have been living under a German fascist dictatorship.

Mr. Brazier *rose*——

Mr. Heffer: Perhaps the hon. Gentleman will forgive me if I do not give way. I do not want to break the flow of my argument.

At one time, I was the only Opposition Member who attacked the Soviet Union for going into Afghanistan. I was the first Opposition Member to say that I did not agree with what happened in Afghanistan. The Soviet Union was wrong, and I argued all the way that it was wrong. Now that the Soviet Union has recognised the stupidity of going into Afghanistan and is withdrawing its troops, are we suggesting that it is about to land massively in Britain, in Westminster, with armoured troops to dominate this country? It is an absurdity, and the Government have gone part of the way to accepting that it is an absurdity, so why are we not going the rest of the way? Why are we to be stuck for ever with this?

The INF treaty has not changed the position very much. It has changed, but to what degree? At the height of the cold war, we argued that it was vital for us to get rid of nuclear weapons, but when we began, on an international scale, to reduce such forces, we said that we did not need to get rid of our nuclear weapons because it was being done on an international scale. It is even more important now that we do it than it was in the past. It underlines the argument that we were using. It does not detract from the point that we were making: that is the real issue.

Earlier, Conservative Members sneered when I asked whether our second amendment was to be selected, and they asked which side of the Labour party I was on. I regret that my hon. Friend the Member for Clackmannan (Mr. O'Neill) talked about a peace party or a war party. I do not believe that anybody in our party is in the war party, and I have never believed that. I do not believe that any member of my party wants to see warfare or to see nuclear weapons or is, in any case or at any time, in favour of nuclear weapons. There is an honest argument about how we get rid of those nuclear weapons. It is not a question of whether we are in a war or a peace party. We all want to get rid of nuclear weapons.

Sometimes, Conservative Members want to get rid of nuclear weapons, but at the same time they want to build them up, back those who are making them and get more and more of them. I have been disgusted by the Prime Minister. She goes around the world making wonderful speeches. Repeatedly in this House, she has said how much

[Mr. Heffer]

she welcomes what Mr. Gorbachev is doing in the Soviet Union and how she welcomes his openness and how she can do business with him. Then she says that we should not trust the Russians or believe what they are doing, and that we must continue to build up our nuclear weapons. In the last part of his speech, my hon. Friend the Member for Clackmannan was right to say that, while the United States of America, together with the Government, is rebuilding and developing nuclear weapons—with which none of us agree, which we do not want and which we are exposing—it is also saying how much it is in favour of what is happening in the Soviet Union.

Such people should remember that Mr. Gorbachev and those like him who want to get rid of nuclear weapons so that the Soviet Union can build its economy on a new basis, rather than on a war basis, need the assistance, sympathy and support of everyone because the generals and the Right wing are looking over their shoulders. They do not want changes; they want things to go on as they have been. The Government have been helping such people by taking the attitude that they have taken.

My party conference had a serious debate on nuclear weapons, and not for the first time. Ever since the first party conference I attended, 30-odd years ago, we have been having that debate. I remember us debating it, and the rank and file—I suppose I will have to put it in those terms—won the debate on one occasion, when Mr. Gaitskell was there. He got that decision knocked over in the next election. *[Interruption.]* We make decisions in our conference. We do not go along and cheer the great leader, or leaderette, or whatever she is called. We had that debate, and we have been having it consistently, and we did not arrive easily at our decision. It took us a long time and much argument and discussion, but we finally came to that decision. I am delighted that this year my party conference reiterated a policy decision that we have now had for a number of years.

The second amendment is in line with that decision. We tabled that amendment before the Labour party conference reaffirmed the decision, so confident were we that the decision would be carried. We had no hesitation in tabling it. We are arguing for the cancellation of Trident. I did not quite understand what my hon. Friend the Member for Clackmannan meant when he said that practically all the money for Trident had been spent, so that we were deluding ourselves. It is always a good idea to read the relevant documents before coming to debates such as this so that one knows what they say. On page IV of its third report, the Select Committee on Defence says:

"The programme continues to include a substantial contingency provision—£1,251 million or some 20 per cent. of the remaining expenditure . . . As far as the progress of the *Trident* programme is concerned, the conclusion of the Comptroller and Auditor General in July 1987 is still valid".

I know that this was written in April of this year, but it was still valid then.

The Committee report continues:

"the bulk of the expenditure still has to be incurred, and the sterling cost of the US part of the programme is vulnerable to any future unfavourable movement in exchange rates. The US missile development programme is significantly more advanced than the United Kingdom Trident programme and there is no indication of any US problems which would jeopardise the UK programme. However, some sources of risk to the UK programme remain, particularly in the building works and AWRE capital programmes and also as a result of shortages of specialist staff in MoD weapons system software".

The point is:

"the bulk of the expenditure still has to be incurred".

The Committee also says:

"Thus expenditure during the coming two years will be £1,866 million, or on average £77·75 million a month."

What could we do with £77·75 million a month if we cancelled Trident straight away? We could use that money to help the Health Service or other services, and some of us do not believe that, having got rid of nuclear weapons, we should use the money saved for building up the conventional side of the weaponry. I shall rest my case on this point.

Mr. O'Neill: I am grateful for the comradely fashion in which my hon. Friend has addressed my remarks. However, I should point out that the public expenditure White Paper published in January this year says that by 1991-92 all but £1·8 billion of the cost of Trident will have been expended. We shall have to take it that the Government will continue until then. These were the figures that I was using, and we shall have to agree to disagree on our sources.

Mr. Heffer: That often happens with disagreements, but, even on the basis of those figures, we are arguing that it should be cancelled. If the Government remain in office, it will not be cancelled, but even the figure given by my hon. Friend the Member for Clackmannan could be put to good use instead of being spent on weapons of destruction. Let us just think about that. All the money that we use on those weapons is sheer waste. How wonderful it would be to provide people with decent homes——

Mr. Tony Banks: With education.

Mr. Heffer: Exactly—with education. My hon. Friend is making my speech for me. He is absolutely right on all those points. That would be wonderful, instead of using the money on weapons which, in the end, may never be used and which, after a period, will go out of existence because they will be outmoded. Let us think of the money that could be used to help people—that is our argument. That is why we shall continue to argue that case and why I regret that I shall be unable to vote for the amendment tabled by the official Opposition. I have set out what I believe in and what my party believes in, and we shall have to look seriously at the official amendment. At the present moment, I should not like to say what I will do.

6.53 pm

Sir Antony Buck (Colchester, North): I am grateful for the opportunity to follow the hon. Member for Liverpool, Walton (Mr. Heffer). I have great respect for him, but I profoundly disagree with him on defence and with the amendment to which he has put his name. He suggests that the money spent is wasted. It is not wasted. That "defence" money has preserved peace in Europe for the longest period that Europe has ever had. It is not wasted, for the same profound reasons that caused the previous Labour Government to maintain a nuclear deterrent. Those reasons are valid today and were put forward by a Government whom the hon. Gentleman supported.

I do not doubt the hon. Gentleman's patriotism. His popularity is self-evident, judging by the way his billets doux are coming in. His patriotism—I hope to have his

attention—is not in doubt, but Conservative Members and probably a majority of his hon. Friends think he is profoundly misguided. It is sad that he is seeking to deal with yesterday's situation. As a result of the unity of purpose between many Opposition Members and Conservative Members, Europe has experienced its longest period of peace, and we are all devoted to maintaining that peace, although we disagree about methods of so doing.

In one respect this is a sad occasion because Sir John Biggs-Davison, the late Member for Epping Forest, is not here with us this evening. I hope that I will be forgiven for mentioning him because I was with him in Angola just before his death and, looking back through past *Hansards*, I see that he has made valuable contributions to our defence debates. For Conservative Members, he was the acceptable face of the Royal Marines. The hon. Member for Yeovil (Mr. Ashdown), the ex-Royal Marine who leads the Social and Liberal Democrats, is not entirely acceptable to us.

My hon. Friend and I were together in Angola in difficult circumstances. That trip will no doubt be billed as a parliamentary jolly, but it comprised two middle-aged politicians—my hon. Friend suffering from cancer and the effects of chemotherapy treatment and myself with minor ailments, such as back trouble and others that I will not mention in such a serious debate—in a grass hut in Angola. All hon. Members were fond of and shared respect for my hon. Friend, and they will be glad to know that we learned a great deal and had a great deal of fun. Sir John laughed so much about the marvellous instructions for the outside lavatory facilities next to the grass hut in which we slept. There was a "thunderbox" with a straw hut about it. The firm instructions were, "Before you sit down, look inside to make sure there isn't a snake or a scorpion there." That was perhaps the acceptable face of a parliamentary jolly.

We watched the UNITA forces—this is perhaps a little more in order than my last remark—tackle an assault course with great vigour; vigour worthy of the Royal Marines of which our former hon. and gallant Friend was a member. As they came over the assault course, robust non-commissioned officers were firing, "Bang, bang, bang," at their feet. We both stepped forward to look at this as we thought they were firing blanks. We were told to step back quickly because it was live ammunition and it was nearly a case of two Members of Parliament being shot in the foot by their friends, although I shall not comment on that further.

That was a classic occasion and John came back undermined, no doubt, by the chemotherapy that he had undergone, but invigorated in spirit by the trip. He stayed on for a little while in South Africa, but I had to come back. It was a matter of enormous distress to all of us that, because his health had been undermined by the treatment and the robust time that we had had, he succumbed so rapidly to pneumonia and other ailments. The sympathy of the House goes out to his family as the regard in which he was held was not confined to Conservative Members or to the Royal Marines, but extended to Opposition Members and to those who were not of his political persuasion. They all respected his integrity.

I hope that my hon. Friend the Minister, when he winds up the debate, will deal with the future of the amphibious capability of our armed forces. That was dear to Sir John Biggs-Davison's heart and is dear to me and many other hon. Members. We must now decide whether Fearless, Intrepid and other parts of our amphibious capability should be maintained and, if so, how. Perhaps the Minister will be able to update the House on how that will be done, as the devotion of hon. Members on both sides of the House to the Royal Marines is considerable.

That matter concerns our local and domestic, but very important, capability, I should like to mention next a broader matter before dealing with other matters involving our forces. This is our first debate without Lord Carrington as Secretary-General of NATO and it is appropriate for the House to pay tribute to the work that he has done.

Mr. Duffy *indicated assent.*

Sir Antony Buck: I see the hon. Member for Sheffield, Attercliffe (Mr. Duffy)—like me, a former Navy Minister—nodding agreement.

We should pay tribute to what Lord Carrington has done in the defence sphere over so many years and to his important work in NATO. It is not an easy task to keep together a disparate organisation such as NATO with so many different constituent members.

The only matter over which I have had a minor disagreement with Lord Carrington—"quarrel" is perhaps too strong a word—was over the geographic limitation of the operation of NATO. I have always thought that there was something to be said for recasting NATO as the shield of the western world—a world with western values—rather than confining it to the geographical guidelines of NATO. There has been flexibility of approach through the establishment of special deployment forces which can go outside NATO, but I should be glad to hear from the Minister about the Government's thinking on this aspect of NATO's affairs.

Best wishes and firm support go out to the new Secretary-General of NATO, to Mr. Wörner, certainly in toto from this side of the House and, with respect, in the main, from Opposition Members too. It is appropriate that we send—this is the first opportunity that we have had to do so—a message of support for and confidence in the new Secretary-General. It should be an exhortation of encouragement to him and an affirmation of our support.

We are extremely lucky that there is such tremendously high morale in the armed forces. Some hon. Members have suggested that there is disunity and demoralisation, but that is not so. I have no doubt that if a Labour Administration were returned, the morale of the armed forces would plummet. I accept that there is not a monopoly of concern about defence matters on the Government Benches for I know that Opposition Members care about defence. The difficulty is that in the Labour party there is a substantial minority whose defence policy is akin to that of many Scandinavians—fortunately, fewer now—which is to send a telegram stating, "We surrender."

Mr. Tony Banks: That is not true.

Sir Antony Buck: We have debated the issue in my constituency, where I found that there were unilateralists who took almost precisely that view. I accept that they were few in number.

Mr. Banks: The hon. and learned Gentleman referred to the Labour party.

Sir Antony Buck: The hon. Gentleman is a Whip, and no doubt he has engaged in a more accurate count of those in his party who take such a view. I concede and hope that there are not very many.

Mr. Banks: On invitation, I shall visit the hon. and learned Gentleman's constituency on any occasion, if he will have me, to debate the issue. He must understand that what he has suggested is not the policy of the Labour party. It is not even the policy of those who say that we should not have nuclear weapons, that we should relinquish them unilaterally. We believe that the country is best defended by being united within. We shall not merely send out a surrender note.

Sir Antony Buck: I am delighted to have that exhortation of support for firm defence policies. I accept that the hon. Gentleman takes that view. Unfortunately, a minority—I am prepared to accept that it is a small minority of those who have allegiance to the Labour party—do not take that view. I shall be delighted if the hon. Gentleman will come to my constituency. If he does so, my majority will zoom. I shall be delighted to have him in my constituency at any time.

We should all be proud of our armed forces. It would be inappropriate, however, if I were not to say a word about Northern Ireland. I do not think that any armed forces other than ours could have sustained the Northern Ireland burden. Certainly no other armed forces could have sustained it with such forbearance and expertise. A message of support for the activities of those in our armed forces should go forward from both sides of the House. Their self-restraint and performance is something of which we should all be proud.

I see our armed forces being maintained at the present level. It is important that we ensure that they are properly and fully equipped with the latest equipment, whether in the Navy, the Air Force or the Army. We must have an assurance to that effect from my hon. Friend the Minister when he replies. I am sure that he is as determined as my right hon. and hon. Friends to see that they are so equipped in future.

I represent a garrison town, and I have been in close touch with the armed forces over many years. I know that they are in good heart. We must ensure that they are sustained by a continuation of proper support by way of equipment and otherwise. If my hon. Friends the Ministers are in difficulties with the Treasury, they had better inform us fairly soon. There will be many supporters of maintaining a proper level of defence expenditure. That may not be sufficient to provide everything for which the Chiefs of Staff ask, but we must ensure that the efforts of the armed forces are sustained by the provision of first-class equipment. That is their entitlement. I am sure that many hon. Members on both sides of the House will be determined to ensure that that happens.

Meanwhile, I thank my hon. Friends on the Front Bench for what they are doing. They are maintaining the credibility of our defence effort within NATO and they are giving just sufficient support to our armed forces to ensure that their superb expertise is supported by being equipped with the finest equipment at all levels. They are entitled to that.

7.6 pm

Mr. John Cartwright (Woolwich): Despite the fundamental differences on defence policy that have been revealed in the debate, there will be general and widespread satisfaction that it takes place against the background of much more encouraging East-West relations than we have seen for many years. We have the historic INF treaty and the progress towards a 50 per cent. cut in strategic missiles. There is the prospect of an early start to conventional stability talks. These talks offer the prospect of securing what surely all sides want to see—greater stability of security at lower levels of military deployment.

Although we welcome the progress that has been made, we must not fall into the trap of assuming that everything before us will be plain sailing. Despite the much greater sense of realism and pragmatism that Mr. Gorbachev has shown, the removal of the threat of Soviet conventional military superiority in Europe will not be easy. NATO is correct to define its negotiating position on the conventional stability talks as concentrating on the aspects of Soviet military power that are threatening to western Europe and that give rise to fears of a surprise attack.

The NATO concept of equal ceilings that limit the numbers of tanks, infantry fighting vehicles and artillery on both sides is a logical response to the current situation. If it is agreed, it will reduce much of the unease that is now felt in western Europe. The removal of the threat of Soviet armour would at the same time remove the most powerful military justification for short range and battlefield nuclear weapons. That is another argument for following up the current NATO priorities.

To persuade the Soviets to accept ceilings of 90 per cent. or 95 per cent. of NATO's current deployment will involve them accepting massively unequal reductions. Despite the INF precedent, that will not be easy. We shall not see the swift progress that some might have us believe. In the meantime, we see no obvious evidence of any slowdown in the Soviet military build-up. Therefore, it seems prudent common sense that we remain on our guard. We must maintain effective levels of defence and deterrence, while negotiating as toughly as we can to secure reductions of arms on both sides.

We have all watched the Secretary of State's spirited rearguard action against the Treasury with great interest. It seems to have taken place in hotel bedrooms and elsewhere. We are aware of the problem of the defence budget. We do not know how successful the right hon. Gentleman has been, but we know that, however successful he has been in his negotiations with the Treasury, it will not be the end of the story. Pressures on the defence budget are here to stay.

The Secretary of State has often made it clear that difficult choices must be faced in making the best use of available defence resources. Some of the choices will undoubtedly affect the capability of our forces to carry out the tasks that are assigned to them. The Government have consistently refused to review existing defence roles. They have consistently declared their determination that they will all be maintained. As the Select Committee on Defence states in its report, which is before the House, the question is how well this can be done, not whether it can be done. That seems to underline the widespread fear that defence resources are now being stretched too thinly to meet too many commitments.

The pressures are increasing. Each new generation of weapons systems will cost at least twice as much in real terms as those that they replace. We have the additional problem of manpower costs. For example, the cost of service pay and pensions has increased by 30 per cent. since 1984-85. Expenditure on equipment within the defence budget has fallen this year from 45·5 per cent. to 43 per cent. There is a risk that it will fall to a still lower percentage because of the pressure on manpower costs.

As other speakers have pointed out, we shall soon have to face the emerging problem of demographic changes—the time bomb that has been ticking away for years. In the early 1990s, the number of 15 to 19-year-olds in the population will be down by 30 per cent. When I have referred to that in previous defence debates, Ministers have said that they are well aware of the problem of demographic change, but that it can be dealt with by ensuring that the pay and conditions of the armed forces keep pace with those provided outside.

In response to that assurance, I would point out that competition for the available young people in our population will be very fierce in the 1990s and beyond. We shall need substantial pay increases to keep pace with what is offered in civilian life, so that we ensure adequate levels of recruitment and, more importantly, retain those trained personnel—key personnel—who will be in demand by civilian employers. Not only pay but conditions of service and the general quality of life in the armed forces will have to keep pace with improving opportunities in civilian life, if pressure from wives and families is not to persuade more of our key personnel to leave the armed services.

The prospect is of continued and growing pressure on the defence budget. The Government have produced one welcome response—a tougher and more commercial approach in the relationship between the Ministry of Defence and defence contractors in an effort to obtain better value for money in defence spending. I welcome that, but I cannot believe that the savings produced will be enough to bridge the gap between demands and resources.

It cannot seriously be argued that cancelling Trident would produce substantially extra resources to improve conventional defences. We can debate how far advanced the Trident programme is now, or how far advanced it will be by 1991. Cancellation now would not release massive new resources to improve conventional defence; cancellation costs would involve the nation in a massive waste of public money in converting half-built submarines into some other purpose and in scrapping the warhead production at Aldermaston—and that is in addition to the costly impact on employment levels throughout the defence industry. There is no magic solution in the cancellation of the Trident programme.

The one ray of hope in a fairly gloomy resource prospect is that all NATO members are facing similar problems. That has reactivated the old interest in burden-sharing and in rationalisation within the Alliance. The impetus comes from the United States, which is determined that Europeans should shoulder more of the burden of their own defence. That is not a new argument from the United States, but it is being presented with much more force because of the anxieties about the United States budget deficit. That American determination has been expressed in many different ways. For example, the Taft commission has toured western European capitals twice during the current year. There have been attempts in Congress to make United States defence spending conditional on greater Allied defence efforts.

Clearly, the problem will not go away, and we must take it seriously. It is sometimes presented too simplistically. Deputy Defence Secretary Taft, for example, recently split the 16 NATO nations into four divisions based solely on an arbitrary assessment of the level of their defence spending. The counter-argument from the Eurogroup is equally predictable. It is true that Europeans provide 90 per cent. of NATO's manpower; 95 per cent. of its artillery; 85 per cent. of its tanks; and 80 per cent. of its combat-ready aircraft. It is equally true that, in mobilisation strength, 7 million troops could be provided by the Europeans, compared with 3·5 million by the United States. However, such arguments do not cut much ice with the American nation, which is convinced that it is carrying too much of the burden of defending Europe and that it should be showing rather greater interest in other parts of the world.

There is a need to break out of what has been a fairly sterile argument about input figures for defence spending contrasted with output figures of force levels. NATO's secretary-general, Manfred Wörner, warned us in July this year that the

"burden sharing debate must not be allowed to degenerate into a numbers game or a trans-Atlantic slanging match".

That is sensible advice. There is no point in wasting a great deal of time and effort searching for some magical equity between each of the Alliance partners. That would be as elusive as searching for the philosopher's stone.

NATO technicians were reported to be hard at work on a burden-sharing formula as long ago as 1951. We do not have a lot to show for their efforts in the intervening 37 years. That is partly because rationalising our defence efforts depends on political will, and there is an understandable fear that national sovereignty will be threatened. Faced with current pressures, we cannot go on with unseemly arguments about who is spending most, who is doing most and who is freeloading. We need a rational assessment on who can do what best on behalf of a united NATO Alliance.

Within the Alliance, we now have a NATO executive working group which is examining the roles, risks and responsibilities within the Alliance to try to improve our collaborative defence effort. That offers us the opportunity to make some real progress at long last. The aim was well defined by Professor David Greenwood of Aberdeen university in a paper that he produced earlier this year for the North Atlantic Assembly, which stated:

"The Alliance must look to the distribution of tasks among its members, to remedying the fundamental inefficiency that exists because each member seeks to maintain a broad spectrum of national military capabilities. In short it must contemplate some measure of role specialisation—an intra-Alliance division of labour in the performance of roles and missions, based on the comparative advantages of different countries in different forms of defence provision."

That involves some loss of national sovereignty, but the days when any one European member of NATO could provide on its own the full range of defence capabilities have long gone. All European nations within NATO now face the same problems: growing pressures on defence budgets, falling manpower resources, and the growing and powerful United States insistence that Europeans must do more to defend themselves. The logical response is to grasp the opportunities provided by closer European defence

[Mr. John Cartwright]

integration within the NATO Alliance. The aim must not be to try to replace the United States effort but to complement and supplement it.

We have talked about these issues for many years. We cannot now escape the need to get on and do something about them. I urge the British Government to accept a leading role in seeking to establish a genuine and effective European pillar in NATO.

7.17 pm

Mr. Keith Speed (Ashford): I think that I agree with almost everything that the hon. Member for Woolwich (Mr. Cartwright) has just said. His remarks about NATO's role concentration are sentiments which all of us, whether working for the Western European Union, NATO or the Government Front Bench, accept. All of us in NATO must do a great deal more to bring that about because, as has already been said, resources are limited.

This debate is bizarre because there are two Opposition amendments—or, rather, there is an official Opposition amendment and another Opposition amendment. The Opposition Front Bench are speaking to what is apparently not official Labour party policy. It is certainly not its conference policy. The hon. Member for Liverpool, Walton (Mr. Heffer) made a moving speech on the second amendment. I did not agree with most of it, but I was certainly impressed by the thoughts, the philosophy and the undoubted feeling behind it which, as I understand it, represents the Labour party's conference policy and the policy upon which he and many others will no doubt be fighting the next election. I do not know what the great British public will think of all that, but I do not think that that is a constructive attitude for an official Opposition on such a fundamental subject as defence.

I turn to more constructive thoughts. I congratulate the Select Committee on Defence, of which I used to be a member, and my hon. Friend the Member for Hampshire, East (Mr. Mates) and his colleagues on a number of excellent reports, including that relating to the White Paper and the one relating to the Royal Navy and the surface fleet. Over the years Select Committees on Defence have asked the Ministry of Defence questions about the numbers of ships, the budget and the squeeze on resources that they forecast several years ago. They did not always receive answers that were relevant or carried a great deal of weight.

At the end of the day, the way to cut expenditure is either to cut commitments or, as the hon. Member for Woolwich said, increasingly to have role concentration in concert with our allies. Under this and virtually every Government since the war, we have successively increased our commitments while at the same time we have restricted and denied the resources to meet those commitments. I need only state some of the commitments for that to be self-evident. They include the British Army of the Rhine, our forces in the south Atlantic and out maritime and air forces in the eastern Atlantic. They also include the Armilla patrol and offshore patrols for oil and fisheries protection; also, as I am sure my right hon. and hon. Friends saw, a Ton class minesweeper which patrolled off Brighton as part of the security for the Conservative party conference.

We have many commitments in different parts of the world as well as to NATO. We are not entirely fulfilling our NATO commitment, and in that we are not alone as no other NATO country is doing so. However, we know that my right hon. Friend the Secretary of State for Defence now faces a major and important battle with the Treasury for the last tranche of expenditure that he deems necessary. He deems it necessary, I deem it necessary and I believe my right hon. and hon. Friends deem it necessary.

I must tell my right hon. Friend the Chief Secretary and his team in the Treasury that at this stage I do not wish there to be unilateral disarmament for the United Kingdom by stealth from the Treasury Bench, for the following reasons. First, there are problems with personnel. The hon. Member for Woolwich and others were right to highlight that. There are not simply problems with pay or conditions of service. Increasingly, nuclear watch keepers, technicians and pilots face real competition from the outside world. For example, a pilot who may be a squadron leader or a lieutenant-commander is aware that his salary cannot compete with that offered by, for example, British Airways or KLM. It goes further than that.

Whether we like it or not, there have been profound social changes in this country and in the western world. We have heard much about family life, which for many people means spending evenings and weekends at home, enjoying a regular existence from nine to five and spending a lot of time with one's wife and children. Undoubtedly, there are problems with particular aspects of service life stemming from foreign travel and long periods at sea. We have heard about the sea-shore ratio today with more of the Navy's front line spending more time at sea. That causes many difficulties, which reflect pressures and forces on our young men and women. Even if they have been trained in the services, they do not stay in the services or give a full return for their training.

We must address that problem, which is not unique to this country. Every NATO country which does not rely on conscription for its full professional forces faces that problem. Reference has also been made to the demographic time bomb. That problem has been grossly underestimated by the Ministry of Defence, by British employers and by others.

There are problems also with equipment, and reference has been made to a figure of about 50 frigates and destroyers. That figure has not been plucked from the air. The Select Committee on Defence examined the issue very carefully. It is an important figure. It represents a minimum required to fulfil our national and NATO commitments. It is a rock-bed minimum to fulfil our NATO force goals, as my right hon. Friend the Secretary of State and his colleagues are aware.

About 50 really is not good enough. There should be 50. Fewer than 50 will not be good enough to support the present rate of shipbuilding of type 23 frigates. With the greatest respect to my right hon. Friend the Secretary of State, for whom I have a great deal of time, it is no use saying that we can run on some of the existing ships. A Leander frigate has 100 more crew than a type 23. That is wasteful of skilled manpower and very expensive. The chief petty officers, petty officers and junior officers are the people we find it difficult to retain at present. There are also heavy costs involved in running those old ships, which are steamships compared with the modern gas turbine type 23.

It may be argued that we can run the type 21 and type 42 destroyers longer. All those ships were designed in the 1960s. The Leanders were designed a decade before that. If the Falklands showed us anything, it was that we must have state of the art technology to deal with a state of the art battle. The type 23 is designed for that. It is designed to be our state of the art anti-submarine platform.

The present very low rate of shipbuilding is no good for commercial shipyards, which are important. We must keep that capability. It is also no good for the maritime activities of Rolls-Royce. Although it has an excellent export record, it needs to continue to supply the Royal Navy. It is also no good if we want to maintain the number of ships that the Select Committee stated was vital.

The problem with equipment goes further than the Royal Navy. The tank situation is a scandal. I am worried that we may have to go abroad for tanks. The present electronics and optics of existing British tanks are not good enough. It worries me that we have to withdraw from international competitions because our tanks are not good enough to compete with tanks of other forces. Select Committees have referred to that problem in the past.

There are areas in which we do not do our service men or ourselves a favour by pretending that all is well. We must modernise our tanks and have the minimum number of ships to carry out our capabilities. The same thing could be said about helicopters and aircraft.

My hon. and learned Friend the Member for Colchester, North (Sir A. Buck) has already referred to the long-delayed decision about an amphibious capability, on which the whole future of the Royal Marines rests. The amphibious capability will not just provide a future for the Royal Marines; it is right for NATO's northern flank and everything that we are supposed to be doing in that important part of the world. The continuing uncertainty about that capability is not doing much good for the Royal Marines, the Royal Navy or for our partners in NATO in that part of the world.

Mr. Mans: Does my hon. Friend agree that he has put his finger fairly and squarely on the dilemma regarding role specialisation and buying equipment from this country? He mentioned the importance of role specialisation earlier, yet he has just referred to the importance of buying a new British tank.

Mr. Speed: With respect to my hon. Friend, I did not refer to the importance of buying a British tank. I said that I was very unhappy because it looks as though we may have to buy a tank from the United States or Germany. I believe that we should have an indigenous armoured fighting vehicle and tank capability in this country. I am certain that we need a new tank for the next decade. If it cannot be provided from our resources, at least I hope that it can be built here, even if it must be from a design from abroad.

Our first priority must be to get the kit and equipment, which must be among the best. It cannot be second best. I was greatly impressed by the Leopard 2 and Abraham tanks. If we can produce a British tank as good as those —and I hope we can—fine, but time will not wait. There is also a constraint on money, and I know that my right hon. Friend the Secretary of State is aware of that.

Mention has already been made of the real problems posed by Gorbachev's era of perestroika and glasnost. Many people make the point, which was perhaps encapsulated in the speech made by the hon. Member for Walton, "Don't worry. We can afford to cut our defences. We can afford to give up our nuclear and other capabilities because all is now going to be right with the world." If that is so, why are the Soviets continuing with an enormous tank programme? Why the Oscar 2 and the Typhoon 2 submarines? The Oscar 2 submarine is not even a strategic nuclear missile submarine. It is designed to attack surface ships. It has on board cruise missiles and SS19s with a range of about 240 nautical miles. The Oscar 2 submarine is 510m long and nuclear-powered. It is virtually unsinkable by conventional weapons.

Why are the Soviets building two nuclear-powered conventional aircraft carriers? Why are they building submarines of the Akula class, one of the quietest submarines in the world and extremely difficult to detect? When we look at what is happening we see no sign, despite all Mr. Gorbachev's words, that, on military procurement, the Soviet Union is cutting down its expenditure on submarines, aircraft, rocket launchers, artillery and tanks. The Soviets are still building overseas bases in Syria and elsewhere, notwithstanding Mr. Gorbachev's speeches about closing down overseas bases and withdrawing to the Soviet Union. That is not happening at the moment.

We need at least an extra £1 billion to meet the problems faced by our armoured fighting vehicles, our amphibious capability and the frigate force. The Ministry of Defence could save considerable sums of money in a number of areas. If there were an office reduction programme in line with the dockyard and workshop reduction programme, there might be quite a saving on real estate and people. The Ministry of Defence has offices dotted all over London—some leasehold, others freehold —that must be costing a great deal of money. We all know how high office rents and capital values are in London. Does the Ministry need all those offices? We have heard a great deal about the diminishing number of admirals, generals and air marshals who are needed for the shrinking number of aircraft, ships and tanks, but what about the square feet of office space? That is one exercise that ought to be carried out.

Secondly, do we really need—all within 100 miles of each other, and within commuting distance of London —Farnborough, Boscombe Down and RAE Bedford—all very valuable real estate? They are doing an excellent job, but the functions of all three could be concentrated on two sites and one could be sold off. The mind boggles at its capital value. It would make the Royal Ordnance factory sales seem a mere bagatelle. Substantial sums of money could go into the Ministry of Defence coffers and be used for the sort of jobs that my hon. Friends and I want to have done. Getting rid of these large capital commitments has revenue implications. I suspect that a great deal more could be squeezed out of the Ministry of Defence's real estate, but that there is not very much more to be squeezed out of the front line, whether it be the soldiers, sailors and airmen or the dockyards and the support facilities. I ask my right hon. Friend to have a really good look at that point.

However, even if the Ministry of Defence sold one of the airfields or got rid of three major office blocks tomorrow, that would not solve the short-term problems. I hope that the Treasury has been listening to this debate and that it will give to my right hon. Friend the extra money that he needs this year. We are far from being out of the wood. The Alliance needs to do a great deal more,

[Mr. Speed]

not least to make sure that we have a strong hand to play within the Alliance in the conventional disarmament talks that have hardly yet begun.

7.33 pm

Ms. Joan Ruddock (Lewisham, Deptford): Yesterday evening British television showed American technicians destroying physically, under the scrutiny of Soviet observers, the first cruise missiles to be removed from Western Europe. I am certain that ordinary people around the world felt a degree of satisfaction and enhanced security at the sight of those pictures. This unprecedented step towards real nuclear disarmament is symbolic of the profound changes that are taking place around us—changes which, while superficially described in the White Paper, have clearly not impinged on the thinking of the British Government.

We are witnessing nothing less than the crumbling of the old post-war order, with its cold war certainties and rigid policies. New thinking and new expectations are challenging established totems, which would have been unheard of even a few years ago.

In the Soviet Union signs of change are increasingly evident, despite what Conservative Members have said, in the new language of modernisation and democratisation. New thinking is challenging accepted ideas not only in internal Warsaw pact relations but in the ideas of security and defence. The stranglehold that the concepts of "deterrence", "strategic superiority" and "parity" have had on super-power thinking show signs of weakening. In his book "Perestroika" Mr. Gorbachev speaks of amending the USSR's

"strategic concepts to gear them more to the aims of defence".

In his public statements he speaks of "reasonable sufficiency" as a military goal. According to United States military experts, this represents a fundamental shift from a military doctrine of offence to defence.

I suggest that Soviet willingness to make asymmetric cuts in military forces could allow a restructuring of the armed forces of both NATO and the Warsaw pact so as to preclude surprise attack. It is a shift in thinking that is clearly advantageous to the West, offering, as it does, the solution to the British Government's frequent assertion that it is the imbalance of conventional forces that determines the need for nuclear weapons. But where in the White Paper and where in the statement that we have heard tonight are the Government's plans? Where are the Government's responses to these remarkable new ideas? Perhaps the Secretary of State will enlighten us.

In the United States, too, a re-evaluation is going on, largely precipitated by its changing economic role in the world. Faced with a decline in economic pre-eminence, the United States is confronting an enormous budget deficit at the same time as there is a challenge to its world view. Recent reports suggest that the Pentagon is aiming for cuts of around $227 billion, so it would not be surprising if the $150 billion poured every year into NATO by the United States is receiving sharp scrutiny and demands that European countries should contribute more towards the costs of NATO.

Many of the signals coming from the United States are contradictory, but few doubt that America's increasing interest in the nations of the Pacific rim and its strategic interests worldwide will lead to a re-evaluation of its European role.

These discussions are echoed in Europe, not least in the Western European Union. The successful conclusion of the INF treaty has raised many questions about the kind of defence that is needed in Europe, ranging from suggestions of a third European nuclear super-power to proposals for an ultimately non-nuclear Europe.

What is the British Government's response to these times of change? I shall give two examples. Last November the Prime Minister stated:

"What I think we have to watch is that there do not grow up substructures in Europe which could have the effect of undermining the links across the Atlantic."

In May, the Secretary of State for Defence said:

"We have been looking at perestroika and at the speeches of Mr. Gorbachev and we have not found much which justifies any decrease in our efforts to keep up our defences."

The Government are in the forefront of opposition to change. I can express it no better than a man who, I believe, may be a friend of the Conservative party, Christopher Coker. In his recent publication, "Conservatives and Defence," he writes:

"The ignorance, complacency and ill-placed sense of moral and intellectual superiority of the Conservatives have prevented them from observing the changed nature of the strategic environment. As a result, they have failed to devise policies which would enable them to deal with the reality now confronting them. It is the Tories who now appear to be encouraging the most dangerous trends of all."

The Government fear, above all else, the collapse of the old post-war, cold war order—an order that gave Britain an ostensible role as a major power, a role that has never had much substance and that masks Britain's real place in the world as a middle-ranking power. Yet the Prime Minister persists in an old-fashioned subservience to the United States that not even the Americans want. There is no special relationship, other than that of dependence. Britain is dependent upon the United States for the construction, delivery, maintenance and, indeed, use of the so-called independent nuclear deterrent. Our defence policy continues to be formed on false and nostalgic premises.

I had hoped that some of the new thinking might just have crept into the "Statement on the Defence Estimates," but I found none. Instead, the White Paper devotes only a few paragraphs of grudging acknowledgment to Gorbachev's reforms and the importance of the INF treaty, followed by pages of traditional cold war nonsense about the Soviet desire to impose their will upon the world. The immense frustration engendered among Opposition Members by such attitudes is shared by many of our European partners who recognise that the British Government are standing in the way of better East-West relations. The Italian Prime Minister obviously felt that recently when he sarcastically told Britain's Foreign Secretary that the European Community could not wait for the Soviets to adopt Victorian values before talking to Mr. Gorbachev with one voice.

The White Paper—and, indeed, the Secretary of State this evening—makes the time-old assertion that NATO strength brought about the INF treaty. The fact is that that treaty came about largely through the persistence of Mr. Gorbachev, who called NATO's bluff by accepting the zero option originally proposed—and it is on record—precisely because NATO believed that the Soviet Union would never accept it. In practice, the Government's

response to the INF treaty has been mealy-mouthed. As far as we can glean—and we have only a dribble of information—the Government are wholeheartedly committed to a so-called modernisation programme that will allow compensatory deployment of new nuclear systems. That will make a mockery of the pictures on television last night and will circumvent the INF treaty. The new plans will bring in United States sea-launched cruise missiles under NATO control, develop new air-launched stand-off missiles, upgrade nuclear artillery systems with weapons of longer range and higher explosive power and deploy more United States nuclear bombers. With those new systems following so soon after the INF treaty, no breathing space is being allowed to test out new thinking and to allow for the consideration of less confrontational developments.

Perhaps the Secretary of State could tell the House why that is happening and why, in the defence Estimates, there is no explicit mention of the cost and implications of those new weapons systems. In particular, why are the Government showing their indifference to the peace process by their enthusiasm for modernising short-range nuclear missiles, even though—as my hon. Friend the Member for Clackmannan (Mr. O'Neill) said—the German Government are so clearly opposed to such modernisation?

The Government also appear to have back-tracked on one of their policies. Their lukewarm support for a comprehensive test ban treaty has now been reduced to support for the principle of such a treaty. Perhaps the Secretary of State could say why, together with the United States and France, Britain voted in the United Nations against resolution 42/26B last November, which called for a cessation of nuclear testing. The resolution was supported by the Soviet Union and it was passed in the United Nations. Since then, several countries have called for an amendment conference to be convened to discuss converting the partial test ban treaty, to which Britain is a signatory, to a comprehensive test ban treaty.

Will the Government now give a more positive response to that initiative? Will the Secretary of State say whether they will back the call for an amendment conference? I guess that it is more likely that he will tell the House, yet again, that verification is a problem. I must tell him that it is now commonly agreed that seismic tests can detect explosions down to a threshold as low as 1 kilotonne. Even if he cannot bring himself to believe the scientists, he might at least acknowledge that by the time any such treaty were concluded the rapid advance in technology would mean that verification would satisfy even him.

It is clear that the Government's policy offers nothing new or radical, just more of the same old incantations that we have heard from the Conservative Benches tonight. Yet, no matter how loudly the Prime Minister and the Secretary of State keep chanting those messages, they cannot arrest changing perceptions. Even Conservative Members appear not to be immune. In a recent poll almost half of the Conservative Members who replied expressed support for Gorbachev's declared objective of a nuclear-free world by the year 2000, and 98 per cent. showed support for the START proposals for a 50 per cent. cut in strategic systems, despite the implications for Britain's purchase of Trident. The right hon. and learned Member for Richmond, Yorks (Mr. Brittan) has displayed previously unsuspected radical tendencies with his call for a Europe free from short-range nuclear weapons and a tank-free central Europe. Furthermore, in a recent Gallup poll, 61 per cent. of Conservative voters were opposed to modernising nuclear weapons and wanted more negotiations for further reductions. The Government are way out of step with the wishes of their supporters, let alone the country.

Instead of nostalgically clinging to outdated ideas, Britain should be in the forefront of post cold war thinking. That is our major challenge. Although it may be hard for Conservative Members to understand, we are dealing as much in the realm of ideas as in arguments about hardware. As the recent Brundtland report said,

"We must learn to think globally and in a long-term perspective. We share the responsibility for a common future. We must change our perceptions so that sustainable development and the conservation of our planetary heritage comes to the forefront."

We can no longer afford the luxury of simple nationalism and of ignoring the effects of our actions upon our neighbours. National security no longer means just protecting our nation from the threat of invasion. It must mean dealing with the much greater and more real threat of environmental disasters—global warming, ozone layer depletion and acidification of forests and lakes. Those are the real threats, not some archaic ideas about Soviet hordes sweeping across Europe.

Our future foreign and defence policies must be based on notions of common security, not just national security; of respect for different ideologies and cultures, not primitive fear of difference; of breaking down the barriers that lead to concepts of the enemy, not setting them in concrete. In any society based on notions of peace and justice there can be no place for weapons that depend on a threat to destroy the world. Nuclear deterrence is no longer a credible policy. As Olaf Palme stated in his report,

"States can no longer strive towards strengthening their security at another's expense. It is only possible to achieve it through joint effort."

Unenlightened self-interest lies at the heart of the Government's policies. It is no wonder that their enthusiasm for arms reductions is so lukewarm. The Government are not, and never will be, the party of multilateral disarmament or, indeed, any sort of disarmament, because their ultimate goal is not the denuclearisation but the renuclearisation of Europe—preferably with, but, if not, without, United States involvement. In contrast, the Labour party knows that many concrete steps could be taken now to further disarmament and that many are already on the agendas of other west European countries and of the Soviet Union. Most are viewed with suspicion, if not hostility, by the Government.

Within NATO, we could make a major contribution to the peace process by divesting ourselves of British nuclear weapons. We could join the majority of non-nuclear NATO countries. We could encourage other countries, notably West Germany, which are already uneasy about modernisation and NATO dependence on nuclear weapons, to move towards a non-nuclear policy. Within NATO, a timetable could be set on a step-by-step basis for a reappraisal of NATO's strategy and a meeting of the proposals that were made in the Soviet Union.

As part of that new thinking, it is inevitable that we loosen our ties with the United States and plan our future within Europe. However, it will benefit no one if Western Europe were to replicate super-power relations by becoming a third nuclear-based power. It is already worrying that the Western European Union is committed

[Ms. Joan Ruddock]

to increasing harmonisation of Europe's security based on nuclear weapons. The alternative, supported by everyone in the Labour party, is to build on the INF treaty, fully to exploit the opportunities of nuclear and conventional arms reductions and to move towards a vision of common security. As a spur to such efforts, I suggest that the House remembers that we, the Americans, the West Europeans and the Soviets hold hostage the majority of the people on this planet. They suffer destitution, poverty and early death as a direct or indirect result of our policies.

The Government are ill-equipped to deal with these challenges. They have no new ideas. They are becoming isolated in Europe because of their inflexible stance on nuclear weapons and their cold war mentality. They are an obstacle to progress on arms control agreements and to the growth of peace and mutual understanding in Europe, which is what our people want and what the White Paper fails to serve.

7.51 pm

Mr. Michael Jopling (Westmorland and Lonsdale): I have never agreed much with what I have heard the hon. Member for Lewisham, Deptford (Ms. Ruddock) say. She told us tonight—I wrote it down—that she thought the INF treaty had been achieved because Mr. Gorbachev had called NATO's bluff. That is the most arrant piece of nonsense that I have heard for a long time.

I must begin by apologising to my right hon. Friend the Secretary of State for Defence and to the hon. Member for Clackmannan (Mr. O'Neill). I was unable to be in the House for the last few minutes of my right hon. Friend's speech and for the early part of that of the hon. Member for Clackmannan. I am sorry, as I should have liked to have heard what they said.

I agreed with my right hon. Friend when he emphasised that we must not lower our guard in the NATO Alliance at this time and that we must maintain the policy that has led us to be able to look to a more peaceful future because of the strength that we have maintained. I wish that my right hon. Friend had had a little more time. He might have said a little more about the need for taking public opinion with us. The majority are with us at the moment. I disagree with the hon. Member for Deptford. It is crucial that we continue that process in the years ahead.

All hon. Members who have spoken in the debate have welcomed the international efforts to reduce the numbers of weapons of destruction around the world and to move to a greater degree of arms control. We have heard about the range of current discussions. I refer to discussions on the already agreed INF treaty, to the discussions on the proposed 50 per cent. reduction in strategic nuclear weapons, to the forthcoming discussions on conventional arms reductions and, finally, to the discussions on chemical weaponry. I shall express my concern about the events that would face us if we were to have a successful conclusion to all such talks and where such a successful conclusion would leave the Soviet bloc.

A successful conclusion to all the talks could leave the Soviets almost as potent a military force as they are now. If that is so, we must always remember that Mr. Gorbachev's years in power are finite and that there is no reason to suppose that the old and the cold in the Soviet Union will not be reinstated in power. I shall mention each of the four sets of discussions that are taking place and state where their successful conclusion could leave the Soviet Union.

First, I refer to the INF treaty. Of course we all welcome it, but its agreement constitutes only a tiny part of existing nuclear weaponry. In any case, as we know, it covers only land-based weapons. Again, as we know, Warsaw pact countries and the NATO powers are fast developing alternative weapons to fulfil their roles. A successful conclusion to the INF treaty does not greatly dent Soviet armoury.

Secondly, I refer to the START discussions. I am sure that we would all like to see a 50 per cent. reduction in strategic nuclear weapons. Even if such a reduction has not been achieved by the outgoing Reagan Administration, it would still leave a massive Soviet weaponry overkill with the 50 per cent. of weapons that would be left. In the event of a successful START agreement, the Soviets would be only marginally less a military threat in the hands of a more malevolent regime than the existing one in the Soviet Union, and we should not forget that.

Thirdly, I refer to the discussions that we hope will shortly begin on conventional arms reductions. They are the most important part of current international diplomacy. Conventional weaponry matters are of the greatest urgency, given the huge Soviet advantage in tanks, artillery and submarines, to which my right hon. Friend referred. At the moment the signs are that the Soviets may well be prepared to talk of heavy asymmetric reductions to move towards parity in conventional weaponry. Of course, we must realise that a considerable part of their huge conventional advantage is in the form of outdated equipment, particularly tanks, as was mentioned by the hon. Member for Clackmannan. That advantage is also partly manifest by gross Soviet troop overmanning.

I was recently in the United States with my colleagues from the Select Committee on Foreign Affairs. We were told of an American estimate of Soviet conventional forces in the western part of Europe. They could be reduced by 30,000 tanks—I think that is near the figure that the hon. Gentleman used—and by 150,000 men without impairing the strike power of Soviet forces in Europe. We must remember that, even if we can agree on substantial Soviet conventional arms reductions on a massively asymmetric scale, their strike power would be only marginally reduced.

Fourthly, I refer to the discussions on chemical weaponry that are taking place between East and West. There has been far too little discussion of, and attention paid to, the threat of terrible weapons that are almost as horrific as atomic or nuclear weapons. Again, the Soviets have a huge advantage. We have seen in the recent Iran-Iraq war what devastating agents of death they can be.

In the United States one can meet many people who will say flatly that an agreement on chemical weaponry is impossible either to monitor or to verify. That means that the capacity for cheating is immense.

In this fourth sector, again we have the prospect of a so-called successful conclusion to the current discussions, but it could still leave us with a massive Soviet threat.

To sum it all up, under Gorbachev the Soviets give us cautious grounds for real hope and optimism. That hope will increase if more agreements can be made and, most important, if we can see at last a reduction in the flood of Soviet defence spending and construction in preparing its military machine. It is now, and to a greater extent in the

years ahead, that it is essential that we are not carried away on a flood of complacency on the back of mass public euphoria within the NATO Alliance countries. We must never forget that we have reached this point of optimism only because of our refusal to budge from a position of strength in the years ahead. As my right hon. Friend said, if the strategy of the NATO countries had followed the lines that the hon. Member for Deptford advocated we would not have had a sigh of a chance of reaching an agreement of that sort.

We are already seeing within NATO some of the backsliders acting as though one swallow does make a summer. I shall take as examples some of those countries that have abysmally low defence spending as proportions of their GNP. Canada, with its miserable 1·2 per cent. of GNP, is already opting out of its responsibilities on the northern flanks. Spain is seeking to banish the 401st Air Wing. Denmark is refusing access to ships which it suspects might be carrying nuclear weapons. Already we are seeing this false euphoria, which we should resist. The United States, which no one could possibly call a backslider, is demanding more equitable burden sharing. Given the size of its deficits and the need for the new Administration to deal with that, it is hardly surprising that it should be seeking to reduce its NATO responsibilities and get others to step into the breach.

I have tried to show why it would be insane to reduce our defence capacity by more than we are forced to do by the current encouraging arms reduction talks. There is a massive job to do with public opinion. All of us who believe in the principles proposed by my right hon. Friend the Secretary of State must do everything possible to explain why we must not throw away our strong position, which has led to such promising prospects.

I commend to the House the recent report of the Select Committee on Foreign Affairs entitled "The Political Impact of the Process of Arms Control and Disarmament", which I was happily involved in producing. The report attempts to explain that reduced defence budgets are not just around the corner. If we can demonstrate to the public that defence spending must be kept up in the years ahead, I believe that we can continue to progress towards disarmament, a fairer balance in arms between the great nations and a greater prospect of peace.

I read in the press that my right hon. Friend is still negotiating in the horrors of the annual PESC round, which I remember so well. It may be that, like the prisoner at the bar, he will be hauled before the Star Chamber court. I remember being in that most uncomfortable position for several years. On at least two of those occasions I think that my right hon. Friend was one of the judges. Therefore, my right hon. Friend is well experienced in arguing and dealing with that rather intimidating body. I hope that he will not give in and will demand that defence spending is not ruthlessly cut. I am sure that is what the Treasury is seeking to achieve, because its great desire is to wish to cut everything in sight. I hope that my right hon. Friend will ensure that our defences are not reduced, because that would be fatal at this time.

8.6 pm

Mr. Ted Garrett (Wallsend): I was not surprised when the Secretary of State chided Labour Members on the Labour party's defence policies, because I do not understand them either. I am concerned that, in the struggle within the Labour party, no one will lose sight of the essential need to defend this country—sometimes at a heavy cost. Nothing remains static in this world. The role of the armed forces is to defend this nation in its hour of need. We never know when that need will arise. In my lifetime, as in that of my hon. Friend the Member for Liverpool, Walton (Mr. Heffer), desperate situations have arisen.

I was in the Labour party before the war as a young Socialist, and I used to think I was a militant. I was looked upon as being rather odd because I supported the Churchill stance on rearmament. As an apprentice, I worked in an armaments factory. We used to make 25 lb field guns and light tanks with two-pounder guns and anti-tank weapons which were useless. They were pea shooters. However, with the grace of God, this nation was able partially to rearm at the outbreak of the 1939-45 war. Had we not done so, none of us would be here today as democrats.

I have always considered it my paramount duty to look at the practical side of life and—perhaps I lack the intellect—not get too involved in the intellectual discussions on nuclear rearmament or non-nuclear arms. I am disappointed with some of those who have spoken. When we are dealing with nuclear weapons, we should realise that we are not dealing solely with the Soviet-United Kingdom-American complex. How do we know that China, India, Pakistan, Iraq or Israel cannot release a nuclear weapon next week? Until that threat is negotiated away during such discussions as have been mentioned, we must face the reality of having a counter-threat.

I know that what I have said may be unpopular with some of my colleagues in the House, but it is an inherent gut feeling that my constituents in the north have. The vast majority have that gut feeling. One of the problems that faces the British Labour movement is that it cannot convince the electorate that it is a party that is prepared to defend this nation.

Having made those points, I will come back to the bread-and-butter issues.

I have been impressed by the arguments that have been made to keep the Corps of the Royal Marines intact—the House should remember that it has been threatened with abolition since 1981. It is difficult to see how morale can be at its best within that group of professional soldiers.

I have a special interest in the case of Swan Hunter, which is in my constituency. Studies have been made of the aviation support ships that will carry troops. Troop-carrying helicopters would be those ships' main capability in the event of or need for an assault. The Fearless and the Intrepid, both assault ships, are nearing the end of their lives and I was interested to learn that consideration is being given to extending their lives.

Before this two-day debate ends, I hope that the Minister will give us some idea how we are progressing in placing contracts for aviation support ships. Preferably, there should be one for Swan Hunter. In the long run, would it not be possible to consider building two, or possibly three, more assault ships if the Royal Marines are to remain a fighting unit and the unit with responsibility for NATO and the northern waters? We need such ships. It should also be borne in mind that Swan Hunter built the Sir Galahad to replace the one that was sunk, and that therefore it has the knowledge and expertise to carry out such contracts.

[Mr. Ted Garrett]

I draw the Minister's attention to page 52, paragraph 516, of the statement. I am heartened to realise that some of my worst fears about the publicity given to the armed forces because of various pranks, horseplay, bullying or whatever one may like to call it and which got into the media and were given prominence have not been realised. The paragraph appears to suggest that the adverse effects of such behaviour have not been as bad as expected. I trust that the Minister can assure me that that is correct.

Contrary to some views expressed, morale has been slightly sapped within the armed forces at this time. I think that one of the problems is that some of the units are over-stretched. For example, I would like to know whether all the infantry battalions are up to their strength of 650; I would be surprised if they were. I would like to know how many soldiers from those battalions are sent on training courses or exercises, thereby undermining the capability of those battalions.

As for welfare, I want to know how service men are to combat the rise in house prices when their terms of contract are ended and they must look to the market to find alternative accommodation. This applies to all ranks, from brigadier down to the ordinary corporal or fusilier. What financial assistance can be provided to put them back in civvy life and to help them compete in the house price market?

In view of the time, I shall cut the further remarks that I had intended to make. I hope, however, that the questions that I have put will produce reasonable replies from the Minister.

8.13 pm

Sir Geoffrey Finsberg (Hampstead and Highgate): The House has heard two remarkable speeches tonight from the Labour Benches, both sincere and both genuine. The hon. Members for Liverpool, Walton (Mr. Heffer) and for Wallsend (Mr. Garrett) made those speeches. I can only say that the views that have been expressed by the hon. Member for Wallsend are those that are expressed to me by genuine Labour voters, who say that they cannot vote for Labour candidates who espouse views like those expressed by the hon. Member for Walton.

Dr. Norman A. Godman (Greenock and Port Glasgow) *rose——*

Sir Geoffrey Finsberg: I shall not give way, because there is not much time and many hon. Members wish to speak.

I welcome what the hon. Member for Wallsend has said. The hon. Member for Lewisham, Deptford (Ms. Ruddock), who is not with us at the moment, said that we are isolated in Europe on the question of nuclear deterrence. Alas, she has failed to read the common platform which was adopted by the Western European Union:

"We are each determined to carry our share of the common defence in both the conventional and the nuclear field, in accordance with the principles of risk- and burden-sharing, which are fundamental to allied cohesion"

The hon. Lady has also failed to recall that Spain and Portugal wish to join the WEU. To my knowledge, Spain does not have a Conservative Government and to join the WEU it must subscribe to The Hague platform. Spain is desperately anxious to join, and we are anxious to have it within the WEU.

The hon. Member for Deptford is right in one thing when she says that Britain is isolated in Europe, but she got it slightly wrong. The hon. Lady should have said that British Socialists are isolated in Europe because one has only to watch the faces of other European Socialists to see that our Socialists are out on a limb—I exclude the hon. Member for Wallsend.

It is at least 10 years since I last spoke in a defence debate. I used to be a member of the Defence Committee along with the right hon. Member for Plymouth, Devonport (Dr. Owen) and the right hon. Member for Dudley, East (Dr. Gilbert). In those days, the Defence Committee did, as it does now, a first-class job. Alas, I do not notice some of those same views coming forward tonight from the Labour Benches.

I have the great privilege of having followed my friend Sir Frederic Bennett in leading the United Kingdom delegation to the WEU. I am glad to see the references to the WEU in the White Paper, particularly in this year when Britain is in the chair of that organisation. I must say as briefly as I can that what is now being done by the Foreign Secretary and by the Secretary of State for Defence is setting an example to all who have to follow in the chair. They are making the organisation work effectively.

The WEU was very much like the sleeping princess. It was created in 1954 and virtually slumbered for 30 years except for the interest expressed by the parliamentary Assembly of the WEU. Its reactivation in Rome was designed to create a European pillar. It was intended not to be a rival to NATO, but to complement NATO's work. It should be borne in mind that France is an active participant in the WEU, which she is not in NATO, and that France played a major role in the reactivation of the WEU.

The two major events which are referred to in the Statement on the Defence Estimates and which are extremely important are The Hague platform, which bound all the members to the defence of their partners at their borders, and the use, if necessary, of nuclear weapons. Those are extremely important binding undertakings agreed by the sovereign nations who are members. One may say that those are just words, but how have those words been translated into action? They were translated into action during the recent troubles in the Gulf, when all the nations of the WEU joined in the minesweeping operation. That even included the non-naval nation of Luxembourg, which made a financial contribution to the operation and was thus involved with her other partners in this vital work.

The WEU's action in the Gulf shows what can be done in a very difficult situation. Many of us were aware that that conflict held the seeds of a third world war.

Now the WEU awaits the accession of Spain and Portugal. When my hon. Friend the Minister replies tonight, I hope that he can say that, when the ministerial council meets next month, it will be able to say that it endorses the accession of those two countries so that the parliamentary Assembly of the WEU can welcome them as full members later this year. There has been a great deal of delay on this issue, not by United Kingdom Ministers, but by Ministers generally. The parliamentary Assembly has wanted Spain and Portugal to join us for well over three

years, but only now, under the British chairmanship, is real progress being made. I hope that this will move fast enough for the decision to be taken at the November meeting.

I agree with my right hon. Friend the Secretary of State that, had those who espouse the cause put forward by the hon. Member for Deptford in her previous incarnation, been successful, there would have been no INF treaty. What worried me was the view in the United States that the INF treaty was not good for Europe. I was glad, as a member of the presidential committee of WEU, to go to the Hill and talk to Mr. Taft, representatives and senators in order to convince them of the urgent necessity of ratifying that treaty. WEU played an important part in convincing the Americans of the need for an early and substantial ratification.

During our visit, we heard clear evidence from a Congressional sub-committee and others that, whoever wins the election next month in America, the burden-sharing issue will not go away. We have a responsibility because Europe has signally failed to get over in America the message of what Europe is doing in its own defence. I hope that attention will be turned to spelling out loud and clear the message that Europe is doing more than its fair share. It is satisfied to do it, but we do not want it said in America that we are hiding behind what the Americans are doing. We are in the forefront, doing an enormous amount, but the message is not getting across.

My hon. Friend the Member for Ashford (Mr. Speed), who is a colleague of mine on the WEU delegation, has already told us that, whenever one talks in America about what WEU is doing in its own defence and what NATO is doing for Europe's defence, it is greeted almost with amazement. Few people understand either the depth of commitment of the Europeans to their own defence or the financial sacrifices being made by a vast number of countries.

I have one slight quarrel with my right hon. Friend the Member for Westmorland and Lonsdale (Mr. Jopling). He was absolutely right about the role of Canada in NATO under a Liberal Government, but the present Conservative Government are making massive efforts to reverse that disastrous trend. They are moving as fast as they can with increased expenditure to try to bring Canada closer to what should be an acceptable level. The sudden volte-face of the new Democrats is interesting. They no longer say that they will pull out of NATO at once if they win; they realise, unlike the Labour party, that that is not popular among those whom they expect to vote for them.

Mr. Douglas: We have never said that.

Sir Geoffrey Finsberg: Some Labour Members wish to pull out of NATO, and we know it.

Otherwise, my right hon. Friend the Secretary of State deserves our full support for his efforts to get value for money in his Department. But, as my hon. Friend the Member for Ashford made clear, we still need to make better use of Ministry of Defence assets, many of which are unused or under-used, and more attention needs to be paid to cost overruns and to the constant specification changes which have bedevilled many of the major projects that the Ministry has tried to initiate over the past decade. *[Interruption.]* I leave aside the bullets ordered by the Labour Government, which were mentioned earlier in the debate.

I look forward to my right hon. Friend trying to decide quickly on the new generation of battle tank. It is better to have something which is available and practicable than to continue hoping for Utopia, because Utopia ain't going to come, whether in the world of commerce or in defence. We need something to replace our aging tanks as quickly as possible.

It has already been said, and I make no apology for repeating it, that we owe a real debt to those who serve in our armed forces. I am glad to know that, at least on this side of the House, we give full, unqualified support to them, whether they be marines or members of the SAS doing a difficult job in Gibraltar.

8.25 pm

Mr. Thomas Graham (Renfrew, West and Inverclyde): *I should like* to express to the House the anger, resentment and concern of my constituents at the recently announced closure of the Royal Ordnance factory at Bishopton. Anger and resentment at job losses are commonly felt emotions in my area which, in recent years, has suffered major closure after major closure.

Everyone associates Renfrew, West and Inverclyde with the closure of the Talbot car factory at Linwood—a company which was bolstered by public funds but which deserted more than 5,000 of my people and then sold its assets to realise as much money as possible from a community which served it well for so many years. Coincidentally, the assets of Talbot at Linwood were largely sold to foreign countries and Talbot consolidated its profit base at its factories abroad—a familiar tale when one stops to consider the background to the closure of the ROF in Bishopton.

But while the community has barely recovered from this massive closure, it has had others heaped upon it. There was the closure of India Tyres at Inchinnan, Prescold at Hillington, Levi Strauss in Inchinnan, and massive reductions in staff at Rolls-Royce, Chivas Regal, Babcocks and a host of small factories. So the litany continues, leaving my constituency with one of the highest levels of unemployment in Scotland.

It is against the background of a community beset by job losses and with little hope that my people are trying to come to terms with the effect of the closure at Bishopton. It is against that background that the work force at Bishopton accepted loyally, and with no small measure of trust, the privatisation of the ROF when it was bought by British Aerospace. They recognised the Government's philosophy, the drive towards the free market and the abandonment of the underpinning of key defence industries through social ownership, and, with their new owners, they set themselves the task of working productively to make the new arrangements work. The work force accepted new production targets, they co-operated in decreasing unit costs and helped to implement new flexible working conditions. The installation of new plant and methods of working commissioned by the company received the full support of the workers. But it is that sort of work force in a specialised industry which demands high skills and commitment. The workers take pride in their service to the defence of their country. The industry is renowned for the long service of its employees and it has an exemplary industrial relations

[Mr. Thomas Graham]

record. To many, working at ROF Bishopton is more than just a job. It is a way of life for them, their families and the community.

To that group of loyal servants came a new employer, British Aerospace. I have the annual report of that company for 1987. It boasts wide success in many aspects of its operation, not the least of which is its relationships with its employees. It states:

"The commitment to business objectives which stems from employee involvement strategies is a key feature of the company's employment relations policy. 1987 has seen further development of the Company's communications practices which provides the business awareness upon which such involvement can be built. Joint problem-solving and consultative forums are increasing in number and impact, thereby increasing the opportunities for employees to contribute to business decisions."

The workers at the Royal Ordnance factory at Bishopton embraced that generous spirit of participation. Indeed, several other hon. Members and I joined the union and management at Bishopton at a meeting which marked the involvement of the factory, its management and workers with elected members of the community. At that "joint problem-solving and consultative forum"—to use the words of the chairman of British Aerospace—there was no mention of redundancy, rationalisation, lack of profitability, rundown and closure. But, only a few weeks later, on 6 October, the rumours started. The very mention of closure was unthinkable to the work force and alarming to the community. Sadly, the rumours were confirmed the following day in a statement from the company announcing the closure of the factory at Bishopton with the loss of 1,200 jobs.

In sheer human terms, that was a breathtaking example of the callous and cynical indifference of a private company which, on the one hand, boasts about its positive relationship with its work force and Members of the House while, on the other, it prepares detailed plans to ditch 1,200 jobs and devastate a community. We are angry about the secrecy and deception of the company, whose representatives met us a few weeks ago, not in a joint problem-solving and consultative exercise but to pull the wool over our eyes while it prepared the destruction of a factory and a way of life.

We are even more angry about the deception of the Government, who have extolled the virtues of privatisation and alleged the efficiency of the market place and the freedom of enterprise while turning a blind eye to the effects of the closure on my constituents. The entire community will be affected. Behind the 1,200 workers who will be made redundant are 1,200 families who will lose an income and lose the dignity of employment. Behind the 1,200 redundancy notices that will be issued lies the shattered pride of a community which for generations has tried to acquire the skills necessary in this essential work. Behind 1,200 lost jobs are the innumerable training opportunities lost to our children—skills lost for ever to a country proud of the tradition of defending itself in times of crisis. Behind the 1,200 severance pay slips that will be issued lies an economic loss to the entire community, with small businesses already closing due to the lack of trade. The effects of the closure will be long-lasting and far-reaching.

The platitudes of the Scottish Office are insulting because we realise, just as the community has been shown yet again in sharp relief, that the Government do not care about the individuals who make up the society that they are elected to govern. The Secretary of State has never suffered unemployment, as I and my constituents have. The Secretary of State has never had to survive on the poverty income that awaits the workers at Bishopton when they go on the dole. The Secretary of State has never experienced the numbing reality that, at his age, if he were made redundant from Bishopton, he would never work again. Yet that is the fate to which he and the Government have consigned my constituents.

The announcement of the closure not only pinpoints serious questions about the Secretary of State's personal competence to ensure that the country's defence is adequately underpinned by long-term strategic resource planning which is under the direct control of Her Majesty's Government, but lays bare the bankruptcy of the argument that privatisation is good for industry, for Britain and for our people. In one fell swoop, British Aerospace has shown us what loyalty the private sector has to our people, our defence and our industries. In one fell swoop, British Aerospace has demonstrated, first, that money knows no loyalty to this country; secondly, that profit respects no sense of national or personal pride; thirdly, that the balance sheet dictates all conscience and responsibility; and, of course, it has shown the country that the ever-seductive quick profit will undermine our security.

There can be many ideological arguments about public versus private, and academics and politicians may debate the legalities of corporate accountability. I have no doubt that in the debate we shall hear much about the adequate provision of the defence of the realm, but I say to the House, to the country and directly to the Secretary of State for Defence, "You cannot control what you do not own."

Of course, ownership has never been important to the Government, and the sense of ownership—of having a stake and a say in their jobs—which the work force at Bishopton has will be cast aside by the Government as surely as it has been cast aside by the accounting minds of the British Aerospace board. But was that not always the intention? Were not the circumstances surrounding the sale of the Royal Ordnance factories such that the Government wanted to press ahead with privatisation at any price?

What answers does the Secretary of State have for the questions asked in the *Financial Times* of 5 March 1987, which allege that the Royal Ordnance factories were fattened up for sale? What answers does he have to the allegation, substantiated by the report from the National Audit Office last November, that the Royal Ordnance factories were sold at a bargain basement price and that land assets, which were never taken into account, can now be sold off at profits of many tens of millions of pounds —going not to the Exchequer but into the pocket of British Aerospace? Does the Secretary of State accept that, with the so-called sale of the Royal Ordnance factories, the Government did not just sell the family silver; they threw it away?

Can we expect a frank answer from the Secretary of State about these matters? When we examine not just the irresponsible actions of the Government in this affair, but the lack of foresight and the lack of commitment to Scotland—where the right hon. Gentleman once served as Secretary of State—I think not. If the Secretary of State is suffering from the episodes of selective amnesia that often

assail Ministers of this Government when they change responsibilities, let me remind him of a speech that he made in his constituency in November 1986. In that speech he attacked the Labour party's defence policy. The terms of his attack may have been fresh to his constituency then, but they have been repeated by him so often and so monotonously that their meaning may escape the notice of the House now.

Let us remind ourselves of the key phrases used by the Secretary of State in his attack. He said:

"Labour's Job Destruction Plan was not just bad for security but bad for jobs also. It could have devastating consequences for local communities but nowhere more so than here in Scotland."

The right hon. Gentleman went further by coining phrases which, in the light of the giveaway of the Royal Ordnance factories and the closure of at least two vital factories, now take on a chilling reality. The "Job Destruction Plan" of which he accused the Labour party in 1986 has taken on a new and more terrifying meaning when applied to his actions and the consequences with which the people of Bishopton must now live.

But not only the people of my constituency will be affected. Every Member of the House should be aware that on 16 October 1988 a spokesman for British Aerospace said:

"There is no active consideration of sites other than those announced. Of course that doesn't mean there won't be further closures in the future as programme needs accelerate."

Will the Secretary of State give us an assurance here and now that not only will he halt the closure of the factories that are currently under threat, but he will intervene to stop the closure of other Royal Ordnance units; or are we to believe, as is more probably the case, that his very own jobs destruction plan is well under way? If the cost of a quick profit, a fast buck, is a few thousand jobs, a few thousand lives and a few hundred communities, that is the inevitable price of the free market.

I have no doubt that what will come from the Secretary of State will be an increasingly callous and unconvincing speech about the free market and the Government's non-interventionist policy. He might well try to convince the House that he has no job destruction plan, but let me remind him of his photo finish at the general election. Few people in Ayr believed him then and no one in Scotland believes him now.

Dr. Godman: As my hon. Friend well knows, I have constituents working in the Bishopton factory. What he is seeing today, with the decision taken over Bishopton, is the continuing bad faith displayed by Her Majesty's Government towards the people of the lower Clyde. It is all of a piece—it is remarkable in its consistency. With Bishopton, my hon. Friend must remember Scott Lithgow. I am pleased that he referred to the fact that the Secretary of State sits ridiculously and precariously on a tick-tack of a majority. The Scottish people are out of tune with the Conservative Government on this and other issues.

Mr. Graham: With the decision at Bishopton, we see a further dramatic reduction in Scotland's share of defence procurement—and who wins? The south-east of England has benefited in the past, but now the company's recently announced plan to shift resources to America reveals another sinister aspect of the jobs destruction plan. All that is, of course, a far cry from the Secretary of State for Scotland last week at Brighton exhorting the Tory faithful and businesses to come north to Scotland—presumably a land fit for profit. At Bishopton there is an immediate opportunity for the Secretary of State for Scotland and the Secretary of State for Defence to stop more Scottish jobs being lost. If their words in Ayr in 1986 and in Brighton in 1988 mean anything more than empty political rhetoric, they will take action now to prevent the closure, with all its devastating implications for our people and industry. Let us not be mistaken: the wider effects on industry, on the broad private sector, will be substantial.

The National Audit Office, in its report No. 505 of 11 July 1985, described the defence sector as

"one of the largest purchasing organisations in the country as well as the biggest single customer of British industry."

So what will be the multiplier effects of the closures in terms of jobs, people and communities? My people in Bishopton demand that the Secretary of State should intervene now to stop their jobs, their skills and their contribution being lost. Any hesitation, any inaction or any weak excuses can only be the final evidence to the country that the Government, with their profit motive, have no loyalty to British defence, British security, British industry, British jobs or the British people.

I have never heard anything so ludicrous in my life as British Aerospace paying £192 million when the real value is well over £1 billion. It is like telling someone who wants to buy one's furniture, "Here you are, you have bought my furniture. Take my house and garden for nothing—I'll throw them in."

8.44 pm

Mr. Jerry Wiggin (Weston-super-Mare): I commend to the House—I hope that the officials responsible will be congratulated—the presentation of the White Paper this year. Those of us who have studied White Papers for some time will remember when they were a dull and boring document. The coloured graphs and diagrams, and so on, make for much easier reading.

I propose to speak briefly on just two subjects, one because of its inclusion, and one because of its virtual exclusion. Although Westland has a much reduced work force in my constituency, I remain deeply interested in the future of the helicopter as a battlefield weapon. It is a subject on which I have spoken many times. I was therefore delighted to see the somewhat simplistic, but nevertheless heartening, diagram on page 24. Can it be that at long last the Army is beginning to appreciate the importance of the helicopter, both for moving troops on the battlefield and as an attack weapon? I say to my hon. Friends who have been discussing our amphibious capability that the helicopter can be used in that role most effectively. The simple landing platform that is required is much less costly than a purpose-built assault ship. Those who say, "But what about the weather?" will recognise that no seaborne assault can be carried out in weather conditions that would preclude helicopters from flying.

As part of the argument, occasionally it has been my practice—it will be tonight—to say a word about the vulnerability of armoured vehicles on the battlefield. That usually draws a stinging letter from GKN, which manufactures some of our new armoured personnel carriers, but it has just bought one quarter of the shares of Westland. It is ahead of the Ministry of Defence in appreciating that one can no longer turn a blind eye to one

[Mr. Jerry Wiggin]

particular arm in the complex modern battlefield. I shall quote from the press handout that was issued at the time of that important purchase:

"In Land Systems important changes are underway. These relate directly to the greater responsibility being placed on conventional land forces, and the increasingly sophisticated threats these forces will face. The response to this is revised land battlefield doctrines, which are moving towards closer integration of front line equipments, on land and in the air, to provide a strong, cohesive, highly mobile and flexible fighting force."

How difficult it is to move the military mind. History is littered with examples of armies going to war equipped for the previous conflict and therefore at a hopeless disadvantage. The American experience in Vietnam showed to the world the way in which the helicopter can give the field commander flexibility to place his troops in the most appropriate position swiftly and safely and, similarly, to withdraw them as and when required. That the tank should remain the be all and end all, backed now by millions of pounds' worth of armoured personnel carriers, ignores the undoubted ability of even quite small infantry units to knock out tanks with hand-held weapons. If one includes the whole substantial armoury directed against the tank, there cannot be much hope that many will survive long on the modern battlefield.

I am therefore appalled to learn that there is now a debate in the Ministry of Defence about replacing the aging Chieftain tank fleet—at a cost of no less than £1 billion if the press is to be believed—solely with new tanks, wherever they may come from. I say to my hon. Friends who have been arguing the merits or otherwise of buying American that there is almost no item of defence equipment that cannot be bought more cheaply in America, but that is not a good argument for so doing. I am sure that my right hon. Friend the Secretary of State will hear that message coming loud and clear from both sides of the House today.

Mr. Leigh: Does my hon. Friend accept that if we purchase a tank, the Challenger 2 tank made by Vickers probably has the best turret in the world, the best weapons system, the most robust hull and the best engine—the Rolls-Royce? Will he pay tribute to that tank, which is produced by a fine British company employing many thousands of people in Newcastle and Leeds in the most modern tank factories in the world?

Mr. Wiggin: As the gist of my argument is that I hope that the Ministry of Defence will not buy any tanks—or a great deal fewer than £1 billion worth—I shall not join in my hon. Friend's request, even though I am sure that what he says about that tank is correct.

If my doctrine is too revolutionary, as I suspect it is bound to be, what about splitting the money—half of it going on helicopters? That is a bad compromise, but it is better than going for a whole new generation of weapons that will unquestionably be out of date before they are in use.

I strongly welcome the creation of the air mobile brigade. Although the 25 EH 101s ordered in the troop-carrying role will not be delivered until the 1990s, I am doubtful whether much air mobility is open to the brigade, in spite of its name. The aircraft to carry it about do not exist. Every autumn there is an exercise, after which the generals express their wonder at the benefits of helicopters and then do little or nothing about converting that lesson into action.

I am sorry that Ministers brought to an end the exercise that they were conducting into the transfer of responsibility for helicopters from the Royal Air Force to the Army and the Navy. They stopped it because someone said that the change would not be economic. But this is not about economics: it is about operations. It is extremely difficult to expect ground commanders to trust their transport if it is run by a separate service. I hope that if, at any time, my right hon. Friend has a little money to spare he will reinstitute that study. He has only to talk to those involved in the Falklands and in exercises to hear them reiterate their need to have command of their own air transport.

Lieutenant General Sir David Ramsbotham, commander of the United Kingdom field army, is quoted as saying:

"The Soviets are ahead of us in their concept for employment of helicopters, having acted while we have been thinking."

That says it all. If one asks the time in the MOD, one will be told that officials will conduct a study of the matter. Never has a decision of this importance been taken in such a lethargic and languid manner——

Mr. Brazier: I thoroughly endorse my hon. Friend's views about bringing air transport under the command of those who have to use it, but I put it to him that the Soviet Union has 35,000 tanks. It has some heavy armoured battlefield helicopters—about 1,000 Hind D and Hind Es—and some lighter ones, but its main effort is still in tanks, not helicopters. So, to some extent, we must look at what the Soviet Union is doing.

Mr. Wiggin: Just because the Russians are doing it, that does not make it right.

I referred earlier to an omission from the White Paper—the scant commentary on the Territorial Army. That is symptomatic of the way in which lip-service is paid to the value of the TA and of all the reserves by the regular services. When it comes down to finding resources and manpower to assist what is a substantial part of the front line, the contribution is extremely inadequate. The reserve and auxiliary formations, as shown in the graph on page 50 of the White Paper, take up 2·2 per cent. of the defence budget, less than 1 per cent. of services manpower and 1·8 per cent. of civilian manpower. For that, the Army obtains a third of its front-line strength—50,000 men in Germany alone—the Navy a substantial part of its minesweeping capability and the Royal Air Force a number of airfield defence units.

The report of the Reserve Forces Policy Board of the United States of America devotes 180 pages to a detailed analysis of all American reserve forces. I commend it as good reading for Ministers on their way to bed. It has much to say about the importance that the United States attaches to its reserve forces.

Increasingly, the Regular Army is providing commanding officers for TA units, few of which now have territorials doing that job. For reasons unknown to me, I have heard that these territorials cannot even draw the same allowances as their regular equivalents—I hope that my hon. Friend the Minister will look into that. Honorary colonels are being appointed from the Regular Army or from the ranks of retired regular officers. No longer are

they distinguished local people with a TA background. Arms directors have too big a say in this. It is being seen as a nice little perk for friends in the Regular Army. I hope that Ministers who have the right to veto these appointments will examine that point.

My right hon. Friend appreciates the serious problems created by the large number of men who leave the service every year. He recently announced that he was spending £10 million on a recruiting campaign. I welcome his obvious determination to tackle the problem, but I doubt whether even this intervention will prove completely successful.

In recent years the Regular Army has argued that because of the importance of the TA its standard of training should be exactly the same as that of the regular forces. That is a fine idea, but it ignores the demands on the individual and his family—demands which eventually drive him out. Sadly, that is what is happening. Reluctantly, therefore, I suggest that, as numbers count, a somewhat lower standard of training after the initial period would be an acceptable alternative. Instead of spending £10 million on advertising, will the MOD think about the possibility of making the regulars responsible for recruiting the reserve forces? That would concentrate their minds greatly on making the TA attractive to the volunteer and would enable a considerably greater amount of time to be spent on welfare, families and on other things that help retention. It is significant that the American forces practise this and seem to have a much smaller problem of retention than we do.

We have already heard in this debate about the demographic problem that will shortly be with us. The expanded TA can help with it, and no stone must be left unturned to ensure its continued success. If my right hon. Friend is still battling in the Star Chamber for resources, I add my voice to those of my hon. Friends in saying that Conservative Back Benchers will be determined to ensure that our forces are thoroughly funded in all their aspects and maintained at their present high standards.

8.57 pm

Mr. Dick Douglas (Dunfermline, West): This has been an interesting debate, set against a background of constraints on defence expenditure. Several Conservative Members have alluded to the Secretary of State winning or losing battles. I suspect that, following a leak in the course of this evening, we shall read tomorrow in the press that he has partially won the battle. I do not know what figure to put on this: perhaps he or his junior Minister will give us one. Something below £1 billion—perhaps £900 million —is the figure that has been circulating as the amount that he has got out of the Treasury. If so, we should like to be told tonight, rather than reading it in the press tomorrow. I think that I speak for all parts of the House when I make that request.

We are worried about the problem of resources. In paragraph 2 of its fifth report the Select Committee said:

"When in 1986 the previous Defence Committee examined the Statement on Defence Estimates 1986, it concluded that, instead of the 'broadly level' funding expected in 1985, there would be a fall in real terms of between 4·5 per cent. and 7 per cent. in the period 1986-87 to 1988-89. Since then, defence spending in real terms has reduced from £18·5 billion in 1986-87 to £17·5 billion in 1988-89. We calculate that the cumulative real reductions in defence spending from 1986-87 to 1990-91 will total £3·2 billion. Historically, the effect of reductions in defence expenditure has borne most heavily on the equipment programme; the equipment share of the budget has fallen from 46·3 per cent. in 1985-86 to 43 per cent. in 1988-89, and is now at its lowest in proportionate terms since 1979-80."

[Interruption.] I do not dispute that. It is against that background that we view the Secretary of State's oft-repeated comments about tough and difficult decisions to be made. We know that those tough and difficult decisions are being made against the background of a commitment to maintain a strategic nuclear deterrent.

Hon. Members spoke earlier about people going to other constituencies to make speeches. During the general election, the Secretary of State came to my constituency and made a speech. I would welcome it if he came again, because that speech quadrupled my majority. Perhaps he should have stayed in Ayr, where his majority was reduced from about 7,000 to about 100. My constituency contains a vast number of workers, not on the base itself, whose work is directly related to repairing and maintaining the Polaris fleet. So far in the debate we have not heard anything about Polaris, certainly not from the Opposition. It is deplorable for the Opposition to put down an amendment to the defence White Paper and not mention Polaris. I shall deal with that later. There are constraints.

The Chairman of the Select Committee on Defence spoke about the vast number of reports—nine—that the Select Committee has produced. I shall confine my speech to Merchant Navy and Royal Navy matters. One of those reports was about the merchant fleet. There have been vast reductions in the merchant service, not just in the number of ships but in the important matter of the availability of British crews. I shall not weary the House by quoting from the report, but I should like to draw attention to paragraph 54 of the fourth report of June this year.

In that report, we dealt with reductions in the merchant fleet and in the personnel. Able seamen are very important, but so are cadets and training. We are an island nation, but we have no maritime strategy. It is farcical to reduce the number of British flagged vessels and Merchant Navy manpower and simultaneously to argue the case that if we have a conventional war somehow or other nations will help us with resupply and replenishment across the Atlantic. In his speech the Secretary of State did not mention that.

The Select Committee also produced a report about the surface fleet. The hon. Member for Ashford (Mr. Speed), who is very knowledgeable about these matters, pointed to the defects in the ordering pattern for frigates and destroyers. It is all very well for the Secretary of State to come to the House in July and in a splurge of activity say that he has ordered three type 23 frigates from Yarrows. That is welcome but there has been a break because in the previous year no ships were ordered. I suspect that, unless he has won a substantial battle with the Treasury, next year no ships will be ordered.

We have seen cuts in our shipbuilding capability. My hon. Friend the Member for Greenock and Port Glasgow (Dr. Godman) spoke about that. I suspect that on the Clyde, unless we are very lucky and retain the very small yard with which I used to be directly associated—Appledore Ferguson, as it is now called—we will have one shipyard on the Clyde, Yarrows, wholly dependent on naval ordering. That yard is designed to build three type 23 frigates. My hon. Friend the Member for Wallsend (Mr. Garrett) drew our attention to the need to maintain shipbuilding capacity in the north-east of England.

[Mr. Dick Douglas]

If ordering is carried out in a feast or famine manner, not only will the Navy be dislocated but so will the reliability and performance of shipyards. It might be argued that certain things can be done in commercial yards, but we cannot re-create overnight the sophisticated personnel in naval shipyards. The Secretary of State should come clean. The Select Committee on Defence searchingly and patiently wheedled out the fact that it is not just a commitment to "about 50" frigates and destroyers but an indication of their operability and availability. I challenge the Minister who is to wind up to tell us the number of these vessels that are available now. It will be well under 50. It will probably be nearer the 40 mark.

My interest in the dockyards concerns the refitting and maintenance of the SSNs, the SSBNs and conventional vessels. The promises made when we discussed the privatisation or commercialisation of the dockyards, particularly Devonport, have been reneged on. In particular, the one relating to the core programme has not been fulfilled, and that resulted in massive reductions in the dockyard work force. To some extent, Rosyth has escaped that, but I have told my constituents not to be complacent, because if we run on with the Trident programme the facilities at Barrow will become a competitor in the refitting and maintaining of these boats. I pointedly ask the Secretary of State whether that is in his mind, that of the Ministry of Defence or that of Dr. Leach, at Barrow. I tell my constituents not to be complacent because, unless there is either a further commitment to SSNs or a further generation of SSBNs at Barrow, there will be problems. It is reasonable to ask for some clarification about that.

There is a problem about the nuclear waste at Rosyth. By the year 2000, it is likely that there will be 10 SSNs and SSBNs to be decommissioned. Rosyth has the first decommissioned SSN, the Dreadnought. There is no discernible plan within the Ministry of Defence to dispose of these boats. There is certainly a plan to take out the reactors and the fuel, but there is no plan to dispose of the hulls. The valuable resource at the dockyard ought not to be used to tie up the hulls of these boats until kingdom come.

The Select Committee has said that it expects answers about this point to be forthcoming before we next study the problem. It is not good enough to talk vaguely about plans when there is a real problem in disposing of these vessels. We cannot do what the United States does—cut up the vessels and bury them in the Nevada desert—nor can we dump them at sea.

I am utterly bemused when I try to discover what defence policy the Labour party is trying to evolve. It is credible to say that we shall run on the strategic deterrent, and it is credible to say that we shall get rid of it, and cancel Trident and decommission Polaris, because that runs on into the 1990s. Either of these policies is credible, but we cannot sell a halfway house. The British people will not buy something in between. As an old-fashioned shop steward, I do not believe that it is a useful negotiating posture to be on record as saying that one will not press the button while at the same time trying to fool the Soviet Union into thinking that we shall use this deterrent as a negotiating ploy, either for strategic weapons or for some form of conventional weapons.

I am disclosing real difficulties, which have to be faced by my party. It is better that my party faces them now and comes to a considered and deliberate conclusion. My view is that this will be the last time—whatever the party—that we shall go through the pretence of kidding ourselves that we have an independent strategic deterrent. The boats and the warheads are ours, but the important part in between is totally American.

The decision to refit and maintain the missiles at King's bay is also a clear indication that, although we can take the missiles off the shelf when we have put them there, in a strict sense they do not belong to us. There is a rolling commitment which no one would accept in relation to a motor car. If someone wants a car repaired, after 10,000 miles, he does not say, "You can give me another one off the shelf."

Mr. Younger: I should have thought that the hon. Gentleman of all people would know that that is exactly what much of industry does with cars all the time.

Mr. Douglas: Yes, but they do it on leasing deals. Is the Secretary of State saying that there is a leasing deal on Trident? One does not do that if one owns the facility. In this case, we are not getting something new; we are getting a refurbished item. I do not want to labour this point because it is generally conceded, unless the Secretary of State wishes to enlighten us.

We shall come up against this again in the year 2000. It is better for the Labour party to face this now, to say that we will be committed to ending the United Kingdom's role as a strategic nuclear power and to begin arguing that case to the British public. That is what I had to do in the last general election. I refuse to believe that people in Rosyth, whose employment is directly related to the issue and who voted Labour, are different from people in the rest of the United Kingdom. They cannot be convinced by the force of argument that the possession of a strategic deterrent is a waste and an attrition of our valuable resources—not only economic resources, but valuable, unique, costly and scarce intellectual resources. Some of the best people whom we have employed have been taken in by our continued possession of a strategic deterrent.

I do not know what will happen when people go to Moscow, but it would be preposterous for us to try to sell some wishy-washy in-between measure. We either keep the deterrent or we say to the British people, "This is the last time. It is our commitment to get rid of it", and come clean, particularly if we have a leader who is not committed to pressing the button. It is a different argument if we have a leader like the previous leader of the Labour party, who said, "If I have to press the button, it is a sign that the deterrent has failed." However, if we have a leader who says that he will not use it, there is no reason for anyone to negotiate.

9.13 pm

Sir Geoffrey Johnson Smith (Wealden): That was an honest statement from the hon. Member for Dunfermline, West (Mr. Douglas). I want to add my voice to those who have expressed concern about the alleged battle between the Ministry of Defence and the Treasury.

I have no doubt that, since my right hon. Friend took office nearly three years ago, he has earned our confidence and we have respected his judgment. We have had three years of virtual standstill of budget in the face of the rising costs of military technology and manpower. We know that those three lean years have followed seven good years in which we had a much-needed expansion of our defences. Nevertheless, as we look to the future, we must be careful not to allow essential schemes for keeping our forces up to date to fall behind, as some of us suspect may happen.

There are three reasons. The first has already been mentioned. We do not know what Mr. Gorbachev will do, but we know that the conventional capability of the Soviet Union is strong and growing stronger and more efficient. Whatever may happen between the United States and the Soviet Union, we shall find ourselves playing a notable part in trying to get an agreement on chemical weapons and conventional arms. If we are to succeed, we must negotiate in strength, as we did during the INF talks.

After three years of standstill, I do not believe that what my right hon. Friend the Secretary of State is asking for is extravagant. The alternative approach would weaken the effectiveness of our forces and allow structural disarmament to take the place of a properly negotiated arms control treaty in which everyone gives up something.

My second reason for expressing the hope that we shall continue to be determined to maintain the effectiveness of our contribution to NATO is a political one. We all know that the United States is deadly serious—it is obvious that it is not bluffing—about the burden that it bears. It expects us in Europe to do more than we are doing already. I cannot think of a decision that would be more badly timed than for Britain of all countries to appear to be reluctant to shoulder its responsibilities now, before the election in the United States, and before the new President has taken his place.

My third reason for backing my right hon. Friend the Secretary of State is based on my belief that we should take no precipitate action following the burden-sharing debate. I believe that my reasoning is more positive than that which is based on comparisons between the spending of various countries. Burden-sharing will be a profitable debate if it is based on ascertaining how we can better organise the roles, risks and responsibilities of the different members of the Alliance. That is exactly why NATO has established a working party to examine the roles, risks and responsibilities and then to decide where there is a need for adjustments, and to make recommendations accordingly.

We know that the working party will report to the NATO Defence Ministers in December, and my right hon. Friend the Secretary of State will have to consider its report. That is another reason why I think that it would be wrong, out of respect for our allies, to undermine our current defence responsibilities in the interests of short-term financial criteria. We should not forget either —I listened with great interest to my hon. Friend the Member for Hampstead and Highgate (Sir G. Finsberg), who is the leader of our delegation to the Western European Union—our obligations to WEU members. We are obliged to defend a fellow member country at its borders if it is attacked. Any fundamental change that we may be forced to make if we starve our defence forces of the resources that are necessary for an adequate modernisation programme will bring into question our reliability as a staunch member of the WEU.

I remind my right hon. Friend the Secretary of State that next month, in Hamburg, we who are members of the United Kingdom delegation to the North Atlantic Assembly, which I shall have the honour of leading, will be attending the autumn session. We shall be addressed by the Chancellor and Defence Minister of the Federal Republic of Germany, and the Supreme Allied Commander. The session will be attended by parliamentarians from all the NATO countries, including prominent Senators and Congressmen. I am sure that all those who attend will emphasise the importance of the occasion.

My right hon. Friend is trusted by other NATO Ministers as a Minister who fully comprehends the significance of NATO in drawing up and funding our defence priorities. We fully support him in his arduous task of ensuring that Britain will continue to take its defence decisions with a full understanding of the long-term needs of the Alliance, which has for so long kept the peace in Europe.

9.20 pm

Mr. Frank Cook (Stockton, North): We have this round of discussions each year, and each year I feel some sympathy for the Secretary of State for Defence and his ministerial colleagues. We find that they are in the same dilemma each year. The Government seek to persuade the United States that we spend sufficient on defence, despite its protestation that a greater degree of burden-sharing is necessary. The Government seek also to persuade our NATO partners that we spend more than our fair share and that they must increase their contributions to equate with ours.

At the same time, the Government seek to persuade the Labour party that they are right to escalate expenditure on nuclear missiles and on the vehicles to deliver them and to spend less on conventional weapons and equipment. In doing that, they seek to persuade the electorate that all is well in defence provision—indeed, that all is so well that the Treasury can afford to stuff billions of pounds back into the pockets of the rich, who do not need the cash in the first place. While that contradictory melange is presented to the media, the Government seek to distract attention from those contradictions by knocking the Labour party. We have had plenty of attemps to do that today——

Mr. Mates: The Labour party knocks itself—*[Interruption.]*

Mr. Cook: I shall continue. The hon. Gentleman has simply proved my point.

It is our job to examine the Defence Estimates. The need now is to put an end to all the posturing and to discuss properly the full range of defence issues in the light of changing technology, changing economy and changing global circumstances.

Before developing that theme, I should like to inform the House of my involvement this year as a participant and assessor in the pilot period of the Parliamentary Armed Services Trust. I shall try to explain the trust quickly, as I do not have much time. The scheme was started to try to give newer Members of Parliament more direct experience of the needs of the armed services, the duties we require them to perform, the equipment that we provide for that purpose and the conditions that they experience. I understand that the scheme was dreamed up by the hon.

[Mr. Cook]

Member for Ilford, South (Mr. Thorne). I pay tribute to him for his initiative and pay tribute also to the Under-Secretary of State for the Armed Forces for the ready way in which the scheme was accepted and for the helpful and gracious manner in which his staff have enabled the three trying hon. Members—very trying in my case I am sure—to carry out our duties. The other Members are the hon. Members for Ryedale (Mr. Greenway) and for Dorset, South (Mr. Bruce). They are looking at the Royal Air Force and the Royal Navy, respectively. I was assigned to the 24th Air Mobile Brigade and have so far spent almost three weeks in total either working with that unit or with the units that support it.

The opinions that I express today have been well ventilated and truly discussed, and the examples that I use have been gleaned from exchanges on those occasions and during the many other defence visits that I have made this year. I could recount a list that would almost reach parity with that of the Select Committee on Defence. When I register my views and analyses today, I keep faith with commitments made to serving men and women of all ranks during many exchanges which have helped to make clear to service personnel, who were previously misinformed on the subject of Labour's defence policy—usually by a frequently mischievous and occasionally malicious media—what the Labour party really thinks on defence. The Labour party has always maintained that, if we are to consign young men and women to advanced areas of confrontation, we must ensure that they are adequately supported, fed, clothed, equipped, armed, trained and led. I have noticed tonight that some hon. Members, notably the hon. Members for Weston-super-Mare (Mr. Wiggin) and for Ashford (Mr. Speed), are not shy to admit that all in the garden is not lovely and that it is no good pretending that all is well. Serving men and women have not been slow to inform me of that.

In response, the Labour party maintains that we cannot expect full effectiveness and efficiency if there is a shortfall in resources and resolution. It is patent nonsense to formulate our strategy to resist the perceived threat from the Soviet bloc around a precommitment to a five-day reliance on conventional exchanges if we fail to ensure that the resources will last that long. Supplies of some munitions can be guaranteed for less than two days. Supplies of some fuel can be guaranteed for less than a day and a half and some spares, essential for mobility, are still awaited from suppliers in Czechoslovakia. I sympathise with the Minister. After all, procurement is his personal fiefdom, his personal forte and his bag. He must help carry the fight to the Treasury so that our services can be made ready to carry the fight to our attackers. I am sure that he has tried but failed, as others have failed before him, to get enough and to apportion it properly or in a way that would equip and empower our young men and women to fulfil the role that we require of them.

In leaving our young men and women short, do we expose them to an earlier death—God forbid—perhaps at the hands of our armourers as they launch our American ballistics in response to Soviet supremacy? Is this House happy to consign the cream of our youth to such kamikaze tactics? If it is, it had better make that clear tonight so that mothers and fathers can understand what is said and reform their opinions accordingly.

Apparent inadequacies can be more trivial, but in the day-to-day concerns of service personnel they can be more telling and immediate. By that I mean items like the new boot which was awaited with eager anticipation by so many units which considered it to be the answer to all foot problems. Those units which have it already would readily return to the previous issue tonight if given the preference, because it is bloody uncomfortable.

Issues of pay, allowances, accommodation and house purchase are even more telling for service personnel. As we have heard tonight, all those issues can cause resentment throughout the three arms of Her Majesty's forces, despite previous ministerial assurances that this year's review board would remove some of the causes for complaint.

Pay was always inadequate in the barrack room. It was ever so. However, comparisons between the military police and civil police reinforce the view that there are greater disparities between what is demanded of military personnel and the way they are rewarded and what is demanded in civvy street and how such a service is rewarded. Pay differentials were always said to be unjustifiable. However, comparisons between commissioned pilots and non-commissioned pilots—and flying instructors, in particular—reveal what is wrong. Until I was forcefully told by a flying instructor from Middle Wallop, I did not know that non-commissioned flying instructors receive £6 a day flying pay, whereas a commissioned instructor receives double that. That anomaly is very difficult to explain, unless one falls back on traditional explanations of RAF flying supremacy over the Army Air Corps. Differentials in travel conditions, living overseas allowances and accommodation rates are sources of bitter comment. House purchase is patently most difficult for those military units required to move more readily than their comrades in the Royal Navy or the RAF who can more easily acquire property close to more stable garrison placements.

So many of the promises made by the review board this year have failed to keep faith with the commitments. The disillusion with review board procedure is widespread, and I must report that resentment runs deep in almost every unit that I visited. Early disengagement from service in the armed forces is clear evidence of that. As the Minister is aware, many units are suffering as much as, and some more than, 30 per cent. wastage per year. That is not fantasy. It is verifiable, and to some extent it is justifiable.

The change in circumstances related to strategic need vis-a-vis the East-West balance of power is also verifiable. That brings me to the main thrust of my comments and I want to refer to points made by the hon. Member for Wealden (Sir G. Johnson Smith) and his reports on reviews currently taking place within NATO. I hope to join the hon. Member for Wealden on some of those reviews. I am pleased that I shall be joining such a review next week when I attend a three-day seminar at the NATO defence college in Rome.

It is just as important that the Labour party should be able to explain to its political opponents, as well as to its political supporters, some of the subtleties of its quest for nuclear disarmament. *[Interruption.]* Some hon. Members find that amusing. One or two of them have been so misinformed as to equate the Labour party's views on disarmament with difficulty in amassing votes at elections.

I remind the House that in 1983 I was a parliamentary candidate for the first time in my life against someone who had been a Member of this House for 21 years. He was the

author of a pamphlet called "The Case for Cruise." He had regularly attended seminars in America, at which he had said why we should retain our nuclear stance. Despite his 21 years as a Member of this House and his nuclear commitment, he was placed third in the poll. I was placed first. There is no difficulty over acquiring votes while professing an anti-nuclear stance. We maintained the same unilateral nuclear disarmament policy in 1987. I stood as a candidate against even younger Tory opponents and even more vigorous middlemen but I increased my majority fivefold. Anti-nuclear policies do not lead to disaffection among voters in the north-east—at least, not in my constituency.

We should put an end to the posturing and consider all the options. It is improper and unreal to take any individual defence factor and to consider it in isolation. Nothing could be more dangerous. I hope to contribute constructively to NATO's strategic review and to put forward the nuclear disarmament view. If we approach the problem by considering the existence of the threat, its nature, size, the direction from which it may come, how we should prepare for it and how we should equip our young men and women and train them instead of considering the restricted amount of money that the Treasury is prepared to make available, we may be able to adopt a bilateral stance and go some way towards meeting our genuine defence needs.

This week I spent two whole days in Northern Ireland. I was in the Castlederg salient with the commanding officer, Light Infantry. I experienced at first hand some of the conditions that our young men and women have to tolerate. We are asking them to do a bloody awful job on our behalf. There appears to be no political solution on the horizon, yet the conditions in which those personnel operate are disgraceful, the hours that they work are unbelievable and the conditions in which they sleep, at least near the frontier, are unspeakable. Yet they are the lucky ones. They have a positive role to play, which they understand and perform admirably, brilliantly and with a determination and commitment that is indescribably exemplary. Along with them, in permanent resident postings, they have their families—young wives, many with young children, living on bases with perimeter wires that are totally secure. They are afraid to go out beyond the perimeter wires and into the broader community because of the kind of retaliatory action that may be taken against them by hostile communities. When I say hostile, I really mean hostile. It might be fine and funny to criticise the dilemma that the Russians face in Afghanistan, but it is sobering to experience the same degree of real, vile hostility within the United Kingdom.

I plead for a comprehensive review that will make us examine each and every condition that we foist upon the young people who give us good service. I refer not only to pay, pensions and the ability to leave the service after 22 years wishing to obtain a house in our society—conditions that do not condemn a regimental sergeant-major to take a job as chauffeur to a civic head simply because that is the only way that he can get council house accommodation —but to conditions that provide such people with the equipment that allows them to do the job for a little longer than the five days that we demand before we make a nuclear response. We must ensure that the back-up reserves that we offer them are adequate.

The hon. Member for Weston-super-Mare spoke about the TAVR. I must honestly report that some officers who have been in charge of TAVR units for as long as two years confidently tell me that there is no way that the men can do the job, that there is no way that they will turn up for parades on time, and that there is no way that they will accept rebuke for any sort of misdemeanour. Yet other officers have said that anyone who has suggested that to me is failing in his duty because it means that he has organised the training badly and not motivated the forces. I have no doubt that there is an element of truth in both those statements. I offer them to the Secretary of State because we must take the truth from both and ensure that we remedy any wrongs.

Mr. Mans: Does the hon. Gentleman agree that every rank in all three services is now paid more in real terms under this Government than when I was a serving RAF officer during the previous Labour Administration?

Mr. Cook: I am pleased that the hon. Gentleman has had the opportunity to register the resentment that he obviously felt when he was a serving officer. During the past seven months I have spoken to serving officers, NCOs and rankers, and I am reporting what they have told me. If the hon. Gentleman does not want to accept that, I challenge him to join the Parliamentary Armed Services Trust, preferably in a branch of the services in which he did not serve, and listen to some of the criticisms. I am confident that he will hear even more than I heard.

I have asked for a review that begins from the basis of the need of our defence commitment, not from the greed of the Treasury, and from the need of the people who ask us to perform that role on their behalf. I ask for it to be carried out quickly and in conjunction with the NATO review.

9.38 pm

The Parliamentary Under-Secretary of State for Defence Procurement (Mr. Tim Sainsbury): I welcome the hon. Member for Stockton, North (Mr. Cook) on his first contribution from the Labour Front Bench during a defence debate. I am sure that most hon. Members were glad to hear his remarks about the armed forces parliamentary scheme and his experiences of it. I hope that the House will be grateful for his support for the members of our armed forces.

The hon. Gentleman expressed sympathy with my right hon. Friend and his Ministers, and we are glad of his concern for our welfare and his sympathy for us. However, the sympathy that we feel for him and his hon. Friends on the Front Bench who have to debate defence on behalf of the Labour party is a great deal deeper. Perhaps I should also welcome the first speech from the hon. Member for Clackmannan (Mr. O'Neill) as a leader of what I must say appears to be a divided army. The hon. Members for Wallsend (Mr. Garrett) and for Dunfermline, West (Mr. Douglas) would classify themselves among those who would sign "Bemused of the Labour party" when it came to what was, or indeed what was not, their own party's policy.

We heard a deeply sincere speech from the hon. Member for Liverpool, Walton (Mr. Heffer). Nobody who heard that speech would doubt his sincerity. What most of us doubt is the truth of the views that he holds. He may be in the majority in his own party but, as was pointed out to him by an Opposition Member, he is not in the majority in

[Mr. Tim Sainsbury]

the country, as the last general election decisively showed. I shall return to some of the comments from the hon. Member for Clackmannan.

Some issues were raised during the first day of this important debate, particularly matters relating to pay, recruitment and retention, which I shall leave to my hon. Friends the Minister of State for the Armed Forces and the Under-Secretary of State for the Armed Forces who hope to catch your eye tomorrow, Mr. Speaker.

Many hon. Members have commented on the possible outcome of the current PESC round and the implications for the Defence Estimates. I refer particularly to my hon. Friends the Members for Hampshire, East (Mr. Mates) and for Wealden (Sir G. Johnson Smith) in that connection. They and others will not be surprised that, on this important point, I cannot add to what my right hon. Friend said in his opening remarks. Equally, many hon. Members have spoken about the importance of obtaining for our forces the best equipment while at the same time getting value for money. My hon. Friend the Member for Hampstead and Highgate (Sir G. Finsburg) referred to that point. I hope that we shall not have to wait another 10 years for his next contribution to a defence debate.

It was Cato the Elder who was reputed to have used the same phrase in every one of his speeches, "Delenda est Carthago"—Carthage must be destroyed. In one sense at least, I should seek to emulate him by saying in every speech that I make from the Dispatch Box that value for money must be obtained. I think that "Utilifas ex vectigali publico maxime est capienda" would more or less cover the point. If I may return the vernacular—*[Interruption.]*

Mr. Speaker: Order. It is in order. I think that some hon. Members would like it to be translated.

Mr. Sainsbury: The sense is that value for money must be obtained. It is essential to extract maximum benefit from public taxation. I am sure that we would all agree with that sentiment.

One of the most important ways that we have of getting that drive for value for money in procurement is competition, and we are maintaining our sustained efforts to secure full benefit from competition. In 1983-84, the proportion by value of contracts let on a competitive basis was only 38 per cent.—that, of course, was up from the level that we inherited from the Labour Government—whereas, in each of the past three years, over half our business has been done by competition.

Naturally, we must expect variations in the figure from year to year, mainly due to fluctuations in the value of large contracts for items such as nuclear submarines, for which competition at the prime contractor level is not feasible. In such cases, however, we insist on the greatest possible competition for the award of sub-contracts.

Our drive to reduce the number and value of contracts let on a cost-plus basis has also been significant. The value of contracts let on that basis—cost plus percentage fee—fell from 15 per cent. in 1983-84 to only 7 per cent. in 1987-88. Each of those contracts is now subject to a cost ceiling, so that we are no longer entering into open-ended commitments.

Of course, because of the length of procurement cycles, it takes time for the full benefits of increased competition and our more commercial approach to work through. Typically, it might take two to three years between the signing of a production contract and the receipt of and payment for the first piece of equipment arising from that contract, and it is only at that stage that the real savings are seen.

Underpinning our drive for greater competition are the steps that we have taken to provide ourselves with a greater choice of companies by seeking wherever possible to widen our supplier base. We continue to encourage small firms to break into the defence market, and the amount of direct defence business won by small firms is running at £1,000 million a year. That figure excludes the substantial sub-contract work that they also undertake. The efforts of our small firms advice division have encouraged several thousand small enterprises to seek out defence business. Our competitive base is therefore in very good health, and we shall maintain our efforts to ensure that it remains so.

The benefits to the defence industry of increased domestic competition are evidenced by its growing competitiveness in international markets. That is shown by our outstanding export record. Defence exports have tripled in real terms since 1979.

I am sure that the House will join me in congratulating our defence suppliers on their recent export achievements. Foreign sales represent a most valuable addition to the order books of United Kingdom companies, while the consequent longer production runs help to reduce the unit cost of our own purchases. In addition, some of the overseas sales enable the development costs of equipment, which are often very substantial, to be recovered from a much increased volume of sales. They also, of course, create a large number of jobs for British workers.

Sir Antony Buck: Does my hon. Friend agree that it would be appropriate to pay a tribute to his own defence sales organisation and to the alteration in the attitude of the corps diplomatique, which is no longer orientated against sales? Therefore, trade is no longer a dirty word and many of our ambassadors are in fact orientated towards selling for Britain.

Mr. Sainsbury: I am grateful to my hon. and learned Friend for his comments. I shall be paying a tribute, as he suggests, later in my remarks, but what he has said is very true.

There are a number of other aspects of our drive for value for money to which I should like to refer, but before I do so I will respond to some of the other points which have been raised in the debate.

The hon. Member for Clackmannan welcomed our greater use of competitive tendering, but it appears that he was somewhat equivocal about the consequences of that policy. He seems to welcome lower prices, but he cannot accept the consequential adjustments of the resources, both men and materials, to the size for efficient production. Surely he cannot want the Ministry of Defence to subsidise and so perpetuate inappropriate or inefficient production, which seemed to be the tenor of some of his remarks.

Mr. O'Neill: What I was trying to point out was that there is a danger in adopting an unduly simplistic approach to competitive tendering. There must be some flexibility, which I have not seen in some of the Government's approaches to the problem. It is necessary

to have competitive tendering as part of a coherent strategy in terms of the Government's relationship with the defence industries.

Mr. Sainsbury: It may not be apparent to the hon. Gentleman, but I assure him that we bear in mind the long-term interests of the Ministry of Defence in our policy of competitive tendering. We are finding it the most effective way of obtaining value for money, and we intend to continue with it.

My hon. and learned Friend the Member for Colchester, North (Sir A. Buck), my hon. Friend the Member for Ashford (Mr. Speed) and the hon. Member for Wallsend raised a question about our amphibious capability. I confirm that the Government remain committed to maintaining an amphibious capability in the longer term. My Department has just received the results of three feasibility studies carried out by industry that have looked at the option of replacing the assault ships Fearless and Intrepid. They will now be evaluated alongside a study completed last year that looked at the option of extending the lives of those ships. No decision will be made before next year, but it will be made in good time before the ships reach the end of their planned lives, which is not until the mid-1990s. We hope to make in the near future an announcement on the invitation to tender for the aviation support ship.

My hon. and learned Friend the Member for Colchester, North, my hon. Friend the Member for Ashford and the hon. Member for Dunfermline, West sought an assurance on escort numbers—and I am happy to give it. Our commitment is to maintain a force of about 50 destroyers and frigates. We will order enough ships to sustain that size. I was glad to announce an order for three new type 23 frigates this summer and I look forward to announcing a competition for another batch order for type 23s next year.

Dr. Reid: Does the Minister recall that, during the Secretary of State's speech, it was pointed out that the ordering rate of 1·6 per annum is less than the 2·6 recommended by the Committee? The Secretary of State pointed out that part of this difference at least can be related to the quality of the new orders that are going out and to the quality of the new fleet. When it comes to a comparison of numbers, can the Minister explain how surface fleet quality should be an important factor in balancing those numbers, but that when it comes to comparing the number of tanks held between the Russian forces and our forces on the western front quality is apparently dismissed?

Mr. Sainsbury: Quality and quantity are both important, and they apply to our surface fleet. I refer the hon. Gentleman to what was said during our debate on the Royal Navy earlier this year.

Mr. Douglas *rose*——

Mr. Sainsbury: Time is running short; I must go on.

Several hon. Members, including the hon. Member for Clackmannan, mentioned the disposal of Royal Ordnance plc to British Aerospace. My right hon. Friend has set out quite clearly the competitive background to the sale of Royal Ordnance, but I would like to spend a few moments on the property aspects of this matter. As someone who was once an adviser on property management to Her Majesty's Government, I can appreciate why those who are perhaps not familiar with the complexities and uncertainties of property development should be puzzled by the contrast between the price paid by British Aerospace and some of the sums quoted in the press as the value of the redundant sites. The fact is that some of those figures are highly speculative and take no account of the major offsetting costs which would have to be set against proceeds. In my view, those figures are likely to turn out to be greatly exaggerated.

Mr. D. N. Campbell-Savours (Workington): What are they?

Mr. Sainsbury: Wait for it. The hon. Gentleman has not been in the Chamber for most of the day, so perhaps he can wait for what I have to say.

The first and most important point is that the speculative figures that have been quoted appear to be based on what I believe to be totally over-optimistic assumptions about the planning permission that might be obtained for sites, which, although developed, are in the metropolitan green belt. They also overlook the considerable closure and transfer costs to which my right hon. Friend referred.

The speculative figures overlook the substantial costs that would be necessary to provide road access and services to the sites. They also overlook the costs involved in carrying out the cleansing and decontamination work that would be necessary in view of the long previous use of those sites for ammunition. They do not take into account the fees, expenses and delays that are inevitable in complex redevelopment proposals.

The information memorandum issued before the sale made it clear that major rationalisations would be required, and would be costly. Bidders were aware that there was the possibility of developing the Waltham Abbey and parts of the Enfield sites.

Mr. Allan Rogers (Rhondda): A little earlier, the Minister said that he was an adviser on property management to the previous Government.

Mr. Sainsbury *indicated dissent.*

Mr. Rogers: Well, an earlier Government.

We accept that the Minister is an expert in property management. In that case, would he like to try to quantify the so-called offset costs that he and the Secretary of State have mentioned so nebulously? My hon. Friend the Member for Renfrew, West and Inverclyde (Mr. Graham) demolished the Government's case on this issue. The only way in which the Government will be able to stand up in this scandal and to hold their head up high is if they can quantify the offset costs. When will the Government be able to do this?

Mr. Sainsbury: The hon. Gentleman is displaying the difficulty of those who are not familiar with the process of understanding the costs. Obviously, nobody would set about quantifying those costs—*[Interruption.]* The hon. Gentleman asked a question, so perhaps he will wait for the answer—without both a detailed study of what was involved and calling in the experts. One would first have to determine what planning permissions might be available. We do not know; nobody knows. Therefore it would be a waste of time to quantify the costs.

Mr. Rogers *rose*——

Mr. Salmsbury: The hon. Gentleman has had his say and there are many other points to be made. I strongly suggest to the House that the issue is different from that suggested by some Opposition Members.

The Select Committee raised an important point about its concern for reliability and maintainability. The Government, in reply to that valuable report, underlined how significant we believe these issues to be.

Good reliability and maintainability are the two key constituents of equipment availability, which would be crucial to our armed forces in any future conflict. Furthermore, improvements in reliability and maintainability reduce support costs, making it possible to transfer resources to the front line. With this in mind, we are now pursuing several initiatives in this area as part of our overall value-for-money policy. With competition now well established, attention is turning increasingly to the need for contractors to produce more reliable and more easily maintained equipment, on time and to cost.

To do this we have to base our procurement decisions on a sound assessment of both the initial purchase price and the through-life support costs, as the Select Committee said. It is important that we seek to place the onus for achieving the required levels of reliability and maintainability, along with the other requirements of the specification, on the contractor.

We are also seeking ways of making industry accept a greater share of the responsibility: there is a wide range of options, from reliability incentives to the provision of spares support on a fixed price basis. We are making a determined effort to ensure that industry realises that we are committed to achieving reliability, and it will be an increasingly crucial element in the control milestones we set for projects as they move through development into production and into service.

Our pursuit of value for money extends beyond equipment. The application of competition to the defence support services, as my right hon. Friend has made clear, has also allowed us to secure considerable gains in terms of enhanced efficiency and greater value for money. Excluding the royal dockyards, contracting out of defence support services has resulted in savings of over 13,000 posts and net annual savings of some £50 million since 1979. We shall continue with our drive to increase that annual level of savings.

Another aspect of value for money to which we are giving Department-wide attention is relocation, which we see as potentially a key factor in our continuous search for economy and improved efficiency. My hon. Friend the Member for Ashford referred to an office reduction programme, which would find sympathy with many. I can confirm to the House that the relocation initiative announced by my right hon. Friend the Paymaster General in March is being energetically pursued as a matter of good management and best use of resources.

The successful transfer of 1,400 jobs to Glasgow under the 1979 dispersal programme is almost complete, and I am pleased to be able to report a high general level of satisfaction among those—about a third of the total number of staff—who moved north of the border. We are now examining a range of further relocation possibilities which, among other things, should significantly reduce the amount of work that must remain in London. It is, however, often overlooked that the majority of our civilian staff are already located outside London and the south-east, and this number will be increased still further.

The House will readily understand that extensive consultations are required before any final decision can be taken on the transfer of work to a new location, but this is an area of departmental management to which my right hon. Friend and I attach considerable importance. It holds out the prospect of a happy combination of useful gains in operational efficiency and substantial cost savings.

The wide-ranging search for better value for money through better designed and more reliable equipment, through better project management, through collaboration with our allies and through clearer and more flexible management arrangements is made effective by the hard work and skill of the people who implement it. As the Statement on the Defence Estimates makes clear, competition makes demands on the Procurement Executive's staff as well as on defence contractors. Therefore, I take this opportunity to pay tribute to the commitment and skill of all those involved in helping to bring about these changes in industry——

It being Ten o'clock, the debate stood adjourned.

Debate to be resumed tomorrow.

Glenochil Prison

Motion made, and Question proposed, That this House do now adjourn—*[Mr. Heathcoat-Amory.]*

10 pm

Mr. Martin O'Neill (Clackmannan): When I requested an Adjournment debate at the beginning of the recess I did not think that my wish would be granted as speedily as it has been, and I immediately express my gratitude, although I question the timing a little. But as it is only the second time in nine and a half years that I have been granted an Adjournment debate, I do not suppose I have many grounds for complaint.

The subject of my debate is the disturbances at Glenochil prison in my constituency. In recent years the prison has had a chequered history—often because of matters unrelated to its general administration—and over the years many hon. Members on both sides of the House have tried to correct misapprehensions and misunderstandings about the regime in that institution.

The problems that arose in the summer, although sadly all too common in other Scottish institutions during the past two or three years, occurred for only the first time at Glenochil. They involved vandalism, disturbances and a breakdown in discipline, and they required what seemed at the time, to some people at least, stern, if not oppressive, corrective action.

I must refer to the strenuous efforts of the staff, and especially the man whom I am proud to call my friend —Gordon Jackson, the governor—who, with his staff, has sought to re-establish discipline, which is the first priority in any prison regime. I pay tribute, not only to the prison service, but to the directorate and the Minister for the courageous decision that they took when the recess began to allow the press into the prison to assess for themselves the conditions in which the prisoners were living and who was responsible for those conditions. When the press saw for themselves the conditions and the manner in which they had been created, it was all too clear that the blame rested not with the prison authorities but with elements within the prison who were trying to disrupt the life and work of the prison service.

At the same time, I recognise that some of the problems that caused the disturbances flowed directly from the somewhat crude and simplistic approach to the relocation of prisoners that was implicit in the grand design. That involved the movement within the Scottish prison service of a number of prisoners, some of whom were disruptive, to institutions that were incapable of receiving adult prisoners of the temperament that they subsequently displayed. In the case of Glenochil, which had specialised in the care and treatment of young offenders, in the first stages at least, the grand design programme was ill-conceived. However, I recognise that there had to be changes in the distribution of prisoners within Scotland. There were areas of overcrowding, and at the same time areas of under-use, so the programme was necessary, but my complaint is that it was carried out in a hurry, without adequate preparation.

The prison service, not least at gubernatorial level, is aware of the problems that confront the prison system. In Scottish prisons we now have a class of prisoner who is in for crimes that involve large sums of money, usually raised through the drug trade. The prisoners have access to people and to forces outside the prison which seek to influence the families of other prisoners. That power is used to undermine the authority of the governor and his staff. The new approaches that are being developed, in intelligence gathering, identifying changes in behaviour patterns in the prison and the simple but time-consuming and often frustrating business of trying to stop or at best to discover the flow of narcotics into the institutions, have come from the experience of people such as Governor Jackson at Glenochil and his staff.

At the beginning of the recess I took out an insurance policy by putting down a marker for an Adjournment debate. At the time I was aware that the prison was not under the control of the staff and that there were areas that could only be called "no go areas", but I was also aware that the governor and his staff had a plan which they thought they could carry through and that by September or October they would be back in control of the institution. When I saw the governor a couple of weeks ago, before he fell ill, he told me that he was happy at the way in which things were progressing. He felt that the programme to restore discipline and control in the adult section of the prison was going smoothly.

Since that meeting I have been approached by the Scottish Prison Officers Association branch in the prison. It expressed grave concern about a change in the regime, which it does not think is in the short-term interests of the institution. The Minister contacted me at the weekend to inform me of his intention to visit the prison and invited me to accompany him. For reasons that he may understand, because of the business that preceded this debate, I was unable to accept the invitation.

The substance of the prison officers' complaint was this. The detention centre is an institution which I have long attacked because the short, sharp shock programme of sentencing was grossly inappropriate to the needs of young people and young offenders. The inmates were being transferred to the Polmont institution—we still call it Polmont borstal. It used to be in my constituency. The premises previously inhabited by young offenders were being used as a remand centre for young offenders under 21 who were awaiting trial and sentence.

I have heard that the prison staff are concerned about the speed with which these changes were carried through, about the lack of notice and of the training that they felt they would require for the new circumstances. They have also told me of their concern about the building. Many of the young people who are awaiting trial—we cannot yet call them young offenders, as they are innocent until proven guilty—often behave little better than vandals. They have taken advantage of the thin walls between the prison cells and have broken through from on cell to another. As the Minister knows, we are discussing a discreet entity in one section of the complex at Glenochil, and this grouping in the institution has been imposed on it at short notice, and without the necessary training or proper architectural preparation. That is a recipe for disaster, about which the prison officers are extremely concerned.

The officers have been corresponding with the Minister and, if I had not known that I was to have this opportunity to raise the matter, I should have written to him too, but I hope now to hear at least part of the story this evening.

I recognise the strenuous efforts that have been made by the Scottish prison service during the summer to try to correct the tragic circumstances that obtained in the early summer as a result of the disturbances. Stability has been

[Mr. Martin O'Neill]

largely restored, but keeping order and running a prison are not necessarily the same things. I hope that we can start from the foundations that have been laid over the summer and that a more relaxed and meaningful regime, which will benefit both prisoners and the safety of prisoners and staff, can be established. Staff satisfaction is severely limited now because they have had to operate in difficult conditions, which they have done with a remarkable degree of restraint, for which they have not been given the credit they deserve.

I should not do my views on the Scottish prison service and system justice if I did not say that overcrowding is one of the basic problems in our prisons. We send too many people to prison because there are no other places for them to go. A report has been issued, but it would not be appropriate to debate it this evening. I note in passing that the time that we have in this House in which to debate penal issues is all too limited. All parties in the House take the view that there are no votes to be gained in prisons: prisoners do not vote. There is not enough public concern about the prison system. When it is felt, it tends to relate to crises such as prison riots, the taking of hostages and suicides. I have had my share of those at Glenochil. Once such difficulties have been resolved, at least in the short term, the public gaze is averted and people carry on as before.

The Minister has shown flexibility in his handling of some of the Scottish prison system's problems, and I pay tribute to him for that, but he must take on the biggest problem of all—our judicial system, which sends far too many people to prison and to institutions which are often not suitable for the prisoners or for the offences of which they have been found guilty. The latest round of reorganisation that the Minister has undertaken has been painful in Glenochil. The situation will take some time to improve.

I am sure that the hon. Gentleman has been left in no doubt about the local feelings on the matter. He must now start to look at a prize bigger than just discipline and stability—the prize of a prison system that is effective and humane. We still have some way to go until we achieve that. I hope that the Minister will be able to give us the up-to-date position in the prison and that he will join me in paying tribute to the staff who this summer took on an extremely difficult job and carried it out with a degree of restraint that was truly remarkable.

10.15 pm

The Parliamentary Under-Secretary of State for Scotland (Lord James Douglas-Hamilton): I am glad to join the hon. Member for Clackmannan (Mr. O'Neill) in paying tribute to the governor and staff of Glenochil prison, and I thank the hon. Gentleman for his generous remarks. We have brought forward a consultation paper on fines and I hope that it will meet the points that he made at the end of his speech. I agree with the inference in his speech that it is important to match a prisoner to an appropriate regime. In terms of grand design, Glenochil was designed as an adult training prison with good, modern facilities, and prison staff are trained to cope with any and every inmate, both adult and young offender.

The hon. Gentleman spoke about drugs. Staff in the Scottish prison service are conscious of the need to prevent illicit drugs being smuggled into and used in prison establishments. Some measures have been or soon will be introduced to try to combat this problem. Among these are the introduction of closed-circuit television systems in visiting rooms and the use of sniffer dogs and strip searches which have been in use. I congratulate the hon. Gentleman on securing the debate. His concern is well known to me. He came to see me and the director of the prison service earlier in the summer and he highlighted some points that were of considerable value to us.

I visited Glenochil prison only yesterday. I met representatives of the local branch of the Scottish Prison Officers' Association and also saw the chairman of the visiting committee, Councillor Watt. I toured both the main prison and the detention centre. In particular, I visited A hall, where I spoke with the prisoners and saw conditions at first hand. On Monday, I also went to Polmont young offenders institution where I saw the local branch of the SPOA and met the prison service chaplains and discussed the way forward with them. I was also able to pay a visit to the prison service college and saw the training courses for new recruits.

I should like to answer straightaway the concerns of the hon. Gentleman about the recent change in the use of Glenochil detention centre. The background to the change was a very serious situation towards the end of September at Barlinnie which developed quite suddenly. Admissions to Barlinnie prison rose sharply, leading to a degree of overcrowding and stress which I regarded as unacceptable. The prison department looked at a number of possible solutions, but none was entirely satisfactory. The best option appeared to be to transfer the young offenders then located in the Glenochil detention centre to Polmont, and, in turn, to move a number of under-21-year-old remand prisoners from Barlinnie prison to the Glenochil detention centre. This was not an easy decision to take. However, there was a serious situation at Barlinnie with overcrowding, and we had to look at ways in which the service as a whole could help. I felt that the decision to make these temporary changes was the right one in the wider public interest.

I stress that the changes are temporary. Later in the year, when the numbers in Barlinnie allow, it is our intention to transfer the young offenders from Polmont back to the Glenochil detention centre buildings. By that date I anticipate that the detention centre as such will have ceased to exist. We are working towards 1 November as the date for the introduction of the new generic sentence for young offenders, at which point all detention centre sentences will become young offender sentences. It is our intention to return a brisk young offender regime to Glenochil, which will incorporate the more positive aspects of the detention centre regime.

The transfer of the detention centre inmates took place after discussion with the governors of Glenochil and Polmont. I have explained the reasons for the urgency with which the changes were introduced. This meant that it was not possible to consult the trade union side in advance, as would be our normal practice. However, officials visited Glenochil on 30 September and held discussions with representatives of the local branch of the SPOA. The situation in relation to the movement of young offender inmates was explained to them and they accepted that Glenochil had to play its part in the wider prison system.

I have been able to discuss the detention centre changes in recent days—only yesterday—with both the SPOA local branches involved. Members of the local branch at Glenochil have three concerns.

First, they felt that remand prisoners were more prone to disruption, as the hon. Gentleman said, and they expressed concern about the future of the detention centre. I was able to give them assurances that it is our intention that Glenochil should revert to holding convicted young offenders once the situation at Barlinnie had eased.

Secondly, they were concerned about the staffing, both in the detention centre and in the main prison. The prisons department has agreed a staff complement for the detention centre, involving the provision of extra staff on detached duty, and I was able to assure the local branch that that agreement would be honoured.

The department monitors closely the staffing needs of Glenochil as a whole. The average number of staff in post since April has been 233 and equates with the complement of figures agreed with the governor. Currently, however, the number of operational discipline staff in post is 237. A further appraisal of staffing needs was completed earlier this month and the department will shortly be discussing its findings with the senior management at the prison.

The third concern of the local branch was for the physical fabric of the detention centre. They felt that it was prone to damage—the hon. Gentleman touched on this—by the young remand prisoners. This is obviously a point of which we were aware when the change of use was agreed. I understand that, to an extent, the fears expressed have not materialised and that no major damage has been caused to the detention centre so far. Management staff at Barlinnie are helping by sifting inmates before they are sent to Glenochil, and they have agreed not to transfer major security problems there. Conditions for the inmates are very much better at Glenochil, since each inmate has his own room, rather than being located three in a cell, as was the case at Barlinnie. Although the representatives of the Glenochil local branch pointed out these concerns to me, I was much impressed by their readiness to assist, their selfless dedication, and their recognition that Glenochil had to play its part in the interest of the service as a whole.

I visited Polmont last Monday and discussed the position in relation to the detention centre inmates with the governor and the SPOA, and both intimated that the arrival of the detention centre inmates at Polmont had created no problems for them. The inmates had become readily integrated into the Polmont regime.

The main part of Glenochil prison houses adult male offenders with a medium security classification. Since the incident at the adult prison in May, the governor and his staff have been working towards the introduction of a progressive regime. The pace of progress has, however, had to be dictated by the need for the governor and his staff to remain firmly in control at the prison.

When I visited Glenochil yesterday, I was able to see at first hand the conditions. I should say that everything has been done to ensure that the inmates receive their due entitlement to exercise and visits, even during the immediate aftermath of the incidents, when conditions were very difficult. The majority of the adult offenders are being allowed periods of association, during exercise and recreation. Three of the prison's workshops have reopened and about one third of the inmates are at work on a regular basis. It has also been possible to reopen vocational training and educational classes for a number of inmates, and there is limited use of the sports facilities in the gymnasium.

A minority of inmates—mainly those in A hall, which has the most difficult prisoners—are receiving only limited periods of association, when exercise is taken. In addition, 13 prisoners, all in A hall are being held out of association under the conditions of rule 36 of the Prison (Scotland) Rules 1952. Staff in A hall are no longer wearing riot gear. I spoke to staff and inmates in A hall. The relations between staff and inmates have improved, and the hall was quiet. There is now a system of progression at the prison and inmates who behave can move to a less restricted regime. Overall, I can report that gradually the prison is returning to normal. Glenochil is calm and staff have restored control and good order.

However, it will take time to restore the full range of privileges and opportunities for inmates. Change can be introduced only as quickly as staff feel confident to proceed. The incidents in May were a very significant betrayal of the trust which management and staff had previously shown inmates. Inevitably, in such circumstances, the restoration of trust and confidence is a gradual matter, but I have spoken with both management and staff and I know that they are working at this as a matter of the highest priority.

Perhaps I might say something now about the physical fabric of Glenochil. A programme of window replacement is well under way. Resources devoted to this have recently been trebled, with the approach of winter. One hall has already been completed and the other three halls should be finished within a month. A rolling programme is under way to refurbish the many cells which were damaged. I have seen the new type of cell and was very impressed. Facilities and furnishings have been upgraded, and I believe that this was welcomed by the inmates to whom I spoke. At the same time, the opportunity has been taken to strengthen a number of the cells which were damaged in May.

The refurbishment programme obviously has the highest priority in the interests of the health and well-being of inmates. We are also looking urgently at ways of improving the external security, so that opportunities for outside recreation and exercise can be restored. I can also report that the prison is much tidier than when the press saw it in May. Inmates are now co-operating better, and less litter accumulates. Also tidying up and cleaning operations are carried out regularly, and daily if possible, depending on weather conditions. Inmates are now prepared to work with staff on keeping the prison clean.

I welcome this opportunity to debate conditions at Glenochil prison. I am grateful to the hon. Member for Clackmannan. I pay tribute to the professionalism and responsibility shown by all the staff at Glenochil. There was no justification at all for the disruption and damage carried out by inmates at the prison. Such activities benefited no one. They are a betrayal of trust. Their immediate result is a loss of opportunities and privileges—not to mention a deterioration in the accommodation—for all inmates. The process of restoring opportunities and rebuilding trust cannot be accomplished overnight. I am confident, however, that management and staff are taking all the necessary steps and are now well on course for a return towards normal regimes for the large majority of inmates.

[Lord James Douglas-Hamilton]

I should like to say something about the events which occurred at Glenochil in May. There had been a number of incidents at the prison since its use was changed to hold adult offenders in June 1987, but none as serious as those which occurred on 5 and 6 May. During rioting over the ensuing days, in which the majority of inmates took part to varying extents, 40 cells were completely wrecked, over 300 windows smashed and considerable damage, estimated at around £200,000, was caused to the fabric of the prison.

Hon. Members will recall the background to these events. They occurred during a week in which there had been some unrest in the prison system, including an incident when an officer was taken hostage at Perth prison. That incident was resolved, but Glenochil prison remained tense. On 4 May an isolated incident occurred, when, it is alleged, an inmate assaulted a member of staff. The prison was in a state of unrest and in the evening a fire was started. The following morning it was decided that inmates should be restricted to their halls while police were investigating. At lunchtime there was an attempt to take a member of staff hostage. The governor ordered that all inmates return to their cells. Inmates in two of the four halls refused. When the governor again asked the inmates to return to their cells and the inmates again refused, they were returned forcibly by prison staff. Prison staff did this using approved techniques of control and restraint and during the process nobody was hurt. I may say that when I was at Polmont prison service training college on Monday I was able to see the training of prison officers to deal with this type of disturbance. The training is thorough and to a very high professional standard. Once the inmates had been returned to their cells, they commenced on a programme of destruction, as I have described.

There was no justification at all for these acts of destruction. The inmates had no legitimate grievances to justify their behaviour; they simply refused to obey prison officers' orders and then became abusive and violent. Nobody benefited from the inmates' actions. Before the incident, the policy of the governor and his staff had been to provide inmates with access to all privileges and facilities at Glenochil on trust. If an inmate betrayed this trust, privileges could be withdrawn.

Following the disturbance, the immediate priority was to reassert control and reimpose good order at the prison. It was clearly necessary for management and staff to reassert the principles of custody and control, which they did.

It has been suggested that the imposition of the restricted regime punished all inmates, including those who might have taken no part in the incidents. However, my information is that a majority of the inmates took part in the disruption, to varying degrees. It will be appreciated that, in the confused circumstances which prevailed, it would have been very difficult for staff to distinguish between those who may have participated willingly, others who may have participated unwillingly and those who took no part at all. Control had to be re-established, and the imposition of a general restriction was the only practicable way forward.

The basis of the new progressive system is now in place, and slow but steady progress is being made in restoring opportunities and facilities for inmates. I should like to pay tribute to the professional way in which the governor and staff have coped with difficult circumstances. I am impressed by the caring and responsible attitudes which staff have shown. I think it would be fair to say that staff regarded the disruption in May as a very serious betrayal of trust on the part of inmates. Clearly, once control had been reaffirmed, the process of returning the prison to normal has had to take place at a measured pace. The confidence and trust which previously existed between staff and inmates cannot be restored overnight; this will take time. I am satisfied, however, that order has now been restored now that the process of introducing more positive regimes is proceeding at a satisfactory pace. Indeed, I saw at first hand yesterday what was being done in the way of reopening workshops, vocational training, education and indoor sports facilities. Again, I thank the hon. Member for Clackmannan for his remarks.

The motion having been made at Ten o'clock, and the debate having continued for half an hour, MR. SPEAKER *adjourned the House without Question put, pursuant to the Standing Order.*

Adjourned at half-past Ten o'clock.

House of Commons

Thursday 20 October 1988

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

PRIVATE BUSINESS

BRITISH RAILWAYS (NO. 2) BILL
Read the Third time, and passed.

TEIGNMOUTH QUAY COMPANY BILL *(By Order)*

YORK CITY COUNCIL BILL *[Lords] (By Order)*

CARDIFF BAY BARRAGE BILL *(By Order)*

FALMOUTH CONTAINER TERMINAL BILL *(By Order)*

PORT OF TYNE BILL *[Lords] (By Order)*

AVON LIGHT RAIL TRANSIT BILL *[Lords] (By Order)*
Orders for Second Reading read.
To be read a Second time on Thursday 27 October.

LONDON LOCAL AUTHORITIES BILL *[Lords] (By Order)*
Read a Second time, and committed.

BIRMINGHAM CITY COUNCIL BILL
Ordered,
That notwithstanding that the Birmingham City Council Bill was taken into consideration by the Committee on the Bill before a report from the Attorny General on the Bill had been presented to the House pursuant to paragraph (1) of Standing Order 158 (Bills affecting charities or educational foundations) the proceedings of the Committee be deemed to have been taken in compliance with that Standing Order.—*[The Chairman of Ways and Means.]*

BARLOW CLOWES
Return ordered,
of the Report of Sir Godfray Le Quesne Q.C., to the Secretary of State for Trade and Industry on Barlow Clowes.—*[Mr. Newton.]*

Oral Answers to Questions

AGRICULTURE, FISHERIES AND FOOD

Aboriginal Whaling

1. **Mr. Harris:** To ask the Minister of Agriculture, Fisheries and Food whether he will take further action to restrict aboriginal whaling.

The Parliamentary Secretary to the Ministry of Agriculture, Fisheries and Food (Mr. Donald Thompson): We will go on insisting in the International Whaling Commission that the taking of whales by aboriginal communities continues to be very closely regulated. And the numbers permitted to be taken should be consistent with scientific advice on the status of the stocks. We will also continue to press for any necessary improvement in monitoring such whaling or in hunting methods employed.

Mr. Harris: While welcoming the tremendous international interest in the efforts that are taking place to rescue the three whales off Alaska, may I ask whether my hon. Friend agrees that the best way in which we can save the whale population as a whole is through organisations such as the International Whaling Commission? Does he think that possibly the time has come when we should stop whaling altogether?

Mr. Thompson: The United Kingdom Government's record on whaling is second to none, and we support the International Whaling Commission in all its efforts. However, many aboriginal communities still live off the whale and depend on it for their whole lifestyle. It would be wrong to think of those communities becoming dependent on the state rather than on their own commerce and industry. Nevertheless, I agree with the broad thrust of my hon. Friend's suggestion.

Mr. Tony Banks: I associate myself with the views of the hon. Member for St. Ives (Mr. Harris). I am sure that there is enormous support on both sides of the House for the banning of all whaling. As certain aboriginal communities clearly depend on whale hunting, would it not be appropriate for countries such as our own to give them adequate financial compensation, so that they will not have to make any sacrifices in achieving something that we want? It will be very useful if the Minister can send a message to the United States Government, commending them for their noble efforts in trying to save the three grey whales in Alaska.

Mr. Thompson: I am sure that those associated with the United States Government read *Hansard* very carefully and will be pleased and surprised to learn of that last comment by the hon. Member for Newham, North-West (Mr. Banks). They need not have me slingshotted all the way across to Alaska. Besides, I have enough to do.

I cannot entirely agree with the hon. Gentleman's first suggestion, which was that we should put aboriginal communities on the dole, as it were, rather than let them follow their natural and long-established commercial practices. There is a time period over which we can change old-fashioned industries to modern ones. As we in the House all know, that pays dividends in the long run.

Common Fisheries Policy

2. **Sir Michael Shaw:** To ask the Minister of Agriculture, Fisheries and Food what is his assessment of the effectiveness of current policing of the common fisheries policy.

The Minister of Agriculture, Fisheries and Food (Mr. John MacGregor): As my hon. Friend knows, the United Kingdom Government have always taken the lead in advocating effective measures for enforcing the common fisheries policy. There are clear signs that other EC member states are now taking the steps necessary, as we have done, to achieve proper enforcement.

Sir Michael Shaw: Is my right hon. Friend aware that, while the industry as a whole appreciates that better steps

are now being taken, in some countries those steps are being taken from a very low base? There is still anxiety, particularly in this country, about the reduction in quotas, which is causing real hardship to many of our fishermen.

Mr. MacGregor: We take steps to reduce quotas only when scientific advice suggests that it is necessary for the long-term conservation of stocks, which is clearly in the interests of our own fishermen. As for enforcement, I am sure my hon. Friend has noticed that the Netherlands, for example, has made a big increase in the manpower of its inspection service, has strengthened its control system, is improving restrictions on its fleet's capacity and effort and is taking a number of its fishermen to court. There is no doubt that considerable efforts have been made in that country.

We are very vigilant. A recent problem related to reports of quota hopping by one or two member states, but I am glad to say that action on that was agreed at yesterday's Council.

Farming Unions

3. **Mr. Geraint Howells:** To ask the Minister of Agriculture, Fisheries and Food when he last met representatives of farming unions to discuss the state of the agriculture industry.

Mr. MacGregor: I meet representatives of the farming unions frequently to discuss agricultural matters. For example, I have met many of them from different parts of the country, including the president, on various occasions in the last fortnight alone.

Mr. Howells: What plans has the Minister to ease financial pressures on our agriculture so that it can compete on equal terms with its counterparts in Europe?

Mr. MacGregor: I am aware that in some sectors of the industry there are problems of declining incomes, and that others, such as the pig industry, also have real difficulties —although that is the case throughout the European Community. On the other hand, some sectors have experienced improvements in incomes in the past year or so, and in one or two earlier years. The overall picture is not one of declining incomes.

Obviously there have been pressures as we have dealt with the reforms of the CAP—which the hon. Gentleman, I think, agrees are necessary—but in this year's price negotiations we secured a better outcome on green currencies for the United Kingdom than for any other country, and it will come into operation on 1 January. That of itself will add £120 million to United Kingdom farm incomes.

Mr. Marland: Is my right hon. Friend aware that there is genuine concern among British farmers that our green pound may not achieve parity by 1992? The fear is that if it does not do so by then some Socialist Eurocrat may decide to freeze values as they are, in which case it would never do so. Can my right hon. Friend reassure the farmers that he will maintain pressure for devaluing the green pound?

Mr. MacGregor: Yes, I can. As my hon. Friend knows, the Commission and the Council have both committed themselves this year to the phasing out of MCAs and their elimination by 1992. I have made it clear that I strongly support that, and that I do not believe that there can be a proper single market in agriculture unless it is done. I assure my hon. Friend that I shall use every appropriate opportunity to continue working to that end.

Mr. Martyn Jones: In view of his further rejection of direct income aid at the last Agriculture Council—which, I believe, took place a couple of days ago—has the Minister any plans to help hill farmers in my constituency to keep up their incomes, which are among those that are diminishing?

Mr. MacGregor: I was by no means alone in making some strong criticisms of the Commission's current proposals for a direct income-aid scheme. Many other Ministers, incuding those from some of the bigger countries, also chimed in with different criticisms. I believe that the current proposals would not be cost effective, are not directed at the right ends and do not fulfil all the conditions that we were asked to carry out.

Rev. Ian Paisley: Will the Minister inform the House of the present position on his promise that he would work towards the elimination of pigmeat MCAs? Is he aware of the proposals now being ventilated in Europe concerning changes in sheepmeat and beef regimes, which would result in serious agricultural conditions in Northern Ireland? Will he keep in mind that feed stocks for the intensive sector in Northern Ireland are now soaring almost out of control, and that the intensive farmers are in great difficulties?

Mr. MacGregor: I argued strongly, and with some good arguments, for the elimination of pigmeat MCAs as quickly as possible. There was still a blocking minority on that, but I am sure the hon. Gentleman will be delighted to know that, as a result of the changes that we did secure, pigmeat MCAs will be down to zero on 1 January if sterling remains at its current level. That is a big change from a negative MCA of 28 points only about 18 months ago.

On the hon. Gentleman's second point, the proposals have just been presented to the Council. We had a brief discussion about them earlier this week and I believe that it will be a long negotiation. I shall certainly be fighting hard for all the United Kingdom's legitimate interests.

On the third point, the particular problem has been the American drought and its effect on soya, which has had an effect on feedstuffs for the intensive livestock sector—a problem that exists throughout the EC and elsewhere. I understand the problems that that unfortunate element is creating for our producers.

Dr. David Clark: When the Minister met the farming unions' leaders, did he discuss with them the Commission's proposals to abolish the sheep variable premium and the consequential increase in the ewe premium? Will he confirm that the ewe premium will be based on a European, not a British, level, and that many farmers will get only half as much as they are expecting? If that is the case, how will the Minister ensure that we keep sheep farming in the hills and keep the areas attractive for people to enjoy and live in?

Mr. MacGregor: As I said earlier, I think that we shall have some complex negotiations on the sheepmeat proposals. There were criticisms from many sides, so I suspect that we shall see changes as they go through.

However, it is early days to be sure about that, as we have had only the most preliminary reactions. It is clear that budgetary discipline has to apply to the sheepmeat sector as to any other, and costs have been rising considerably. However, within that overall requirement, I am determined to ensure that we secure the best possible arrangements, which may well include the continuation of the variable premium. We have still to negotiate that. I am determined to ensure that we secure the best possible arrangements in the new regime for the United Kingdom sheep producers.

Mr. Charles Wardle: Can my right hon. Friend reassure NFU members who are milk producers that Britain's highly efficient Milk Marketing Board will not be subjected to the reforming zeal of EC bureaucrats?

Mr. MacGregor: From time to time there have been problems in ensuring that the Milk Marketing Board conforms with Community requirements, but, as far as I can recall, the main issue in that respect does not arise from the EC, but may follow from a court case in Northern Ireland, on which I cannot comment because it is sub judice. That is the issue to which the Milk Marketing Board may have to address itself before too long.

Milk Quotas

4. **Mr. Matthew Taylor:** To ask the Minister of Agriculture, Fisheries and Food if he has had any representations regarding the implementation of the Agriculture Act 1986 concerning compensation for milk quotas.

Mr. Donald Thompson: I have received a number of representations on this subject.

Mr. Taylor: Is the Minister aware that real hardship is being caused to tenants by excessive delays in the payment of compensation by some landlords? Does he agree that that could be best tackled by requiring interest to be paid on that compensation?

Mr. Thompson: I know very well the hon. Gentleman's concern for the matter in general and for some of his constituents in particular—and why not? I have with me the relevant correspondence. The matter is best settled by arbitration. Some cases will have to go to court, and that is the time when interest can be discussed.

Mr. Maxwell-Hyslop: I wrote to my right hon. Friend the Minister for Agriculture, Fisheries and Food on a specific question and asked him to take it up personally with the Chancellor of the Exchequer. In some parts of the country the commissioners of Customs and Excise are trying to charge value added tax on those compensation payments, which is wholly outwith the undertaking given by the previous Minister for Agriculture, Fisheries and Food when they were introduced. Can my hon. Friend tell me what progress the Minister has made in his representations to the Chancellor of the Exchequer on that important matter?

Mr. Thompson: My right hon. Friend received my hon. Friend's letter last night and we have managed to have only the briefest of discussions on it. However, my right hon. Friend will be writing to the Chancellor of the Exchequer and others on that important matter.

Mr. Molyneaux: Has the Ministry entirely forgotten about the additional quota that was allocated to Northern Ireland, which seems to have been misappropriated and distributed over the whole of the United Kingdom?

Mr. Thompson: These questions seem to run on for a long time in Northern Ireland. I think that I have answered this question on about four previous occasions. The answer has not altered. I can see no hope of a future re-distribution.

Mr. Nicholas Bennett: In view of the substantial decline of the surplus of dairy products, does my hon. Friend envisage that there will be further cuts in the milk quota?

Mr. Thompson: The substantial decline in milk products came about on purpose. Therefore, we shall monitor very carefully the supplies of milk, butter, skimmed milk powder and other dairy products and, in consultation with our European partners, review the position.

Water Pollution

5. **Mr. Pike:** To ask the Minister of Agriculture, Fisheries and Food what further steps he is taking to reduce water pollution from farm sources; and if he will make a statement.

The Parliamentary Secretary to the Ministry of Agriculture, Fisheries and Food (Mr. Richard Ryder): In our response to the Environment Committee's third special report the Government announced a number of measures to deal with the farm pollution problem, including a commitment to draw up regulations to ensure proper containment of silage and slurry.

Mr. Pike: I congratulate the Minister on his first reply from the Dispatch Box. I am sure he will be aware that in many parts of the country nitrate in the water supplies is already at an unacceptably high level. There are problems in the aquifers, which will show up for some considerable time. What steps do the Government intend to take to introduce protection zones and to encourage the proper use of nitrates by farmers and environment-friendly farming?

Mr. Ryder: I thank the hon. Gentleman for his kind words. The Government are looking at a range of options. We have not yet reached any conclusions, and before we do we shall consult various bodies. We look forward to finalising those conclusions in the relatively near future.

Mr. Conway: Does my hon. Friend agree that the attitude of the National Farmers Union and the Country Landowners Association to nitrogen pollution is positive? We are getting fed up with the Opposition kicking the farmers round the block all the time. The farmers—not the whingers opposite—are the true safeguarders of the environment.

Mr. Ryder: My hon. Friend is quite right. I particularly welcomed the speech made last month by Mr. David Naish, the vice-president of the NFU, in which he warned farmers that by continuing to pollute the rivers they were undermining their reputation in the countryside. Also, I draw attention to the fact that the maximum fines

available to the courts for farmers who pollute the countryside are £2,000 and that many courts are not using those full penalties.

Mr. Duffy: Is the Minister aware that farming pollution has risen steadily in Yorkshire and Humberside in recent years and that the Yorkshire water authority has been hampered by that extraordinary section in the Control of Pollution Act 1974 that he apparently has in mind? Is the Minister saying that his right hon. Friend intends to repeal that section, which has enabled farmers to evade prosecution if they pleaded acts of omission arising from good agricultural practice? A similar defence was not available for industrial spillage.

Mr. Ryder: The hon. Gentleman has misunderstood my reply. I was reminding the House that £2,000 is the maximum penalty for polluting the countryside and that the courts are not using the maximum penalty. In the south-west, which has one of the worst pollution problems, the average fines that are dished out by the courts are £140, so it is quite clear that those penalties are not being used.

Mr. Michael Brown: I congratulate my hon. Friend on his appointment. After so many years, we are delighted to hear his voice again in the Chamber. Does he agree that there is a far greater danger of water pollution from fluoride than from nitrates?

Mr. Ryder: I thank my hon. Friend for his kind remarks. He knows that my views on fluoride do not coincide with his.

Mr. Ron Davies: I offer the Minister the Opposition Front Bench's congratulations on his appointment.

As the Minister clearly recognises that there is a problem with nitrate pollution, can he explain why the Government are embarking on a programme of cuts in research and development, much of which is directly related to optimising fertiliser application and therefore minimising pollution risks? Will he confirm that if the Barnes report is accepted, about 1,000 scientists, many of whom work on environmental protection, will be sacked? In view of the Prime Minister's recent conversion to the cause of environmental protection, does he think that he ought to ensure that his Department's actions support her views?

Mr. Ryder: I thank the hon. Gentleman for his kind words of welcome.

In part, the answer to the hon. Gentleman's question depends on the amount of industry funding. I emphasise that Britain has an excellent record in this sphere—we spend more money than any other country in Europe bar Germany on research into pollution. We aim to keep up to that mark.

Bass

6. **Mr. Summerson:** To ask the Minister of Agriculture, Fisheries and Food what steps he is taking to protect the bass nursery stocks.

Mr. Donald Thompson: As I announced on 27 July, we shall increase the minimum landing size for bass and introduce restrictions on the use of gill and similar nets with a mesh size between 65mm and 89mm. These measures are to take effect from 1 January 1990. There will be further consultations with local interests about establishing nursery areas to protect juvenile bass stocks.

Mr. Summerson: I thank my hon. Friend for that reply. He will be aware that sea bass is a slow-growing fish and that it is essential that stocks be conserved. Will he therefore consider the matter rather more urgently and designate nursery areas for these fish to come into effect before 1990?

Mr. Thompson: The matter is complicated because of the various sections of the community who have an interest in bass stocks and catch bass. I think that it will take a couple of years before we can reconcile the various interests.

Mr. Ward: My hon. Friend will be aware that fishermen on the south coast are not convinced of the need for the measures that he is about to introduce. More important is the fact that the measures will not apply to our EEC partners. That seems to be one more example of unfair competition with other members of the Community. On reflection, will my hon. Friend agree to withhold the new measures until they are applied throughout the EEC? Will he ensure that fishermen in places such as Poole are given the maximum, not the minimum, time to make the adjustments?

Mr. Thompson: You, Mr. Speaker, have just heard both sides of the argument. It is vital that bass stocks be protected from as early a date as possible after proper negotiations. We must try to persuade the Europeans to come along with us while we are trying to persuade some of my hon. Friend's constituents to be more enthusiastic about the future of the industry on which they place such great reliance.

NFU Horticulture Committee

7. **Mr. Jack:** To ask the Minister of Agriculture, Fisheries and Food when he last met the chairman of the National Farmers Union horticulture committee; and what matters were discussed.

Mr. MacGregor: My noble Friend the Parliamentary Secretary last met the chairman of the NFU horticulture committee on 20 September, when the main subject under discussion was horticultural research.

Mr. Jack: My right hon. Friend will be aware of the considerable concerns expressed in horticulture about his proposals for revised funding arrangements. This is a highly competitive industry. Can my right hon. Friend give me an assurance that any changes to the funding arrangements will be phased in to allow the industry adequate time to adjust to the new regime?

Mr. MacGregor: There is a later question on the Order Paper about research and development generally, but it is entirely right to ask the industry—whatever the sector—to undertake more of the near-market research. I recognise that a higher proportion of horticultural research and development has been classified as near-market because a high proportion of the work is close to commercial application. We are engaged in intensive discussions with the horticulture industry on this point, and I can tell my hon. Friend that timing is one of the matters that are being discussed.

Ms. Armstrong: I wonder whether the Minister will give some definition of precisely what is meant by near-market research for horticulture? Most of the horticulturists whom I have met in my constituency are bewildered. They have pursued the matter with the Ministry, but they are no nearer to understanding precisely what it is that they have been asked to do. They feel, and I support them, that 60 per cent. from the industry within the next three years is the death knell for it.

Mr. MacGregor: That is a big exaggeration. The broad definition of near-market research is that it is work that offers the possibility of commercial exploitation or application within a short enough time to justify investment by industry. That is what is happening in many industries outside horticulture and agriculture. We have specified in detail the kind of research projects that we believe come within the definition of near-market research. That is one of the subjects that is also part of the discussion with the industry—to agree on which of the projects should come within the definition.

Mrs. Roe: Is my right hon. Friend aware that Hatfield polytechnic has recently launched a unique, new BSc degree course in horticulture, in collaboration with Writtle agricultural college? It is the first horticultural degree course that has been mounted outside the university system. Will my right hon. Friend take the opportunity to congratulate all those involved in the initiative, which will provide a steady stream of highly trained experts to ensure that horticulture is equipped to meet the challenges of the 1990s and beyond?

Mr. MacGregor: I am grateful to my hon. Friend for raising that matter. I am happy to congratulate those involved.

Many sectors of horticulture are facing expanding markets. It is important that they are competitive and that they meet the changing requirements of consumers. I am sure that the higher the skills involved, the better placed the industry will be.

Ministry's Centenary

8. **Mr. Lord:** To ask the Minister of Agriculture, Fisheries and Food what plans his Ministry has to mark its centenary during 1989.

Mr. MacGregor: The Ministry will be arranging a number of events which will be co-ordinated with the programme for Food and Farming Year, which also takes place in 1989. There will be exhibitions in London and in the regions, a centenary history of the Ministry and a special centenary appeal in aid of the Save the Children Fund.

Mr. Lord: I thank my right hon. Friend for that answer. Many hon. Members can probably remember the days of food rationing—[HON. MEMBERS: "Speak for yourself".] I am not speaking personally. Will not the celebrations present us with an ideal opportunity to congratulate all farmers on the magnificent efforts that they have made over the years to provide the country with sufficient food—always at the urging of Conservative Governments?

Mr. MacGregor: I entirely agree. One of the problems is that because we have had to grapple with the farmers' success and the penalties that that has brought, with surpluses and the CAP, there has been too much public emphasis on the problems of the CAP and not enough on the contributions that have been made by our farmers and food industry over the past 40 years. Especially in the past few years, the range and quality of food have been improving and the price increases of food are well below the general level of the RPI. There is a good record on production, quality, price and exports, and I believe that 1989 will give us a good opportunity to put that case across.

Mr. Grocott: Will the Minister find time to reflect in the centenary year that for most of the past 100 years Britain's food policy was determined in Britain and not in Brussels? Does he agree with me that consumers were better served when the policy was determined in Britain?

Mr. MacGregor: It is the case that we have moved faster towards self-sufficiency in those products that we can grow in the past 10 years than in earlier periods. Our farmers have used the opportunity of entering the Community to continue to expand our food production.

Sir Charles Morrison: To ensure that the Ministry of Agriculture, Fisheries and Food and the industry can celebrate their bicentenary, will my right hon. Friend mark his Ministry's centenary by ensuring that he extracts from the Treasury adequate resources for agricultural research, in the interests both of farm production and of the countryside?

Mr. MacGregor: My hon. Friend will know that a large contribution is made to agriculture, food and fisheries research and development from public funds at present. The sum is currently running at about £200 million a year, which is a substantial contribution.

Mr. Skinner: I wonder whether, when this centenary is celebrated, a plaque will be unveiled on the wall of the Ministry of Agriculture, Fisheries and Food and whether tribute will be paid to this industry, subsidised during the whole course of its 100 years. Will the Minister tell us what the exact amount of subsidy has been over the past 10 years, during which the Prime Minister and the Cabinet have talked about leaving matters to market forces, and during which time more than £10 billion has been ploughed into the industry from the taxpayer?

Mr. MacGregor: The figure has been too high, especially in relation to the production of surpluses. That is why we have been playing a leading part in the Community in achieving the reform of the common agricultural policy. As a result of our recent efforts, savings of more than £1,000 million will be made over the next four years in the United Kingdom alone, compared with what would have happened had we not undertaken the reforms.

Farm Diversification Grants

9. **Mr. Paice:** To ask the Minister of Agriculture, Fisheries and Food what types of projects have been most popular among farmers applying for farm diversification grants.

Mr. Ryder: Good quality holiday accommodation accounts for just over 30 per cent. of applications and recreational and educational facilities for about 20 per

cent. Food processing, farm shops and livery are also popular choices; indeed, there is a widespread interest in most of the enterprise for which grant-aid is available.

Mr. Paice: I thank my hon. Friend and welcome him to his new post, but may I suggest that many of the ventures that he described—indeed, probably all of them—could lead to many farmers falling foul of the planning legislation and that there is a great need to give guidance to farmers on planning and for a much more open-minded approach on the part of many planning and highway authorities?

Mr. Ryder: I thank my hon. Friend for his kind welcome. I agree with his judgment of farmers' appreciation and understanding of planning laws. It is precisely for that reason that we shall be publishing a farmers' guide and leaflets dealing with the planning system later this year. I very much hope that they will help farmers to understand the planning system better.

Mr. Allen McKay: In diversification, what emphasis is being given to organic farming?

Mr. Ryder: The answer is, "None at the moment."

Sir Geoffrey Johnson Smith: How sure is my hon. Friend that the most popular diversification grant will not go towards housing, and what safeguards can he give?

Mr. Ryder: I can give my hon. Friend an assurance that diversification grants do not go towards housing. On the other hand, I would point out that there is one grant which to the best of my knowledge, has not been made so far, and that is a grant for martial arts.

Sea Fish Industry Authority

10. **Mr. Worthington:** To ask the Minister of Agriculture, Fisheries and Food when he last met the chairman of the Sea Fish Industry Authority; and what subjects were discussed.

Mr. Donald Thompson: I have not yet had an opportunity, since assuming my new responsibilities, of meeting the chairman of the Sea Fish Industry Authority, but look forward to doing so soon.

Mr. Worthington: I hope that the Minister will meet the SFIA chairman very soon, and that during that meeting he will impress on him the need for him to meet the leaders of fishermen's organisations and to involve them fully in the training programmes that are to be mounted. The Minister will be aware that the European Community is urging that there should be training programmes across the EC, but it is crucial that those training programmes should meet local needs. Will the Minister do what I ask?

Mr. Thompson: I am glad to welcome a question such as that. I agree with every word of it in thought and substance.

Dr. Godman: When the Minister meets the chairman of the Sea Fish Industry Authority, will he offer that gentleman the assurance that the Government have no intention whatever of abandoning the vessel building scheme? May I point out to him that there is growing concern among fishermen that the Government intend to abandon the scheme, except to provide replacement vessels for vessels lost at sea. Will he, here and now, dispel those genuine and growing fears of our fishermen?

Mr. Thompson: The Government put no restrictions on people building their own boats. However, there is an EC moratorium on the priorities for boat building. We have to consider the size of the British and European fleets. It would be ridiculous to continue building bigger, better and faster boats with greater capacity for a diminishing fish stock. We must put conservation first and boat building second.

Set-aside Scheme

11. **Mr. Andrew Mitchell:** To ask the Minister of Agriculture, Fisheries and Food what the response of farmerss has been to the set-aside scheme launched in June.

Mr. MacGregor: The response has been satisfactory. I will be announcing figures of applications and registrations as soon as they are available following the 21 October closing date

Mr. Mitchell: Does my right hon. Friend accept that there may be substantial environmental benefits from a temporary policy of land set-aside? All too often, modern farming practices can result in the destruction of our great national landscapes and habitats.

Mr. MacGregor: I very much agree that there are big opportunities through set-aside for those environmental benefits. In drawing up the scheme I was very careful to have environmental conditions written into it which will help to ensure that. One interesting point from our early analysis of applications received is that the most popular choice so far is permanent fallow. I hope that farmers who undertake set-aside through permanent fallow will use the opportunity to improve the conservation value of land set aside in precisely the way that my hon. Friend has described.

Mr. Cryer: Are the Government thinking of introducing a set-aside scheme for factory owners whose factories have been set aside under this Government, causing the loss of 2 million jobs in less than 10 years? Will the set-aside scheme giving farmers up to £100 an acre for watching the grass grow apply only to farmers? Is it being denied to City institutions with offices in Mayfair which are taking Government money? They do not even see the grass grow—they are too far away.

Mr. MacGregor: It applies to all those who actually farm the land. There is a cost involved in looking after land and keeping it in good agricultural condition as well as environmentally attractive. The set-aside payments recognise that cost.

Country Landowners Association

12. **Mr. Marland:** To ask the Minister of Agriculture, Fisheries and Food when he last met the president of the Country Landowners Association; and what subjects they discussed.

Mr. MacGregor: I last met the president of the Country Landowners Association on 5 October. We discussed various matters of mutual interest.

Mr. Marland: My right hon. Friend will know how enthusiastic the Country Landowners Association is that voluntary set-aside should succeed. Although it is now almost too late for arable farmers to register for set-aside, is there a message that my right hon. Friend would like the CLA and hon. Members to convey to arable farmers who would like to register at this late stage?

Mr. MacGregor: Yes. I know that the CLA has been very helpful. I have been seen press reports that suggest that the president of the CLA has applied to set aside part of his land. The CLA is also helpful in assisting us to monitor—indeed, it will do some monitoring for us—what some people fear might be a problem in relation to tenants on set-aside land. I do not think that there is a problem yet, but the monitoring will be helpful. Although registrations have to be in by the closing date, that is only to help farmers who may wish to apply for set-aside in future years. It will still be possible for them to do that, but it will be more difficult if they do not register.

Mr. Campbell-Savours: How does the Minister respond to the CLA's latest proposals for an automatic system of compensation for land blighted during nuclear incidents such as Chernobyl?

Mr. MacGregor: We are looking at several proposals made by the CLA, and my hon. Friend the Parliamentary Secretary will meet the CLA at the end of the month.

Mr. Gale: Bearing in mind the recent anniversary of the October hurricane, did my right hon. Friend take the opportunity to discuss with the CLA the number of trees still lying on the land, particularly in Kent? Was he able to reassure the CLA that his efforts will continue unabated until the trees are removed and new trees are planted in their place?

Mr. MacGregor: I have not only discussed that with the CLA, but, to coincide with the anniversary, I have visited many areas that have been affected. Although I recognise the difficulties, substantial efforts have been made by woodland owners and others to do the clearing up, and I believe that by early next year we may well see half the clearing up done. There is also a good prospective take-up of the schemes that we have introduced to help with replanting.

PRIME MINISTER

Engagements

Q1. **Mr. Beaumont-Dark:** To ask the Prime Minister if she will list her official engagements for Thursday 20 October.

The Prime Minister (Mrs. Margaret Thatcher): This morning I presided at a meeting of the Cabinet and had meetings with ministerial colleagues and others. In addition to my duties in the House I shall be having further meetings later today, including one with the Premier of the State of South Australia.

Mr. Beaumont-Dark: Does my right hon. Friend accept that the television and radio strictures upon Sinn Fein, the propaganda arm of that evil machine the IRA, have been widely welcomed in the country, as it has in the House, among thinking and feeling people? Will my right hon. Friend also accept that that is only one step on the road to its defeat, because anybody standing for public office in the United Kingdom should have to swear an oath renouncing violence and upholding the primacy of Parliament and the ballot box?

The Prime Minister: I am grateful to my hon. Friend and agree that the measures announced yesterday have been widely welcomed in the country by people who do not wish terrorists to have direct access to the broadcasting media. On the second point about those who wish to stand for local elections taking an oath to renounce violence, a similar proposal was put forward previously by my right hon. Friend the Secretary of State for Northern Ireland. If we go ahead with it, we shall do so by way of legislation and introduce it at the earliest opportunity.

Mr. Kinnock: In the argument between those who want to raise child benefit and those who want to freeze it, on which side is the Prime Minister?

The Prime Minister: The right hon. Gentleman knows full well that child benefit is reviewed every year. He knows that there will be an anouncement at the proper time. He knows what the proper time is, and he must await it accordingly.

Mr. Kinnock: Child benefit was reviewed last year and resulted in its being frozen. I am not asking for detail from the Prime Minister, I am asking for a statement of principle from her. Does she want to raise child benefit, or does she want to freeze it? How can a Government give £3 billion to top-rate taxpayers and not give an undertaking to increase child benefit?

The Prime Minister: This year, as the right hon. Gentleman is aware, we directed £200 million in net extra resources to families in income-related benefits, especially for the children. That was against the £120 million that uprating child benefit this year would have cost. If the right hon. Gentleman wants a general increase in child benefit, it would also go to the topmost people on top tax.

Q2. **Mr. John Greenway:** To ask the Prime Minister if she will list her official engagements for Thursday 20 October.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Greenway: Is my right hon. Friend aware that her recent remarks in Bruges and in Brighton last week reflect the opinion held by the overwhelming majority of people in this country and, if the truth were known, throughout Europe? Does she agree that other European Heads of Government would do better to concentrate on practical measures towards economic progress and their agriculture policies rather than harp on about ideological European union ideas?

The Prime Minister: Yes. The speech was greeted by an avalanche of support, as well as some criticism. I firmly believe that the best way to secure forward movement in the European Community is by active co-operation between sovereign states. Furthermore, we have concentrated on practical measures, and in doing so have often been way ahead in achievements—beyond those who talk in woolly terms about European union.

Mr. Ashdown: Inflation is now running at four times the level of that in West Germany and is 50 per cent. above the

EEC average. Interest rates in Britain are nearly twice as high as they are in France and three times as high as in West Germany. Wage rates in Britain are rising two and a half times as fast as in France, and as an average are 50 per cent. higher than in the EEC. What grounds can there be for the Government's smug complacency about the economy?

The Prime Minister: I understand that the hon. Gentleman put a lot of work into his question, but he seems, at one and the same time, to be criticising both higher inflation rates and higher interest rates. Does he not know that the way to get inflation down is by higher interest rates?

Q3. **Mr. Burt:** To ask the Prime Minister if she will list her official engagements for Thursday 20 October.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Burt: Does my right hon. Friend agree that no responsible Western Government would allow the right to strike or trade union activity to interfere with the security services? Bearing in mind the disruption caused at GCHQ and the genuine efforts that the Government have made to deal with legitimate trade union concerns, is my right hon. Friend aware that the overwhelming majority of British people will fully support the necessary action that has recently been taken by the Government at GCHQ?

The Prime Minister: Yes. The original decision that we took on GCHQ was upheld by the highest court in the land and the European Court of Human Rights. As my hon. Friend the Minister of State, Foreign and Commonwealth Affairs, said in the House yesterday, about 10,000 man days were lost at GCHQ in the period 1979 to 1981 as a result of industrial action that had nothing to do with GCHQ. We have made strenuous efforts to accommodate those who did not uphold the new conditions of service. Only about 18 did not, while 7,000 people accepted those conditions. The action that we have taken is correct.

Ms. Short: Will the Prime Minister please explain what will seriously be achieved by not allowing the British people to hear and understand why both communities in Northern Ireland engage in violent conflict? At the time of the Anglo-Irish Agreement she promised reforms to reduce the alienation in Northern Ireland, but we have not seen them. We are now promised a series of measures that many of us believe will increase the conflict. Does she have a strategy to remove the causes of the violence, or will she allow it to rip under a blanket of censorship?

The Prime Minister: It would be a great help if we received full support for the measures that we have taken against terrorism, including the support of the Labour party for the Prevention of Terrorism Act.

Mrs. Roe: Following the Labour party's abject failure over the Dundee episode, does my right hon. Friend agree that Ford's recent announcement of investment at Bridgend shows that foreign firms believe in this country, which is good for jobs and for Britain?

The Prime Minister: Yes. We all welcome Ford's decision to site its main engine investment in this country. We were very concerned when forces in the trade union movement—though not in Scotland—stopped Ford from going to Dundee. I am delighted that it has decided to make much investment in this country, which is a vote of confidence in the United Kingdom Government.

Q4. **Mr. Roy Hughes:** To ask the Prime Minister if she will list her official engagements for Thursday 20 October.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Hughes: Will there be any reconsideration of the Government's proposal to impose charges for eye tests? Does the right hon. Lady appreciate that there is particular worry about the plight of pensioners who, because of charges, will be deterred from seeking tests? Is she also aware that, because of that, there is a serious risk of an increase in the number of cases of glaucoma? Does the right hon. Lady realise that there is considerable concern on this issue among her Back Benchers? Bearing in mind the right hon. Lady's eye affliction some time ago, can she tell the House whether she shares that concern?

The Prime Minister: Those on low incomes will not have to pay the charge, as the hon. Gentleman is well aware. It seems reasonable that those who can afford to pay should pay about £3 twice a year on dental charges or up to £10 on spectacles, although competition among opticians may result in virtually no charge. The hon. Gentleman is aware of the enormous increase in prosperity this year. Indeed, the Labour party voted against tax reductions, including some that would have affected older people. It would seem reasonable that those who can afford it should pay this small, modest charge for something that is fundamental to their health.

Mr. Paice: Will my right hon. Friend confirm that if she were to undertake a 10-day speaking tour she would do so during the recess? Does she assume that the only reason why the hon. Member for Yeovil (Mr. Ashdown) waits until we reassemble is——

Mr. Speaker: Order. The hon. Member can ask questions only about the Prime Minister's responsibility. She is not responsible for that matter.

Q5. **Mr. O'Brien:** To ask the Prime Minister if she will list her official engagements for Thursday 20 October.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. O'Brien: The Prime Minister is well aware of the unfairness and cruelty that will be inflicted on people on low incomes when the poll tax is introduced. Is she aware of the unfairness and cruelty that will be inflicted on a pensioner couple when they will have to pay twice the poll tax while their income will be only 50 per cent. more than that of a single pensioner? Will the right hon. Lady do something to arrest this cruelty that will be inflicted on people on low incomes?

The Prime Minister: Community charge is the way of paying for a part of local government services. It is therefore an obligation that falls on all citizens unless they are unable, because of low income, to afford the whole amount, in which case they will get an 80 per cent. rebate. In the last resort, they will get an average of 20 per cent. of the community charge on their social security benefit to enable them to pay it. The hon. Gentleman loses sight of

the fact that it is a citizen's duty to pay towards the cost of local income and that there are full rebates for those on low incomes.

Q6. **Mr. Stanbrook:** To ask the Prime Minister if she will list her official engagements for Thursday 20 October.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Stanbrook: Will my right hon. Friend consider the suggestion that the ultimate solution to the problems of Northern Ireland lies in a re-drawing of the border, generous resettlement grants, its restriction to those British who wish to remain British, and thereafter its treatment on exactly the same terms as any other region of the United Kingdom?

The Prime Minister: We have not considered that approach. I do not think that it would work. There have been countries and incidents where it has worked in the past—for example, with Greece and Turkey afer the first world war—but previous efforts to do this in Northern Ireland have failed. We must carry on with our present pledge to the people of Northern Ireland, which is that there will be no change in their status, except at their wish and through their express consent and the express consent of the House. Northern Ireland is part of the United Kingdom and must be governed in that way.

Q7. **Mr. Haynes:** To ask the Prime Minister if she will list her official engagements for Thursday 20 October.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Haynes: Does the Prime Minister remember lecturing the nation—something that she does quite regularly—on spending money that it does not have? Why, then, do she and her Chancellor encourage people to spend money that they do not have?

The Prime Minister: I congratulate the hon. Gentleman on being able so frequently to secure the last question at Prime Minister's Question Time. I do not know quite how he does it.

I do not think that it is right to encourage people to borrow more than they can afford—nor, I believe, does the hon. Gentleman. The steps that we have taken on interest rates will reduce borrowing and increase saving, and that is necessary both to get inflation down and to reduce the trade deficit. It is the right step to take.

Barlow Clowes

3.30 pm

The Chancellor of the Duchy of Lancaster and Minister of Trade and Industry (Mr. Tony Newton): With permission, Mr. Speaker, I wish to make a statement on Barlow Clowes.

Many people have been badly affected by the collapse of the Barlow Clowes operations. The extent of the suffering and distress has been fully set out in the letters I and my colleagues have received from Members of both Houses and direct from those concerned. We share the deep concern expressed on all sides, and sympathise with those who have suffered loss.

The story is very complex: it stretches over many years and involves many different participants. The House will recall that, following my right hon. and noble Friend's statement on 13 June, he appointed Sir Godfray Le Quesne QC to prepare an independent report on the facts of the Department's handling of this matter. My right hon. and noble Friend is today publishing Sir Godfray's account, subject to minor deletions made on legal advice in order to avoid possible prejudice to criminal proceedings. His report is one of the most open and exhaustive ever volunteered by a Department of State into its handling of a matter of this kind, and contains a full account of the Department's role.

I should make it clear to the House that, while the Government attach importance to maintaining the normal rule that officials' confidential advice to Ministers should not be made public, we have decided that, in the quite exceptional circumstances of this case, it is in the public interest to include the submissions to Ministers and other material which would not normally be published. In accordance with normal practice, the names of officials involved have been excluded.

We are extremely grateful to Sir Godfray Le Quesne for the thoroughness and speed with which he produced his report. In accordance with his terms of reference, the report is purely factual. The Government have studied it with great care and have taken legal advice, including that of leading counsel, and I would now like to set out to the House the key events and our conclusions.

It is only possible to judge the events that occurred in the light of the regulatory system in place at the time. The legislative framework within which all but the final events of this case took place was based on an Act of 1939, which was consolidated in the Prevention of Fraud (Investments) Act 1958. There was very little change in the way it operated until 1983. Then, against the background of Professor Gower's much broader review of investor protection, commissioned in 1981, the Government introduced new regulations. These regulations required, among other things, first, much more information about prospective licence holders; secondly, a certificate from a qualified auditor as to the firm's ability to operate as a going concern during the lifetime of the licence; and thirdly, regular financial monitoring returns, verified by a qualified auditor, covering the proper holding of client money and investments. The regulations were designed to enable the Department to rely on the verification of prescribed information by qualified auditors and solicitors.

Sir Godfray's report shows that Barlow Clowes first came to the Department's attention in 1975-76. It received advice which, due to a misunderstanding within the Department, did not adequately cover the point at issue and it did not then apply for a licence to deal in securities. The consequences of this have been carefully examined. Had it applied in 1975-76, it is almost certain that a licence would have been granted, given practice at the time. If Barlow Clowes had received a licence in 1975-76, the first monitoring return of the sort I have described would have been required by the end of December 1984. In the event, Spicer and Pegler certified in July 1985 that it had obtained verification of the clients' investments and cash, and that the statement of clients' funds gave a true and fair view of their composition as at 28 December 1984. There is no reason to think that the fact that Barlow Clowes was not licensed in 1975 had any material effect on the course of subsequent events.

The partnership again came to the Department's attention in late 1983. The review and tightening up of the system in 1983 had brought large numbers of unlicensed dealers to light. Wholesale prosecution would have been unjustified and, as Sir Godfray's report explains, it was the policy to bring unlicensed firms into the regulatory net and to take other action only where there was evidence of wrongdoing or that investors' funds were at risk. The Department originally believed that the partnership was applying for membership of the National Association of Securities Dealers and Investment Managers (NASDIM), which would have meant that it did not need to be licensed directly by the Department. When it became apparent that the partnership was not doing so, the effective choice open to the Department lay between prosecution of Barlow Clowes for not holding a licence—the only sanction provided by the legislation—and licensing the firm if it could meet the regulatory requirements. As Barlow Clowes was a partnership, the Department—even where grounds existed—had no powers to investigate it or to apply for a winding-up order, nor was there any provision for intervening to protect investors' funds if a licence were refused.

The Department therefore decided to seek to bring the partnership within the regulatory framework. In doing so it had four main aims. The first was to subject the partnership to the conduct of business rules (strengthened in 1983), the second to secure examination of its affairs by qualified auditors, and the third to persuade the firm to incorporate a limited company so that the powers available under the Companies Acts would become available. Fourthly, it was also necessary for Barlow Clowes to make arrangements which satisfied the Bank of England that the partnership was not in breach of the Banking Act 1979. When all these objectives had been met, licences were issued in October 1985 to the partnership and the company. In issuing the licences the Department made clear to the Barlow Clowes' solicitors that it had been heavily influenced by the assurances received from or through them. The Department also took full account of the report from Spicer and Pegler on clients' funds as at December 1984.

In 1986 new licences were issued to Barlow Clowes after it had submitted applications accompanied by the verifications and auditors' certificates required by the legislation. Although the majority of the powers under the Financial Services Act 1986 did not come into force until 29 April 1988, stronger and wider powers of investigation contained in that Act became available on 18 December 1986.

By the time of Barlow Clowes' licence applications in 1987, the Department had received material from the stock exchange and others that caused concern about Barlow Clowes' United Kingdom business. The Department did not at that time have the power to apply for a winding-up without first conducting a statutory investigation. Even if there had been such a power, there was not at that stage sufficient evidence to be confident that an application to wind up the company would be successful.

The Department had three courses open to it. It could refuse the licence. This would have stopped the company from lawfully taking on new business. But because the Department could not apply for a winding-up, there would have been no way of securing existing investors' assets. This action could therefore have precipitated a disorderly collapse of the business, which would have damaged existing investors' interests—[HON. MEMBERS: "But that happened anyway."]

The second course was to grant the licence but immediately to issue notice of intention to revoke it. The company could have referred that to the licensed dealers tribunal, which would have meant that it could carry on trading until the tribunal had decided the case.

The Department therefore adopted the third possible course. This was to institute an investigation under the powers newly available under the Financial Services Act and to issue a new licence, subject to review, pending the outcome of that investigation. The investigation proceeded but even six months later, in April 1988, with all the information the investigators had by then uncovered, there were legal doubts whether sufficient grounds existed for a winding-up petition to succeed. By May 1988, the combination of the investigation and new information on the company's solvency had yielded enough evidence to secure a winding-up order.

We are informed by the liquidators of Barlow Clowes Gilt Managers that on current information investors are likely to receive in excess of 75p in the pound, and they are hoping to make a substantial distribution before Christmas.

I now turn to Barlow Clowes International. This company was based in Gibraltar, and was not licensed. Any offshore company dealing with expatriates, and not holding itself out as dealing in securities in the United Kingdom, would not need a licence. The question, therefore, is whether the Department had reason to believe that BCI required a licence. As Sir Godfray's report shows, no firm evidence came to the Department indicating that this was so, and the information provided by the United Kingdom company from 1984 to 1987 indicated that BCI serviced expatriates and non-residents. During this entire period there were no complaints from investors, no questions about whether BCI was licensed, no approaches from intermediaries that would have revealed that BCI was dealing with United Kingdom residents.

From 1984 the Department decided that, as part of its licensing function, it would adopt a policy of sample monitoring of advertising in the national and financial press. No advertisements from BCI came to light as a result of this monitoring. Subsequently, it has emerged that a single advertisement was placed by BCI in one general supplement of *The Times* devoted to Gibraltar. This was not picked up by the sampling system. It has since transpired that BCI received business as a result of advertisements placed by authorised intermediaries, not in the general or financial press. These advertisements did not mention BCI, which was named only in subsequent private correspondence. No example of such correspondence was referred to the Department before the Barlow Clowes collapse.

The liquidators of Barlow Clowes International predict that there will be sufficient funds realised to make a distribution in excess of 30p in the pound. The complications in BCI will take some considerable time to resolve but the liquidators are hoping to make a small interim distribution early in 1989.

I should now like to turn to the main conclusion that the Government draws from Sir Godfray Le Quesne's report. Within the constraints of the old legislation and the information available to the Department at the time, the Department's general handling of the licensing of Barlow Clowes and Partners, and Barlow Clowes Gilt Managers Ltd., was careful and considered and its actions reasonable. Barlow Clowes International had no licence: only since the company collapsed has it emerged that its activities were such that it probably should not have operated without one. Sir Godfray's report shows that the Department did not have reason to know this.

I must also inform the House that the legal advice the Government have received on the question of liability to investors with all these businesses is clear. The Government have no legal liability.

In view of the hardship that has been caused, the Government have considered carefully whether there is a case for ex gratia compensation. The facts set out in Sir Godfray's report in the Government's view provide no grounds for concluding that the Department's handling of the matter was unreasonable or caused the losses experienced by investors, and therefore provide no justification for using taxpayers' money to fund compensation.

We are aware that the Parliamentary Commissioner for Administration has said he is considering whether to investigate complaints of maladministration in the Department's handling of the matter. My right hon. and noble Friend has today sent him a copy of Sir Godfray Le Quesne's report. If he decides, in the light of that, to carry out an investigation, the Government will, of course, co-operate fully with him and consider carefully any report he may make.

My right hon. and noble Friend is also sending copies of Sir Godfray's report to the Institute of Chartered Accountants in England and Wales, the Securities and Investments Board and FIMBRA, for them to see whether there are matters for them to consider.

It is all too clear from the account of events in Sir Godfray Le Quesne's report, and from the points I have made so far, that there were a number of significant weaknesses in the legislative framework of the Prevention of Fraud (Investments) Act 1958, even after the regulations were greatly tightened in 1983. There were no provisions for injunctions to stop unauthorised businesses or breaches of the rules, or powers to restrict business, safeguard assets or appoint trustees. Nor was it possible to investigate unincorporated investment businesses. The Government have acted to correct those weaknesses in the Financial Services Act 1986, whose main provisions came into effect in April this year. These improvements do not mean that the present system of investor protection is completely risk-free. No regulatory system can eliminate fraud or guarantee investors against loss. But the

[Mr. Tony Newton]

legislative framework has been radically revised and strengthened since the chain of events covered by Sir Godfray's report took place.

Hon. Members: Resign.

Mr. Tony Blair (Sedgefield): For the 11,000 investors in Barlow Clowes who have waited for more than four months for this report, who expected not only a factual narrative but some accompanying conclusions from Sir Godfray and who hoped, not for a set of ministerial excuses but for a statement of ministerial responsibility, this report will come as a profound and bitter disappointment. Their sense of grievance will be all the greater in that Sir Godfray's report is not the report that we were promised.

Will the right hon. Gentleman comment specifically on the following words of the Secretary of State:

"This is an inquiry to determine the facts of what actually happened within the department and to determine whether or not the department is to blame in any way"—[*Official Report, House of Lords*, 13 June 1988; Vol. 498, c. 11.]

Why do we not have such a report? [HON. MEMBERS: "Yes, we have."] We have not. Why, instead of an independent objective judgment of the facts, have we been given the Government's shamefully partisan, self-serving interpretation of the facts? Does the right hon. Gentleman not know that it is all very well to refer to the parliamentary ombudsman, but that what the investors wanted above all today was some sense of finality—not to be shunted from one investigator to another in a game of ministerial pass-the-parcel?

As for the Minister's claim that Sir Godfray's report shows that the Department was not negligent, I ask him to deal specifically with the following points. From my brief examination of the report I believe that it bears out each one of them. Is it not true that when the licence was first issued to Barlow Clowes in October 1985 the Bank of England had raised objections to the company, and that NASDIM, the City watchdog, had said that Barlow Clowes was unsuitable for a licence? Is it not true also that the DTI had been given assurances and had discovered that they were false? Barlow Clowes had then been trading illegally for more than 12 months under the Prevention of Fraud (Investments) Act 1958. How on earth was it given a licence in 1985?

Is it not right to say that in 1986—and I ask the Minister to answer this point specifically—the stock exchange expressed misgivings? The deputy head of the Bank of England's banking division said that he thought that there was a possible "fraud". The accountants to Barlow Clowes said that they thought clients' money was being misused. The monitoring returns submitted to the DTI were, according to the Minister's own inspector, seriously inadequate—but the licence was reissued.

In 1987 the stock exchange inquiry report stated, as Sir Godfray says, that there were "serious doubts" about whether Barlow Clowes was fit and proper. The police investigated Barlow Clowes, according to Sir Godfray. The Inland Revenue investigated Barlow Clowes. The DTI sent in its own inspectors. Yet in October 1987, when virtually every single body, private or public, with any responsibility for regulation was shrieking warnings at the DTI, the licence was reissued.

Is it not further the case that when the monitoring returns came in from Barlow Clowes in December 1987 —as, again, Sir Godfray finds—they were unsigned, unaudited, and then the firm was allowed to trade for a further six months, taking in millions of pounds, until in May this year the new SIB shut down in three weeks what the Minister's Department had left open for three years? What about the "disorderly collapse" that happened then, in May 1988? I may tell the Minister that in the light of all that, confirmed by Le Quesne, his denial of any negligence on the part of his Department is so brazen that it is risible.

I turn to the question of the ombudsman. Will the Minister undertake that the Government will abide by any compensation order made? Does he agree that the ombudsman should look also at the offshore investors, who, I may tell the Minister, had their funds managed in the United Kingdom, advertised in the United Kingdom, and run by residents in the United Kingdom? Will the Minister also, even at this stage, accept a proposal that I believe would command support from all quarters of the House—that the Government are bound to have some liability and should be using their good offices now to convene all those with a potential liability so that the spectacle of long, drawn-out legal proceedings can be avoided and a proper lifeboat scheme mounted? Is that not both a fair and a wise course?

Finally, I may tell the Minister this. The file in my hand is only of letters that I have received from investors over the past few months. Many right hon. and hon. Members will have received similar letters. Those who sent them are not get-rich-quick speculators. I doubt that many of them are drawing £1,000 per week for living expenses. They are Britain's new class of investors. They are the elderly couple with an accumulated nest egg. They are the young couple who have been left a small inheritance, perhaps from the sale of their parents' home. They are the mine workers or steel workers made redundant. Is it not the case that they are the very people whom the Government have encouraged into the market place of investment? The question asked by thousands of Barlow Clowes investors who are victims of malpractice today is echoed by millions more in this country who fear that they may be victims of malpractice tomorrow. Will the Government stand by them, or will they let those investors fall? Today, they have their answer, but we on the Opposition side of the House will not let them down.

Mr. Newton: Let me seek to comment on the points made by the hon. Member for Sedgefield (Mr. Blair) in the order in which he raised them.

First, it was made entirely clear in Sir Godfray's terms of reference that the purpose of his inquiry was to establish the facts on which judgments could be made. Inescapably, in a matter of this kind, those judgments will differ. Manifestly—and I understand this—the hon. Gentleman's judgment differs from the Government's judgment, which I have outlined to the House. However, it is a comprehensive description of the facts, which I believe will assist everyone in the House in considering in detail—and I hope that people will study the report in detail—the sequence of events against the background of the legislation existing at the time. I repeat that that is a very important point.

I well understand that people would have preferred some sense of finality, to use the term employed by the hon. Gentleman. But it is in the nature of an event such as

this—with all the potential that it creates for legal action of various kinds—that it is very unlikely that one single statement can bring the sense of finality that he has sought. I certainly do not pretend that my statement could have done that today.

The hon. Gentleman raised a good many points about the detail of particular comments at particular times, which are set out clearly in the report. Let me make two observations that I do not consider were properly reflected in his remarks. First, as is very clear from the report, the majority of those comments did not come in the form of anything that could be construed as evidence in the context of the action that the hon. Gentleman suggests that we should have taken. *[Interruption.]* I hope that all hon. Members will study the report. It is very clear that in general what came to the Department consisted more of rumour and speculation than of evidence. The Department's duty was to seek to establish evidence on which proper decisions could be made, and that is what it sought to do.

Let me make it absolutely clear that there was no question of the Securities and Investments Board precipitating action that the Department had been unwilling to take. It was decided, in the light of powers that had become available at the end of April 1988, under new legislation passed by this Government, that the best way of producing an orderly conclusion—an orderly winding-up of Barlow Clowes—was for the SIB to take the action that it accordingly took.

There was some laughter in the House when I referred to the issue of a disorderly collapse, which was the likelihood under the previous powers on the occasions to which the hon. Gentleman has referred. The suggestion was made, I think probably from a sedentary position below the Gangway, that what happened was a disorderly collapse. Let me make the difference clear. What happened was a collapse in which a proper winding-up order was made in circumstances in which equitable dealing between all the investors in the companies could be secured. A disorderly collapse would have occurred if the Department had taken action that would have precipitated a position —*[Interruption.]* I hope that the House will listen to this point—*[Interruption.]*

Mr. Speaker: Order.

Mr. Newton: —which would have caused the collapse in circumstances in which no action could have been taken to safeguard and freeze the assets. The more sophisticated investors would have got all their money, and the rest would have got nothing. That is what I mean by a disorderly collapse, and that is one of the risks that the Department was concerned to avoid.

It is not for me to suggest what the Parliamentary Commissioner should investigate, how he should investigate it or what he should conclude, but I have no doubt that he will have noted the hon. Gentleman's comments.

Lastly, the hon. Gentleman asked me what view the Government took of the need to ensure proper protection for that growing army of investors that we are rightly proud of having brought about. The answer is that we have already passed a comprehensive Act which has dramatically improved the framework of regulation in this whole sphere—and that comes after a period in which the Labour Government, as far as I can discover, did nothing whatever with a framework that went back to 1939.

Sir William Clark (Croydon, South): Is my right hon. Friend aware that most hon. Members will have sympathy with him in handling this case when he was not in the Department when all these things happened? Does he agree that when the DTI had its reservations about Barlow Clowes, without winding it up with a disorderly collapse or whatever, the advice from the civil servants to Barlow Clowes should have been "Don't take any more investments from the public until we have satisfied ourselves that you are safe and sound as an investment instrument"?

The report refers to expatriates, but, in all kindness to my right hon. Friend, I can assure him that the investors in Barlow Clowes who live in my constituency are not expatriates. Consequently, for civil servants to suggest that the overseas fund was being used only by expatriates really is beyond belief.

Secondly, many invested their money unwittingly not knowing the full facts, yet those facts were known by the Department, which had reservations. Not giving that advice must be a dereliction of duty. Can my right hon. Friend assure the House that whichever officials were responsible for that dereliction of duty are no longer in that section?

Mr. Newton: First, there must have been a risk, which would have weighed with the Department, that action during most of the period of the kind for which my hon. Friend asked in the first part of his question would itself have contributed to the company's collapse, and that would necessarily have been a disorderly collapse, given the legal framework at the time.

Of course, I am not suggesting that my hon. Friend's constituents, or the many others who so unhappily have been caught up in this wretched business, are expatriates, because manifestly they are not. The issue is whether the Department could reasonably have been expected to know that those non-expatriates were being invited to invest in Barlow Clowes in the way that subsequently transpired. In the passage of my statement on the advertising that took place and the way that that was done, I think that I have shown why, in my judgment, the Department could not reasonably have been expected to know.

On the question of facts and civil servants, I should tell the House that the permanent secretary at the Department —it is a matter for him to investigate rather then for Ministers—has considered whether the facts set out in Sir Godfray's report give rise to a case for disciplinary action, and has decided that they do not.

Mr. David Steel (Tweeddale, Ettrick and Lauderdale): Are Ministers in the Department satisfied that the people in the Department who are having to deal with these sharks and the rumours and speculation—to use his own phrase—which were drawn to the Department's attention, have sufficient expertise and qualifications to do so?

Secondly, the Minister tells us that the Government are advised that there is no legal liability, but does he agree that a particular feature of this tragic collapse is that many of the thousands of investors were elderly people, such as my own constituents, who put all their redundancy pay

[Mr. David Steel]

into the fund believing that they were buying British Government securities with the DTI's stamp of approval? In those circumstances, is there not a moral liability?

Mr. Newton: It is precisely because we had doubts about the overall adequacy of the previous regulatory system that such an immense amount of effort went into producing the Financial Services Act 1986 and to bringing it into effect. An important part of that Act is to improve the regulatory system by bringing to bear on it the expertise of those who really are involved in the field. Hence, the establishment of the Securities and Investments Board, and, of course, FIMBRA, regulating the sort of people about whom we are talking in important respects of the statement.

I have made the position on legal liability clear. I have also made it clear that the Government have considered the issue of compensation on other grounds but arrived at the conclusion that I gave in my statement.

Several Hon. Members *rose*——

Mr. Speaker: Order. There can be hardly an hon. Member whose constituents are not involved in this, including my own. May I ask those hon. Members who are called not to repeat questions that have already been asked and, furthermore, to ask single questions rather than a range of questions?

Mr. Michael Grylls (Surrey, North-West): Does my right hon. Friend agree that those who press for compensation to be paid by the Government should bear in mind that compensation will come from taxes paid by all taxpayers and we should be cautious before we go down that route? However, is it surely not right that there should be a thorough investigation into the role of the financial intermediaries who made such rash recommendations, and, perhaps, the auditors, who should have known what was going on in Barlow Clowes throughout?

Mr. Newton: I obviously acknowledge my hon. Friend's first point. Whether it would be right to ask taxpayers to compensate is an issue to which the Government gave close consideration. I hope that my hon. Friend and the House will realise that in making the statement I labour under the difficulty, among others, that further action of various kinds may well arise from the facts revealed by the case. The point that my hon. Friend has in mind is perhaps best covered in the statement by my having said that my right hon. and noble Friend the Secretary of State has referred the report to the Institute of Chartered Accountants in England and Wales and to other regulatory bodies. I think that my hon. Friend will understand that I cannot go much beyond that, but I am sure that his point will have occurred to others.

Mr. Robert Sheldon (Ashton-under-Lyne): Is not the point encapsulated by one of my constituents who, at the age of 50, put all his redundancy money into Barlow Clowes, having gone to an intermediary, been informed that this was Government gilt-edged, that the company had its certificate and that its certificate had been renewed? Is not there clearly some sort of duty upon the Department to make some sort of compensation to such people?

Mr. Newton: I agree entirely with the right hon. Gentleman that the problem is encapsulated in the case that he has set out. However, I am afraid that I cannot agree that on the basis of the account of the Department's actions within the legislative framework—I am sorry to have to emphasise this again—that existed at the time the Department's behaviour gives rise to a case for asking taxpayers to fund a compensation scheme.

Mr. Nicholas Winterton (Macclesfield): I warmly welcome the factual content of my right hon. Friend's statement, but does he accept that many hon. Members find his conclusions completely unjustifiable and confused? How is it that the Department granted a licence to a group of companies about which it had been warned by me, among other hon. Members, and when clearly, before granting the licence, there was inadequate monitoring, incompetent accountancy advice and inadequate auditing? Despite all that, the Department still gave the licence. Is it not correct to say that this was not an official decision but a political decision because the Department knew that something was wrong with the company and if it did not grant the licence some people would lose, whereas if it did grant the licence people might come out of it all right? Was not it a gamble—a gamble that went wrong for which the Government should accept liability?

Mr. Newton: I can readily accept, because it is made clear in the report, that at certain points in time decisions were put to and taken by Ministers, not by officials, which is entirely right. That is not at all the same as saying that they were political decisions in the sense that my hon. Friend rather implied in his remarks. They were decisions made in good faith on the basis of the information available and applying a necessary judgment about the balance of advantage and disadvantage, including to investors in general, arising from different courses of action. I have explained why judgments were made which led to the decisions that were taken at the time. I hope that my hon. Friend will study the report with care, which I recognise he has not yet had time to do, before continuing with suggestions of the kind that he made in his question.

Mr. Alfred Morris (Manchester, Wythenshawe): Is the Minister aware that it was the case of my constituent, Mr. Leslie Mullard, aged 75, and his wife, who have lost £65,000, which went to the ombudsman as a test case, and of the reply to me from the ombudsman of 8 July? If the Government are not prepared to offer compensation, will they at least give a plain assurance in the House today that they will abide by any recommendation for compensation which may be made by Sir Anthony Barrowclough? What does the Minister say about the remark of the right hon. Member for Chingford (Mr. Tebbit) that he was minded to refuse the licence? How could the offshore fund have existed without the licence for the onshore fund?

Mr. Newton: I was of course aware, because it had been reported in the press, although I am not sure that it has been confirmed by the Parliamentary Commissioner, that the right hon. Gentleman had referred a case to the Parliamentary Commissioner. I have no doubt that a number of other cases have been referred to him as well. I made it clear in my statement, and I readily reiterate it, that the Government will co-operate, as they rightly should, and that they will consider with great care any report that the ombudsman may make. Beyond that, I am not prepared to engage in speculation about the

hypothetical conclusions of a report that we do not yet know is going to be written without any opportunity to consider what it says.

Mr. Norman Tebbit (Chingford): I remind my right hon. Friend, and I ask him to make it plain, that although I was not at the Department at the time that the licence was granted and that although it was reported in the press —and no doubt it will be dealt with in the report of the inquiry—a document during my time at the Department said that I was minded not to grant a licence. As anybody who has been in Government will know—I realise that few of those who sit on the Opposition Benches have been in Government——

Hon. Members: Is it in your book?

Mr. Speaker: Order.

Mr. Tebbit: As anybody who has been in Government will know, such an expression is a commonplace expression in correspondence, whether a Secretary of State has or has not minded himself to grant a licence. [AN HON. MEMBER: "Wriggling."] The hon. Gentleman says that I am wriggling. I think that he has forgotten that the correspondence said that I was minded not to grant a licence. What I am making plain is that I cannot take credit for having made a decision not to grant.

Mr. Newton: I think that I would simply like to thank my right hon. Friend for his observations.

Dr. David Owen (Plymouth, Devonport): Popular capitalism, which this Government and many hon. Members support, surely depends on trust in institutions. How can we trust an institution, in this case the Department of Trade and Industry, when we know that the Bank of England and the stock exchange raised very serious questions? Can the right hon. Gentleman really come to the House and say that, given the background to these events, its actions were careful, considered and reasonable? Is it not time for this House, as an institution of Government, now to demand ex gratia payments for these small investors?

Mr. Newton: I hope that the right hon. Gentleman will —as I am sure he will—read, in the case of the Bank of England in particular, the text of the letter that it wrote, which is contained in the report. The suggestion in that letter on which I think his comments rely is of the form that "it occurs" to the writer that something may be the case. I think that the right hon. Gentleman will accept that that is not a basis on which a Department could launch action that would precipitate the collapse of a company or, in this case, a partnership. As for the stock exchange, my statement made it absolutely clear that once the concern began to have some flesh put on it, which was only at a relatively late stage, the Department not only took it seriously but set in hand the action that ultimately brought about the winding up of the company.

Mr. Stephen Day (Cheadle): Is the Minister aware that over 400 investors in my constituency have been affected and is he also aware that the majority of these people are not City whizz-kids? They put their life savings into Barlow Clowes largely because of the guarantee that they thought they had of a DTI licence. Will the Minister comment on the fact that if the Financial Services Act 1986 had been fully in operation when Barlow Clowes collapsed, many of these investors would probably have been protected by the fund that was established under the provisions of that Act? As the Government recognise the principle and the need for such funds to be available in those circumstances, will they not accept that principle and do something about it, not because they are legally required to do so but because they have a moral duty to help people who are now in extremely dire circumstances?

Mr. Newton: It is certainly the case that, had the full framework of the Financial Services Act been in place, the position would have been a great deal better than under the legislation as it existed at the time. I cannot quite endorse the precise proposition that my hon. Friend has put to me. It would have depended on whether or not this or any other firm was duly authorised under the Financial Services Act. In the light of what we now know, it appears to be highly unlikely that that would have been the case, but what is very clear indeed is that the new legislation —the improved regulatory system—should make it very much less likely—even though, in the nature of things, it cannot make it totally impossible—that events of this very unhappy kind for my hon. Friend's constituents and others will occur again.

Mr. Brian Sedgemore (Hackney, South and Shoreditch): Is it a fair summary of the Minister's 17-minute statement that for a long time members of the DTI knew that Barlow Clowes were criminals but could not prove it and that when they could prove it and had the option of prosecuting or granting a licence they chose to grant a licence? Is that the acceptable or the unacceptable face of Thatcherism?

Mr. Newton: The short answer to the hon. Gentleman's question is that that is not true. When he has had a chance to read the report I think that he will recognise that that is not true.

Mr. Anthony Nelson (Chichester): Is my right hon. Friend aware that his very full and detailed statement will be studied with care not only by Barlow Clowes shareholders and investors but by investors throughout the country in many other concerns? I put it to my right hon. Friend that the lesson to come out of this is that we should not wait for the horse to bolt before we close the stable door. Whether it is the Department of Trade and Industry or the Securities and Investments Board, I think that investing members of the public would like to feel that at an earlier stage of the proceedings the whistle was blown on fraudsters and rip-off merchants such as this. When this matter was discussed in the House during the passage of the Financial Services Bill, hon. Members on both sides of the House argued the case for the Securities and Investments Board to be able to play a much more incisive and investigative role in these matters, but that argument was resisted by the Government who said, "We are too afraid of a more powerful body overseeing the City." I believe, as do many other people, that the time has come for a rethink.

Mr. Newton: First, I agree with my hon. Friend that there is material in this report and in the sequence of events for large numbers of people to study. I hope that the report will be studied by many intermediaries and by all those who are concerned with the regulatory system. Secondly, if my hon. Friend is suggesting that we waited for the horse to bolt before we shut the stable door, may I make the

[Mr. Newton]

simple point that this Government, after decades during which no previous Government had tackled this problem, set up the Gower committee on investor protection in 1981 and introduced new regulations under the existing legislation in 1983. The Government have now produced a comprehensive framework. Far from waiting until the horse had bolted, we have got on with the job and a new framework is now in place.

Mr. James Lamond (Oldham, Central and Royton): When the Minister remembers that many thousands of small investors have lost at least a quarter of their capital, some of them perhaps 75 per cent. of it, together with the income that they derived from it, and when he recalls the crocodile tears that have been wept over the years, by the Prime Minister in particular, over the erosion of old people's capital by inflation, and also the very substantial "lifeboat" that was launched in the past to assist the banks who got into trouble, does it not smack a little of hypocrisy for him now to speak of protecting taxpayers' money in order not to compensate the small savers who have lost their savings?

Mr. Newton: The hon. Gentleman will, I hope, recall from my statement that I made it clear that we considered very carefully—I mean that—whether it would be proper to compensate for just the sort of reason that he has outlined. We came to the conclusion that, on the basis of the facts set out in Sir Godfray's report, we could not properly do that.

Sir Peter Emery (Honiton): My right hon. Friend will recognise the concern felt on both sides of the House, which is justified, but we must not reach a judgment until people have had time to study the report. Sir Godfray was asked:

"to investigate . . . with particular reference to . . . the monitoring of the activities of the licence holder."

We have not heard anything from my right hon. Friend about the activities of the licence holder, which many of us believe were extremely dubious. If he conducted his business in a doubtful way, ought that fact not to be made clear from the Dispatch Box? If it is believed from the report that there are liabilities attaching to the auditors and to the financial advisers, can the Government bring together those who are liable—many of whom are insured, so the insurance factor will deal with the liability—so that we can finalise the matter quickly and not have it drag through the courts for years and years?

Mr. Newton: I note my hon. Friend's latter suggestion. I hope that people will read this extremely comprehensive report thoroughly. With regard to monitoring, my hon. Friend will realise that he is taking me back to the ground, over which I skated delicately some questions ago, concerning possible issues of liability in various directions arising from the report. My hon. Friend will realise that I cannot speculate or comment further on that, having made it clear that the report has gone to the relevant regulatory bodies.

Mr. Jack Ashley (Stoke-on-Trent, South): The Minister has given us his interpretation of the facts and mentioned a possible reference to the ombudsman. May I suggest that he goes much further and assures the House that, if the ombudsman finds a different interpretation of the facts and also finds maladministration, there should be full compensation? If he does not, the right hon. Gentleman is saying that the Government will accept the ombudsman's findings only when they suit them.

Mr. Newton: I do not think that I have implied any such thing. I have said very clearly that we shall consider carefully any report which the Parliamentary Commissioner produces. I repeat what I said to the right hon. Member for Manchester, Wythenshawe (Mr. Morris)—I am not prepared to engage in speculation about hypothetical reports before we have had a chance to study them.

Mr. David Howell (Guildford): We shall obviously have to examine the report in great detail and not rush to instant judgments. Is my right hon. Friend aware that he does not sound quite right, and nor, from what he says, does the Le Quesne report, when he makes such a clear distinction between the Barlow Clowes UK portfolios and its Gibraltar portfolios? Is he aware that some investors had their funds switched between the two, often without their knowledge, and that there was not the clear distinction that seems to be implied in the report? Will my right hon. Friend take that into account? My right hon. Friend is aware that the reference to the ombudsman will take several months, so will he not rule out the idea of temporary support and help for real hardship cases while this affair drags on?

Mr. Newton: With regard to the latter part of my right hon. Friend's question, I cannot add to what I have already said about the compensation issue as a whole. Of course I accept—it is clear with hindsight—that funds were switched from one portfolio to another and that a number of things that happened should not have happened. The issue that Ministers have had to consider is whether the Department, exercising its regulatory functions, could reasonably have been expected to know that that was happening when it was happening. That is the point to which my comments were directed.

Several Hon. Members *rose*——

Mr. Speaker: Order. I appreciate the House's anxiety about this matter but I have to balance it against today's business. There was great distress among hon. Members last night who were unable to speak in the debate on the Defence Estimates. I shall therefore allow questions on the statement to run for a further 10 minutes when we shall move on to business questions. I shall endeavour to ensure that hon. Members who cannot be called to ask a question on this statement will be called then.

Mr. Joseph Ashton (Bassetlaw): Is the Minister saying that his Department monitored only sample advertisements in the financial press? Was it unaware of massive advertising in trade union magazines and others aimed at professional and managerial people nearing retirement or taking large lump sums on redundancy? Was no check made on those advertisements to establish how many people might be caught?

Mr. Newton: I think that I made it clear in my statement that the Department's monitoring rested on sampling the national and financial press. Some of the advertising to which the hon. Gentleman refers was not covered by that sampling system. I am advised that there are about 8,500 periodicals and publications in Britain which carry heaven

knows how many advertisements. I think that the hon. Gentleman will understand that monitoring each and every advertisement in each and every publication would be a task on a scale which would present great difficulties.

Mr. Ian Gow (Eastbourne): Is it really the Government's view that no fair-minded person reading Sir Godfray's report could believe that any blame, let alone any negligence, attaches to my right hon. Friend's Department? If the Parliamentary Commissioner should decide to investigate a complaint of maladministration against his Department, is there any information over and above that already provided by his Department to Sir Godfray which could be provided to the Parliamentary Commissioner?

Mr. Newton: I am certainly not aware of any additional information which the Department could make available because—I hope I need hardly say it—the Department has made available to Sir Godfray for his inquiry all the information and papers that it has on this subject. That is not to say that nothing further could conceivably emerge from other quarters. We have co-operated with Sir Godfray in good faith, just as we shall co-operate with the Parliamentary Commissioner for Administration if he decides to investigate.

The report sets out a set of facts on which, necessarily, a judgment has to be made. As I have said to one or two hon. Members on both sides of the House, it is obviously possible for judgments to differ, but I have given the Government's judgment on these facts.

Mr. Harry Ewing (Falkirk, East): Is the right hon. Gentleman aware that I have a great deal of sympathy for him as he has been landed with this problem although he had no ministerial responsibility during the course of events which led to his statement?

It is extremely important that the right hon. Gentleman should take up the point made by hon. Member for Croydon, South (Sir W. Clark) about civil servants in the Department, and the announcement from the Dispatch Box that the permanent secretary is examining whether civil servants should be moved or removed. Is he aware that it is highly undesirable for Ministers to come to the Dispatch Box and make such statements about civil servants? If heads are to roll, they ought not to be civil servants' heads but ministerial heads.

Mr. Newton: I thank the hon. Gentleman for his initial comments but, to judge from the rest of his question, I think that he may have misunderstood what I said. I was asked about the position of civil servants. I made it clear that that is a matter ultimately for the Head of the Civil Service, but in the first instance it is one for the permanent secretary to the Department of Trade and Industry. I said what conclusion the permanent secretary to the DTI had come to.

Sir Peter Hordern (Horsham): Will my right hon. Friend confirm that in the face of warnings from the Bank of England and the stock exchange his Department issued a licence in 1987, and that it did so on the balance of advantage, to avoid turmoil? What is the position of those investors who would have been saved had the Department taken action in 1987 and refused a licence, but many of whom invested their life savings thereafter? Does my right hon. Friend really feel that no moral responsibility attaches to the Government in that case?

Mr. Newton: My hon. Friend has rightly made a point that came up on numerous occasions in my statement and during the questions on it. Any decision on these matters had to be made on the basis of a balance of considerations and the consequences that would flow from alternative action. I hope that he will weigh the possibility at least —perhaps even more—that had Ministers made a different decision at the time we should be debating not his point about those who invested subsequently but instead the plight of those who had suffered from a disorderly collapse of the kind that I outlined earlier.

Mr. D. N. Campbell-Savours (Workington): Is not the real reason why the Government do not want to pay compensation that the matter has implications for investors in Investor Discount Brokerage, Afcor Investments and Harvard Securities, all of which have closed down over the past 12 months? In each case, investors allege—and have sent evidence to the Department—that Department inspectors had refused to act when they clearly should have acted to protect investors' interests.

Mr. Newton: No, I do not accept that interpretation in any way. As I said in my statement, the Government have carefully considered the case for compensation against the background of the facts revealed in Sir Godfray's report and decided that against that background it was not possible for us to conclude that taxpayers should be asked to fund compensation.

Mr. David Shaw (Dover): Does my right hon. Friend accept that, from the point of view of anyone with experience of the investment industry, there is no question but that his Department acted in accordance with the correct and proper procedures, from all that he has said? However, the real issue surely is that the blame must lie substantially with the firms of accountants and solicitors that gave false assurances to his Department. I note that he did not say that he was referring the report to the Law Society, and I trust that he will assure us that he is. He must surely accept that the real question is not where the blame lies but how quickly old-age pensioners—the elderly investors who might die before they can get their money back—will receive compensation. Will my right hon. Friend look at the legal procedures and all the problems that those investors will face in getting quick compensation?

Mr. Newton: I referred in my statement to the estimates that we have been given by the liquidators in respect of this country and Gibraltar, both of the current position and of the timing of any payments to investors. In particular, the liquidator of the United Kingdom operation hopes to make an interim distribution before Christmas. I hope that that will be some encouragement to my hon. Friend. We shall certainly do anything that we can to ensure that the process is completed as soon as possible.

On my hon. Friend's first point, I refer him to what I said earlier in these exchanges about the position of the various advisers involved. I have no doubt that the Law Society will have its attention drawn to his remarks.

Mr. Bill Michie (Sheffield, Heeley): The Minister has outlined the long period of fiddling by Barlow Clowes and the dithering of the Department of Trade and Industry but then said to the House that there would be no compensation for those affected by this illegal action. On

[Mr. Bill Michie]

behalf of those of my constituents who have written to me, I must ask how the Minister and the Government can justify allowing £1,000 expenses a week for Clowes when some of the victims are now having to manage on social security.

Mr. Newton: I can certainly give the hon. Gentleman an undertaking that we shall do everything in our power to encourage the liquidator—the decisions in these matters are his—to ensure that the expenses are kept to a minimum. I do not accept the hon. Gentleman's description of the Department's handling of the matter, which was a very difficult matter involving complex issues. As I have said repeatedly, the matter involved courses of action all of which were bound to have some disadvantages. I believe that reasonable judgments were made at the time against the background of the information available at the time and in the context of the legal powers available at the time.

Mr. Tim Smith (Beaconsfield): Could my right hon. Friend do a little more than take note of the suggestion made by my hon. Friend the Member for Honiton (Sir P. Emery)? Given that people who have just lost all their life savings are not the best placed to take legal action, and that the Department relied heavily on assurances given by Spicer and Pegler and Herbert Smith, could he not get together some of the professional advisers to decide whether there should be some sort of out of court settlement?

Mr. Newton: I note that that suggestion has been made for a second time. However, in the circumstances and for reasons that my hon. Friend will understand against the background of my remarks, I do not think that I want to go further on the role of the various special advisers involved.

Mr. George Foulkes (Carrick, Cumnock and Doon Valley): After the Minister's long statement and all the answers that he has given I am still not clear how to advise my constituents who invested in Barlow Clowes and felt safe to do so because the DTI had given the company a licence in 1985. Will the Minister amplify what he said in reply to my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris)? Is some kind of compensation one of the options that he will eventually consider when he gets the ombudsman's report or should my constituents and all the other investors now abandon hope of any compensation and realise that they have been abandoned by the Government?

Mr. Newton: I should make clear what I said in my statement about the current expectations of the liquidators concerning the amount that will be returned to investors. As I suggested, in the case of the United Kingdom operation in particular, that amount is expected to be really quite substantial. I am sorry, but beyond that I cannot add to what I have already said about the Parliamentary Commissioner and the report that he may possibly produce.

Mr. Alastair Goodlad (Eddisbury): Does my right hon. Friend accept that the sorry sequence of events that he has recited will give no comfort to the unfortunate victims of the affair, who may have hoped for compensation from his Department, for which there are clearly no grounds whatever, or for ex gratia payment, for which there are clearly no grounds whatever——

Mr. Robin Maxwell-Hyslop (Tiverton): There are excellent grounds.

Mr. Goodlad: —but that in what my right hon. Friend has said about the position of the solicitors, accountants and intermediaries of all sorts there are grounds for hope? More generally, does my right hon. Friend accept that in the regime following the enactment of the Financial Services Act 1986 events such as these could not be repeated?

Mr. Newton: I am grateful to my hon. Friend for the first part of his remarks. I should perhaps make it clear that I have not—in the sense in which he implied—said anything about the accountants or the solicitors. I have also made it clear that there are issues which will need to be—and which no doubt will be—considered by the relevant regulatory bodies.

I note my hon. Friend's last point.

Business of the House

4.37 pm

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham): With permission, Mr. Speaker, I should like to make a statement about the business for next week:

MONDAY 24 OCTOBER—Consideration in Committee of the European Communities (Finance) Bill.

Motion relating to the Local Government (Prescribed Expenditure) (Amendment) (No. 2) Regulations.

TUESDAY 25 OCTOBER—Opposition Day. There will be a debate on an Opposition motion entitled "The State of the Econony".

Second Reading of the Road Traffic Bill *[Lords]*, the Road Traffic (Consequential Provisions) Bill *[Lords]*, and the Road Traffic Offenders Bill *[Lords]*, which are consolidation measures.

WEDNESDAY 26 OCTOBER—Consideration of Lords amendments to the Housing (Scotland) Bill.

Motions relating to Scottish community charge regulations. Details will be given in the *Official Report*.

THURSDAY 27 OCTOBER—Remaining stages of the European Communities (Finance) Bill.

Motion on the Housing (Northern Ireland) Order.

FRIDAY 28 OCTOBER—There will be a debate on the disposal of radioactive waste on a motion for the Adjournment of the House. The Environment Committee's first report Session 1985-86 on radioactive waste (HC 191) and the Government's second stage response (Cmnd. 9852) will be relevant to the debate.

MONDAY 31 OCTOBER—Second Reading of the Rate Support Grants Bill.

The House will wish to know that it is proposed that Government business will be taken in the week beginning 14 November. The new Session will open on Tuesday 22 November.

[Debate on Wednesday 26 October 1988: Abolition of Domestic Rates (Domestic and Part Residential Subjects) (Scotland) Regulations 1988; Community Water Charges (Scotland) Regulations 1988; Community Charges (Registration) (Scotland) (No. 2) Regulations 1988; Standard and Collective Community Charges (Scotland) Amendment Regulations 1988; Personal Community Charge (Exemption for the Mentally Impaired) (Scotland) Regulations 1988; Community Charges (Registration) (Scotland) (No. 2) Amendment Regulations 1988.]

Mr. Frank Dobson (Holborn and St. Pancras): I thank the right hon. Gentleman for his statement, and, in particular, for the Opposition day set down for next week. In view of the fact that the parliamentary year is scheduled to last no fewer than 18 months on this occasion, will he tell us whether we shall have an Opposition day every week during the spillover period to go some way towards compensating for and matching the enormous extension of time made available for Government business?

In view of the widespread concern over today's statement about Barlow Clowes, and the number of hon. Members who wished to ask questions after the statement and did not get in, can we expect an early debate on the matter?

In view of the Prime Minister's recent much-vaunted conversion to protecting the environment, can we expect an early debate on that subject in Government time, or will her conversion prove to be about as authentic as the Turin shroud?

Does the right hon. Gentleman recall that he has still failed in his duty to the people of Scotland in not getting enough Tories to serve on the Select Committee on Scottish Affairs? When can we expect the promised debate on his failure to set up that Select Committee?

Finally, in view of the growing crisis of homelessness, and the likely further increase in homelessness as many people cannot find the money to meet their mortgage repayments, can we expect a debate on homelessness and housing in Government time?

Mr. Wakeham: The hon. Gentleman asked me five questions on the business for next week. First, he asked me about an Opposition day. I recognise that it has been a long Session, and that we have already provided one extra day over that required by Standing Orders. I suggest that we discuss the question of additional time through the usual channels.

The hon. Gentleman raised the matter of Barlow Clowes and the report. I recognise that it is a very important matter, which the House will want an opportunity to discuss. I suggest that we spend the weekend reading the report, and perhaps have discussions through the usual channels to decide how best to proceed, as clearly many important issues have emerged from the exchanges that we have just had.

The hon. Gentleman's remarks about the Prime Minister and the environment are not really worthy of him, from his present position, but there will be a number of occasions when those issues will be debatable in the near future. I have no doubt that opportunities wil be taken in the debate on the Queen's Speech, and so on.

With regard to Scotland, the hon. Gentleman, representing a London seat, seems continually to misrepresent the position. As he knows, proposals were put to the Opposition which were unacceptable to them. I regret that. I gave an undertaking that there would be a debate on it, and I shall honour that undertaking, but I consider that discussions through the usual channels will be the best way to proceed.

In regard to homelessness, I am conscious that a debate did not take place as intended, as a number of Opposition Members wished to raise an earlier matter at considerable length. That presents us with some difficulties. I think it is a matter best discussed through the usual channels.

Mr. Julian Amery (Brighton, Pavilion): Would my right hon. Friend arrange for a general debate on Northern Ireland before the summit meeting between our Government and the Government of the Republic of Ireland to review the Anglo-Irish Agreement so that Her Majesty's Government will have the benefit of the views of the House on the matter?

Mr. Wakeham: I fully recognise my right hon. Friend's concern, and the force of his argument. I shall have to look into whether I can provide time, but of course there will be occasions when Northern Ireland issues can be raised. I shall look into the matter for my right hon. Friend.

Mr. Menzies Campbell (Fife, North-East): In view of events during the summer Olympic games, and certain remarks attributed to the Minister of State, Home Office since then, will the Leader of the House find an early date

[Mr. Menzies Campbell]

for a debate on drugs in sport? When he is considering that, will he bear it in mind that 179 hon. Members, in the current Session, have signed an early-day motion supporting in principle the proposal that anabolic steroids should become controlled drugs under the Misuse of Drugs Act 1971?

[That this House notes with concern the evidence of mounting use of anabolic steroids by sportsmen and women which is recognised as having dangerous medical side-effects including the risk of death; is concerned that such drugs are freely available in the United Kingdom and are a source of temptation to naive competitors, unscrupulous coaches and over-ambitious parents; and expresses its support for the principle of making anabolic steroids controlled drugs under the Misuse of Drugs Act 1971.]

Mr. Wakeham: That is a suitable subject for debate. I cannot promise an early debate on it, but I shall certainly bear the hon. Gentleman's suggestion in mind.

Mr. Patrick Cormack (Staffordshire, South): As my right hon. Friend and his ministerial colleagues are preparing for the Barlow Clowes debate, will they consider not just what Ministers and officials could reasonably be expected to know, but what investors could reasonably be entitled to think?

Mr. Wakeham: I do not think that I shall stray any further into the matter than my right hon. Friend the Chancellor of the Duchy did when speaking at the Dispatch Box a few moments ago. However, I shall certainly take note of my hon. Friend's point and draw it to his attention.

Mr. Dennis Skinner (Bolsover): When this debate on Barlow Clowes takes place, can we have a guarantee that by the time we have the debate the Secretary of State will have got the sack and been replaced by an elected Member who can carry the can? Will the Leader of the House ensure that the Chancellor of the Duchy does not take part in the debate, in view of the fact that it will not be lost on the British people that that Minister spent a lot of time at the Department of Health and Social Security when 138,000 people were arrested and tried under this Government——

Mr. Speaker: Order. Questions, not statements.

Mr. Skinner: I am just suggesting that we do not have that Minister in the debate, because the British people understand that if a Minister can be part and parcel of 138,000 people being arrested and convicted for fraud on the DHSS when the Government do not have the guts to deal with licences——

Mr. Speaker: Order. This is an abuse of business questions.

Mr. Wakeham: The hon. Gentleman's question is not much about next week's business, but I think that I can answer him. In a fairly uncertain situation, one thing is certain. As far as I know, my right hon. and noble Friend will still be Secretary of State when we have any debate on the matter, and almost certainly my right hon. Friend the Chacellor of the Duchy will reply to any debate in this House, and he will do it extremely well.

Mr. Michael Latham (Rutland and Melton): Before we have a debate on Barlow Clowes, be it the week after next or whatever, will the Minister, whose statement today, frankly, was extremely disappointing and sounded too much like civil servants protecting their own backs, come to the Dispatch Box next week and announce what he will do about the specific suggestion made by two Conservative Members—that the affected interests should be called in to see if they can sort it out as the Minister is not prepared to do it himself?

Mr. Wakeham: I shall certainly pass that suggestion to my right hon. Friend, who has already taken note of it from the questions raised with him. I do not think I can add anything more at this stage.

Ms. Joan Walley (Stoke-on-Trent, North): Does the Leader of the House have any proposals to bring forward a Bill for the removal of Crown immunity from the Palace of Westminster? In the light of the removal of asbestos from offices in the Tea Room corridors, will he make arrangements to report back to the House meetings he has had with Ministers at the Department of the Environment to make sure that hon. Members and their staff who are working in the Tea Room buildings can be sure that there are no asbestos fibres there, and, rather than depending on random sampling of asbestos, will he ensure that each office has been sampled so that the same safeguards apply that would apply to local authorities throughout the land?

Mr. Wakeham: There are two parts to the hon. Lady's question. First, on bringing forward legislation on the matter, I can assure the hon. Lady that at this stage in the Session, I am very anxious to get existing legislation through and I have no proposals to bring any further forward at this stage. Secondly, I recognise her concern and perhaps that of other hon. Members. I am looking into the matter, and I shall be in touch.

Sir Philip Goodhart (Beckenham): There has been considerable anxiety about the Government decision to repatriate 9,000 Vietnamese boat people who are now in Hong Kong. Can we have an early debate or a statement by the Foreign Secretary so that we can probe the assurances that have been given that those unfortunate people will not face punishment or starvation?

Mr. Wakeham: I recognise the concern expressed by my hon. Friend. It is an important matter. I cannot promise an early debate, but I know of occasions in the near future when such matters could be raised when the Foreign Secretary will be taking part in a debate in the House.

Mr. Alex Salmond (Banff and Buchan): In considering the case for an early debate on the bid for Scottish and Newcastle Breweries by Elder IXL, will the Leader of the House take note of the unity of Scottish opinion on that matter across party boundaries? Will he take note of the fact that the Secretary of State for Trade and Industry has powers under the Industry Act 1975 to prevent, by prohibitive order, the transfer of control of important manufacturing concerns? Given the unity of Scottish opinion, is there not a substantial case for early action to end the uncertainty that should be tested in an early debate in the House?

Mr. Wakeham: As the hon. Gentleman knows, the proposed acquisition is being considered by the Director General of Fair Trading. He has a statutory duty to advise

my right hon. and noble Friend the Secretary of State. It would not be appropriate for me to say anything more at this stage.

Mr. Patrick McLoughlin (Derbyshire, West): May I draw my right hon. Friend's attention to early-day motion 542 which deals with the appointment by Derbyshire county council of a former Labour Member of Parliament to the post of county director at £45,000 a year?

[That this House deplores the appointment by Derbyshire County Council of Mr. Reg Race, former hon. Member for Wood Green, former Research Officer for the National Union of Public Employees, former head of the Greater London Council's programme office, former consultant to the Association of Cinematograph, Television and Allied Technicians and former researcher to the Labour-funded London Government Information Unit, to the £46,000 a year post of County Director; and believes that all local authority employees should be politically impartial and that Derbyshire County Council is making appointments on the basis of whether or not candidates are acceptable to the ruling group's left-wing views and not on the basis of merit and experience.]

Would it be possible to have a debate on the conduct of local government, bearing in mind that unsatisfactory appointment? The man has now resigned—*[Interruption.]* Well, he has resigned. The people of Derbyshire are wondering how much it cost to appoint him and how much has been spent on removal expenses for what has turned out to be an unsatisfactory nine-month political appointment. Is it not time for proper debates on the conduct of local government?

Mr. Wakeham: My hon. Friend has raised an important point. Effective local government rests solidly on the tradition of politically neutral officers, serving with equal commitment whichever party is in political control. There is increasing concern that in some cases appointments are politically motivated. The Widdicombe committee has put forward proposals aimed at preventing such abuses and the Government are considering them carefully.

Mr. Tony Banks (Newham, North-West): Is this a statement?

Mr. Wakeham: I have a note on every early-day motion on the Order Paper, and I propose to give the right answers.

Mr. Max Madden (Bradford, West): In view of that interesting reply, will the Leader of the House arrange for Law Officers or Ministers in the Department of the Environment to make a statement tomorrow morning, hopefully having persuaded the Bradford Conservative council overnight to drop its plan to restrict public entry to next Tuesday's Bradford council meeting? Does the Leader of the House realise that many of my constituents and hon. Members will be denied access to that council meeting if the plan is allowed to be introduced?

Does he not realise that, however much Bradford Conservative council attempts to stop the public from witnessing its proceedings, it will not conceal the fact that it has no electoral mandate or popular support for the 9,000 redundancies and other deeply damaging policies it is hoping to steamroller through at next Tuesday's meeting? Incidentally, it will be breaching a Bill which was sponsored by the Prime Minister soon after she was elected as the Member of Parliament for Finchley.

Mr. Wakeham: I know that this afternoon the hon. Gentleman has been in touch with officials at the Department of the Environment. Those are matters for the council, but I will ensure that the Minister for Local Government is aware of the hon. Gentleman's view.

Mr. Robin Maxwell-Hyslop (Tiverton): Will my right hon. Friend, without fail, arrange for the Chancellor of the Duchy of Lancaster to appear next week again at the Dispatch Box because his statement today was so inadequate and important questions remain unanswered? In his statement, will he address himself particularly to his Department's negligence, reported in paragraph 5.1 of the Le Quesne report, in which it is clear that the Department of Trade and Industry agreed to the two devices which enabled any fraud that took place to take place, namely electronic rather than written records and a system of obviating the necessity for issuing contract notes, without which any fraud would have been revealed before a lot of people had bought these securities?

Mr. Wakeham: I believe that my suggestion that we should all read the report over the weekend and then decide how best to proceed is the best suggestion I have for the House.

Mr. Jack Ashley (Stoke-on-Trent, South): As the freezing of child benefit will have serious implications for the future of poor people and for the political future of the Secretary of State for Social Security, would it not be wise to debate that subject next week?

Mr. Wakeham: The wise course is to wait until the statement on such matters is made in the normal course of events.

Mr. Phillip Oppenheim (Amber Valley): I wish to reinforce the request made by my hon. Friend the Member for Derbyshire, West (Mr. McLoughlin) for a debate on the recent sudden and surprising resignation of Reg Race, former Labour Member of Parliament, from his position as chief officer of Derbyshire county council. Will my right hon. Friend bear in mind that there is grave concern in Derbyshire that the resignation of Mr. Race is not unconnected to a large secret investment that the county council pension fund has made in a business operated by Owen Oyston, a former estate agent from Manchester? Will my right hon. Friend bear in mind the great concern in Derbyshire about that matter?

Mr. Wakeham: These are not matters for me, but I note what my hon. Friend has said.

Mr. David Clelland (Tyne Bridge): Notwithstanding his previous answer on the subject, will the Leader of the House make arrangements for an early statement on the Government's position on the hostile takeover bid for Scottish and Newcastle Breweries, the Newcastle half of which is in my constituency? Is he aware that, although the people of Tyneside may be willing to accept Australian Neighbours, they are not willing to accept Australian Foster parents?

Mr. Wakeham: My right hon. and noble Friend the Secretary of State has a statutory duty in these matters, and it would not be right for me to comment while he is considering his duty.

Mr. Nicholas Budgen (Wolverhampton, South-West): Since the European Communities (Finance) Bill, with which the House will be dealing on Monday, envisages an 80 per cent. increase in European structural funds, a measure that will finance Euro-Socialism, will my right hon. Friend say, in view of the change in the Government's position as signalled by the Prime Minister's recent speeches about Europe, that the Government will be voting against that 80 per cent. increase?

Mr. Wakeham: The appropriate Minister will deal with the Bill on Monday when it comes before the House. However, I know that my right hon. Friend the Prime Minister fully supports the Bill, and I hope that my hon. Friend does as well.

Mr. Allan Roberts (Bootle): Will the Leader of the House arrange for a statement to be made next week on the privatisation of Girobank? Will he ask the Minister to explain why the short list of those who have put in bids has not yet been announced, although it was promised that it would be announced during the recess? Will he ask the Minister to say whether there is any truth in the fact that the Bank of Scotland was on the short list and has withdrawn and that great difficulties are being experienced by the Government in their attempt to privatise Girobank?

Mr. Wakeham: I do not know whether that is correct. I do not believe it to be so. I shall refer the matter to my right hon. Friend the Minister, who I am sure will make a statement, if a statement is needed.

Sir Michael McNair-Wilson (Newbury): Is my right hon. Friend aware that during the summer recess I had an opportunity to visit a unit at the Royal Berkshire hospital which is keeping premature babies alive? I was told that it is now possible to enable a 22-week-old baby to survive. In view of the grave implications of that, in terms of the Infant Life (Preservation) Act 1929, for medical teams which may be terminating pregnancies after that age, may I suggest that he should find time for the House to reach a final decision on the Abortion (Amendment) Bill introduced by the hon. Member for Liverpool, Mossley Hill (Mr. Alton)?

Mr. Wakeham: I recognise the concern, but I cannot add anything to what I have said before. Private Members' Bills are dealt with under procedures that the House has agreed. I cannot arbitrarily make a change in those arrangements.

Mr. Tony Banks: Will the Leader of the House arrange for a debate next week on the corrupt and incompetent policies being pursued by Tory-controlled Westminster city council, so that we can have an opportunity to discover more about the scandalous deal between Westminster city council and the Conservative party over the freehold sale of the office in Smith Square? It is clear that that cost Westminster ratepayers a great deal of money. If we are to talk about efficient local government, the activities of Westminster city council deserve much wider discussion.

Mr. Wakeham: The partial way in which the hon. Gentleman asked his question showed that he does not expect me to be very forthcoming in my answer. I cannot promise such a debate, but no doubt he can find a way of raising any points that he believes to be important.

Mr. John Browne (Winchester): Does my right hon. Friend recall that, in his statement, our right hon. Friend used the word "exceptional" to describe the Barlow Clowes affair? Quite apart from any legal obligation that may or may not come from reading the report and further investigations, many Conservative Members feel that the Government have an exceptional moral responsibility. Would it be possible to make the proposed debate on Barlow Clowes a matter of urgency before the Government make further statements on proposals without having sensed the feelings of Conservative Members?

Mr. Wakeham: I still think that the advice that I have given to read the report over the weekend and consider how best to proceed is the right advice for the House.

Mr. Bob Cryer (Bradford, South): May I suggest that the Leader of the House resurrects the Salmon commission's report on standards of conduct in public life? It would enable us to discuss the responsibility of the Secretary of State for Trade and Industry in the Barlow Clowes affair and why he has not resigned, as used to be the case when Ministers behaved in a crass and incompetent way. It would enable us to discuss the responsibilities of members of local government and the lord mayor of Bradford, who is using his casting vote in an unscrupulous and cheating way to maintain the Tories in office so that they can sack 9,000 employees, close 25 community centres and half a dozen benefit shops and make savage cuts elsewhere. Surely it is a matter of concern for the House that these massive cuts and attacks on the city of Bradford are being made in this unfair, cheating and gerrymandering way. We should discuss the matter, and the Salmon report contains the basis on which to do so.

Mr. Wakeham: I am sure that, when Lord Salmon wrote his report, he did not expect it to be used in the sort of question that the hon. Gentleman puts to me today.

Mr. Peter Thurnham (Bolton, North-East): May we have an early debate on the need for legislation to deal with the dumping of toxic and other waste materials and for heavier fines to stop illegal dumping?

Mr. Wakeham: This is an important matter. I cannot promise a debate specifically on this subject, but, with a little skill, my hon. Friend might be able to make a point or two on Friday 28 October.

Mr. Ivor Stanbrook (Orpington): Since my right hon. Friend says that he has a note on all motions on the Order Paper, will he say what progress has been made with the implementation by the Government of what is required under early-day motion 6?

[That this House deplores the fact that, alone among public service pensioners, those whose service was overseas cannot count pre-appointment war service towards their pensions; and calls upon Her Majesty's Government to remedy this injustice to a dwindling group of elderly people whose working lives were spent in adverse conditions while dedicated to the service of British interests overseas.]

It calls on the Government to end the anomaly whereby all public servans receive credit for war service unless that public service was abroad. Surely it is time for the Government to honour their implied moral obligations. Between the "court of Star Chamber", the Treasury and the Foreign Office, will he kindly ensure that this early-day motion is accepted and that the money is paid?

Mr. Wakeham: My hon. Friend raises early-day motion 6, and I shall tell him what my note says. My hon. Friend has had a long-standing interest in this matter and has raised it in the House on a number of occasions. We recognise how strongly the colonial service pensioners feel about the issue and we shall keep it under careful review. As my hon. Friend will appreciate, however, there are many claims on public expenditure resources.

Mr. Jonathan Sayeed (Bristol, East): Does my right hon. Friend agree that it is a policy of enlightened self-interest that education be involved in business and business in education? If he agrees that that is the case, will he arrange for an early debate on the decision of Customs and Excise to charge VAT on gifts by business to universities?

Mr. Wakeham: I think that my hon. Friend is in luck. If he attends tomorrow and catches your eye, Mr. Speaker, this subject will be appropriate to the debate on education and industry links.

Mr. David Martin (Portsmouth, South): Does my hon. Friend appreciate the strength of feeling about the inadequacy of the law and the state and practice of sentencing those who drink too much, get into a car, drive away and kill someone? May we have an early opportunity to debate the North report's proposals and hear the Government's conclusions on those proposals and, thereafter, have an early opportunity for legislation?

Mr. Wakeham: This is an important matter, and, as my hon. Friend probably knows, I have some responsibility for these matters. At present, we are considering the recommendations of the North report. When we have reached our conclusions we shall report to the House and decide how best to proceed from there.

Written Answers

5.6 pm

Mr. Roy Hattersley (Birmingham, Sparkbrook): On a point of order, Mr. Speaker. Earlier this afternoon the Home Secretary and the Secretary of State for Northern Ireland distributed in the Press Gallery what purported to be written answers to parliamentary questions. Both concerned the future of the right to silence within the United Kingdom system of justice. One was not a written answer, for no question on the subject had been placed on the Order Paper. Both amounted, with varying degrees of ingenuity, to stratagems to avoid making a statement in the House. I do not wish to debate the merits—nor would you allow me to do so—of what the statements proposed, although it is important to my point of order to mention that until now the right to silence has been an essential aspect of our free society.

My point is simply that the prospect of a change to our legal system as fundamental as that should have been announced to the House in the proper and usual way. I therefore ask you, Mr. Speaker, first, what can be done to prevent the Government behaving in this hole-and-corner way and, secondly, whether we may have an explanation tomorrow from the Government about how something described as a parliamentary answer, which was not a parliamentary answer, was circulated in the Press Gallery, and what are the consequences of that mistake.

The Lord President of the Council and Leader of the House of Commons (Mr. John Wakeham): I shall certainly look into the matter. As I understand it, two written answers have been made today by my right hon. Friend the Home Secretary and my right hon. Friend the Secretary of State for Northern Ireland that were perfectly in order.

Mr. Frank Dobson (Holborn and St. Pancras): No.

Mr. Wakeham: May I finish by saying that if I find that that is not the case I shall communicate it to you, Mr. Speaker.

Mr. Speaker: I have looked at one of the written answers. Written answer No. 249 says "pursuant to a reply on 20 July." I am not aware of the second written answer.

Mr. Kevin McNamara (Kingston-upon-Hull, North): Further to that point of order, Mr. Speaker. I appreciate that the Secretary of State for Northern Ireland had difficulties, but nevertheless he circularised a written answer without a question being put down, and the question was not headed "pursuant to" anything.

Mr. Speaker: If it was any fault of the Table Office, I shall look into the matter.

Mr. Hattersley: Perhaps I might help the Leader of the House through the dark passage of his ignorance. The question to which I referred was allegedly laid by the hon. Member for Nuneaton (Mr. Stevens). While he received an answer to his question, which was circularised, he did not ask a question.

Barlow Clowes Report (Copies)

5.8 pm

Mr. Robin Maxwell-Hyslop (Tiverton): On a point of order, Mr. Speaker. I understand from the authorities of the House that there has developed a considerable laxity in Government Departments, who are omitting to lay on the Table of the House—which, for this purpose, means Journal Office—as soon as the House has passed a notice of motion for an unopposed return, the document concerned so that it is available to hon. Members. I understand the position to be that, although Ministers can control the time of release from Vote Office of documents which they are putting into Vote Office, from time out of mind it has been the rule of the House that when the House has passed a notice of motion for an unopposed return —as the House did at about 2.26 pm today—there should have been a copy of the Barlow Clowes report by Sir Godfray Le Quesne available to hon. Members in the Journal Office.

When I went to Journal Office to get it, it was only with some difficulty that the Clerk of the Journal was able to get a copy from Vote Office, who were under the impression that the embargo on release to hon. Members from Vote Office in some way covered Journal Office, which it does not. Would you, Mr. Speaker, therefore use such machinery as is appropriate to make it known—because I believe that it is a matter for you, Mr. Speaker, to make it known—to all Ministers that when they put such a motion on the Order Paper it is incumbent on them to ensure that there is a copy available to the Table of the House—which means the Journal Office in this context—right away and that that copy will not be delayed because, for their own reasons, they wish to delay delivery to hon. Members from Vote Office?

Mr. Speaker: The hon. Member raises an important matter. I shall certainly look into it.

Private Bills

5.9 pm

Mr. Dennis Skinner (Bolsover): On a point of order, Mr. Speaker. You will recall that before July we had one or two discussions in the House about the propriety of the private Bill procedure as it affected the North Killingholme Cargo Terminal Bill and the Associated British Ports (No. 2) Bill and about whether Members with an interest could serve on the Committee. For instance, because the National Union of Mineworkers opposed the legislation, sponsored members of the union would hardly be likely to serve on the Committee.

It has been drawn to my attention that a former member of the private Bill Committee on the North Killingholme Cargo Terminal Bill, the hon. Member for Luton, South (Mr. Bright), has now become a PPS, so he has been taken off the Committee and a substitute found. This matter should be considered again because of the complications resulting from the appointment of the new Chairman.

Simon Engineering is the company that sponsors the North Killingholme Cargo Terminal Bill. That company's subsidiary, Simon Carves, is part of the British Chemical Engineering Contractors Association. The parliamentary adviser to that association is none other than the Member who has replaced the hon. Member for Luton, South—the hon. Member for Rochford (Dr. Clark).

We must look into this matter. I suggest that the present Chairman should not be able to preside over this private Bill Committee. It would be better for all concerned if this murky private Bill procedure were abandoned, together with these two Bills, because of the complications which have arisen during the past six months.

Mr. Speaker: I think that that matter should correctly and properly be drawn to the attention of the Chairman of the Committee of Selection. That is what the hon. Member should do. We must now move on.

Mr. Frank Dobson (Holborn and St. Pancras): Surely, Mr. Speaker, an alleged breach of the Standing Orders applying to private Bills is a matter that is reasonably addressed to you. Members who become members of opposed private Bill Committees are required to sign a declaration saying that they have no personal or constituency interest in those matters. It is perfectly legitimate for my hon. Friend the Member for Bolsover (Mr. Skinner) to bring this point to your attention at the earliest opportunity, and that is what he did.

Mr. Speaker: I do not appoint Members to chair private Bill Committees. I shall look into the question of whether a declaration has been signed. I fully accept that this is an important matter.

Mr. Skinner: The reason for the urgency is simple. The private Bill Committee has been set up and will meet in the next few days. I suggest that the matter must be dealt with as soon as possible.

Mr. Speaker: So far as my responsibility is concerned, I give an undertaking that I shall look into the matter.

BILLS PRESENTED

Rate Support Grants

Mr. Secretary Ridley, supported by Mr. Secretary Walker, Mr. John Major, Mr. John Selwyn Gummer and Mrs. Virginia Bottomley, presented a Bill to make further provision about rate support grants: And the same was read the First time; and ordered to be read a Second time tomorrow and to be printed. [Bill 216.]

Haemoglobin Disorders (Screening and Counselling)

Mr. Tony Lloyd, supported by Mr. Keith Vaz, Sir George Young, Mr. Bernie Grant, Mr. Dafydd Wigley, Mr. Paul Boateng, Mr. John Bowis and Mr. Peter Pike, presented a Bill to oblige health authorities in England and Wales and Health Boards in Scotland to provide screening and counselling services for people at risk from inherited haemoglobin disorders and to draw to the attention of those people and of medical practitioners and registered nurses the availability of such services: And the same was read the First time; and ordered to be read a Second time on 28 October and to be printed. [Bill 217.]

STATUTORY INSTRUMENTS, &c.

Ordered,

That the Liverpool and Wirral Urban Development Area Order 1988 be referred to a Standing Committee on Statutory Instruments, &c.—*[Mr. Wakeham.]*

Orders of the Day

Defence Estimates

[SECOND DAY'S DEBATE]

Order read for resuming adjourned debate on amendment to Question [19 October]:

That this House approves the Statement on the Defence Estimates 1988 contained in Cm. 344.

Which amendment was, to leave out from "House" to the end of the Question and to add instead thereof:

"believes that the plans outlined in the Statement on Defence Estimates, Cm. 344, and in particular the Government's acquisition of Trident which is neither British nor independent, are already having a deleterious effect on the conventional defences of the United Kingdom, especially the Royal Navy surface fleet, and on related defence procurement industries; calls upon the Government to cancel Trident and use resources to secure our non-nuclear defences and to work actively for the reduction and abolition of nuclear weapons in Britain and elsewhere and the adoption by the North Atlantic Treaty Organisation of a strategy of No First Use; applauds the signing of the Intermediate Nuclear Forces Treaty by the Governments of the United States and the Soviet Union and would be opposed to any nuclear arms deployment which would undermine the effectiveness of that Treaty; welcomes the progress being made towards a Chemical and Biological Weapons Ban Treaty, and the anticipated 50 per cent. cuts in ballistic missiles which would result from the Strategic Arms Reduction Talks; and further believes that the Conventional Stability Talks will provide the means whereby North Atlantic Treaty Organisation and Warsaw Pact troop numbers can be asymmetrically reduced, forward troop deployments can be withdrawn, and short-range ground and air launched dual capable systems can be eliminated."—*[Mr. O'Neill.]*

Question again proposed, That the amendment be made.

Mr. Speaker: As this debate is starting later than we had expected, because of an important statement and business questions, I appeal to the Front Benchers to make brief contributions to give a lead.

I propose a limit of 10 minutes on speeches between 7 o'clock and 10 minutes to 9. I hope that that limit will be followed by all Members who are called, in view of the late start and the great demand to take part in the debate.

5.13 pm

The Minister of State for the Armed Forces (Mr. Archie Hamilton): Although I have addressed the House as a Defence Minister before, this is the first time that I have done so without the right hon. Member for Llanelli (Mr. Davies) sitting on the Opposition Front Bench. I regret his resignation. He is an honourable man—too honourable, I suspect for today's Labour party. As he said on BBC 2's "Newsnight" programme on 17 June this year, three days after his resignation:

"I felt it was going to be impossible for me. I would have been the person in the House of Commons who would have to draft the amendment to the defence White Paper. I would have found that difficult to do. I would have had to have stood at that Dispatch Box and argue the case. I think this year I would have found it impossible to do."

How many other members of the Labour party share the right hon. Gentleman's views on Labour's defence policy, but dare not speak out?

The amendment in the name of the Leader of the Opposition, which the right hon. Member for Llanelli did not draft, alleges that Trident is neither British nor independent. That is, of course, nonsense. Trident missiles will be purchased from the United States, as indeed will other equipment for the submarine, and the British Government will control the operation of our strategic nuclear force. The critical factor is that a large proportion of our missiles will always be on our submarines ready for use and under the absolute control of the Government.

The hon. Member for Clackmannan (Mr. O'Neill) suggested yesterday that, with an 18-day period needed to service Trident in the United States, he hoped that the Soviet Union would give us three weeks' warning of a nuclear attack. That is also nonsense and I suspect that he knows that it is nonsense. Just in case he really wants to know what provision is being made to service Trident, let me tell him.

We regard the agreement to service Trident missiles at King's bay as very satisfactory. It will save some £770 million in capital costs as well as running costs. Of course Trident missiles will need to be returned to King's bay, but only once every seven to eight years. Our requirement is, and has always been, to maintain at least one submarine on deterrent patrol at any one time and I can assure the House that we shall have more than sufficient missiles to meet that requirement.

Mr. Martin J. O'Neill (Clackmannan): I am grateful to the hon. Gentleman for giving us that information. Was there at any time the option of these missiles being serviced anywhere else, for example, on the Clyde at Coulport or Faslane?

Mr. Hamilton: As I have said, that option existed, but it would have cost us serious sums of money to set up those facilities here. Significant savings have been made by getting the servicing done at King's bay.

Mr. Tony Benn (Chesterfield): Before the Minister leaves the point about the independent nature of the deterrent, will he tell the House plainly whether those missiles can be targeted without the use of the worldwide American satellite system? Sir Frank Cooper, former permanent secretary to the Ministry of Defence, made it clear in the Zircon film that there would be no capacity to target those missiles unless the American satellite system were switched on for that purpose.

Mr. Hamilton: The right hon. Gentleman knows quite well that we do not comment on the targeting of our missile systems.

I should like also to take the opportunity to make it clear that, although construction work at Vickers Shipbuilding and Engineering Ltd. on the two Vanguard class submarines so far ordered was suspended during the recent strike, we do not expect that there will be any slippage in the planned in-service date.

There were a number of interesting contributions in yesterday's debate. The hon. Member for Liverpool, Walton (Mr. Heffer) reminded the House how his family had been affected by Europe's two world wars. For the hon. Gentleman's family, and indeed for many other British families, those experiences were not unusual. The hon. Gentleman and I are united in our conviction that Europe must never witness another world war. Where we part company is on how that should be ensured.

The hon. Gentleman advocates a nuclear-free world, but does he not accept that the fear of a nuclear exchange has actually preserved peace in Europe? No one can afford to start a war that may end in massive nuclear destruction.

[Mr. Hamilton]

But remove the nuclear weapons and Europe becomes free for conventional war, and more likely to experience the third world war which we are all determined to prevent.

In the debate yesterday, my right hon. Friend the Secretary of State described in some detail the extensive improvements that we are making to the armed forces. I should like to concentrate on the many different activities carried out by the services over the past year, in the United Kingdom, NATO, and in many other parts of the world.

Mr. Bob Cryer (Bradford, South): If Polaris kept the peace, as the hon. Gentleman claims, why do we need Trident, which is between four and 10 times more powerful in its extermination capacity than Polaris? Why should we go to this expense when we have Polaris which, the hon. Gentleman claims, deters people from embarking on nuclear war? Why do we need Trident?

Mr. Hamilton: As the hon. Gentleman knows, Polaris is a relatively short-range missile system, and we cannot guarantee that it will remain undetected in the relatively shallow waters in which it has to operate. Therefore, we need a successor system which will operate much more widely.

Regular participation by United Kingdom forces in major NATO exercises not only helps to establish the sort of co-operation between allies that would be vital in war, but provides a visible demonstration of Alliance solidarity in peace. I should like to mention just a few of the many NATO exercises our forces have participated in during the year. The United Kingdom contingent of the allied command Europe mobile force, which represents some 25 per cent. of its total strength, took part in joint exercises in both Norway and Turkey. The 19,500-strong United Kingdom mobile force took part in September in a large NATO reinforcement exercise in Denmark.

At sea, a number of Royal Naval ships and submarines played their part in Teamwork 88, a major NATO maritime exercise which also involved RAF aircraft and some 5,200 Royal Marines. In the UK air defence region, RAF Jaguars, Buccaneers and Tornados were also involved in exercises Elder Forest and Elder Joust in April and earlier this month.

In Britain, a series of national exercises designed to test our current plans for military home defence has been taking place since 7 September, involving the Regular Army, elements of the Royal Navy and Royal Air Force, and members of the United States forces based in this country. They were joined by volunteers from the Territorial Army, the Home Service Force and by individual reservists.

I should like to take this opportunity to express my gratitude to all those employers who have released people to take part in these exercises. The importance of the reserve forces to our defence effort cannot be over-estimated, and it is vital that we keep these forces fully trained. I am also most grateful to those non-military organisations, including the police, fire and ambulance services, and the voluntary aid societies, who have found the time and resources to participate. Their contribution to the success of the exercises is very much appreciated.

Mr. Robert Key (Salisbury): Is my hon. Friend aware of how successful exercise Drake's Drum was? I was one of the hon. Members who were privileged to see that exercise on Salisbury plain, and we were particularly struck by the way in which the home defence forces and the territorialists quickly knitted back into the regular military pattern. Is he also aware that any attempt to move the military from Salisbury plain to the north would be heavily resisted in my constituency? The Army is welcome to stay there for as long as it wishes. The local community is well aware of the great contribution that the military makes to conservation, of the environmental impact of the Army on the south of England, and of the role that the Army takes, for example, in preserving Stonehenge, with English Heritage. I hope that my hon. Friend will have something to say about that later.

Mr. Hamilton: I am grateful to my hon. Friend for his remarks, and I know that the Army will be particularly grateful that it is so welcome in his constituency.

The House will be aware that earlier this month the Soviet Union issued a challenge inspection request to the United Kingdom under the terms of the Stockholm document. We responded positively, and within the time limit laid down. The exercises taking place within the specified area were not included in the annual Stockholm calendar of notifiable military activities for 1988 since the troop levels in the field did not approach the 13,000 threshold for notification. The inspection lasted for 48 hours and was conducted in a professional and congenial spirit. No difficulties arose and we welcomed the opportunity to demonstrate our willingness to contribute further to such confidence-building measures.

Although our defence efforts are rightly concentrated in the NATO area, it is important not to forget our commitments and activities that lie in other parts of the world. The past year has been an important one for deployments and exercises by our forces outside the NATO area. Such deployments not only test the capabilities of our forces, but provide an excellent opportunity to renew professional links with our friends and allies throughout the world.

Even as I speak, ships of the Navy's Outback 88 task group deployment are preparing to return to the United Kingdom from the far east. The three warships and three Royal Fleet auxiliaries, headed by HMS Ark Royal, represented the Royal Navy at the fleet review in Sydney on 1 October as part of the Australian bicentennial celebrations. It was particularly appropriate, of course, that the 60-odd vessels in the review were led to their stations by HMS Sirius, the namesake of the Royal Navy ship that led the first fleet to Australia 200 years ago.

It is a matter of regret that the visit to Australia has been marred by the activities of trade unions in Melbourne which prevented HMS Ark Royal entering Melbourne harbour. As the House knows, we have a policy of neither confirming nor denying whether our ships are carrying nuclear weapons and we are not prepared to alter that policy to meet the demands of the Australian trade unions. I believe that many Australians in Melbourne were extremely disappointed not to have Ark Royal contributing to their 200th anniversary celebrations.

Earlier in their deployment, ships from Outback 88 were able to demonstrate the Government's firm commitment to the five power defence arrangements by joining our allies—Malaysia, Singapore, Australia and New Zealand—in two major exercises: the maritime exercise Starfish in the South China sea, and the impressive

air defence exercise Lima Bersatu. They also joined units from the Hong Kong garrison and the Sultan of Brunei's armed forces in exercise Setia Kawan, or "Loyal Friend".

The RAF also mounted an impressive overseas deployment to the far east during this, its 70th anniversary year. This deployment, nicknamed Golden Eagle, is still under way and involves four Tornado F-3 air defence aircraft, with tanker and Hercules support. The aircraft took part in exercise Lima Bersatu, and will return home via the USA, thereby completing a circumnavigation of the earth.

Sadly, there have been a number of natural disasters around the world this year. Where the services have been in a position to help, they have done so. In August, there was a severe earthquake in northern India and Nepal. The British military hospital at Dharan became the focal point of medical support for the local population, helped by emergency medical teams flown in from Hong Kong and the United Kingdom. The hospital was expanded from 70 to 250 beds and has been working non-stop over the past few weeks, treating several hundred casualties. This extra activity is now winding down, but it has been an outstanding example of the professionalism and skill of the armed forces.

In September, following the devastating passage of Hurricane Gilbert across the Caribbean, the West Indies guardship, HMS Active, sailed to the Cayman Islands and Jamaica to provide emergency relief assistance, and a team of Royal Engineers flew from Belize to Jamaica to help restore the Princess Margaret hospital, near Kingston, to working order.

Yesterday, my right hon. Friend the Secretary of State paid tribute to the efforts of the Royal Navy and the Armilla patrol. I shall mention in particular our mine countermeasure vessels. To date, they have discovered and destroyed 10 mines in the waters of the region. Without their efforts, ships might have been lost or seriously damaged, almost certainly with loss of life.

Western European Union partners have made a real contribution to maintaining the freedom of navigation in the Gulf and to upholding regional stability. Members have continued to co-ordinate closely over their assessments of the changing situation in the Gulf and about their plans for national naval contingents there. I am glad to inform the House that mine countermeasure vessels of Western European Union countries are currently checking a new merchant shipping route in the Gulf. This will be an important contribution to freedom and safety of navigation in those waters.

Another difficult but continuing task for our armed forces is, of course, in supporting the Royal Ulster Constabulary in the fight against terrorism in Northern Ireland. The Government are determined to carry through their efforts to restore peace and order to the Province, and all three services, including the Royal Marines, have a part to play in combating, within the rule of law, the men of violence whose aim is to destroy any hopes of peace or a normal life for the people of Northern Ireland.

The main responsibility for the military element of maintaining security in Northern Ireland rests with the Regular Army and the Ulster Defence Regiment. There are currently some 11,100 regular service personnel and some 6,300 Ulster Defence Regiment personnel in the Province.

I should like in particular to pay tribute to the Ulster Defence Regiment and the role which it plays in supporting the RUC. Since its foundation just over 18 years ago, the UDR has been continually on operations —a unique record for a regiment of the British Army. During that time, the regiment has been transformed from its original role as a part-time local defence force. Today, nearly half of the soldiers in the regiment are full-time soldiers, carrying out almost exactly the same duties as the Regular Army, but with the benefit of local knowledge and considerable experience. In over 80 per cent. of the Province, the UDR now provides the primary military support to the RUC.

A few brief details will serve to illustrate the increasing professionalism and the continuing commitment of members of the UDR. First, in the past two years, all new UDR permanent cadre officers have completed the standard military course at Sandhurst, some of them, I may say, with distinction. Secondly, from a strength of some 6,300, nearly 1,000 members of the UDR have now served for 15 years or longer under the most dangerous and stressful conditions. Thirdly, nearly 30 per cent. of the permanent cadre have previous experience with other regiments of the Regular Army, and nearly 40 per cent. in the case of officers and senior NCOs. Finally, this year alone there have been 43 awards for gallant and meritorious service in Northern Ireland made to members of the UDR, including 19 mentions in dispatches.

I believe that these figures speak for themselves in showing how the UDR has developed into a highly motivated, professional and experienced regiment of the British Army. The military value and capability of the UDR is increasingly being recognised on both sides of the water, and I applaud the special efforts that the regiment has been making recently to win the support of the whole community of Northern Ireland, which it serves with such distinction. It is a matter of regret that some members of the Catholic community are reluctant to join and that they presently form only a small element of the regiment.

The past year has, however, seen an upsurge in brutal acts of terrorism. Inevitably, this has taken its toll of members of the security forces, as well as those they work so bravely to protect. So far this year, a Royal Navy recruiting officer, 21 members of the Regular Army and 11 members of the UDR have been murdered by terrorists in Northern Ireland. Outside the Province, one soldier died in a bomb attack on Mill Hill barracks in north London. Another was killed as he drove to catch a ferry home in Ostend and three RAF personnel were murdered while off duty in Holland.

Hon. Members will recall in particular the barbarous and shameful act on 20 August this year against a bus carrying 35 off-duty soldiers from 1st Battalion the Light Infantry returning from leave to their base in Omagh. The bomb killed eight soldiers and injured 27 others. I know that the House will support me in condemning this kind of cowardly attack against young men who have chosen to serve their country.

The House will be well aware of the review of security in Northern Ireland that has been carried out. I shall not comment further on that now.

Events such as these do not, however, weaken our resolve to defeat terrorism. The campaign against the men of violence in Northern Ireland continues and some notable successes have been achieved. A significant number of terrorists continue to be arrested and charged with serious offences.

[Mr. Hamilton]

Since the beginning of the year, the security forces have also recovered nearly 500 weapons from terrorists, the highest total since 1977, over 86,000 rounds of ammunition, the highest total since 1974, and over 6 tonnes of explosives have been found or neutralised. In addition, some 300 kg of the powerful military explosive Semtex has been recovered in the Republic by the Garda.

Despite the significant recoveries that have been made by the security forces on both sides of the border, the large quantities of arms and explosives that reached Ireland in the pre-Eksund shipments still pose a serious threat. By the end of September, for example, some 400 kg of Semtex had been used by terrorists to make 160 lethal or potentially lethal devices, which were either exploded by the terrorists or made safe by the Army.

Over the past year, a considerable number of planned terrorist attacks have been successfully thwarted. Just last month, for example, three armed terrorists were intercepted at Drumnakilly in the act of attempting to assassinate the driver of a coal lorry. Hon. Members will have noted that the Provisional IRA has admitted that the terrorists were on so-called active service when they were killed. I believe that that statement speaks for itself in demonstrating the viciousness of the current terrorist campaign. The incident also demonstrates the risks that the security forces face in Northern Ireland as they try to halt the terrorists' campaign of violence and murder. Many lives have undoubtedly been saved by the bravery, vigilance and dedicated hard work of the security forces.

This vigilance needs to be constant, though, and the hard work needs to be effective. To increase the effectiveness of our counter-terrorist operations in the border area, a new brigade was formed earlier this year, with special responsibility to improve the co-ordination and direction of security force activity along the border. It will also allow the other two brigades to concentrate on areas of high terrorist activity in the rest of the Province. We continue to build on the Anglo-Irish Agreement and on the improved crossborder co-operation with the Irish security forces, which is vital to our efforts to prevent the border being exploited by terrorists.

The most telling recent example of the Provisional IRA's utter callousness when it comes to the murder of innocent civilians was the plot to detonate a massive car bomb in Gibraltar in March. Had this attempt not been thwarted, it is possible that there would have been hundreds of civilian and military casualties. I welcome the clear and conclusive verdict of the Gibraltar jury, which was reached after an exhaustive public examination of all the relevant facts. I should also like to take this opportunity to pay tribute to our special forces. Because of their covert nature, very little is usually said about them. It is often forgotten that they are ordinary people with families and are no different from anyone else. They are, however, highly trained, they have to take great risks and, as a fighting force, they are the envy of the world.

In Gibraltar the SAS showed great courage and determination. They had a difficult task and they carried it out within the law. I have no hesitation in saying that they are a credit to the country and I join in my right hon. Friend the Prime Minister's recent tribute to their bravery in going back to Gibraltar to give evidence at the inquest.

I must say that the Government made it clear all along that the inquest was the proper place for a full examination of the events of 6 March and that prior "trial by television" was highly undesirable. The facts as they emerged at the inquest have amply demonstrated that the television programme "Death on the Rock" was manifestly flawed with significant inaccuracies, casting a shameful slur for a number of months on the reputations of the soldiers concerned. The timing of the programme was, moreover, unjustified and prejudicial to potential jury members. I therefore very much welcome Thames Television's inquiry under Lord Windlesham into the making of the programme.

Mr. Eric S. Heffer (Liverpool, Walton): I find what the Minister says very interesting in relation to the overall debate on defence expenditure, but, as he is pursuing this matter, has the *Index on Censorship* been drawn to his attention? Over the years, that journal has concentrated on analysing undemocratic regimes in Eastern Europe and other parts of the world, but one of its recent editions analysed the failure of the Government to protect human and democratic rights in this country. Is he aware that that is a new departure for the *Index on Censorship* and that, in this respect, this country has the worst record in the West? We are increasingly finding that the Government are taking away our democratic rights step by step. It is the duty and responsibility of our defence forces to uphold democracy and not to allow the Government to undermine it.

Mr. Hamilton: I should have thought it was clear to any hon. Member that the people who are trying to undermine democracy here are the terrorists and that we must do everything we can to oppose their dastardly acts.

The terrorist attacks on the continent over the past year have reinforced the need for vigilance. I can assure the House that the safety of service personnel, wherever they are, is of paramount importance to this Government, and that we are taking all reasonable steps within our power to protect them. Service men and women are given regular and timely briefings on the level of the terrorist threat, and particular emphasis is put on practical steps which individuals can take to minimise the risks to their safety.

Much wider initiatives are being implemented. As I announced on 23 August, we have decided that service personnel, their families and British civilians working with British forces Germany should now use British civilian number plates on their private cars, as they do in this country. Action is well in hand to carry out this change as soon as possible. About 95,000 vehicles are involved, and to get the maximum benefit from this initiative the numbers must be issued randomly, so the change will inevitably take time. We aim, however, to complete the greater part of the changeover before the Christmas leave period begins.

Mr. John Wilkinson (Ruislip-Northwood): I have corresponded with my hon. Friend on this issue. Would it not be wise for the Ministry to encourage service personnel in Germany to buy German cars and register them locally rather than to drive British cars with British number plates, albeit not service plates, which are readily identifiable?

Mr. Hamilton: I take my hon. Friend's point. Most of our service men in Germany want to buy their cars there

so that they can enjoy the tax advantage of that arrangement. They then bring them back to Britain. They are under threat anyway when their cars are in bases, and we are trying to protect them when they are on the open road or coming across the Channel on the ferries.

Mr. Frank Cook (Stockton, North): Did the Ministry consider that the use of English number plates would identify service personnel as being fish in a different pond? Was it not considered possible to use United Nations plates, which would have allowed service personnel to enjoy tax concessions and an added degree of anonymity?

Mr. Hamilton: I am not sure whether the hon. Gentleman wishes to refer to United Nations plates or NATO plates. The use of NATO plates was an alternative that was considered, but it was thought that the IRA might decide to treat all members of NATO as targets. The cars bearing such plates would still have been identifiable when crossing the channel by ferry and on the open road away from British bases, with which we were mainly concerned.

Our primary defence commitment is, of course, NATO, and for that reason the actions of the Soviet Union are of the utmost importance. As my right hon. Friend the Secretary of State said yesterday, a fact that needs to be faced is that the recent Soviet rhetoric has yet to be matched by substantive action. It is therefore essential for us, and for NATO, to ensure that our conventional and nuclear forces are kept up to date.

People have now seen through the arguments of CND and those of the Opposition parties. The clear lesson of the INF treaty was that success in arms control comes from being able to negotiate from strength, not from weakness. This is not nuclearphilia, cold-war mongering or sabre rattling. NATO's nuclear stockpile in Europe has been reduced by about 35 per cent. since 1979 and now stands at its lowest level for over 20 years. There can be no clearer demonstration of our determination to maintain only the minimum forces necessary for effective deterrence.

Equally, however, those minimum forces must be effective and properly structured. Weapons that are seen to be outdated or ineffective simply serve no good purpose. Let there be no mistake, therefore. Now is not the time to drop our guard. The need to ensure that our defences are effective and up to date, as this Government have been doing for the past nine years, has not now gone away, even with such an important development as the INF treaty.

Mr. Tony Marlow (Northampton, North): My hon. Friend has just said that weapons that are outdated serve no useful purpose. Are not we reaching the stage now whereby the development of anti-tank missiles and the development of helicopter technology will render the tank a lump of metal constrained within small areas of the battlefield, totally vulnerable and irrelevant to future defence needs? If the Government, quite rightly, are going to spend money on defence, should it not be spent on aerial defence through helicopters rather than on these blundering great antiquities?

Mr. Hamilton: I have been aware for some time that my hon. Friend takes a jaundiced view of the future of the tank. He held the view when I was last a defence Minister about 18 months ago. His views have been taken into consideration by all those who are in the place where I work, and their view is that the tank still has a useful future.

Mr. Edward Leigh (Gainsborough and Horncastle): Will my hon. Friend give way?

Mr. Hamilton: No, I shall not give way. I must bring my remarks to an end. I have undertaken to make a short speech.

The Government's defence policy since 1979 has been clear and unequivocal. I wish I could say the same of the Opposition's policy. Yesterday, they tabled two amendments to the Government's motion. One, in the name of the Leader of the Opposition, set out what he would like Labour policy to be. The other, in the names of the hon. Member for Islington, North (Mr. Corbyn) and other Members generally reckoned to belong to the hard Left of the Labour party, represents what Labour policy as agreed at the Labour party conference actually is. As usual, the Labour party is split on defence.

Let us make no mistake about this. Whether we consider the policies of the soft Left or the hard Left, they are equally dangerous and damaging to the security of the United Kingdom. Labour's defence policy has played a key role in losing it two general elections, and it looks to me as if it will sink it in the next one, too.

5.46 pm

Mr. Allan Rogers (Rhondda): First, I welcome the Minister's return to the Government Front Bench. I am sure that his recent stint as Parliamentary Private Secretary to the Prime Minister will fit him well for his post as Minister in charge of the SAS.

I join the Minister in the tributes that he has paid to our service men and women. They have played an important part in the defence of this country, and my right hon. and hon. Friends and I offer our gratitude and congratulations to all those whose professionalism and skill has contributed so much to the quality and image of our armed services. We have great regard for those who serve in Northern Ireland in most difficult circumstances. We heard last night from my hon. Friend the Member for Stockport, North (Mr. Cook) of the appalling conditions that some of our soldiers and service personnel generally have to endure, and I am sure that there may be ways of improving these conditions. I hope that the Secretary of State for Defence and the Minister will consider what my hon. Friend said and perhaps improve conditions.

We offer our condolences and sympathy to the families of those who have been killed over the past year in service for our country.

We understand that this year the Ministry of Defence begged for an extra £1·4 billion. That is money that the Secretary of State says is vital for our defence, but the claim has been turned down. We understand also that the hotel room, or bedroom, negotiations at Brighton have failed and that he has a somewhat smaller sum than that for which he argued. The right hon. Gentleman said yesterday that he was under severe financial constrictions and that he needed the additional money badly. Will he or the Minister let us know how he fared? Will one or other of them let us into the secret and tell us what the deal is so that we can comment on it? It would be interesting information. I am sure that the House would like to know the details of the deal.

The issue of Royal Ordnance sites was dealt with ably yesterday by my hon. Friends the Members for Clackmannan (Mr. O'Neill) and for Renfrew, West and Inverclyde (Mr. Graham). They posed critical questions,

[Mr. Allan Rogers]

none of which was dealt with either by the Secretary of State or his property adviser, the Under-Secretary of State for Defence Procurement. Perhaps the questions will be answered today. There is extreme concern about the aura of connivance, corruption and irregularity that is beginning to surround the issue. I can assure the Minister and Conservative Back Benchers that the problem will not go away. Yesterday, the Under-Secretary of State for Defence Procurement claimed that there are major offsetting costs in relation to the two sites that are being sold. I intervened to ask whether he could provide details of these costs and he replied that

"it would be a waste of time to quantify the costs."—[*Official Report*, 19 October 1988; Vol. 138, c. 976.]

Why would it be a waste of time to quantify the costs? Will the Minister explain the reasoning behind that ludicrous statement? Surely the costs were important in assessing value or pricing when the Ministry of Defence was selling the Royal Ordnance sites. Are we to understand that Royal Ordnance was sold without an examination of both sides of the balance sheet? Why is it a waste of time to quantify these negative costs? Surely they should have been a vital factor in assessing what the asking price should be——

The Parliamentary Under-Secretary of State for Defence Procurement (Mr. Tim Sainsbury): The hon. Gentleman has only quoted one sentence of what I said last night. I reminded him then that, when trying to quantify costs, one has first to discover what costs are being quantified—what decontamination is required, what planning permission might be available, what development costs such as access roads and sewerage might be. Those things are not known; they are uncertain, and until they have been determined the costs cannot be quantified. All that we know for certain is that they are substantial.

Mr. Rogers: I have never heard so much codswallop in my life. Is the Minister suggesting that it is beyond his and his Department's wit to assess what the costs of access roads or of site development would be? Any developer who is going to develop land—whether previously developed or on a green field site—could come up with those costs. The Minister is merely illustrating his Department's incompetence in this matter.

The facts revealed in *The Independent* are as follows. There were two sites in the south-east, including the historic Enfield site. They were sold to British Aerospace on a valuation of £3·5 million, and are now worth £400 million. Representations were made by British Aerospace, in its desire to take over Royal Ordnance, to the effect that it would protect jobs. It has now reneged on that promise. These serious allegations strike at the heart of the Government's competence and integrity. They warrant a full and public inquiry. Will the Secretary of State or his Ministers now give the House an assurance that such a public inquiry will be held? I shall be happy to give way to them, should they want to do so. Their silence illustrates that they do not want an inquiry because of the incompetence that would be revealed—but the problem will not go away.

I also want the Minister to give us an assurance that he will co-operate fully with any Public Accounts Committee investigation into this matter. I see that he is nodding his assent, and I am glad of that. May we also have an assurance from the Minister that none of his officials who were involved in the sale will be employed by British Aerospace when they leave the MOD? Such a thing is not unknown.

In his wind-up speech yesterday the Parliamentary Under-Secretary of State for Defence Procurement said that he sought to emulate Cato the Elder by using in every speech the phrase

"Value for money must be obtained"—[*Official Report*, 19 October 1988; Vol. 138, c. 973.]

The British taxpayer wishes that, when he sells off Royal Ordnance—and other public assets—he would espouse not "value for money" but getting "money for value"—the value of British assets which are being given away.

I want to concentrate on the management aspects of defence and of the defence economy: procurement, competition in procurement, the Government's so-called efficiency drive and the so-called monetary savings that have accrued to them from it. Those things bear directly on the operations and capability of our forces.

Procurement decisions lie at the heart of defence matters and are an area of defence that the Government do not particularly like having discussed. When pressed on such issues they retreat during discussion of the vital points behind the barricades of security or commercial confidentiality. That is why it suits them for the Opposition to have differences over the pace of nuclear disarmament. It is understandable that they should make much of those differences—one would expect nothing else from them. No one is in politics to help other parties, especially not the Conservatives, whose ethic is one of helping themselves. Our differences suit them because they shroud their deficiencies. They shroud their cut-backs, their overruns, their delays and their bad management of the defence economy. They give them an escape route from their failures. Apart from the activities of the Opposition and of some newspapers such as *The Independent*, discussion of the scandal of procurement mistakes, fraud and irregularities is going by default.

Mr. Dick Douglas (Dunfermline, West): I hesitate to interject but thank my hon. Friend for allowing me to do so. As a member of the Select Committee on Defence I may say that we produced a substantial report on procurement and enjoyed substantial co-operation. Indeed, we could not have produced it without the MOD's co-operation. So I cannot really see how differences in the Labour party help the MOD to hide anything to do with this matter. The MOD was forthcoming in its replies, which substantiated virtually everything that the Select Committee said.

Mr. Rogers: I thank my hon. Friend for his timely and helpful intervention.

While this might be excusable in some parties, it is surely not excusable in the Tory party, the party of big business. Conservatives pride themselves—we hear this every day—on being the shrewd, hard City slickers, the tough streetwise people who are capable of taking tough decisions. When the last Secretary of State for Defence was appointed, the then Minister of State said in a defence debate at the time that it was nice to have a Secretary of State who knew his way around the business world. Let us grant the Tories the fact that they are shrewd, hard City slickers, capable of taking tough decisions that affect nurses, hospitals, the sick and needy, and child benefit. But

when it comes to defence they fail lamentably to take the tough, hard decisions that are required for the defence of this country.

I want to speak briefly about the Government's spending proposals, and in doing so to pay tribute to the Select Committee on Defence for highlighting much of what was wrong about these Defence Estimates. The Government say there is no need for a defence review and that all commitments and roles will be maintained—the forward defence of West Germany, the protection of the east Atlantic, the defence of the United Kingdom home base, Northern Ireland, Polaris and Trident, out-of-area operations, the Falklands garrison and sea and air bridge. But many hon. Members on both sides now say that we cannot maintain these commitments and carry out these roles without an increase in expenditure. Yet expenditure is falling in real terms. On the Government's figures it will fall by more than 7 per cent. in real terms between 1986 and 1989.

The Government gave a commitment—carried on from a commitment made in May 1977 by the Labour Government, as was pointed out yesterday by my hon Friend the Member for Sheffield, Attercliffe (Mr. Duffy) —to 3 per cent. growth a year in real terms. In practice we know that that 3 per cent. growth has not taken place since the Falklands episode. Defence spending has fallen considerably in recent years, it is still falling and it will continue to fall. As table 1 of the Select Committee's report on the 1988 Estimates shows, in 1979 defence as a share of GDP was 4·5 per cent. In 1987-88 it was also 4·5 per cent., but in 1990-91 it will be only 4 per cent. There has been no extra effort or allocation made by the Government. In other words, defence is receiving a diminishing share of a larger cake.

Mr. Keith Mans (Wyre): Does the hon. Member for Rhondda (Mr. Rogers) agree that the reason the Defence Estimates have stayed the same in terms of GNP is because of the growth in the British economy? In terms of real increases in defence expenditure, the figure is substantially higher today than it was in 1979.

Mr. Rogers: Yes, but in real terms the figure has fallen. [HON. MEMBERS: "No".] I will not engage in some puerile argument. I suggest that Conservative Members look at the Estimates, where it will be seen that, as a share of GDP, the amount of money being spent on defence is less than in 1979. I am glad that the Minister says that is right, and perhaps he should give a lesson to his hon. Friends.

That trend should also be viewed against a background of increasing inflation. In its observations on the buying power of the defence budget and on the relative price effect, the Select Committee observed that the budget takes no account of recent and continuing inflation. They are rises that will decrease spending in real terms over the next few years.

Another factor highlighted by the Select Committee was the generation-on-generation cost increases to which my hon. Friend the Member for Clackmannan referred yesterday.

The Secretary of State for Defence (Mr. George Younger): I am sure that the hon. Gentleman would wish to give the House the complete picture. I am sure that he would not like to have said all that he has without adding that, nevertheless, the level of defence spending today is some 20 per cent. higher in real terms than it was under the last Labour Government. I am sure that the hon. Gentleman would want the complete picture to be before the House.

Mr. Rogers: The figure is still 8 per cent. less than in 1984. My argument does not depend on historicial comparisons with 1979, 1945, or 1920. My comparisons are with recent history. More importantly—and it is typical of the Government and of some of their not so bright supporters to ignore this fact—the real argument is about what is to be spent in the next three or four years. Everyone will agree that defence spending is falling.

I return to my argument concerning generation-on-generation cost increases, which concerns the factor by which the cost of a new generation of defence equipment exceeds the cost of its predecessor in real terms. The Select Committee commented that,

"there is every reason to believe that it is increasing substantially."

As we know, the type 22 frigate is costing about four times as much as the Leander. That will have a significant negative effect on the Estimates, and it is one that the Government are not redressing. That is not surprising, because we see exactly the same phenomenon in the Health Service, where the Government's reaction is exactly the same. Their response, as we have heard today, is, "We're spending more money," and a refusal to acknowledge, as is demonstrated in their own figures, that they are spending a diminishing amount of an expanding GDP.

As a result, the technologies have a substantial negative effect on the rest of the Department's expenditure. That is why service men's pay, like nurses' pay, is suffering. It is also why service men, like nurses, are voting with their feet. One hon. Member who spoke yesterday made mention of the Royal Air Force pilots who are leaving to take jobs with civil airlines, and he put his finger right on the problem. Terms, conditions and pay outside are far better than those which service men currently have. The Select Committee was right to point out that awards must now be found from within the defence budget. In other words, "You can have the pay rise if the money is there to fund it." It must be a matter of great concern to right hon. and hon. Members in all parts of the House that the number of skilled and trained personnel of all ranks and abilities who are leaving the Royal Air Force is steadily increasing. The level of pilot loss from the Royal Air Force is causing substantial concern.

Yesterday, the Secretary of State for Defence and the Under-Secretary of State for Defence Procurement spoke of competition for procurement. May I ask them to harden up that comment and also to remove some of the wooliness from the comments made by the Parliamentary Under-Secretary of State for Defence Procurement earlier. The Secretary of State does not know how much is being saved. On 30 June 1986, he stated:

"As the Select Committee rightly observed, it is, of course, difficult to quantify the precise savings that we make."

He went on to say that,

"nobody knows what we would have had to pay in the absence of competition."—[*Official Report*, 30 June 1986; Vol. 100, c. 714.]

The Secretary of State was right. Nobody knows what can be saved—not the Secretary of State and not the Procurement Executive. It is a farce. What the Government are claiming is not really verifiable.

[Mr. Rogers]

We all know about MOD estimates. Presumably they can be set at any convenient level. Certainly they have been in the past. The Select Committee rumbled that fact. It stated:

"First, there is the problem of estimating what MoD would have paid for an item if it had not been competitively procured."

The permanent under-secretary of state rejected the suggestion that what may appear to be good competition might have been bad estimating. He went on to state:

"What you have to safeguard against is deliberately inflating the estimates so that the eventual figure looks good."

I must admit that the thought had occurred to us, too.

I do not believe that the Secretary of State knows what he is really saying. In the 1986 debate, he tried a little harder at a later point, when he commented:

"The introduction of competition for the supply of missile pallets,"—

and I am not sure how big or small are missile pallets—

"which we had previously bought non-competitively, has led to the price being cut by half."

I accept what was said by the Minister, and the logical conclusion of his statement—and it was his statement, not mine—is that previously we had been overcharged, either honestly or dishonestly. If that is the case—and the Secretary of State appears to be amused, so certainly he is not resenting my comments—let the right hon. Gentleman say how much of the money from that honest or dishonest fraud has been recovered. What action, if any, has been taken against the firms that overcharged? Are they still MoD contractors? Why is it that those fraud investigations are taking so long? If there is so much money to be saved, why do not the Government post-cost all non-competitive contracts instead of the miserable percentage that are currently being post-costed?

Procurement fraud is a recurring theme in the history of the British defence industry. No doubt certain villainous shipwrights attempted to defraud the taxpayer when fitting out Sir Francis Drake's fleet. More recent scandals included the excess profits made by Ferranti on open-ended contracts for the Bloodhound missiles in the 1960s. They were discovered and Ferranti was forced to make a repayment, although nobody went to prison for perpetrating that massive fraud on the British taxpayer.

In the past 12 months, the biggest potential scandal has been the possible multi-million pound frauds carried out by Marconi. The Marconi investigation has been going on for more than 12 months. There are only seven other possible frauds currently under investigation, so why is the Marconi inquiry taking so long? Is it because the number of officers in the MOD's serious crime squad is only 28? Why is that so, when there are thousands of social security investigators probing people who have defrauded the DHSS of only £5 or £10—while the big boys in the City are getting away with murder? Do the Government accept the recommendation of the Public Accounts Committee that a telephone hotline be established for whistle-blowers on contract fraudsters? Have they ever paid any compensation to the whistle-blowers who have been sacked while helping to save British taxpayers millions of pounds? No.

For many people the distinction between irregularity and fraud is difficult to discern; nevertheless, the Ministry of Defence, for some peculiar reason, insists on such a difference. Over the past 14 years, the main irregularity —so we are told—has been contractors overcharging without—we have been told—dishonest intention. Between 1972 and 1985, 1,100 contracts were re-examined or post-costed, and in 114 of those cases refunds were secured, totalling approximately £30 million.

The first question that I should like to ask the Secretary of State is this: why does the MOD admit that only a small percentage of contracts are post-costed? A second and more important question is why the irregularities occurred. We are told by the Department that administrative difficulties lead to such irregularities. If that is the case, why do those administrative difficulties always result in overcharging, never in undercharging? There can never be a mistake for the benefit of the taxpayer. Mistakes are always for the benefit of big business—the friends of the Tories.

Are not the Tories a little suspicious about the fact that the contractors are always overcharging? I think that they ought to be. Mr. Peter Levene, the chief of the Procurement Executive, is suspicious; if he is, why is not the Secretary of State? Why does the Minister of State find it amusing that I should bring to his attention such gross frauds on the British taxpayer? Oh, yes, it is a very laughable position. We have just heard the Government refusing to help pensioners over the Barlow Clowes affair. They say that they cannot pay compensation to them—that they cannot recover and pay out taxpayers' money —but they will allow taxpayers to be robbed by big business.

Mr. Peter Levene has said that he feels that the penalties for overcharging are not large enough. He has said that he wants to be charged on money that the contractor has to repay. The Government refuse to implement his suggestion. Why? Why will they not act on the recommendation of their senior officer? Can the Secretary of State explain it? It is obvious that the problems of fraud and irregularity will not be cleared up by a Government who will never reveal the cosy relationship between defence contractors and the MOD, and between big business and the Tory party.

Let us leave procurement and equipment. The Government next tried to make great play of presenting an aura of efficiency, suggesting that they had saved considerably on manpower while still alleging that the services were not merely maintaining capability but extending and increasing it. The Estimates state:

"The programme"—

of manpower cuts, that is—

"will enable us to improve our front-line capability, without any increase in total manpower".

Let us have a look at that proposition. Let us examine what is happening to the Royal Navy, for example. The Government have stated that since 1981 the proportion of Royal Navy personnel serving on the front line or immediately in its support has increased to 70 per cent. From what has it increased? Was it 69·5 per cent. last year? That is a rather nonsensical statement.

Mr. Bill Walker (Tayside, North): Will the hon. Gentleman give way?

Mr. Rogers: I shall do so later.

The Estimates then state that the services' uniformed strength has been reduced by more than 8,000. Indeed it has: we now have 8,000 fewer sailors. That is nothing to be proud of.

Mr. Bill Walker *rose*——

Mr. Rogers: I have told the hon. Gentleman that I will give way to him afterwards. If he will stop bleating I shall do so, but he really must wait until I have finished.

The Royal Navy also contains 28,000 fewer civilians. Its manpower strength has fallen by 36,000 since the Government came to power. It is shrinking in manpower as well as ships.

Mr. Bill Walker: The hon. Gentleman is showing the House very clearly his complete ignorance of defence matters. Does he not realise that the purchase of modern, sophisticated equipment means that fewer people are required to operate it? We require fewer pilots today than were required to defend the United Kingdom 20 or 40 years ago, because we have much more expensive sophisticated equipment flown by much more highly skilled and trained individuals. Fewer people are doing a much more effective job.

Mr. Rogers: I was just coming to that point, and I thank the hon. Gentleman for providing me with an introduction. I am sure that he can well remember 40 years ago.

In order to obscure the truth, the Estimates state—and now I am coming to the point that the hon. Gentleman is bleating about—

"Less manpower-intensive ships are also being introduced into the Fleet; for example, on current plans, the crew of a Type 23 will be two-thirds of that needed in a Type 22."

I am sure that the Secretary of State consulted the hon. Member for Tayside, North (Mr. Walker) when he drew up the Estimates. But the hon. Gentleman cannot get away with that now, and neither can the Secretary of State. We are not going to let them get away with it. They have been rumbled by the Select Committee, and they are twisting and wriggling.

The past and present falls in manpower that we see in the Estimates, and which the Secretary of State and the hon. Member for Tayside, North are talking about, have nothing to do with the ordering of ships. We have no type 23 frigates, and we shall not have any until next year. We shall not get the rest of them until the late 1990s. The Select Committee rumbled that. It said:

"The quotation above might have its place in the SDE 91 or 92, but it carries little conviction this year."

It does not carry much truth either. The Secretary of State ought not to produce estimates containing statements that are manifestly untrue and simply seek to obscure the truth.

Mr. Leigh: Will the hon. Gentleman give way?

Mr. Rogers: No, I am afraid that my time is limited. Other hon. Members want to speak.

The same tale applies to the Army and the Air Force: cutbacks and more cutbacks, with the same allegations of increased capability and efficiency. The Select Committee is right to point out to us—I ask hon. Members to read the report—that the services are being overstretched, with commanders having to do more with less, a greater burden being imposed on individual service men, front-line manpower having to take on additional tasks and skilled men having to carry out less sophisticated ones. That is the problem of the Government's cutback in manpower. Our front-line service men have not the capability to carry out their tasks.

We would require another debate to talk about the mismanagement of procurement. The list of delays—or what the Select Committee has called "fairly widespread slippage"—is a long list indeed. Time prevents me from going into detail. but we need only look for examples to find them. There is the £288 million overspend on the Rapier, the £40 million overspend on the Harrier GR5, the £260 million overspend on the ALARM system and its slippage of several years. There is the three-year delay in bringing the Foxhunter radar into service, which has resulted in 32 Tornado fighters being put into storage. The £17 million spent on the command system was wasted, meaning that our type 23 frigates, when they actually go to sea, will not have a computer-automated command system allowing them to operate with full effectiveness.

I could go on for a long time about procurement delays, but it would be wrong for me to leave the debate without referring to the sorry plight of the merchant navy, to which my hon. Friend the Member for Dunfermline, West (Mr. Douglas) referred yesterday. The Select Committee has brought the problems to the Government's attention. Suffice it to say that the merchant navy, both in ships and men, is an extremely vulnerable part of our defences.

This debate is one of the few opportunities to examine the Government's stewardship of defence matters. Once again this year the Government are talking big and acting small. The cuts, delays and mismanagement mean that our defence commitment and roles are there only in name. If we were called upon to fulfil those roles, to honour our commitments, we would be found sorely lacking. That is the main basis of the Opposition's criticism of the Government.

6.20 pm

Mr. Julian Amery (Brighton, Pavilion): When the hon. Member for Rhondda (Mr. Rogers) came to the Dispatch Box I had not expected him to press for more defence expenditure. I had not expected him to criticise the shortfall in real terms in what we have been spending. I am sure that all that he has said on that will be a great help to my right hon. Friend the Secretary of State and his colleagues when they present their dossier to the Star Chamber. His speech will be honoured in the file that is put before the Secretary of State for Energy.

Of course, it was natural and right that he should try to avoid—I shall not say "evade" because it is a bad word—the great strategic issue that has divided his party by dwelling primarily on procurement. But it was a bit of bad luck that his hon. Friend the Member for Dunfermline, West (Mr. Douglas) intervened. It stuck in his hon. Friend's gullet to accept that the Government really have been quite decent in making information on procurement available to the Select Committee.

The whole subject of defence is weighty and grave. Just occasionally there is a ray of light which relieves it. I want to start my remarks by saluting the brilliant young German pilot who managed to land an aircraft in Red square. If I had to nominate anyone for the Nobel prize, he would be the one. He made monkeys out of all the top brass in the Soviet Union; and I hope that our top brass will have considered whether the same thing might have happened over here.

We have to try to reconcile two developments. There clearly has been a major change in the Soviet Union's foreign policy. General Secretary Brezhnev tried to export the internal problems of the Soviet Union by expansion. Afghanistan, Angola, Aden, Ethiopia and Nicaragua were all symptoms of that. It now seems that President

[Mr. Julian Amery]

Gorbachev wishes to change that policy, convinced as he has become that expansion does not solve the problems. Brezhnev used to talk about seizing the oil of the Gulf as the minerals of southern Africa. Well, that has not worked. It has proved to be a no-win operation, as Mr. Gorbachev appears to recognise.

At the same time, as my right hon. Friend the Secretary of State pointed out yesterday, the deployment of Soviet forces on the ground shows that they are just about the same as they were under Mr. Brezhnev—perhaps a little more sinister, because they are being modernised.

Therefore, there is a problem here. The conclusion that we must clearly draw is that our foreign policy must be as flexible as possible, seizing every nuance of improvement in what the Soviet leaders say, and even appear to do. But our defence policy must mirror and reflect exactly the situation on the ground. It may be that Mr. Gorbachev's concentration on reconstruction inside the Soviet Union will lead to disarmament. It may mean that he is prepared to beat the swords into ploughshares. But that is a slow process. Making swords, as I know from my experience in procurement, is slow, and to turn them into civil equipment is equally slow. If there is to be a real reconstruction in the Soviet Union, it will mean the transfer of its best managers and scientists from the defence industries to the civil industries.

Therefore, my right hon. Friend is right to go on as we are. There could be a reversion in the Soviet Union to the policy of externalising internal problems, and we would be fools if we built our defence policy on hopes as distinct from facts.

Even taking a hopeful view, we have to recognise that changes are not only taking place in the Soviet Union. Whatever the outcome of the American presidential elections in November, I suspect that there will be great pressure in the United States to limit its overseas commitment to Europe. I do not think that it will abandon its commitment. I do not think that it will abandon our allies. But, over the years, it has carried a disproportionate amount of the burden, and with its trade and fiscal deficits we must expect that it will reduce its effort, particularly as problems are increasing at the other end of the world—the Pacific rim—where it is, economically, financially and security-wise, as interested as it is in Europe.

Therefore, we in Europe will have to fill any gaps that may arise. This is not the occasion to go into what kind of European union we want—I shall have plenty to say on that subject in another debate—but I think that we are all agreed that there will be a European union. That comes out just as much in the Prime Minister's speeches as in others. Therefore, we must give thought to how, collectively, we Europeans will protect and promote the joint interests that we are in the process of forming. Protection and promotion mean defence, and there is a gaping hole in the heart of it. Europe cannot be defended without France, and France, although an Atlantic ally, refuses to take part in the defence organisation that has been created for the defence of Europe. President Mitterrand re-emphasised that in a speech the other day.

Frankly, I think that the French are mistaken. I can understand that, when the Americans were in a position of hegemony, when they dominated the European scene, General de Gaulle felt uneasy about it But that is not the situation today. The Americans are asking, almost begging, us to play a bigger part than we do. Therefore, I think that the French are wrong, but we must live in the world as it is. Interesting Franco-German defence agreements are being made. I hope that there are an increasing number of Anglo-French and Anglo-German projects under review. But, somehow, all that wants bringing together.

Since 1946 I have been a believer in Europe. I am the last survivor of the little group that sat with Churchill in the autumn of 1946 and decided to start the European movement. Would not the best way be to put more weight into the Western European Union? That was, after all, a British conception. It was launched by Anthony Eden when the French rejected the idea of German rearmament. We persuaded them to agree to German rearmament by committing a corps and a tactical air force to the continent on a permanent basis. Our concept was simple, and its importance is only now beginning to become clear. There was a memorandum that persuaded Eden that we needed two boxes—a box to keep the Russians out, which was NATO, and a box to keep the Germans in, which was the Western European Union. That is what we went for.

I do not think that boosting the WEU will weaken the American commitment. The Americans are in Europe because it is in their interests to be in Europe. A very big European effort indeed would be needed before the Americans could feel safe enough to withdraw massively from Europe. However, if we strengthened the WEU, that might anchor West Germany still more firmly into the western European family. That is important, at a time when the siren voices of neutralism are being heard quite loudly in different parts of Germany.

There is another reason why it is important to strengthen the WEU. If the bipolar world—the world that has been dominated by the two super-powers—is to recede, though I am not sure that it will, and if a more multipolar world is to take its place, we must expect problems to arise for states that were previously subordinated to the two great alliances. Even during the time of the bipolar world, that has been happening. The Falklands and the Iran-Iraq wars are examples, but new crises may arise between countries that are now less subordinated to the two super-powers.

The newspapers are full of stories about Serbian nationalism. I do not intend to weary the House by discussing that problem, apart from recalling that world war I started with an outburst of Serbian nationalism that culminated in the assassination of the archduke. The Balkans are still a possible powder keg. So is the middle east, so is Africa. Europe will not be the policeman of the world—at least, I hope not—but Europe has worldwide interests and it is our duty to protect and promote those interests. The Gulf war demonstrated that fact.

When my right hon. Friends consider their defence policy, I beg them to keep seriously in mind the importance of the Western European Union. We need to keep the Germans in the western bloc and strengthen the European pillar of the Atlantic alliance. We need an organisation in which we can give thought to how European interests outside the area can best be protected and promoted.

6.33 pm

Mr. Menzies Campbell (Fife, North-East): Unexpectedly, I found that I was unable to be present for the opening speeches yesterday evening. I have written to the Secretary of State and to the hon. Member for Clackmannan (Mr. O'Neill), who opened the debate for the Opposition, offering apologies for my absence.

Throughout the debate generous tribute has been paid to those who serve in our armed forces. I am happy to associate myself with that tribute. However, I wish to pay a particular tribute to those who perform search and rescue operations around the coasts of the United Kingdom. I have a particular constituency interest in that matter, but it is also a matter of national significance. Many hon. Members will know that a review of such operations is taking place. The Under-Secretary of State for the Armed Forces who is to reply to the debate knows of my particular interest in the apprehension that is felt about the future of the search and rescue operations at RAF Leuchars in my constituency. A flight of 22 Squadron, flying Wessex helicopters, provides that search and rescue facility.

Until this year, 138 missions have been flown and 98 people have been rescued. On average, 90 per cent. of rescues are civilian rescues. On a daily basis, the pilots and their accompanying observers and winchmen have to display great skill and courage—almost always in very unpleasant and dangerous conditions. As we have heard, a review is taking place. Some of us, including the hon. Member for Tayside, North (Mr. Walker), who has taken a keen interest in the matter, had hoped that before the debate we might be told the precise result of that review.

The Minister was extremely courteous when he listened to what we had to say. In particular, he received from Fife a delegation comprising the district council, the regional council and me. We welcomed that, but we should welcome all the more a decision that the existing service is to be retained.

Mr. Bill Walker: I do not want anybody to think that it is only in Fife that the civic authorities are concerned about this matter. The hon. and learned Gentleman knows that he has the full support of Tayside in all the efforts that are being made to retain the Wessex helicopter squadron. Many of the rescues are carried out in Tayside, and it is fair to say that the majority of those rescues take place in my constituency.

Mr. Campbell: The Minister will be in no doubt about the strength of feeling at every level of government in central Scotland about the issue.

The Government's announcement of February 1988, to the effect that search and rescue would be retained so long as there was a military requirement for it, has not alleviated much of the concern. I do not expect the Minister to tell us today about the results of the review, but can he say when he will be able to give us the results? Since the review has not yet, I presume, been completed, I can do no better than to refer him to the last sentence of paragraph 10.6 of the seventh report of the Select Committee. It says that

"the withdrawal of SAR facilities from Leuchars would mean that large areas of central Scotland would have no daylight SAR coverage within an hour from call out."

The last sentence of the following paragraph is in heavy type, which I suppose means that it is emphasised. It says:

"It would not be acceptable for military SAR facilities to be withdrawn from RAF Leuchars without there being a requirement that any civilian facilities should use aircraft as capable, and have readiness states and back-up at least as good, as those provided by the military."

I intend also to refer briefly to the closure of the Royal Ordnance factory at Bishopton. The case concerning the property elements of that closure have already been eloquently deployed. Last night the hon. Member for Renfrew, West and Inverclyde (Mr. Graham) spoke most movingly about the consequences of the closure to his constituents. However, my concern relates to the possible strategic consequences of that closure. I understand that Bishopton is the United Kingdom's prime manufacturer of gun propellants and that it has a unique nitroglycerine manufacturing facility. It employs 1,100 skilled, experienced and loyal workers.

What consideration has been given to the consequences to our defence capability if the factory goes out of production? What assurances have the Government received about continued production and supply? And is it really true that we might find ourselves, in extremis, having to rely on foreign manufacturers? At best that would make us vulnerable. At worst it would put us at severe risk.

Tribute has already been paid to the Select Committee's work. I can do no more than say that in its consideration of the Royal Navy's surface fleet, in its sixth report to the House, that tribute is more than amply justified. It behoves all of us to read that report and the Government's response to it and form a judgment as to where the truth lies. I do not understand the Select Committee to have changed its conclusions because of the terms of the response. Perhaps it was hardly encouraged to do so when the Government's practical response to its report was to order three new type 23 frigates.

I ask the Government to take account of the fact that great uncertainty surrounds shipyards such as Yarrow and Swan Hunter as a result of the Government's current shipbuilding programme. Building the ships that the Royal Navy requires necessarily involves high levels of investment and skill. To justify such investment and to maintain such skills there must be long-term orders or at least an expectation of them. Skills are frequently difficult to acquire but easy to lose.

There is also uncertainty about helicopters. On 9 April 1987, the Secretary of State for Defence announced an intention to place an order with Westland for 25 utility EH101 helicopters for delivery in the early 1990s. The EH101 is a basic design. Since the announcement, the Ministry of Defence has, I understand, attempted to define its detailed requirements and may even now be embarking on project definition studies. The result is that 1995 is probably the earliest achievable delivery date.

I am sure that I am not the only hon. Member to have received representations on this matter, but I must tell the House that the company views the delays with considerable concern. I hope that the Minister can give the company some comfort today and assure it that further delays are unlikely.

It is inconceivable that the secure defence of the United Kingdom can be ensured other than through our membership of NATO. For the foreseeable future, NATO will be a nuclear alliance. I find myself in almost total agreement with the right hon. Member for Brighton, Pavilion (Mr. Amery); any contact with officials or politicians in the United States makes it clear that,

[Mr. Campbell]

whoever wins the presidential election next month, the issue of a greater European contribution will undoubtedly be on the agenda. There is a risk of overemphasising the United States position. I do not believe that there is any mood of isolationism, but there is a mood of realism brought about by financial circumstances there, particularly the budget deficit.

We cannot ignore the possible political consequences of the economic changes of 1992. There are undoubtedly uncertainties in that connection, but there may be opportunities as well. A more integrated Europe might find itself compelled and encouraged to make a greater contribution to its own defence. It is clear, however, that, by 1992, all but £1·8 billion of the expenditure on Trident will have been incurred. Just as Polaris could not be towed out to sea and sunk—which I think was suggested at one stage—we will not be able to switch Trident off as if it were a conveyor belt. Whichever party is in government by 1992, it will have Trident effectively, if not completely, in place.

No matter what is said in the debate or outside the House, the party that forms the Government in 1992 will not unilaterally remove Trident. The intermediate nuclear forces treaty has changed all that and the debate in 1992 will be about keeping a strategic nuclear deterrent in the United Kingdom or being willing to dispose of it if one is satisfied that that is safe. It is wrong to think that that debate will necessarily be domestic, because if the United States and the Soviet Union achieve a START I treaty and move on to START II, it is almost certain that there will be great pressure on the United Kingdom to put her weapons on the table.

Leaving aside the difficult question whether we should own or lease the missiles, we cannot ignore the fact that the United States might, because of its commitment to START II, be unwilling to remain co-operative in those respects in which the United Kingdom relies on it for the servicing of missiles.

It was not always popular in my party to be in favour of deployment of cruise missiles. There was a curiosity in the opinion polls of the time—they showed that a majority of people opposed cruise but favoured retaining the independent nuclear deterrent. The Government take great credit for the INF treaty. It is partly justified, but the issue is not quite as simple as they claim. It is clear, however, that if there had been unilateral withdrawal of cruise missiles during the time of Mr. Brezhnev it is unlikely that there would have been any response.

My criticism of the Government is that they seem to be unduly pessimistic. I accept the need for caution in these matters but caution and optimism need not be mutually exclusive. We must accept that Trident will effectively be in position by the next general election. The weapon's life goes beyond the end of the century. It is highly unlikely that any Government will be capable of removing or be willing to remove Trident unilaterally. If a safe means of arms reduction can be arrived at without prejudice to our safety, we should adopt it, but there can be no reduction unless there is satisfaction, in so far as one can be satisfied, that our safety will not be prejudiced.

6.46 pm

Dr. Alan Glyn (Windsor and Maidenhead): I should like to pay tribute to my right hon. Friend the Secretary of State for Defence and his colleagues for the excellent colour and quality of the Estimates.

Defence consists of strategy and tactics. Strategy is the ability to estimate the strength of one's enemy now and in the future. Tactics are through NATO and the flexible and dual response and the retention of Trident.

We all welcome the historic summit between President Reagan and Mr. Gorbachev in December 1987. We note that it might be the first step towards some form of arms reduction, both conventional and atomic. We must remember, however, that in the same month as that summit, my right hon. Friend the Prime Minister met Mr. Gorbachev at Brize Norton, where bilateral negotiations were made possible. We should give credit to our Prime Minister for that, and it was a step in the right direction.

We all know that the Warsaw pact has more than 3:1 superiority in artillery, 2:1 superiority in tactical aircraft and hundreds of thousands of chemical weapons. It also has nuclear warheads targeted towards NATO. My right hon. Friend the Prime Minister has always maintained that until we can get a lasting and satisfactory disarmament agreement, we must retain our nuclear deterrent. I entirely agree with her.

My right hon. Friend the Member for Brighton, Pavilion (Mr. Amery) mentioned the United States. I agree with him that they have problems on their doorstep in central and south America. They sometimes chide us and say that we should spend more on defence, but I think that they will always be our main ally in NATO—let us hope so.

Mr. Gorbachev has achieved an incredible victory in his own country by beating the conventional Communist clique. He realises that unless he can achieve a powerful industrial and agricultural output he has no future. With such a background, it would be possible to pay for increased arms production. Let us not forget that the Soviet Union is increasing arms production day by day.

There is also the possibility that the satellites, on which Mr. Gorbachev places so much importance, could either give him difficulties or strength, according to their wish. Their will and their degree of independence—and their independent views—have already become apparent to the world. A change in leadership could mean an alteration of policy.

I shall now turn to what I regard as one of the most dangerous things happening now. Hostile relations between Russia and China have resulted in at least 500,000 troops being stationed on the Sino-Soviet frontier. If an agreement was made between those two countries—and it looks as if there will be one—we would be faced with an estimated 500,000 troops who could be deployed under the Warsaw pact. Far more importantly, if that agreement was to go even further and there was a military alliance between Russia and China, we should be faced with one of the most powerful combinations and an enormous defence problem. That is why it is terribly important that we should always anticipate that possibility in our defence strategy.

My right hon. Friend the Member for Westmorland and Lonsdale (Mr. Jopling) said yesterday that we should anticipate possible and future alignments and that we should always ensure that we have sufficient in our

armoury to defend ourselves. That is why reductions must be verified, and must, at the same time, not reduce in any way our ability to make our contribution to NATO and our own defences. I referred to the United States earlier. It will always play its part in Europe.

I wish to speak next about the Reserve. I welcome the national employer liaison committee, although I am not sure whether it will work, because of factors beyond the Government's control. The Government will have to think again about how we can build up a sufficiently strong Reserve and Territorial Army that can take its place in NATO and fulfil its essential commitments in the defence of this country.

I thank my hon. Friend the Under-Secretary of State for the Armed Forces for coming down to Victoria barracks and helping me. I hope that he does not have to face the Star Chamber for long when it comes to rebuilding the barracks. We visited the Life Guards together on the way and learnt two lessons there. One important lesson that we learnt was that the versatility of the Army today is quite incredible. The second lesson was appreciating the difficulties of manning equipment such as tanks that are highly sophisticated and require a great deal of training. One has to balance sophistication and training to ensure that there are enough men to absorb the complicated technology that is now incorporated in almost all weapons.

I fully support the Government. I support their retention of Trident and I support almost everything that they say in the defence review. I hope that this country will be able to play its part not only in NATO and in other parts of the world that people tend to forget, but that we shall be able to assist in the process of world disarmament.

6.54 pm

Mr. A. E. P. Duffy (Sheffield, Attercliffe): The Defence Estimates before the House represent a reduction in real terms of 2·6 per cent. a year. Inevitably, hon. Members yesterday expressed anxiety about how long the Government can keep the lid on defence spending while meeting current commitments. The Secretary of State for Defence himself admitted that difficult choices cannot be avoided.

Yet the existing gap is nothing like the chasm that is likely to open up between commitments and resources in the next few years. The scale of some forthcoming procurement decisions will prevent the Secretary of State from finding relief in slippage, cutting some marginal tasks out of area or the more efficient management of procurement. It is little wonder that a leader in *The Daily Telegraph* this summer described the "Statement on the Defence Estimates 1988" as

"bland and . . . self-congratulatory as ever"

or that Mr. Leon Brittan, in his pamphlet "Defence and Arms Control in a Changing Society", said:

"The Government should not put off a wide-ranging review of defence policy."

We are witnessing once again the syndrome that existed in the 1970s, which was so soundly criticised by Conservative Members when they were in opposition, as well as by this Administration when they came to power. In the 1970s, the resources that successive Governments were prepared to justify to Parliament were never quite sufficient to meet the commitments and capabilities that those Governments equally thought it necessary to maintain. I experienced that phase when I was on the Treasury Bench, but I was part of the Government who eventually took steps to match resources with commitments.

Whereas in the 1970s commitments were pruned—as they were following the 1974 review; there is no doubt about that—they have now been kept at roughly the same level for the past six years, and in certain cases even increased. At the same time, we are edging into a very expensive phase of procurement, involving, for example, the completion of the Tornado programme, the arrival of Trident, the replacement of the aging Chieftains, the maintenance of amphibious capability and the development of the European fighter aircraft—not to mention a large and increasing number of quite unnerving cost overruns to be found in table 2 of the Estimates. Yet competitive tendering actually fell over the past year, as is also revealed in table 2.

The outcome is bound to have a harmful effect on training, activity and professional standards, governed as they are by such factors as petrol, spare parts and ammunition—the only respects on which money can be saved in the short term. In consequence, there is an effect on morale and retention rates, which are already worsening quite significantly, as was confirmed in our exchanges yesterday. That is the natural consequence of overstretch and curtailment of activity.

Let us consider briefly the three services. The role of the Royal Navy cannot be filled by any other ally. Nevertheless, the Navy will account for only £2·5 billion of the Estimates, compared with the more than £4 billion that is to be spent on British forces in the central region. Hon. Members on both sides of the House must be concerned, therefore, that doubts should continue to arise year after year about the size and effectiveness of the fleet, especially in view of its NATO-assigned role and the escalating size and power of the Soviet navy. NATO is a maritime alliance; the Warsaw pact is not. Yet the Government's inadequate provision for the Navy is something to which every independent expert bears witness. Plainly, that provision is now inadequate to allow us to discharge our NATO role, much less continue to meet out-of-area commitments. SACLANT says that he is now 45 per cent. short of the escorts that he needs and the Commander-in-Chief, Fleet does not have adequate operational assets, according to the Select Committee on Defence.

The surface fleet of destroyers and frigates numbers "about 50", the Ministry of Defence says—in itself a change from the previous absolute commitment to 50 ships. Currently, there are 13 destroyers and 35 frigates available—48 vessels. But of these, three destroyers and 11 frigates are in refit, on trial or being used for training, leaving just 34 operational. In other words, almost all the Nott proposals of June 1981, to which both sides of the House were then opposed, have been achieved by 1988. Nott recommended only two carriers, and we are just about to mothball one. We do not have the men to run the carrier that is about to be mothballed.

Caught out by the statement on the Defence Estimates in 1988 by the Select Committee, the Secretary of State rushed to announce the ordering of three more type 23 frigates. Yet he invited tenders for four frigates just a year ago. That is an example of slippage. Because the defence statement is so professional—look at it, Mr. Deputy Speaker—because it is so glossy and so presentational, seemingly full of information, graphs and essays, it is so

[Mr. A. E. P. Duffy]

potentially lulling, comforting and even deceiving. The only way in which hon. Members can deal with it is really to study it—as most demonstrably do not, as can be seen from debates year after year—and ask questions.

With the greatest respect to the Minister who opened the debate, we got the kind of speech that we get every year under this Administration—a long speech that bears little relation to the subject. What he had to say is very important but it can be said under two other departmental headings. What we are here to do—we cannot do otherwise—is to discuss the statement. The best way in which we can address it is to raise questions.

That is the best way in which hon. Members can assist the ongoing debate on defence—to go on raising questions such as what is the present age structure of the surface fleet? How many vessels are operational, in dockyard hands or on disposal lists? We do not always have up-to-date information on what ships are on disposal lists. How many of the minesweeper orders planned under a £1 billion modernisation scheme will be completed by the 1995 deadline? How many type 23 frigate orders are envisaged by 1991, before, as my hon. Friend the Member for Rhondda (Mr. Rogers) reminded us, they are overtaken by the NFR90 programme? Is it true that the first two type 23s will probably sail without an effective central command and control system? That was the whole purpose of the type 23 programme, because, of course, the NFR90 ships will have another role to play. Above all, why is British sea power apparently more highly prized by the Kuwaiti Government than by Her Majesty's Government?

The Army, according to *The Economist* on 27 May this year, "is seriously underequipped". The problem of replacing Chieftan tanks is well known, but the Army has a vital need also for modern artillery and air defence weapons. Three questions arise: first, given the stress laid on air mobility on page 24 of the statement, when will the EH101, to which the hon. and learned Member for Fife, North-East (Mr. Campbell) referred, succeed the Puma in that role? Secondly, when will the multi-launch rocket system, referred to on page 312 as "under order", come into service? Thirdly, does the full development of the third generation of anti-tank guided weapons, mentioned in paragraph 4.4, allow for the latest Soviet tank technology, notably the FST1?

The RAF has received more favourable funding in recent years, but there remain two significant gaps in the RAF's aircraft inventory. The delays in acquiring a modern airborne early warning aircraft are well known. We heard yesterday from the Secretary of State that we cannot afford the full complement. I should like to know when the first E3A aircraft will be delivered. That would be helpful to the House. Will it just slip? The other gap is the lack of specialised electronic warfare aircraft, such as the EF111 or the F4G "Wild Weasel". If West Germany sees the need to acquire a Tornado variant for the job, why are we preventing our own tactical air force in the central region from having one?

I have other questions. First, when will Tucano production catch up on the original schedule? Secondly, when will the much-delayed tail end of Tornado GR1 deliveries finally occur? Thirdly, how long is the Tornado ADV radar expected to remain a problem? What is the future of the 32 mothballed Tornado F2s? When is the improved UKADGE mentioned on page 23 of the statement expected to become operational? Finally, when, oh when, will we have a modern IFF?

Compared with last year's hawkish treatment of Soviet foreign policy, the present Estimates display considerably greater willingness to accept the reality of change in the Soviet Union. Yet the Government are still saying that, as East-West relations improve, as the Russians withdraw from Afghanistan and as they implement the INF treaty, it is appropriate to respond with a vast increase in Britain's nuclear capacity.

That is a gross misjudgment of our real security needs, as the North Atlantic Assembly—of which I am a member—composed of Members of Parliament from 16 member nations, recognises in a new report. It considers that those needs are to improve the conventional balance in Europe, to strengthen the European pillar and to acknowledge and encourage the very welcome developments in the Soviet Union. That is the view of the parliamentary side of our alliance.

I recommend that report to hon. Members. It is a fascinating blueprint for a new and more equitable relationship between the transatlantic members of the alliance. They see that relationship as having changed. Therefore, they ask how NATO is to change with it. Should we not start with a strategic rethink with a view to greater flexibility and seek a strategy of flexible, minimum deterrence? I hope that in next year's Defence Estimates we shall have an essay on those issues, because the permanent under-secretary in the Ministry of Defence is eminently qualified to address those vital questions. In conclusion, perhaps the biggest threat we face currently is the danger of the status quo.

Mr. Deputy Speaker (Sir Paul Dean): Order. I remind the House that the 10-minute limit on speeches is now in operation. I ask hon. Members who are called to keep an eye on the clock.

7.7 pm

Mr. Cyril D. Townsend (Bexleyheath): The House always listens very attentively indeed to the hon. Member for Sheffield, Attercliffe (Mr. Duffy) as he has a great knowledge of defence matters and, as I said in March this year when I followed him in a debate on the Royal Navy, he has a genuine determination to see the Royal Navy enhanced and strengthened. But, alas, he is in an impossible position. Only a few weeks ago at the Labour party conference a resolution was passed proposing that Britain's defence expenditure should be brought down into line with our European partners. As all my hon. Friends know, that would mean massive cuts in Britain's defence equivalent to about the cost of running the Royal Navy.

We mark this year the 71st anniversary of the Bolshevik revolution which brought about the Soviet Union. I do not think that I am going too far in saying that at the moment the Soviet Union is in danger of being a Third world country with First world weapons and the First world's best space programme. It is a country in chaos with a bloated bureaucracy and a military and industrial complex out of control. Of course we all wish the secretary general the best of luck in trying to reform and modernise his system and cut back on the defence effort of that country, but I am not sure I would give him more than a 51 per cent. chance of succeeding.

Lord Carrington, who has just completed a very successful period with NATO, said:

"When it comes to plain facts, there has been no reduction yet in Soviet military power, no diminution in the rate at which new tanks, ships and aircraft are flowing off the production line. Expenditure on procurement continues to grow at nearly 3 per cent. a year, despite Mr. Gorbachev's peace rhetoric and his interest in slowing down the military machine."

The same noble Lord said in a speech in Oslo in 1985—it is worth drawing his remarks to the attention of the House—that if there is an elephant in one's neighbour's garden, it may make sense to study its intentions but equally it makes sense to have a strong fence to protect one's flowerbeds. We are right to keep our guard up in these changing circumstances while hoping for the best.

In August this year—this is a sign of the times—the United States Defence Secretary, Mr. Carlucci, gave an address at the Soviet military academy in Moscow. While speaking to the assembled company he said:

"we have difficulty in reconciling a defensive doctrine with what we see in Soviet force structure and operational strategy as an emphasis on the offensive—especially on surprise and manoeuvre. I refer to such things as the operational manoeuvre group concept, forward-based bridging units, and the heavy emphasis on tanks and artillery. At the same time, we see no shift of emphasis to the kind of forces typically associated with defence."

I hope that the House and the country will ask the basic question as to why, in October 1988, the Soviet Union constantly practises the river-crossing exercise with its shock armies. Why does it base so far forward and so close to the German border so much ammunition and petrol, oil and lubricants? If we cannot get a satisfactory answer, surely we have no alternative but to keep on strengthening our own defence effort and improving our co-ordination with our allies.

I want to draw attention to the enhancement of the weapons systems of the Soviet Union. We used to say, with some confidence, "We do not need to match the Soviet Union tank by tank, aircraft by aircraft or submarine by submarine because we have a technological edge." Sadly, we are losing that edge. I remind the House of the new Typhoon submarines that the Soviet Union has deployed. They are quiet and hard to detect. It will be difficult for our submarines to keep abreast of that stealth technology. We talk about our reactive armour. The Soviet Union has the same thing. We must spend our money on gaining and keeping a technological gap. If we do not, without the numbers behind us, we will be in real trouble.

I cannot claim great enthusiasm for deciding on the new tank for the British Army of the Rhine. I suggest to my hon. Friends on the Front Bench that the way forward is through improved surveillance methods and precision-guided missiles. In this day and age, if one can find, one can hit and if one can hit, one can destroy.

I want to draw attention to the lack of helicopters in the British Army. There was a recent display and exercise on Salisbury plain which drew attention to this. Many of my hon. Friends will have further details. We have allowed the British Army to fall behind other armies in NATO and the Warsaw pact in this respect. The time has come to improve helicopter capability.

Saint Cyril was once described as a fearless and courageous preacher of the orthodox, in theological terms. I have tried to be the same in defence matters. I hope that I may be allowed to raise two further points which are not quite so orthodox. The first concerns the need for a defence review. I am by no means a lonely voice among Conservative Members on such topics. My right hon. and learned Friend the Member for Richmond, Yorks (Mr. Brittan), before clearing his desk to move to Brussels where I hope he will keep Kent suitable and safe for grazing heifers and Tory voters, called for a defence review. He was wise to do so. It should not be an issue between the parties. Sir John Nott carried out the last defence review under great pressure from the Treasury. He had to find big cuts in a short time. The inter-service mechanism was not at the advanced stage that it has now reached and the results of that review are well out of date. For example, there has been the INF agreement. It would be wise of the Government and in their own political interest to recognise that. The previous election is over one horizon and the next election has not yet appeared on the other one. This is a good moment to study Britain's defence capabilities and the new challenges we face in the new world to see how we can best proceed.

The second matter—this is one of my many lost causes but I am happy to bring it forward for consideration by my hon. Friends—is the need for Britain to place less emphasis on its continental effort and more on its maritime effort. I have considerable firepower behind me on that issue. However, at least three Secretaries of State for Defence have quietly taken me aside and said, "Cyril, you are wrong. Please understand that you just harm everything by talking like that. Don't you understand that the United States is under great pressure to cut back on its 327,000 service men in Europe and that Germany does not want to carry our burden in Europe?" Since the time of Marlborough standing armies in Europe have not been popular with the British people. I do not believe that it is the best use of limited defence resources. We would be true to our traditions and would be looking after the best interests of the defence of the free world if, over a period of time, we could disengage from the continent and increase our maritime effort. I should like to see the Cabinet discussing that matter and I should like to see a cautious Civil Service statement in the defence White Paper that, in the long run, that is where Britain's defence interests lie.

7.17pm

Dr. John Gilbert (Dudley, East): The debate has come far too late in the year. It is a scandal. It is wrong for defence to be pushed back into the mop-up session just because of the incompetence of the Government's business managers. I hope that we shall be given an assurance that there will never again be five months between the publication of the White Paper and the debate. If we do have the debate this late, let us have it when the Secretary of State has some idea whether he has won his annual battle with the Treasury.

It will not surprise many hon. Members to know that I find myself unable to support the amendment in the names of my right hon. and hon. Friends merely because of one phrase which relates to the cancellation of Trident. I do not propose to weary colleagues with explanations of my reasons for that because I am sure that they are fairly well known. I want to place on record that I am content with the rest of the amendment. I am delighted that it calls on the Government to

"use resources to secure our non-nuclear defences and to work actively"—

those are beautiful words—

[Dr. John Gilbert]

"for the reduction and abolition of nuclear weapons in Britain and elsewhere".

I congratulate the Front Bench spokesmen for not mentioning unilateralism or saying that we should have no nuclear weapons in our hands, in our territories, or on our territorial waters. I welcome the slow move back towards the traditional defence policies of my party. However, there was one extraordinary passage in the speech of my hon. Friend the Member for Clackmannan (Mr. O'Neill). I gave him notice that I intended to raise the matter. He talked about a peace wing and war wing in the Labour party. I do not know of anybody in my party who is in a war wing or who wants a war. I hope that it was a slip of the tongue because he will be hard put to identify anybody in the Labour party who wants a war with anyone.

I congratulate my hon. Friends the Members for Sheffield, Attercliffe (Mr. Duffy) and Rhondda (Mr. Rogers) on their catalogue of inquiries of Ministers about the state of our defence equipment programme. I notice that not a single Minister had the courtesy to make a note when either of my hon. Friends was speaking, so I suppose that we cannot expect answers to their extremely important questions. The only other explanation is that Ministers know the list already and are preparing the answers anyway, but I should be surprised if that were the case.

My hon. Friend the Member for Attercliffe produced a superb list of problems in the Ministry of Defence and I shall add a couple, one of which is at least a scandal. At least one Minister in the Ministry of Defence must be extremely grateful that the DROPS affair has not been considered in detail by the Select Committee on Defence.

I am concerned that a choice will have to be made between an American and British tank. This country has had a dismal history of tank production since the Chieftain tank was introduced in 1966. We have no record of which we can be proud of co-operation with our allies over the debate on smooth and rifle bore, and what should be the size of the bore of the tank gun, and we have had a dismal record in selling tanks abroad. Unless the new owners of the Royal Ordnance factories can do something about selling more tanks, we should get out of the tank-making business altogether; we would probably be far better off buying German, if not American, tanks. MBT80 was on the stocks when I arrived at the Ministry of Defence in 1976, but we have not progressed much further with it.

I am worried about the state of the fire control systems that are available to the Royal Navy. I cite in aid the appalling disaster in the Gulf not long ago when an American warship, which had the most modern fire control systems, shot down an innocent airliner. I do not seek to place blame on any of the individuals concerned, but an article in *New Scientist* of 5 May reports—I should be grateful for some response from the Minister on this—that the Ministry of Defence has had to cancel an order for a computerised command and control system for the new type 23 frigates. The article says that the Ministry of Defence has

"spent £30 million on the project, but the system could not cope with orchestrating all the weapons and sensors on the frigates.

This means that the officers on board four Type 23 frigates that will be launched between now and the 1990s will have to rely on operating each sensor and weapon independently."

If that is so, we are faced with a serious problem, with no guarantee that the disaster that overtook that airliner and American warship could not happen to one of our own warships.

I have never concealed my scepticism about the European fighter aircraft, which was known as the AST403 in 1976. It was supposed to be a Harrier-Jaguar replacement and to be optimised in the ground-attack role. It is now to be optimised in the air-superiority role, but I have never heard a single satisfactory word of explanation from a Minister of why that U-turn in the function of the aircraft has taken place. I strongly suspect that it is to do with industrial and political considerations in terms of co-operation with the French or German defence industries rather than being related to the needs of the Royal Air Force. It would be extremely interesting if Ministers said whether the United States is releasing its stealth technology for the EFA project or, if it is not, whether they are confident that our stealth technology matches that of the Americans.

On page 65 of the White Paper—the Minister need not look it up, as it is not a point on which I want a reply—there is mention of the forces in eastern Europe that are not on the central front. I do not take issue with the figures given for the central front or eastern Europe, but it is a fact that the other Warsaw pact land forces—I recently returned from a trip to Hungary, Bulgaria and Romania—are, for all practical purposes, no more than supernumerary agricultural workers. They spend most of their time in the fields digging ditches and cutting hedges. I cannot foresee their being of any serious military use, other than in the defence of their country—certainly not in any forward deployment.

The hon. Member for Bexleyheath (Mr. Townsend) made the extremely valuable point that the quality of Soviet material is now outpacing ours in various directions. He drew attention to the Typhoon submarine, about which we have known for some time, but there are serious suggestions that the Soviet Union is outpacing us in the quality of battlefield munitions, and that must be of considerable concern. It gets most of its technology from breaches of COCOM.

I am concerned that the Ministry of Defence does not put nearly enough resources at the disposal of the COCOM office inside the Ministry. The Select Committee on Trade and Industry has taken a little evidence about this matter, and, as I understand it, there are three officers on full-time duty in the Ministry of Defence attending to COCOM matters. Anyone who has visited the office of technology assessment in the Pentagon, as I did recently, knows that the United States has about 200 people devoted to this extremely important work, and it is high time the Ministry of Defence paid more attention to it.

I can understand why the Secretary of State is experiencing difficulty agreeing his defence Vote with the Chief Secretary to the Treasury. One reads in the newspapers that the Secretary of State is cooling his heels in the Treasury's ante-room. I take it that that is another of Mr. Bernard Ingham's insulting briefings about Cabinet Ministers. I can believe that the Treasury is unsympathetic to the politics of burden-sharing, and I very much agree with the right hon. Member for Brighton, Pavilion (Mr. Amery) and the hon. and learned Member for Fife, North-East (Mr. Campbell). Whoever wins the next election will come under enormous pressure for a reduction in American ground troops in Europe. Had I

been speaking yesterday, I would have made a different peroration because I understand that Vice-President Bush has given a firm commitment—if he has been reported accurately—that there will be no reduction in the American military presence in Europe. I foresee no reason for complacency because there will be enormous pressure on the matter in Congress, which controls the defence vote. Our budget, despite the efforts of Ministers to pretend otherwise, is on a downward trend in real terms, and I hope that the Secretary of State will win the fight that he must win with the Treasury to obtain an adequate defence Vote.

7.27 pm

Mr. John Wilkinson (Ruislip-Northwood): To some extent, our debate is a victim of the peace process. Increasingly, the people of Western Europe are coming to take at face value the statements of General Secretary, and now President, Gorbachev.

The general secretary expressed the hope that all in western Europe will live in the same house. The people of eastern Europe have a different wish. They do not wish to live in the same house as the Soviet Union. More and more, they are asserting their different identities and reverting to their historic and national roots. There are nationalist movements in the Baltic states, the Ukraine, Byelorussia, Armenia, Georgia and in the Balkans, to which my right hon. Friend the Member for Brighton, Pavilion (Mr. Amery) alluded. They are movements of fundamental significance, but, as I have said before, empires in decline can be at least as dangerous to their neighbours as empires that are expanding. If one looks at the history of what has happened in the periods of decline of the Ottoman empire, the Austro-Hungarian empire, the French empire, the British empire, the Portuguese empire and many others, one sees that the processes of decline were accompanied by conflict. We cannot be sure that such conflict in Europe will not overspill, with dramatic consequences. We must, therefore, be vigilant, as my hon. Friend the Member for Bexleyheath (Mr. Townsend) so wisely reminded us.

At the same time as change is afoot in the Soviet Union, the Soviet's new peace policy is encouraging western Governments to increase their credits to the eastern bloc, to increase the flow of high technology to the eastern bloc and greatly to expand East-West trade without predetermined quid pro quos being demanded. The result of the process could be a much strengthened Sovied Union in economic terms. In military terms, it is clear that the capability of the Soviet armed forces continues to grow across the spectrum—in both strategic and conventional weaponry. As yet, there has been no sign of substantial changes in military doctrine or of substantial reductions in force posture by the Soviets. It is important that we be vigilant and that, as resources are so constrained, we should seek ever better value for money.

I am afraid that this will be a difficult affair for the British Government. They have shown great responsibility in their conduct of the nation's defence. I praise my right hon. Friend the Secretary of State for Defence and his ministerial team. I know as a Western European Union committee chairman how helpful they have been, for example, in organising the WEU symposium on military research in London in March and in providing for visits by my committee to the tri-national Tornado training establishment at Cottesmore and to the Aeroplane and Armament Experimental Establishment at Boscombe Down. They have been helpful, positive and encouraging in every way, but they are up against a fundamental problem—lack of resources.

The pay of the armed forces must go up at least in keeping with the rate of pay in the civil community. The cost of weapons increases rather more than inflation. All this happens at the same time as our defence budget decreases in real terms and, although I acknowledge that the decrease is a fairly recent development, it is a fact that the Government must face. This squeeze on resources is impelling my right hon. Friend the Secretary of State yet again to go cap in hand to the Treasury in this expenditure round to ask for more money. My right hon. Friend knows that unless he gets more money the circle cannot be squared.

Unless my right hon. Friend gets more money, it will be dificult to honour the Government's pledge in their answer in Cm. 443 to the report of the Select Committee on Defence on the surface fleet. The Government said:

> "The Government has provided substantial additional resources for defence, including additions in the last Public Expenditure Survey round, so that commitments can be sustained. There is thus no need for or question of a defence review, whether 'by stealth' or otherwise."

Over the past six years I have spent much time—I have co-authored two books and chaired the Omega committee report of the Adam Smith Institute—vainly trying to suggest that it would be wise for the Government to embark upon a review. For a long time this budgetary bind has been plain for all to see. I have suggested that we should examine radically in concert with our allies—not unilaterally as we did in 1981 when Defence Secretary Nott presented Cmnd. 8288 "The United Kingdom Defence Programme: The Way Forward"—how best as good, faithful members of NATO, determined to enhance the European contribution to our common Atlantic defence, we could make better use of our resources.

The strategic defence of our nation in nuclear terms must be sacrosanct, and we all understand that. The Opposition's amendment is plainly totally irresponsible. We cannot ignore the defence of the home base. The Government have improved Britain's air defence, with the Tornado F3 coming into service, improvements in our radar infrastructure and the fact that the Home Service defence force and Royal Auxiliary Air Force Regiment squadrons are exercising well.

Defence of the east Atlantic and English channel is crucial for NATO. We play a key part, with 70 per cent. of the naval forces in those areas coming from the Royal Navy. Unless these command areas are secure, how can western Europe be reinforced in time of tension or war? Without such certain reinforcement, how can a defence of western Europe be sustained?

We must also consider our overseas intervention force capability. The capability to intervene on the flanks with the AMF and Marines is crucial. Our Norwegian friends are particularly vulnerable, adjacent as they are in the north to the Soviets and with the Kola peninsula base complex right on their doorstep—the base from which the Soviets' strategic submarine force and northern fleet sail. Intervention forces are vital for Britain. We have repeatedly seen how necessary they are, most recently in 1982 in the south Atlantic conflict.

[Mr. John Wilkinson]

Last, but not least, there is our Brussels treaty commitment. Are we for ever and for aye to keep a tactical air force, plus 55,000 men on the continent of Europe, as though nothing has changed? It is not as though the foreign exchange costs are met by our German friends. Since 1980 they have been absolved of the offset requirement which was incumbent on them. Paradoxically on the autobahns one sees the Germans proceeding on their stately way in BMWs and Mercedes while the Americans and British, who are there to defend them, drive along in their old jalopies. The Germans spend about half as much as the British on defence as a proportion of GNP.

I am suggesting only that the balance between the offence and the defence is changing in favour of the defence with precision-guided weapons, as my hon. Friend the Member for Bexleyheath pointed out. The helicopter used against armoured vehicles is especially effective. We no longer have a conscript army as we did when we undertook the Brussels treaty commitment. There is a baggage train of families to maintain. One need only read the National Audit Office report "Costs and Financial Control of British Forces in Germany" to realise how expensive that baggage train is. Furthermore, in peace-time these forces are stationed in the wrong place, so it will be difficult for our forces in Germany to get to the right place in time of war.

My right hon. and hon. Friends in Government should not eschew a review. There is nothing wrong in re-examining strategy as international affairs develop. In fact, it is the responsible and right thing to do. If my right hon. and hon. Friends bite the bullet, forget what they may have said in answer to the Select Committee and conduct such a review, they will conclude that three divisions in Germany are too much for the United Kingdom. We should do rather more at sea and in the air and with our intervention forces. If we reduced our forces to a division west of the Rhine covering the clutch of Royal Air Force stations, Laarbruch, Bruggen and Wildenrath, that would be appropriate. We are not shirking our duty. We are one of the two European nuclear powers in the Alliance and shall continue to play a vital part.

7.38 pm

Dr. John Reid (Motherwell, North): I am grateful for the opportunity to contribute to the debate, first, because I know that many hon. Members wish to speak, and, secondly, because I cannot claim the comprehensive and detailed knowledge shown in many speeches, like that of my hon. Friend the Member for Sheffield, Attercliffe (Mr. Duffy).

However, I wish to raise once again the defence implications of the closure of the royal ordnance factories, especially, but not exclusively, that at Bishopton. The case has been put both inside and outside the House, most recently and with most passion last night by my hon. Friend the Member for Renfrew, West and Inverclyde (Mr. Graham) who has a direct constituency interest.

I have an interest, first, as someone concerned with the defence and security of our nation, and, secondly, as someone concerned with the defence of my nation's employment. Thirdly, like other hon. Members, I am concerned to see that fair play is given to the taxpayer over this. Finally, I have a particular interest as a Member of Parliament whose constituency depends on the steel industry, which, while it is less strategic in a defence sense than the ROFs, is strategic in an industrial sense, and is about to go through the same privatisation process as that faced by the royal ordnance factories. As a result of all these concerns, I find the Government's attitude towards defence in general, and the royal ordnance factories in particular, at best wrong in priorities, and at worst negligent of the national interest.

Over the past few years, the defence posture of the Government has been characterised by three main features. First, they have consistently shown a preference for nuclear weapons, even if it is at the expense of conventional forces—what Lord Carver referred to as their delusions of nuclear grandeur. Secondly, the Government have consistently preferred the encouragement of private gain even when, in the defence sector, it may be at the expense of national defence needs. Finally, they have shown an increasing preference for using the private market as the arbiter of national defence requirement when it should only, and can only, be determined by public discussion, public policy and public ownership.

The history of the Government is littered with examples of dereliction of duty, from the Westland affair to the sell-off of the royal dockyards. Nowhere is that dereliction more obvious, and nowhere is the concern felt more, than in Scotland, and nowhere is it more obvious than in the proposed closures at Bishopton and Patricroft. In yesterday's press we read even more horrifying reports that another 10 British Aerospace factories, including two royal ordnance factories, could be under threat. Thus, despite the assurances of Ministers at the time of privatisation, and despite all the promises and pledges of British Aerospace, Bishopton is to close.

The fact of closure is galling enough on its own, but the excuse for the closure makes it even more unacceptable and unpalatable. The reason given—the need to reduce so-called spare or surplus capacity—serves only to underline once more the necessity for public sector control of the royal ordnance factories. While they were in the public sector and operating in the broad national interest, the existence of spare capacity within the royal ordnance factories was not a handicap but a bonus. Reserve capacity was a requirement of good defence provision, not because of any sympathy or sentimentality towards the work force, but for the good, sound strategic defence reasons that a nation with insufficient means to increase defence production in an emergency is a nation incapable of responding to an emergency.

Nothing illustrated that fact better than the conflict in the Falklands. Whatever side we take in the debates on the merits of that war, there was surely something bizarre and demeaning about a maritime nation scouring the ferry and fishing fleets of Britain to muster an adequate naval force to send into action. Let us not forget that during that emergency the royal ordnance factory at Bishopton was working 24 hours a day, seven days a week to supply the additional requirements made necessary by that conflict.

With the ordnance factories, the Government are going down the same mistaken road they followed with the Falklands. It is not as if the Government were unaware of the danger to reserve capacity when they privatised the factories. The matter was specifically raised during the debate on the Second Reading of the Ordnance Factories

and Civil Services Bill, as far back as 16 January 1984, by my hon. Friend the Member for Kingston upon Hull, North (Mr. McNamara) and others. The answer from the then Under-Secretary of State for Defence Procurement now looks quite staggering in its complacency. The Minister said, when he was challenged about the threat to reserve capacity:

"There has been far too much unwarranted negativity".

Incidentally, he may not have been a good manager of the interest of the defence force, but he was an expert in the use of words. I was talking to some people from Bishopton and they are greatly relieved to know that they face not unemployment but "unwarranted negativity". The Minister said:

"There has been far too much unwarranted negativity of this sort in discussion of the future of the ROFs. The right hon. Gentleman suggested that, once privatised, the ROFs could not be relied upon to supply the guns, fighting vehicles and ammunition they have supplied in the past; that in a time of tension or war we in the Ministry of Defence would look to the ROFs to step up production and suddenly find that they were not there. That is patently absurd. The ROFs are not being sent anywhere."—[*Official Report*, 16 January 1984; Vol. 52, c. 101.]

Well, I have news for Ministers. If they continue their present course, the next time we have an emergency or, in the words of the Minister, in a time of tension or war the Ministry of Defence looks to the ROFs—like Bishopton—they will not find them. They are going somewhere. In private hands, they are going down the tubes. Ministers cannot say that they were not forewarned. The tragedy is that normally forewarned is forearmed. In the case of this Government, forewarned means disarmed.

All this might be understandable if there had been fair treatment of the taxpayer, but the reality is that British Aerospace profited by untold millions because of undervaluation of land alone.

There are those who believe in a conspiracy theory of history. I am inclined to attribute what has happened not to that, but to another theory of history, beginning with a capital C. Whatever the reason for it, there should have been some humility from Ministers last night. Instead, the present Under-Secretary of State for Defence Procurement boasted of his prowess at property management. If that is a manifestation of expertise of property management by the Government, thank God the hon. Gentleman is not my estate agent.

Even at this late stage, the Government have a chance to restore the faith of workers at Bishopton and the other factories and to secure a good reserve capacity on a sound basis for the conventional support of our armed forces. They owe that duty not only to the work force of Bishopton, but to the safeguarding of the defence of this country.

7.48 pm

Mr. Robert Hayward (Kingswood): I wish to deal with one or two points that relate particularly to my part of the country, but, initially, I shall comment on some of the contributions made so far. I find the contributions from hon. Members on the Opposition Back Benches far more honest than the contributions from hon. Members on the Opposition Front Bench. That is also true of the contribution from the Liberal Benches because, although the hon. and learned Member for Fife, North-East (Mr. Campbell), who is not in his seat at the moment, acknowledged that Trident would be in existence up to 1993, he did not say whether his party believed that that weapon would be used. His party leader has flatly refused to give an answer to that question when it has been put to him on a number of occasions on television. I therefore hope that, sooner or later, the Liberals will decide whether they would intend to use that weapon, as well as simply acknowledging its existence.

The hon. Member for Clackmannan (Mr. O'Neill) was challenged yesterday by my hon. Friend the Member for Bristol, East (Mr. Sayeed) about the level of expenditure to which the Labour party would commit itself. In reply, he said:

"I confirm the first question. I shall reply to the second question in the course of my remarks."—[*Official Report*, 19 October 1988; Vol. 138, c. 917.]

I sat through his speech, and I have read it in the *Official Report* twice since then and can find no attempt to answer the question from my hon. Friend the Member for Bristol, East about the amount of GNP that the Labour party would commit. I listened with interest to see whether the hon. Member for Rhondda (Mr. Rogers) would touch on the matter today, but we still have no indication of approximately what proportion of GNP the Labour party intends to commit.

There may be a vast range of opinion among Opposition Members as to how that money should be spent. On the one hand, we heard it stated honestly by the hon. Member for Liverpool, Walton (Mr. Heffer) and, on the other hand, by the right hon. Member for Dudley, East (Dr. Gilbert), who made an excellent contribution to the debate, but Labour Front Bench Members have at no stage given an approximation of the amount of GNP that the Labour party would commit. They reel off all the problems saying, "We haven't got enough frigates or ammunition. We have problems with helicopters, the Army and the Air Force", but there is no indication as to whether they would be willing to put in more money, the same amount of money, or less money than the Government are currently doing. It is patently dishonest to list that catalogue of questions without attempting to deal with that general financial point.

I wish to mention two specific points about which there have already been a number of comments. I agree with the comments yesterday of my hon. Friend the Member for Weston-super-Mare (Mr. Wiggin) about the Territorial Army. I have been in correspondence with my hon. Friend the Under-Secretary about the Territorial Army because, although I appreciate the efforts made by the Ministry of Defence to recruit people into the Territorial Army as an extra reserve of expertise that we genuinely need, I am concerned about the demands being put on individuals who join the Territorial Army. I believe that the Minister has been advised about this matter. I do not expect a reply this evening, but I am willing to discuss the matter with him later.

The impression is given that people recruited into the Territorial Army are told that they will be required for a certain number of days. The minimum is 27 days, plus at least six weekends. From my conversations with a number of people involved in the Territorial Army, it has become clear to me that that is not the expectation of the Territorial Army. One of those people said to me yesterday, "If you don't do at least one weekend every month, then you are useless to the Territorial Army." It was clearly indicated to the person about whom I wrote to the Under-Secretary that he would be required for at least

[Mr. Robert Hayward]

16 weekends a year and that anything less than that would not be of any major benefit to the Territorial Army. I checked that with other people whom I know belong to the Territorial Army and they all gave that clear indication.

It is therefore hardly surprising that, if people are recruited into the Territorial Army, expecting to give six, seven or eight weekends a year, which is quite reasonable, and then find themselves confronted with substantial pressure from officers in the Territorial Army to attend for 16 or 20 weekends a year, they find that demand too great and therefore give up. That partly explains the high turnover that we are currently facing. If we resolve that problem, many people currently leaving the Territorial Army will be willing to stay and those who have left would rejoin.

The other comments that I wish to make relate to recent purchasing decisions. I particularly welcome the commitment made yesterday by the Secretary of State to the European fighter aircraft. The Under-Secretary will be well aware of the importance of that to Bristol, like the importance of the Tornado programme, in terms of engines, and we greatly appreciate that. Much comment has been made about helicopters. Like my hon. Friends the Members for Bexleyheath (Mr. Townsend), for Ruislip-Northwood (Mr. Wilkinson) and for Weston-super-Mare, I am somewhat confused because I do not believe that the Ministry of Defence knows what it wants to do with helicopters. As my hon. Friend the Member for Ruislip-Northwood said so lucidly, aspects of defence policy are changing and, therefore, the requirements for tanks, helicopters and other armaments.

I particularly welcome the decision announced during the summer recess regarding the RTM 322 engine and the EH101 helicopter. I hope that that will go a long way towards guaranteeing sales of that helicopter, not only in Europe, but in other parts of the world. Like other hon. Members, I am not sure that the Ministry of Defence has a clear understanding of what it wishes to do with helicopters. I am not a military expert. I am not able to say whether it should do X, Y or Z, but the lack of clarity of policy comes through over and over again in all the documents with which I have been confronted.

There is a time limit for speeches in this debate. I hope to give extra time to other hon. Members and will not, therefore, comment on the royal ordnance factories, about which a number of hon. Members have spoken. However, I hope that my comments are of help in respect of the Estimates, which I commend to the House.

7.56 pm

Mr. Tony Benn (Chesterfield): Many important questions have been raised in the debate, but the main one is, "Are we right to tax the British people by £19 billion, which is £441 per elector, for the purposes set out in the defence White Paper?"

There is some disagreement, which I have tried to follow, between the two Front Benches about the balance between conventional and nuclear forces. I find no great disagreement—indeed, a wide measure of agreement—between the two Front Benches about the level of defence spending. I listened very carefully and I too picked up the idea that the Opposition were saying that more money should be spent on defence. If this debate were confined to that narrow question, it would not reflect the deeply held views of those people living in this country who believe, as I do, that the time has come for a much bolder, more imaginative and far-sighted review of Britain's defence and foreign policies.

I make no complaint, because we are not allowed to do so, that the amendment tabled by me and my hon. Friends has not been called for debate and will not be voted on, but that does not prevent me from referring to it. We said that our group of hon. Members

'declines to accept the Defence Estimates; believes that the Trident and new nuclear weapons programmes should be cancelled and the finance saved diverted to health, education and housing budgets; further calls for the removal of nuclear bases, weapons and facilities from Britain and an end to all participation in any nuclear programmes or systems; further resolves to reduce arms expenditure by £7 billion to the same level as other Western European countries and to divert the money saved to social spending and the arms manufacturing facilities released to socially useful production; and believes that reduction in arms spending will help to promote peace and the elimination of poverty and hunger throughout the world.'.

The thinking behind that was reflected clearly and overwhelmingly, not only at this year's Labour party conference, but at a succession of Labour party conferences. It has been put before the electorate and all of us in the House have been party to manifestos that have contained some or all of those proposals, but the real argument is about whether we should look again at the whole basis on which we propose to tax the British people.

The time has come to re-examine six assumptions upon which the foreign and defence policies of all Governments have been based since 1945. I say "all Governments" because, in a strange way, this is not in any sense a party matter. These assumptions are, first, that there is a Soviet military threat; secondly, that the United States, as the leader of the Western Alliance, has a world policy designed to uphold democracy and human rights all over the world; thirdly, that nuclear weapons make us safer; fourthly, that Britain has an independent deterrent; fifthly, that we can well afford to pay the cost of these arms; and finally, that our defence policy has protected and nourished democracy at home. All these assumptions need to be re-examined, for I believe that they are significantly false.

First, there is the issue of the Soviet military threat. Does anyone in this place seriously believe that, while Mr. Gorbachev is wrestling with long-overdue reforms in the Soviet Union, the Red Army is planning to land in Britain or to attack western Europe? I shall turn to what the public think about this because there are means of knowing that. The Soviet Union lost 20 million people during the second world war, and I am of a generation that will never forget that the liberty that we now enjoy was won in part by Russian blood in defence of their own territory in 1941. The purpose of the bombing of Hiroshima was not to bring the Japanese to their knees. I learnt when I was in Japan that the Japanese had offered to surrender weeks, if not months, before the bomb was dropped. It was dropped to warn the Russians.

The reason that Mr. Gorbachev is credible now is because—*[Interruption.]* The hon. Member for Tayside, North (Mr. Walker) laughs, but he should read the record of the tribunal trying the Japanese leaders after the war in Tokyo. The Japanese offered through the Swiss to surrender months before the atomic bomb was dropped. The only condition that they laid was that Hirohito should remain. The hon. Gentleman should read the record

before doubting the accuracy of what I am saying. I discovered the fact only five years ago, but it is all on the record. The great theory that the bomb was used to save about 250,000 American lives is not true. Instead, it was used to tell the Soviet Union that we, the West, had an overwhelming weapon.

Mr. Gorbachev is credible because he says that he wants to cut defence expenditure to improve the standard of living of the Russian people.

Mr. Mans: Will the right hon. Gentleman give way?

Mr. Benn: I shall not give way to the hon. Gentleman because of the time limit.

The second argument is that the United States advocates and upholds democracy and civil rights throughout the world. I hope that I shall not be misunderstood when I say that America is an empire as Britain once was. America, in Vietnam, Cuba, Chile, Grenada, and in its relations with Franco and the Greek colonels, was not upholding democracy. Instead, it was protecting its world interests.

I was born in 1925, when about 20 per cent. of the world's population was governed through this Chamber. This place was the heart of the British empire, but we now live in a far-flung colony of the American empire. Those outside the House know this. The fact that we have no vote in the American presidential elections is a reminder of our colonial status.

The third argument—*[Interruption.]* Conservative Members laugh at what I am saying. They should remember that when we governed India the Indians had no say on how they were governed from this House. When Mr. Gandhi came to London in 1931, he was asked what he thought of civilisation in Britain. He said that he thought that it would be a good idea. That was a sign of the anti-colonial pressures of the time. The House must face facts.

The third argument is that nuclear weapons make us safer. After Chernobyl and the clear risk of accident, that is an unsupportable point of view. I say to my hon. Friends who contend that we must have the bomb because the Russians have it that when a Labour Prime Minister decided that we should build the bomb, the Russians did not have it. We decided to build nuclear weapons when the Soviet Union did not have them. That argument is a part of the history of the post-war years.

Fourthly, do we have an independent nuclear deterrent? We do not. We do not make nuclear weapons. The Americans supply them and refurbish them. Sir Frank Cooper was the permanent secretary at the Ministry of Defence and he must know more about these matters than anyone else. In the course of the Zircon film he said that we could not fire Polaris without the American satellite system. That was the secret, or the breaking of it, that made the Government wish to ban the film. Sir Frank made it clear that the Zircon satellite was an attempt to replace or supplement the American satellite system. The price that we paid for that, as we heard yesterday, was American control of the British security service and the situation that now prevails at GCHQ.

Fifthly, can we afford an independent nuclear deterrent? The answer is that we cannot. I am one of the few Members who sat in this place to listen to Aneurin Bevan's resignation speech. He resigned in 1951 over the high defence budget, which was at the expense of the welfare state. The cost is massive because it involves 60 per cent. of our scientists and engineers. If we compare that with the average level of expenditure in Western Europe, £7 billion more is spent here than by our allies, who are equally keen to defend their countries.

The transfer of resources would enable us to meet pressing needs. Does anyone think that more people will die in Britain as a result of the Red Army landing here than as a result of AIDS, cancer or heart disease? The people know that the nation's health is a national interest and that it is being starved of resources in part for the purpose of maintaining the defence budget.

Finally, is democracy protected by the present system? It is not. Militarism destroys liberty or erodes it. Let us consider, for example, the role of James Angleton in "Spycatcher", who came to London and told MI5 that the then Labour Prime Minister was a Soviet agent. There was the former Secretary of State for Defence who ordered Cathy Massiter to tap the phones of CND. These examples tell us that the military state infringes domestic liberty. The war in Ireland is a most vivid example.

What do the public think? There are those who say, "Mr. Benn, what you say may be right, but what do the public think?" I am not a believer in opinion polls but they are available for examination. The latest opinion poll findings tell us that only 9 per cent. of the British people think that a Soviet attack is likely. When it comes to causes of war, 58 per cent. of the British people think that the cause may be nuclear attack by accident. It seems that 6 per cent. think that the likely responsibility for such a war would rest with the Soviet Union, while 27 per cent. think that it would be with the United States. These are not hard Left arguments. I am referring to the figures that have been published by Dr. Gallup, who is no particular friend of mine.

It appears that 41 per cent. of the British people have confidence in the world role of the Soviet Union while only 24 per cent. have confidence in the United States. When it comes to desire for world domination, 17 per cent. consider that to be the main interest of the Soviet Union and 32 per cent. think it to be the main interest of the United States. When asked about credit for the disarmament agreement—the INF—only 10 per cent. think that the United States should get the major credit——

Madam Deputy Speaker (Miss Betty Boothroyd): Order. The right hon. Member has precisely 20 seconds left.

Mr. Benn: I appreciate the time constraint that is upon us, Madam Deputy Speaker, and I shall draw my remarks to a conclusion.

For 40 years the cold war has dominated the politics and economics of the House and the country. We have hope in 1988, and it must be our task to seize the possibility of looking to the 1990s and the next century so that we can reallocate the money and the skills that are wasted on weapons of mass destruction to create the means of life for those who are condemned to die because resources are being wasted instead of being made available to meet their needs.

For these reasons I shall be voting against the Defence Estimates tonight. I believe that they represent a burden that the British people should not pay, and a burden that world events make it unnecessary for us to pay.

8.9 pm

Sir Hector Monro (Dumfries): If there were time, I should take great pleasure in shooting down in flames the right hon. Member for Chesterfield (Mr. Benn) point by point. Will he never learn? Three general elections have not shown him what the British public want. He is not the only person to be out of step with the British nation. That highlights how fortunate we are to have my right hon. Friend the Secretary of State for Defence and his ministerial colleagues, who are pursuing sensible defence policies, cutting out waste and maintaining security for Britain now and in future.

I support the efforts that my right hon. Friend the Secretary of State is making to persuade the Treasury, and perhaps the Star Chamber, to maintain our defence spending, or perhaps to increase it. We must be careful about expenditure, but defence spending is falling behind other areas of spending and there is much to do if we are to support the United States and NATO and look after our own responsibilities.

In exchange for this support for the Secretary of State I ask him to make one or two small switches of emphasis. We should move marginally away from our hi-tech weapons, some of which are of doubtful effectiveness, towards personnel. Recruiting will be tight in the 1990s; we must retain what we have; we shall have to compete in a difficult market for new recruits. Pay is not the essential aspect. Conditions of service and fringe benefits are. We must examine them carefully and help our forces in every way. Housing is always a prominent issue among service men. They all want to own their houses, but need to know where and how they can do that on mortgages. Our service men frequently have to move, and hence their children must frequently change schools. They need support for that. All these things are terribly important. We always hear—rightly—from Ministers about how they are trying to help with the simplification of service life, but that always seems to be about to happen tomorrow. When will it happen today?

The second tiny switch of emphasis has to do with the value for money that we obtain from our reserves. They are extremely effective and cost effective, and a small change in the amount of money available to them would be highly beneficial. Many hon. Members have spoken about the TA, the RNVR and the Royal Auxiliary Air Force and the Home Service Force, together with the cadets in those forces. They deserve excellent equipment, the best facilities and a proper promotion structure in each service. Too often experienced officers in their forties find they have nowhere to go.

The great initiative of recent months under Brigadier Tommy Macpherson to highlight to the nation the importance of our reserves and their value to the MOD is highly commendable, and I hope that it will be successful with our employers, who have a significant part to play in the promotion of our reserves.

I am delighted that my hon. Friend the Under-Secretary of State for the Armed Forces is coming to the south of Scotland next month to talk about low flying, which is an important issue there. I am sure that he will strike the right balance and explain how essential it is for Royal Air Force pilots to maintain a significant level of low flying. The hon. and learned Member for Fife, North-East (Mr. Campbell) mentioned how important it is to maintain the search and rescue facility at Leuchars for central Scotland. It would be inconceivable if 22 squadron were removed from Leuchars or 202 squadron from Lossiemouth. I am quite sure that the distinguished Air Officer (Scotland and Northern Ireland), Air Vice-Marshal David Brook, is fighting his corner hard over what is an important issue for Scotland—not only for the services but for the community at large. My hon. Friend the Member for Tayside, North (Mr. Walker) and others—and I—have all paid tribute to the search and rescue service.

Turning to Royal Ordnance, I am as concerned as anyone else about the closure of Bishopton, because of the large number of lost jobs that will ensue in an area of high unemployment. I want to discuss the knock-on or knock-off effect that that will have on the Royal Ordnance factory at Powfoot in my constituency, which is managed effectively and efficiently by ICI Nobel. It has a full order book and is the only factory in the United Kingdom manufacturing tubular propellant for all British small arms ammunition. It was the subject of a five-year agreement between RO and the MOD. I stress that it is the only indigenous provider of the propellant that we require for our small arms ammunition.

In 1985 Royal Ordnance gave ICI notice to quit. I went to see my right hon. Friend the Member for Henley (Mr. Heseltine), then Secretary of State for Defence, and he gladly gave me a stay of execution into the 1990s, which was good news. This year, however, Royal Ordnance said that it would remove the production line in 1990 to Bishopton. Then, a few weeks ago, came the announcement that Bishopton was to close. Where is this production line to be taken now? It is quite wrong that we should buy the propellant that we need from America or the continent—for example, from Czechoslovakia, where it is manufactured with Communist Government subsidy —given that it is a crucial powder for our ammunition. Will the Minister examine the matter, not in terms of Royal Ordnance's rights as a company, but in the light of the factory's being the only supplier of this gunpowder in this country. Surely we cannot go into the 1990s without it. I hope for a response from the Minister as soon as possible.

A further knock-off effect will be that if we do not have Powfoot we shall not need to make nitrocellulose at Dumfries, which will mean a further loss of jobs. Royal Ordnance must not lose sight of its reponsiblility to the community as well as to the MOD and its shareholders. I am not climbing on the bandwagon of those who complain about property development. RO is jolly lucky if it can sell Powfoot or give it away after it has been sterilised following years and years of high explosives production.

I am delighted with the firm policies developed by my right hon. Friend for this country. He is on the right lines and has my entire support. I hope that he will look into support for personnel in the services, at their conditions of service, and will give me a favourable reply on what is to become of the unique production line in my constituency which now seems severely threatened and stands to lose 140 jobs. I hope that my right hon. Friend will be able to reverse that decision.

8.18 pm

Miss Joan Lestor (Eccles): The hon. Member for Dumfries (Sir H. Monro) nicely opened the way for me to follow him by discussing the Royal Ordnance factories.

Today, a lobby of working men and women from Bishopton and Patricroft in my constituency was here. They came to protest at the closure of the factory, pointing out the effect that the loss of their jobs would have on communities that already suffer, in many cases, from unemployment that is well above the national average.

The workers also asked, and I repeat their request, for an inquiry by the Public Accounts Committee into the background of the privatisation of Royal Ordnance and what has flowed from that. If the speculation in *The Independent* and the fears that were first expressed in the MOD's report about the sale of the Royal Ordnance factories, which was commented on by the Comptroller and Auditor General, is all wrong, the Government have nothing to fear. They will hold a public inquiry, we shall have egg on our faces and they will come out of it with no more stains on their rather spotty characters than they have now. I do not understand the resistance to such an inquiry. The disclosures since the leak during the week of the Labour party conference, where I first picked up the news on the television, have given people cause for concern about what is happening.

My concern about the background to the privatisation started some time ago. When I took over the Eccles constituency from Lewis Carter-Jones, he handed me a file on the subject. I also raised the matter with the Leader of the House, who was standing in for the Prime Minister on 11 February. I asked him to put pressure on his colleagues in the Ministry of Defence

"to answer the criticisms of the Comptroller and Auditor General about the privatisation of the Royal Ordnance Factory"

because the Minister had refused to answer them. I pointed out the cheapness of the way in which the deal was carried out, and the fact that

"dividends were waived to make the company more attractive and . . . the delay in the transfer of pension rights and redundancy pay made this whole operation exceedingly expensive."

The Leader of the House replied:

"I think that the hon. Lady misses the important point. The important point is that there were difficulties in the armament procurement industry. That industry will be much better under privatisation than it ever would under state control."—[*Official Report*, 11 February 1988; Vol. 127, c. 498.]

A few months later we were told, as the hon. Member for Dumfries stressed, that two factories—others have already closed—were to close. In particular, that at Patricroft is to be closed. There are grave doubts surrounding the background to this matter and the way in which the Royal Ordnance factories were sold off to British Aerospace.

Earlier, one of my hon. Friends mentioned the soothing noises that were made by the Ministry of Defence. I have a letter dated February 1987 from Lord Trefgarne to Lewis Carter-Jones stating:

"Whilst your constituents may be concerned about the introduction of competition into the procurement of ammunition, Royal Ordnance with its long history of producing these stores will stand a good chance of winning the orders for our further requirements."

Lord Trefgarne went on to comment on how well Royal Ordnance was already doing. Soothing noises were made, and I can refer to another letter dated 30 November, which made similar soothing noises.

When the leak finally came and the unions took up the matter, they were told that production at the closed Royal Ordnance factories would go to other Royal Ordnance factories. However, we now know that the company is looking both nationally and internationally for other plants. Three joint ventures are planned. I should like an assurance that none of the work from Patricroft or Bishopton will go to the planned joint ventures in Chile, Brazil and Kentucky. If we are to have an armaments industry, and if we are to supply our defence forces, it appears, if those reports are true, that we shall be moving production to non-NATO countries where there is no agreed quality assurance in respect of propellant and ammunition standards. If we are saying—and of course we are not—that an arms industry is no longer needed in this country, the talents of the highly skilled men and women who have been employed in it should be applied elsewhere. There is plenty of social and other need in the community which those skills could be used to meet. But no, we now find that those goods are to be bought elsewhere.

My constituency has an above average level of unemployment. It has been starved of investment and of growth, and over the years its traditional industries have declined. We had a spark of hope when £160 million was invested in the Trafford park development scheme, which begins just 100 yards from the Royal Ordnance factory that is to be closed with the loss of more than 1,000 jobs. It makes a nonsense of putting money into a development scheme in the hope of producing more jobs when at the same time the door is closed on more than 1,000 jobs nearby, in a situation that has very shady surroundings.

Skills there are to be left lying dormant. The knock-on effect on the community will be colossal in respect of both employment and local trading losses. Families will be plummeted into poverty. More and more youngsters in that area are being left without hope. They have looked to Patricroft and other places for some form of apprenticeship and for hope for the future. As was said by one of my hon. Friends yesterday in respect of Bishopton, the Royal Ordnance factories have become family concerns employing fathers and sons, and so on. Already large numbers of young people in my constituency have been left without hope for the future.

We shall soon hear Conservative Members saying that those unemployed could work if they wanted to do so and that they are not getting on their bikes looking for jobs. The truth is that there is no more work available in my area. If that industry had declined, we would want to use the skills of those people in some other way. However, that is not the case, because that production is being sent elsewhere. People are being denied the right to work, and we are robbing our defence industry of assured equipment quality.

As far as we can tell, British Aerospace is making a financial killing by selling out the jobs of my constituents. That is how we see it, and that is how the people of Eccles see it. That is how it is viewed by the people in all the areas affected. It is nonsense for the Government to shrug it off. Every Conservative Member who has spoken, with the exception of the hon. Member for Dumfries, has said, "It is a pity about the unemployment, but . . ." There should be no "but" about unemployment. I say again to the Minister that if the stories about the background to this development are wrong, if we are wrong, and if the unions are wrong, the Government have nothing to fear from an inquiry, because we shall be the ones made to look silly and not them. I urge the Government to think again.

8.24 pm

Mr. Neil Thorne (Ilford, South): I shall not attempt to go down the path followed by the hon. Member for Eccles (Miss Lestor) in respect of the Royal Ordnance factories, particularly with reference to that in her own constituency, except to say that it is vital that a large number of alternative industries are available in towns so that they are not dependent on one particular type. That is certainly the case in Eccles. Corby is a marvellous example of a town that was wholly dependent on one industry, but which is no longer so dependent—and it is now a boom town. I hope that the hon. Lady's constituents will find that in the *not-too-distant future other employment* opportunities are made available to those who are dedicated and who wish to use their skills. Therefore, I am not as pessimistic as the hon. Member for Eccles.

I thank my hon. Friend the Minister of State for his mention of the work and assistance given by the Royal Army Medical Corps following the Dharan earthquake. The services provide important assistance in emergencies, which is often not appreciated or realised by the agencies that demand that we provide more aid. We have those forces and resources readily available in many parts of the world. It is important that we should be able to provide assistance at short notice. That is what happened in Dharan, and I am delighted that our services did so well there. Complete surgical teams were promptly ferried out from Hong Kong, supplemented by experts from this country, and a permanent base was established. I hope to visit Dharan next month, when, I understand, the services there will be running down because they are to be relocated. Had the earthquake occurred six months later, it would have been much more difficult to provide assistance. I hope that in reviewing the services that the Army was able to provide my hon. Friend will seek to ensure that there is some continuity and that those people who have settled near Dharan will not be left without medical cover of the kind upon which they have come to rely for such a long time, when the British Army moves its Gurkha recruitment base, as it plans to do in the next few weeks.

Under the same heading, we must also give credit to the work of the Royal Navy after the recent hurricane in Jamaica. It was able to send in a patrol vessel and to provide substantial assistance at short notice. Such help does not appear in any acknowledgement of the aid that we provide. A number of other countries provide more aid in pounds, shillings and pence, but they do not have on hand the type of services that we can provide in emergencies.

The second point I wish to address concerns our reserve forces. Other hon. Members have mentioned the extremely good value for money that our reserves represent. I recall that the last time a calculation was made at my request the cost of providing a reserve soldier was only 10 per cent. of that of providing a regular soldier because of the extra provision made for accommodation, pensions and education.

Therefore, reserve soldiers represent extremely good value for money. It is not possible for them to take over completly because a minimum number of regular soldiers must always be provided to fulfil the role of the regular forces. All through our history, over many hundreds of years, the reserve forces have had an important role to play. However, because of our NATO commitments, we have come to expect a very great deal from them. We have been using them as a trade-off because of the lack of national service, and that has put an enormous strain on the lives of those part-time soldiers, sailors and, in some cases, airmen. That is one of the main reasons why we are having difficulty in retaining recruits.

Plenty of young men and women are able and willing to offer their services, but often they sadly find that the commitment does not fit in with their domestic lives. We must do some serious thinking about that, because those young people are vital if we are to ensure that we need not call upon a national service, which most regular forces would regret.

One aspect to which we do not pay enough attention is the social side, particularly for junior ranks. The training required is often onerous, because the soldiers and their commanders are of course anxious that their service should reach virtually "regular" quality. I well understand that the commanders want to achieve that standard, but it often means that families are neglected. We must try to make up for that by ensuring that there are extremely good clubs for junior ranks, particularly for the benefit of their wives and families. In my view, the reserve forces should have the best club in any neighbourhood, without exception. I think we should then find that many who have passed through their service would wish to contribute by coming back to help with the facilities.

I know that time is limited and that many others wish to speak, so I shall not detain the House for long, but I should like to raise one or two other matters. The first concerns helicopters. I know that 25 utility helicopters have been ordered. Continuity is important to the helicopter industry if it is to exist. The helicopters were originally due to start being delivered in the early 1990s, but I understand that delivery may now be put back to the mid-1990s. If that happens there will be further employment repercussions, for without continuity it is impossible to keep together the skilled work forces that are so essential. I hope that my hon. Friend the Under-Secretary will have something to say about that later.

There is also the question of the offset for the Boeing AWACS deal that was done in 1986. Let me refresh my hon. Friend's memory. It was agreed that Boeing would provide new expenditure of 130 per cent. of the cost of the AWACS, which would have meant a total expenditure in this country of £1,300 million. I should be grateful if my hon. Friend would say a little about that. I should like to be reassured that things are going well and that progress will not be too prolonged.

I congratulate the hon. Member for Stockton, North (Mr. Cook) on joining the Opposition Front Bench team, and thank him for the kind remarks that he made about me yesterday in connection with the armed forces parliamentary scheme. I am delighted that everything in which he has been involved has been going so well. It is possible, of course, that his appointment had something to do with it; nevertheless, it is very good news. I hope that the scheme will be expanded, and that other hon. Members on both sides of the House will have an opportunity to participate when it is launched officially later in the year.

In this connection I am most grateful to my hon. Friend the Parliamentary Under-Secretary of State for all his help and encouragement.

8.34 pm

Mr. Harry Cohen (Leyton): The glossy cover for the Defence Estimates, with three nuclear submarines in a wonderful setting, shows how much the Government romanticise and glorify the nuclear arms race. Nuclear weapons are the Government's steroid fix. They would fail any drug test because they are addicted to the magic mushroom—the nuclear one. The Prime Minister wants every new one that is going: Trident, battlefield nuclear artillery, the Army tactical missile system, short-range nukes to follow on from Lance, the replacement of free-fall bombs—TASM—nuclear depth charges, submarine-launched cruise missiles, more United States F111 hydrogen bombers, and the air-launched cruise missile to follow. The Prime Minister calls it modernisation, but it is cheating on the spirit of the INF agreement. She is rearming when the people of the world want disarmament.

This new arms race, embodied in the Defence Estimates, goes against the grain of Britain's and the world's interests. A good deal of environmental pollution is nuclear. Chernobyl and Sellafield are examples of the abysmal record, and we can now add another example, that of Fernald in Cincinnati, Ohio, where thousands of tonnes of nuclear waste have been released into the atmosphere and the water supply in the production of material for nuclear weapons. The Government are at present sitting on a report of significantly higher than normal leukaemia and other cancer clusters at Aldermaston and Burghfield.

Tackling the poverty and famine that so scar the face and conscience of the world is not compatible with massive arms expenditure. The economies of the super-powers are overburdened. What perestroika is all about is to get money to the people, the consumers, in the Soviet Union, but that cannot be done while there is such high spending on defence. The United States is one of the biggest debtor nations of the world, and its defence commitments contribute to that.

There is also the serious danger of nuclear proliferation. The Government's flying of plutonium to the Japanese is a scandal if ever there was one. I was on a delegation led by my hon. Friend the Member for Islington, North (Mr. Corbyn) to see the Iraqi ambassador about Iraq's use of chemical weapons. He virtually said to us, "If we had nuclear weapons, we would use them in defence of our country. You in Britain have them; why shouldn't we?" Government practice is encouraging that sort of attitude. Instead of getting out of the nuclear arms race and encouraging others to do so, we are moving more and more to politically usable nuclear weapons.

The MOD is on record as saying that nuclear weapons can be used

"to demonstrate that NATO has the capability and will to use its nuclear weapons in a deliberate, politically controlled way . . . (with the objective of restoring deterrence by inducing the aggressor to make the decision to terminate his aggression and withdraw)".

Presumably that would justify the use of nuclear weapons against Argentina in a future Falklands conflict.

The new nuke-speak refers to the "single shot" or "selective strike". The Prime Minister is aiming towards another Hiroshima, or perhaps a future attack against a troublesome Third world nation. That would truly be a third world war. The Government even contemplate the use of Trident—the equivalent of 2,000 Hiroshimas, a global orgy of world death including our own.

Trident is not independent: its missiles are targeted and serviced by the United States and are under NATO—in reality, US—control. It is a potential first strike weapon. Trident's use, and our obliteration as a consequence, is in reality in the hands of the United States President, perhaps even Dan Quayle, who, in his inexperience, may be tempted to use it in the European theatre while he stays in his bunker avoiding the draft, so to speak.

The Foreign Secretary talks of Trident being an irreducible minimum deterrent, but when he is asked to define "irreducible", he says that it relates to what the environment has to face. I will tell him what the environment has to face. It is the super-powers reducing their nuclear weapons. So why are the Government going for the massive increase that Trident is all about? They even refuse to put it on the negotiating table. The Government's stance is:

"no further reductions in nuclear weapons in Europe until imbalance of conventional forces has been removed and a global ban on chemical weapons achieved."

What a foolish set of conditions. There should be simultaneous negotiations on all three aspects. That condition amounts to a block on further nuclear disarmament.

In their evidence to the Select Committee on Foreign Affairs the Government talk of

"the need for residual force entitlements to remain at, or near, current NATO levels."

Again, that is the minimum necessary. It says that after reductions residual ceilings will have to be near or at the current NATO force levels. The Ministry of Defence is blocking serious negotiated reductions by saying that it will not make any. That is the MOD's perpetual bleat, despite the opportunity for substantial reductions on both sides. One of those opportunities is in conventional forces, where there is a great opportunity for reductions.

A West German paper entitled "Security for Europe" talks about a phased reduction in tanks coming down from about 80,000 to 10,000 on each side by the year 2000. That would be an asymmetrical phased reduction. Front-line strike aircraft and helicopter gunships would be cut to an equal ceiling of 500 on each side. Then it says that we should reduce the armed forces and their associated armaments by exchanging military data, by mutual at-site inspections in the process of verification, and by reducing the number of troops and officers in Europe by half, with either totally demilitarised zones or at least partially demilitarised zones where the most offensive and dangerous weapons are taken out. It also talks of confidence-building measures so that we set up a European military danger reduction centre of the sort that was agreed between the United States and the Soviet Union in September 1987. We could perhaps set up international fax hot lines. One has been in existence between the United States and the Soviet Union since 1963.

In addition, there need to be measures to avoid a technological arms race. That is the basis for negotiation which should be actively pursued by the Government to bring down enormously our defence costs and those of the world.

In conclusion, I recommend a pamphlet produced by Labour Action for Peace entitled "Welfare or Warfare? Cutting the cost of militarism". It talks about how the cost has increased 28 per cent. in real terms under the Government. Since the war, £240,000 million has been spent on war preparations. It describes how we

[Mr. Harry Cohen]

consistently spend more than our industrial competitors and how our military commitments overseas plunge us into debt on our balance of payments. It also points out that, if we cut defence spending to the level of Japan or Germany or other of our competitors in western Europe, £6,000 million a year would be released for spending on civilian industries, health, education and other welfare services.

That is the direction in which we should be going. It is time that we turned back those high defence costs and made Britain, Europe and the world a safer place.

8.44 pm

Mr. Edward Leigh (Gainsborough and Horncastle): The hon. Member for Leyton (Mr. Cohen) is a likeable chap but his speech was absurd. My right hon. Friend the Prime Minister does not want any weapon systems that are not strictly necessary for defence. She does not want to use nuclear weapons, but it is her public pronouncement that she would use them if necessary which prevents not just nuclear war but all war. That is a fact and the hon. Gentleman cannot escape it.

This debate has been characterised by some interesting speeches from the Labour Back Benches. It has also been characterised by a speech from the hon. Member for Clackmannan (Mr. O'Neill), notable for what it did not say rather than for what it did.

The right hon. Member for Chesterfield (Mr. Benn) is an honest man. He represents the "peace at any price" movement in the Labour party, but at least he is honest. The right hon. Member for Dudley, East (Dr. Gilbert) is honest. He represents the "peace from strength" movement in the Labour party, although I question whether it is still a movement. I suspect that it is a dwindling band of people.

But the hon. Member for Clackmannan, who speaks on behalf of the Labour party, seems to represent the "peace at any price unless it might lose us the next general election" movement within the Labour party. He spoke for 50 minutes. His speech was masterly. He dealt with a number of interesting issues which were not central to what the House should be talking about. He did not touch at all upon nuclear strategy, on which I am sure the House would have wanted to hear his views. When I pressed him all he said was:

"I am whole-heartedly behind the present moves to reduce the threat of nuclear war on the continent and throughout the world."—[*Official Report*, 19 October 1988; Vol. 138, c. 918.]

What does that mean? It means nothing and it was designed to mean nothing. That statement, which I enticed, was the only statement made by the hon. Gentleman on nuclear policy. It could have been made by the right hon. Member for Chesterfield or my right hon. Friend the Prime Minister. It is meaningless.

The hon. Member for Lewisham, Deptford (Ms. Ruddock) also made an interesting speech. We all know that she used to lead the Campaign for Nuclear Disarmament. Her speech was also like the dog that did not bark in the night. Is she ratting on her unilateralism? Why did she not mention it? She is rather like a person who has wandered into a desert, sees a mirage in the distance and rushes helter-skelter for it. The desert that she has wandered into is the unilateralism that she espouses and which she realises, as a shrewd and ambitious politician, is losing the Labour party election after election. The mirage to which she and the whole Labour party are rushing towards is the belief that recent developments in the Soviet Union, glasnost and perestroika—those expressions that have a cosy Slavic ring about them—have fundamentally changed the ball game when it comes to defence policy.

When I listen to the Labour party I am reminded of a story that I was told recently in Lincoln cathedral of the rabbi and the poor man. The poor man goes to the rabbi and says, "Rabbi, rabbi, how can I live in dignity with eight children in two rooms?" The rabbi says, "Go out and bring your cow in from the field and you will live with dignity." He does it and things get worse. He goes to the rabbi and the rabbi tells him to bring in his chickens. Things get worse. The rabbi tells him to bring in his pig. Things get even worse. The poor man goes to the rabbi and tells him, "Things are desperate." The rabbi tells him, "Go back to your home. Take away the cow, chickens and the pig." The poor man comes back and says, "Yes, rabbi, things are perfect. I can live in peace and dignity."

Why is that relevant? It is simply because, like the poor man in that parable, the Labour party in the shape of Ernie Bevin in 1948 said that such had been the violations of Yalta by the Soviet Union that we had to form NATO. For 40 years violation after violation is heaped upon Europe. The Prague spring, Hungary—*[Interruption.]* It is no good Labour Members jeering. This is what lies behind the need for a strong defence policy. Finally, those developments culminated in the invasion of Afghanistan and the unilateral deployment of SS 20 missiles without provocation targeted on western cities. Those missiles are now being withdrawn, thanks to the wise statesmanship of my right hon. Friend the Prime Minister and President Reagan. Incidentally, the hon. Member for Deptford made an extraordinary comment on that yesterday.

The Soviet Union has withdrawn from Afghanistan —no thanks to Mr. Gorbachev but thanks to the brave resistance of the Mujahidin, resourced by western nations. Just because those two developments have taken place, like the poor man in that parable the Labour party says that all is now sweetness and light.

But what is the true test of detente? What is the true test of what is happening in the Soviet Union and Eastern Europe? Has the Berlin wall been taken down? Is there freedom in Prague? We were reminded only yesterday of current troop strengths. The internationally respected International Institute for Strategic Studies reminded us that the Soviet Union is not reducing its conventional forces in Europe to produce the reasonable sufficiency that is required for peace. It reminded us that NATO countries have 22,000 tanks and the Warsaw Pact 53,000. In terms of artillery, NATO has 10,000 and the Warsaw Pact 35,000. NATO has 4,000 combat aircraft, whereas the Warsaw Pact has 7,000. NATO has 864 helicopters, whereas the Warsaw Pact has 1,165.

The recent developments in the Soviet Union have changed nothing. In many ways, things are worse than they were in the late 1970s. I say to my right hon. and hon. Friends on the Treasury Bench, and in particular to my right hon. Friends at the Treasury, that we would give the wrong message in the current climate, and during this delicate stage as the presidential election in the United States moves towards its climax, if there were to be a significant cut in the Defence Estimates and if they did not

keep pace with inflation. We have to keep on the plateau that was decreed when we formulated our NATO commitments.

My hon. Friends the Members for Weston-super-Mare (Mr. Wiggin) and for Northampton, North (Mr. Marlow) dealt with the tank issue. I do not believe that they were entirely serious when they said that the Chieftain tank should not be replaced. That would be absurd. By the year 2010 the Chieftain tank will be 50 years old. There has to be a replacement for it. I hope that my right hon. and hon. Friends on the Treasury Bench will bear in mind the serious logistical and manpower problems that would arise if a British tank were not ordered. It is unthinkable that a decision could be taken not to order a British tank.

I hope also that my right hon. and hon. Friends will deal with the problems that would arise if undue pressure were to be put on certain companies not to provide a British gun. The negotiations are at a delicate stage. I suspect that I am preaching to the converted on the Treasury Bench, but British companies would be very seriously affected if the policy were to change, particularly with regard to exports to the middle east.

As for land disposal, an editorial in *The Daily Telegraph* this week pointed out that the Ministry of Defence is the third largest landowner in the country. It has about 3,000 sites. The Ministry needs to do much more about realising its precious assets. If necessary, a Minister must concentrate full-time on realising them. I have seen an example of the non-realisation of assets in my constituency at Hemswell. The saga has continued for about 10 years. Hemswell was abandoned by the Royal Air Force. Since then, very little has been done. Luckily, progress is now being made, thanks to free enterprise. RAF Binbrook, which the RAF is vacating this year, will provide the opportunity for a £100 million development of private housing. I hope that my right hon. and hon. Friends will grasp the opportunities that have been provided.

To return to my theme of peace through strength, if the viper withdraws its fangs the wise man does not lay down his stick. He does not throw it to the ground, as the right hon. Member for Chesterfield would do. Furthermore, he does not do what the leader of the Labour party wants to do—throw it to the ground and multilaterally offer part of it to the viper in return for one fang. Instead, the wise man adopts the statesmenship that has been followed by the President of the United States and the Prime Minister—to talk peace and modernise defences. As long as we have that, I shall have confidence in the Estimates and in the Treasury Bench.

8.54 pm

Mr. Bob Cryer (Bradford, South): The argument that we should negotiate from strength is very dangerous. It might be mirrored exactly by those in the Soviet Union who hold the same daft ideas as have been put forward today. They might argue, "We need more nuclear weapons in order to negotiate with Thatcher and her cronies."

The Tories are talking about a totally immoral and un-Christian threat of mass extermination. They rise to their feet when there are terrorist outrages in Northern Ireland and decry the loss of human life and limb. They do it time after time, yet tonight they are talking about the use of weapons that would destroy millions of men, women and children. The hon. Member for Gainsborough and Horncastle (Mr. Leigh) confirmed that the Prime Minister is prepared to use nuclear weapons for international policy purposes. That is outrageous. The argument is that we should never use them but that they are there. If, however, nuclear weapons are to be a deterrent, there must be an intention to use them whenever the chiefs of staff and the Prime Minister decide that it is right to do so. The threat of mass extermination, involving the possession and deployment of nuclear weapons, is immoral.

The Minister failed earlier to answer the question that I put to him. If, as the Government claim, Polaris has kept the peace, why are we embarking on a replacement for it that will be between four and 10 times more powerful, depending on the number of missiles to be used? The expenditure on it is massive. Prestige—nothing else—is involved. The Government are spending £11 billion on Trident, yet some of their poodles in Bradford are to sack 9,000 workers just to save £3 million or £4 million. What are the correct priorities—to preserve jobs and services in Bradford or to spend £11 billion on producing an even more effective means of mass extermination?

The House welcomed the INF agreement and the legislation that provides immunity for Soviet inspectors to observe the reduction in nuclear forces. The Opposition welcomed it with enthusiasm, but modernisation is a euphemism for cheating. The Government are going behind the back of the INF agreement in order to increase and develop nuclear weapons. They were not involved in the INF agreement, apart from a few telephone calls between the Prime Minister and the President of the United States and a cup of tea with the bold and courageous leader, Mr. Gorbachev, on the tarmac at Brize Norton. However, by their foolish actions, the Government are potentially prejudicing a very important beginning; it affects only a tiny proportion of the nuclear weapons that are held in stockpiles throughout the world —about 3 or 4 per cent.

How does the Minister reconcile massive expenditure on nuclear weapons with our signature on the United Nations nuclear non-proliferation treaty? We are told that treaties involve a solemn obligation. We signed that treaty, as did 133 non-nuclear nations. They signed it in good faith, on the basis that they would not manufacture or deploy nuclear weapons. If that is good enough for them, why does the United Kingdom always have to have nuclear weapons?

What will the United Kingdom say to nations that have rejected nuclear weapons—"It is all right for us to have them but it is not all right for you to have them."? That argument can be turned around. Non-nuclear nations could say, "If the United Kingdom feels that it is necessary to have nuclear weapons for defence, why should we not do the same and break the treaty?" They have said in two review conferences that the nuclear signatories—the United Kingdom, the Soviet Union and the United States —are breaking the treaty. The Soviet Union and the United States, however, are following clause 6 of the treaty which commits signatories which are nuclear powers to negotiate in good faith to remove nuclear weapons. The only nuclear signatory to the United Nations nuclear non-proliferation treaty which is in breach of it is the United Kingdom

Do the Government care about their international obligations or do they not? When will they satisfy the 133

[Mr. Bob Cryer]

non-nuclear nations that they will follow clause 6 and, more important, by their actions persuade the non-nuclear nations not to follow our terrible example and go nuclear?

Mr. Rhodri Morgan (Cardiff, West): One way in which the United Kingdom could meet its obligations is for it to include in the Estimates an item for arms conversion. The matter should not divide the House. Whether arms reduction is achieved through multilateralism or unilateralism, it must be possible that, by the early 1990s, Britain will have dispensed with Trident and other nuclear warheads. I refer to warheads and other ports manufactured in such places as the atomic weapons establishment in Cardiff.

There should be an item in the Estimates to prepare nuclear establishments such as Aldermaston, Burghfield and Cardiff, which are heavily involved in the manufacture of the British nuclear deterrent, for the possibility of converting to civilian production. They have done it before. Space age materials such as uranium, beryllium, zirconium and titanium are of great value to the hospital service and for specialised machinery used elsewhere.

Madam Deputy Speaker: Order. This is becoming a speech, not an intervention.

Mr. Cryer: I am most grateful to my hon. Friend, who has made a valuable point. If the Government intend to support moves towards peace, they should provide in the Estimates for some skills to be transferred. Although only a nominal number of people may be involved at first, it is an important principle. The Government could usefully embark on retraining for peace as a demonstration of what they often proclaim, although their actions indicate the reverse.

Why can other NATO countries be non-nuclear? The Prime Minister went to Canada and spoke to the Canadian Prime Minister. Did she rebuke him because the Canadians do not allow nuclear weapons on their soil? They will not, for example, have nuclear-powered cruise missiles. The only time that there were cruise missiles on Canadian soil, there was an absolute embargo on their use for nuclear purposes. They were flight-tested only as a contribution to NATO. The Canadians' stance remains that they will not have nuclear weapons on their soil.

Canada is not the only member of NATO. The Government have an opportunity to push NATO away from what is called "flexible response", but which involves first use of nuclear weapons. Roughly speaking, the idea is that if the Soviets book Sealink and the rest to come here to take us over and we fail to hold them with conventional forces, we should use nuclear weapons and effectively blow up the world.

NATO's first use of nuclear weapons should be stopped. We should move back from the brink, not endorse the idea of first use, which is potentially disastrous.

If those who believe in nuclear weapons are so frightened of the Soviet Union—their leader has described Mr. Gorbachev as bold and courageous—they should take a suicide pill, not support mass extermination. Nobody will come to the House saying that we will have a Division on whether to use nuclear weapons and that hon. Members should go to the Aye or No Lobby to establish who makes the decision. The Prime Minister and perhaps the Secretary of State for Defence and a few cronies from the chiefs of staff will make the decision. How undemocratic that is! It is an affront to civilisation.

Those who believe in the threat of mass extermination should commit suicide and let us get on with living. There might be much enthusiasm for the Prime Minister setting an example. That might be more widely welcomed on Conservative Benches than she thinks. There is a very strong case for getting rid of nuclear weapons.

I have been a unilateralist since the early 1960s, when I was a member of the Campaign for Nuclear Disarmament. I believe that we can persuade the vast majority of people in the United Kingdom of the sense and sensibility of this course. That is the principle that we should stick by.

9.4 pm

Mr. John Browne (Winchester): Before beginning my six-minute speech, may I declare an interest as an active member of the Territorial Army.

In three weeks' time, we shall observe Remembrance Sunday. This year, it will be of special significance because it will be the 70th anniversary of 1918—the end of the great war, or the war to end all wars. Unfortunately, at the same time, we shall be remembering the dead of the second world war, a war brought about by an aggressor who gained encouragement from our apparent weakness. We should all remember that and vow, this Remembrance Sunday, to ourselves and for future generations that no apparent weakness on our part will lead to war. We really should remember that, particularly when we come to defence budgets.

Peace is always under threat and I would like to mention as many of the threats as time allows. First, there is the change in the perceived military threat. History shows us that there are three basic kinds of peace. There is the peace of death that greeted Germany at the end of the second world war. There is the peace of deterrence under which we live now on an East-West basis. Thirdly, there is the peace of détente—for example, the present peace between Germany and France. On a strategic European basis, we have grown accustomed to the peace of deterrence, but Mr. Gorbachev appears—and I emphasise the word "appears"—to offer a chance to move towards a new type of peace, a peace of détente.

What are they really up to in the Russian camp? Since the INF treaty we hear increased talk not about defence but about defensive defence. Meanwhile, the Soviets maintain their teaching, tactics, organisation and equipment for fast, surprise attack. As yet there is no reality in defensive defence.

Secondly, I would like to mention the cultural threat. Mr. Gorbachev is not only popular, but very well-known throughout the West. He is known not merely as Gorbachev, but as Gorby. He has proposed a new type of peace, that of detente, which is very attractive to the western grass roots. It sounds good, as if it might be cheaper. He also has great ability, using his western style charisma, to talk over the heads of Western leaders and negotiators directly to the grass roots throughout the western world. He is widening the defence debate from out of chambers like this to the grass roots throughout the Western world.

Today, everyone seems to have a view on defence. Unfortunately, many of those views are based on a woeful lack of knowledge and a belief that defence is somehow

simple when, in reality, it is extremely complex. I believe that the Government have a duty now to improve not only the knowledge but the quality of thinking about defence in this wider debate. We must not be content merely to issue information from the Ministry of Defence on a passive basis but must take an active role in teaching, organising seminars, and bringing trade union leaders, lawyers, school teachers, bankers, students and those sort of people into these seminars so that they learn to think in a more informed way about defence and to participate in quality debate. In this respect I very much support the parliamentary armed services scheme.

My third point is about defence spending. At a time when the strategic East-West peace of deterrence is changing—even, apparently, towards a peace of détente—new and hitherto unexpected enemies may be tempted to threaten us. It would be very unwise for us to assume that the Soviet Union is, or will remain our sole enemy. I note with interest that the intended exercises in Switzerland this year are not only against the orange forces from the east but against the blue forces from the west.

Defence spending in the United Kingdom is a measure not just of our money or wealth but of our national commitment and will to defend ourselves. It is watched worldwide. Costa Mendez saw that before the Falklands. It is an example to our NATO allies. It is a message to our potential enemies. Any effective cut in our defensive capability would be a staggering thing to contemplate at the moment, particularly in the light of the forthcoming American presidential election and the problems of burden-sharing. I therefore strongly support my right hon. Friend in his struggle with the Treasury for the realistic funding that he asked for at the very beginning.

Mr. Morgan: £1·4 billion.

Mr. Browne: Yes, £1·4 billion. Obviously, we must strive for value for money and cutting waste. But cutting waste is not the same as cutting costs. Some costs are necessary to do business.

There are many things that I would like to suggest, but one I should like to make in the last ten seconds is this: why do we not allow the men and women on the spot in the armed forces to suggest cuts, and give them a financial incentive for doing so—maybe 50 per cent. of the cut achieved in the first year—as a bonus to their pay? Then we would get cuts made by people inside the armed forces and not exclusively by people outside the armed forces who have little or no practical experience, and often risk in their recommendations the cutting of bone rather than fat.

9.10 pm

Mr. Sean Hughes (Knowsley, South): It is customary in defence White Paper debates to pay tribute to the men and women in our armed forces, and I add my support and that of my party to that which has been expressed by right hon. and hon. Members on both sides of the House.

I also echo the demand made so eloquently by my hon. Friends the Members for Eccles (Miss Lestor), for Renfrew, West and Inverclyde (Mr. Graham) and for Motherwell, North (Dr. Reid) for an inquiry into the circumstances surrounding the sale of two former Royal Ordnance factories. My hon. Friend the Member for Sheffield, Attercliffe (Mr. Duffy), in a very powerful speech, spoke of the lulling, almost deceiving, presentation of the White Paper. My only disagreement with him is that I would remove the qualification "almost".

After the hilarity which greeted the 1987 White Paper's attempt at historical perspective, some of us thought that the Secretary of State, or at least his script writers, might have been a bit more circumspect this year—but not a bit of it. This year we are not given just history; we are entertained to a consideration of theory.

As I read through chapter 1 of this year's White Paper, I was reminded of a similar publication which established historical fact and arrived at a considered judgment in much the same way, "1066 And All That" by Sellar and Yeatman. Hon. Members familiar with that classic will recall how the authors were able to classify everything as either "Good Things" or "Bad Things" so that the Norman conquest, the great plague and the American war of independence were all good things, while Mary Tudor, political economy and Napoleon were all bad things. The defence White Paper is written in exactly that style. The big difference is that Sellar and Yeatman wrote their classic as a spoof. I take it that the Government are deadly serious.

Let us remind the House of just one gem from the White Paper, although as *The Observer* review of "1066 And All That" said:

"Quotation is hopeless: every sentence clamours for it."

In paragraph 4 on page 5 of the White Paper is a confident assertion that

"Soviet operational art . . . has its roots in a long-standing tradition of defending the homeland by taking the offensive."

I do not want to exaggerate, but that is a bit rich coming from the Tories. If we take the year 1815 as the date when we became top nation—I cannot remember whether that is a phrase from the White Paper of from "1066 And All That"—a cursory glance at the history books suggests that we have been involved in at least 52 significant wars. In all our 52 wars of self defence, we have had two opium wars, two Sikh wars, two Maori wars, three Burmese wars and four Ashanti wars. We completed a third Maratha war and the eighth and ninth Kaffir wars. We even managed an invasion of Afghanistan. Indeed, to prove to the Russians that anything they might do we could do better, we invaded and occupied that country twice. *[Interruption.]* Not since 1815.

It gives me no pleasure to recall those unsavoury events which earned our country such a sinister reputation in so many parts of the world and prompted so many people to suspect our motives and fear our ambitions. If we use history to demonstrate the threat perception of the enemy, we must have the gumption to realise that our enemy will use our history to demonstrate their threat perception of us. It helps to have a more balanced view. It helps to move away from the infantile historical perspectives that seem to characterise the Government's defence White Papers. The Prime Minister had the cheek to tell the Conservative women's national conference in May this year that the Labour party needs to have a better understanding of history. Even the Prime Minister's impertinence pales in comparison with that of the Secretary of State for Education and Science who, on his recent visit to a Moscow school, declared to his hosts, with Mellor-like diplomacy, that we all had to acknowledge that history was a problem for the Soviets. It is not half as much of a problem for them as it is for the Tory party.

It is not just the Government's historical background that is inaccurate. In their statistical comparisons between

[Mr. Sean Hughes]

NATO and the Warsaw pact inaccuracies abound. The Government constantly talk up the preparedness of the Warsaw pact compared to NATO. I should say in passing that that is a dangerous line of argument for a Government who have been in a position to so domething about that for nine and a half years.

According to the White Paper, it is not just in military doctrine that the Warsaw pact displays a great conformity. It is displayed in economic structures, personnel reliability and inter-pact co-operation. The casual White Paper reader must be under the impression that the Warsaw pact is some great monolithic cohesive mass. There is not even a hint, despite the speech of the hon. Member for Ruislip-Northwood (Mr. Wilkinson), that events in Poland, Hungary, Romania or Czechoslovakia are suggestive of some diversity, to say nothing of events within the Soviet Union itself from as far apart as Latvia on the Baltic to Azerbaydzhan in the south.

I have no inclination to argue that the Warsaw pact represents a loose association of democratic states, free to come and go as they please. However, for the Government to argue that the pact is a great monolith is nonsense. All the military experts I have read now argue that any comparison between the armed strength of the Warsaw pact and NATO, if it is to be meaningful, must take account of the potential for unreliability within the pact.

A similar word of caution must be given to the casual White Paper reader when the Government indulge in their annual bean count of who has what and where. The White Paper make a slight genuflection to the problems inherent in comparison by stating that

"the complexities of comparing capabilities of specific equipments are well illustrated in the case of tanks."

However, 12 paragraphs later it dismisses that acknowledgement by saying:

"older Warsaw Pact tanks, for example, are more easily written off on paper than on the North German plain . . . it is a false and dangerous delusion to discount the reality of numbers."

That is the problem with the way in which the White Paper argues. We are back to a black and white interpretation of everything. No one is suggesting——

Mr. Julian Brazier (Canterbury): Twenty years ago the imbalance in the number of tanks was frequently thought by experts to be balanced by the supposed technological superiority of Western tanks. Today the modern Soviet tanks—they are building many new ones at a much faster rate than the West—are, in some respects, superior to ours.

Mr. Hughes: I shall come to the qualitative comparison in a moment.

No one is suggesting that we discount the reality of numbers. We are simply saying, as my hon. Friend the Member for Clackmannan (Mr. O'Neill) said yesterday, that if we are to have a meaningful defence debate we should try to discover what the reality is. As the White Paper makes specific reference to the complexities of the tank comparison, I shall take that as an example. According to the Pentagon's 1988 assessment of the Soviet threat, there are 53,000 Soviet main battle tanks in the area from the Atlantic to the Urals. The same figure is given in the International Institute for Strategic Studies report that was published yesterday. According to the report of Senator Carl Levin, the chairman of the Senate arms services sub-committee on conventional forces and alliance defence, there are 52,200. According to the White Paper, there are 51,000, which is proof that it is easier to wipe off between 1,200 and 2,000 tanks on paper than it is to wipe them off of a north German plain.

Perhaps the Minister will explain that discrepancy, because normally the White Paper talks of the Warsaw pact's capability. Why is there an underestimate, unless it is to enable the Government to back their claim that over half the Warsaw pact's tanks are modern?

The White Paper claims that in the Atlantic to the Ural region and on the central front more than half the Soviet tanks are modern, but the Pentagon claims that the figure is about 40 per cent.

To prove that the Warsaw pact not only has a quantitative lead but is catching up with NATO's qualitative lead, the Government not only flagrantly wipe out between 1,200 and 2,000 tanks but change their definition of "modern". By their definition, the Chieftain tank, which was introduced in the mid-1960s—to which my right hon. Friend the Member for Dudley, East (Dr. Gilbert) referred and which the hon. Member for Weston-super-Mare (Mr. Wiggin) yesterday referred to as an aging weapon—is not sufficiently modern for Britain and needs to be replaced by the Challenger tank. In the same breath, they argue that all Warsaw pact tanks introduced in the mid-1960s must be classed as modern and so, QED, they prove that over half the Warsaw pact's tanks are modern.

Everything that I have read suggests that the greatest danger from the Warsaw pact is a surprise attack, although it is difficult for the layman to imagine a surprise attack of over 50,000 tanks. As the decision to go nuclear would be taken early in the hostilities, speed is of the essence. When we talk of large numbers of tanks, we must cope with what Mearsheimer has identified as the "crossing-the-T" phenomenon. Simply put, there is not enough room for the attacker to place all of its 24 divisions at the point of the attack. As the size of the attacking force increases, the logistical as well as the command and control problems increase proportionately:

"Although the notion is perhaps counter-intuitive, bigger divisions are not necessarily better divisions when an attacking force is attempting to effect a blitzkrieg. A Pact defensive would have to traverse the obstacle-ridden terrain which covers almost all of Germany and restricts the movements of large armoured units."

In other words, there is a danger of a monumental traffic jam in the middle of central Europe. Instead, the White Paper conjures up the nightmare of swift, massive progress.

In a section of the White Paper entitled "Quality of Men", paragraph 16 makes a dismissive comment that

"Soviet military doctrine. . . does not require the soldier in the field to show initiative. . .".

The observation on Warsaw pact training does not exactly fit the Government's nightmare of a huge, monolithic, well-trained and up-to-date machine.

The White Paper declares that the Warsaw pact's plans are as well-rehearsed as NATO's. The Warsaw pact declares 22 exercises involving 13,000 or more soldiers, while the White Paper lists 23 major NATO exercises in 1987. No reference is made to the fact that, as Jonathan Dean, the former American ambassador to the mutual and

balanced force reductions talks reminded us last year, NATO's annual exercises of 250,000 men and more are over twice the size of the largest Warsaw pact exercises.

The White Paper refers to the geographical advantages enjoyed by the Warsaw pact, with consequent benefits for its reinforcement capability. In terms of the Warsaw pact's ability to achieve a quick victory—we cannot overemphasise the importance attached to speed when considering the doctrine of flexible response—geography works to NATO's advantage. That is why, as General Bernard Rogers, who until last year was supreme allied commander of NATO forces in Europe, said:

"It is important to remember when assessing the role of non-strategic weapons that numbers per se are not critically decisive. It would be as foolish for us to try to match each Soviet nuclear system with one of ours as it would be foolish for us to try to match them man for man and tank for tank at the conventional level. . . As a defensive alliance we do not need to match the Warsaw Pact one for one in any category of forces".

Why then has the defence debate been conducted throughout the country at that level? It is because that suits the Government. The Government do not want a defence debate. They simply want an exchange of slogans. Some Conservative Members' speeches towards the end of the debate were a perfect example of that. We should all remember that, when we relegate the defence debate to an exchange of slogans, we play into the Government's hands.

The Conservative party acts as though it has a monopoly on patriotism. The tone is set by the Prime Minister. Returning from a NATO summit in March this year, she said that the Labour party had

"no memory, no stomach, no spine and no guts".

The Conservative party had already plunged into new depths in the general election last year with its now infamous poster, depicting a young soldier with his hands raised in surrender, and entitled, "Labour's defence policy." Conservative Members may think that is smart, but that poster and their attitude, which was repeated tonight, are deeply offensive to millions of Labour party members and supporters whose patriotism is unchallengeable.

Sir Antony Buck (Colchester, North): Some of us are prepared to concede that we do not have a monopoly on patriotism, but we are interested in knowing the defence policy of the hon. Gentleman and his colleagues.

Mr. Hughes: The great divide in defence polices in Britain cannot be so shamefully characterised as being between the patriotic and the treacherous, nor can it be so ridiculously dismissed, as the Prime Minister seems to think, as between those with stomach, spine and guts and those without those attributes. The great divide is between those who want to find a way of removing the nuclear option from the strategy of the two blocs and those who believe that the possession of nuclear weapons, however tenuously independent, somehow confers on the owner the title of super-power.

The White Paper pompously declares on its opening page:

"More open internal policies, which bring the Soviet people more information about their own country and the world outside, are self-evidently desirable"

—and that from the Government of GCHQ, "Spycatcher" and Zircon.

The misinformation should stop. The ludicrous warping of history should stop. The implication, the very meaning of the doctrine of flexible response should be spelt out so that the people of this country know what it is. General Rogers has written:

"the people of the sixteen sovereign nations that constitute the Atlantic Alliance have a decisive role to play concerning our strategy. No NATO strategy wil be credible or effective unless there is a broad-based consensus within the Alliance that it is appropriate, unless there is substantial support for it, and unless there is a firm commitment to provide whatever measures are necessary to sustain it."

I do not disagree with that. But we cannot have a broad-based consensus, substantial support or firm commitments for and about strategies which are deliberately obscured. That is why the claim at Brighton last week by the Secretary of State, that we must all admit that the Government's defence policy was the will of the British people, is so ludicrously absurd.

We could make a start tonight. We could see how much time the Minister allocates to the doctrine of flexible response. We could see how much time he devotes to commenting on the recent words of Robert McNamara, the former American Secretary of State and the man who, more than any other human being alive, was responsible for formulating the doctrine of flexible response. We could see how much time he devotes to agreeing with or rebutting McNamara's comments that most Americans, and to that we can add Britons,

"are simply unaware that NATO strategy calls for early initiation of the use of nuclear weapons in a conflict with the Soviets. Eighty per cent. of them believe we would not use such weapons unless the Soviets used them first. They would be shocked to learn that they are mistaken. And they would be horrified to be told that senior military commanders themselves believe that to carry out our present strategy would lead to the destruction of society. But those are the facts."

Whenever we press the Government about this, they reply that it is not the use of nuclear weapons that is of value but their deterrent effect. The doctrine of flexible response is mentioned on three occasions in the White Paper. Most of us had believed that the nuclear weapon was always a weapon of deterrence, and was used as a threat to prevent the enemy from using their nuclear weapon first. That is not the role of nuclear weapons in flexible response. There is a clear commitment that, faced with a conventional attack from the Warsaw pact, NATO would go nuclear at some stage.

I am under no illusion that the 1 million Warsaw pact soldiers assembled in the central region are there for their health, or that the 50,000 or so tanks are there for lack of garage space, but common sense tells me that the Warsaw pact must have the odd suspicion about us. It should be the role of the British Government to reduce tension, and they should not lag behind in every initiative for peace. We hear a great deal from the Government about the need to modernise our weapons. We hear nothing about the need to modernise our strategy.

The White Paper proclaims 1987 as a successful year for the Conservative defence policy and points to the INF treaty as proof. I have always held that it is one of the more endearing characteristics of Conservative Members that, while they resolutely refuse to accept responsibility for any of their own actions, they consistently claim credit for the achievements of others. It ought to be remembered that, since the death of Stalin, the influence of the Soviet military in the formulation of Soviet defence policy has grown. That is why the dismissal of Defence Minister Sokolov and Marshals Koldunov and Konstantinov, after

[Mr. Hughes]

the Matthias Rust affair, facilitated an improvement in East-West relations. It is a particularly fitting verdict on the Government that the aerobatics of a West German adolescent have done more for international peace and rapprochement than nine and a half years of Conservative Government. It is no wonder that there is an obligatory Churchill quotation in every defence White Paper, because the Government are set in a cold war time warp. The exciting things that are happening in the world are passing us by.

I believe that changes taking place in the Soviet Union would have taken place, and will take place, with or without hiccups, whether Gorbachev is there or not, because we are seeing there a collapse of a societal model. Nevertheless, we should not underestimate Gorbachev's personal contribution. The Prime Minister has to come to the terms with the fact that he is there, and with the fact that Brezhnev is no longer with us, even if there is speculation about the length of his absence. She has to come to terms with the fact that Stalin is no longer there.

Everything that the Government do is geared to the nuclear pretence. To that end, they unilaterally reduced spending on conventional armaments, bilaterally agreed to rent missiles from the United States and multilaterally agreed at Montebello to modernise the nuclear stock. Unilateral, bilateral and multilateral, all at the same time. What a shambles. To hide the shambles of their policy, Conservative Members try to turn these debates into discussion of a Labour Government's defence estimates —as if the Tory party had not been in power for nine and a half years.

We are in the second year of this Parliament. If recent experience is anything to go by, we are probably three years away from the next general election. It is the duty of the Opposition, in scrutinising the Government's plans, to set out their own objectives. Our objectives are clear. We believe in a well-defended Britain. We remain committed members of NATO and we want to move this country and ultimately both power blocs away from nuclear dependence.

Conservative Members have pressed my hon. Friends to say what proportion of GNP we would spend on defence. It would be irresponsible, and anyway impossible, to say precisely how much it will cost to do this and precisely how much it will cost to do that. We do not have the advice which is available in government from professional advisers. We do not know what the world situation or the domestic situation will be when we come to office, and before acting we will want to consult our allies, but our objective is clear.

I do not know why Conservative Members are getting so excited, because I chose my words very carefully. Lest the same thing befalls me as befell Senator Biden, let me refer to the document from which I took those words. On page 67, under the title "Defence", it is stated:

> "It would be irresponsible, and anyway impossible, to say by precisely how much we shall do this, and precisely how much it will cost. We do not have the advice which is available in government from professional advisers; we do not know what the world situation—or the domestic economic situation —will be when we come to office; and before acting, we should want to consult our allies. But our objective is clear."

That comes from "The Right Approach", a statement of Conservative aims published two and a half years before the 1979 general election. As usual, it is one rule for them and another for the rest of us. I have great pleasure in commending to the House the amendment in the name of my right hon. Friend the Leader of the Opposition.

9.36 pm

The Parliamentary Under-Secretary of State for the Armed Forces (Mr. Roger Freeman): The hon. Member for Stockton, North (Mr. Cook), who made a maiden appearance as defence Whip at the Dispatch Box last night, referred to the armed forces parliamentary scheme which is, as he explained to the House, a trial programme to give Members of Parliament a chance to be assigned to an armed forces unit for three weeks a year. It provides experience of the forces, particularly for those, like myself, too young to have done national service. I am glad that he found it a success, and I hope that the scheme continues. The late Member for Epping Forest, Sir John Biggs-Davison, would have approved of the scheme. We miss him tonight. We miss his expert and cogent contribution to this annual debate.

Many questions have been asked during the debate, and I shall try to cover as many of them as I can. The hon. Member for Sheffield, Attercliffe (Mr. Duffy) asked me 14 questions in a very brief speech. He would not expect me to answer all of them, but I shall ensure that Ministers, including myself, respond to all the points that he has raised. I shall ensure that either I or one of my colleagues responds to the question that my hon. Friend the Member for Dumfries (Sir H. Monro) put to me.

The hon. Member for Knowsley, South (Mr. Hughes) —if I could have his attention for a moment—argued that the Ministry of Defence and NATO have in some way overestimated Soviet conventional capacity in Europe, particularly tank capacity. If he is right, then obviously the Soviets pose less of a threat, but how does that square with the official Opposition's argument throughout the two days of debate that they want increased spending on conventional weapons? Why did he not mention the increased Soviet capabilities in their submarine fleet and long-range aircraft, presumably on account of a perceived threat on the central front? He took in isolation one category of weapons system and did not paint a fair picture.

The hon. Member for Stockton, North and my hon. Friend the Member for Dumfries also spoke about the well-being of the young men and women of our armed forces and, particularly, about their pay, allowances, accommodation and opportunities for house purchase. I can assure both hon. Members and the House that we treat those matters most seriously.

On coming into office in 1979, the Government put service pay on a level that was based on the earnings of those in comparable civilian employment. In every year since then, although there was staging in two years, the Government have honoured the recommendations of the independent Armed Forces Pay Review Body. We believe that service men and women generally regard their pay as both fair and reasonable.

The House will know that earlier in the year my right hon. Friend the Secretary of State announced the outcome of a comprehensive review of armed forces' allowances. It was the first review of that sort to be carried out for many years. It was designed to ensure that service allowances would be up to date, cost-effective and appropriate to the requirements of modern service life. As a result, some

significant improvements have been made. For example, we recognise that nowadays many service personnel choose to buy and live in their own homes. We have therefore substantially increased the financial assistance that is available to them when they are required to move home following a posting to a new location. We have removed many differences which existed between the treatment of single and married personnel. It will take some time for the full effects of these changes to become apparent. We believe that the majority of service personnel recognise that the broad thrust of what we are doing is right.

The hon. Member for Clackmannan (Mr. O'Neill) referred yesterday to the demographic trough and the effect that this would have on recruitment and on service manning. The three services have recognised the implications of the trough for many years. We take it seriously, and are taking active steps to ensure that we can compete with private sector employers in what, as far as the armed forces are concerned, is a voluntary service. About 5 per cent. of our armed forces' personnel are women, and the figure is much higher in the United States and in Canada. We have no intention of changing our rules on no combat duty for women. We do not intend to change the rules about discharging women when they become pregnant. There is room, however, for the employment of more women in the armed forces. That will go some way to dealing with the demographic trough.

Mr. Wilkinson: It is much to be welcomed that women are to fly as rear crew members in AWACS. Other armed forces allow women to fly communications aeroplanes. As the Royal Air Force has a pilot shortage, could it not do the same?

Mr. Freeman: I cannot give my hon. Friend any assurance that women will occupy cockpits. I cannot give him any comfort on that score. However, we shall keep the matter under review. He is right to say that women will fly in AWACS.

The hon. Members for Rhondda (Mr. Rogers) and for Attercliffe referred to defence expenditure. I repeat for the benefit of the House the three salient features that are expressed clearly in the "Statement on the Defence Estimates". First, since 1979 to the current year there has been a 20 per cent. increase in real terms in the defence budget. Secondly, we spend 4·7 per cent. of our gross domestic product on defence. That is a higher proportion than that of any of our major European allies. Thirdly, when it comes to the future—I share the frustration of the right hon. Member for Dudley, East (Dr. Gilbert) that this debate comes first—the House must await the Autumn Statement.

My hon. Friend the Member for Ruislip-Northwood (Mr. Wilkinson) asked for a defence review. Gone are the days when, especially under the last Labour Government, there were periodic reviews. The process of budgeting and reviewing commitments is a much more sophisticated system nowadays. It is a continuous process. We shall not take any special steps to have a major defence review. My right hon. Friend the Secretary of State has to face difficult decisions all the time, and we shall take them regularly. As regards BAOR, there are no steps afoot to change the role of 1st British Corps or our commitment to NATO.

The right hon. Member for Dudley, East mentioned the problems of developing a command system for the type 23 frigate. They have been faced up to with the cancellation last year of the contract for the original command system and the subsequent placings of competitive project definition contracts for a solution based on the latest technology. It is true that the first type 23s will enter service without a fully operational command system, but their weapons and sensors will be capable of independent action, enabling the ships to fulfil their operational tasks.

Mr. O'Neill: I am grateful to the hon. Gentleman for conceding that the command and control system will not be available to more than the first of fleet, because the impression we received last year was that only the first of fleet would not have the command and control system. As he has now admitted that this is so, what limitations will there be on the operational capabilities of the frigates when they come into service?

Mr. Freeman: We expect no significant operational limitations. The number of ships affected will depend on the success of the contracts that we have placed.

My hon. Friend the Member for Ilford, South (Mr. Thorne) raised the subject of the Gurkhas. I repeat the commitment which Ministers have given before about the future of the Gurkhas after we leave Hong Kong. I know that the Select Committee plans a visit to Nepal towards the end of the year, and I hope to follow it there. The Government will announce their conclusions next year about how that commitment to the Gurkhas will be fulfilled.

My hon. Friend also asked about the AWACS offset deal. Boeing's first report listed contracts totalling $141 million, and, following our evaluation, we have allowed a total offset credit of $96·5 million. The second report listed contracts totalling about $192 million, bringing the cumulative total of contracts placed to $333 million. We are now evaluating the second report—*[Interruption.]* There is a long way to go, but a long time is still available.

My hon. Friend the Member for Dumfries and many other right hon. and hon. Members spoke about low flying and aircraft safety. The need for training in low flying has been recognised by all for some time and accepted by successive Governments. There is understandable public concern about the risks in low-flying training. It came to the fore as a result of the tragic accident on 9 August in the constituency of my hon. Friend the Member for Penrith and The Border (Mr. Maclean), when two Tornado aircraft engaged in training at night were involved in a mid-air collision and four aircrew were killed. A board of inquiry is still sitting. As a result of that accident, a detailed re-examination of the procedures for low-flying training at night has taken place.

It is important to bear in mind that, of major aircraft accidents in the past five years, only about one in four has occurred when the aircraft was engaged in low-flying training. In those cases, the primary cause of the accident was not always attributable to the low-flying training itself. Nevertheless, changes have been made following the re-examination.

With effect from 10 October, steps have been taken to allocate separate days by command: strike command, Royal Air Force Germany, and the United States Air Force; and aircraft will move, well separated, broadly in a clockwise direction around the United Kingdom low-flying system.

[Mr. Freeman]

In future we intend to introduce a computerised notification and warning system in the United Kingdom low-flying system, based on a central computer with a larger network of terminals extending to every low flying squadron. Such a system will accept notification of sortie details and in return provide information on other aviation activities, warnings and restrictions in low flying areas—information which is now fed manually into the system. I hope that the House accepts that the steps that we have taken as a result of the tragic accident have been in the right direction——

Mr. Bill Walker: As my hon. Friend knows, I fully support the necessity for low-flying operations, which are carried out extensively throughout Scotland and in my constituency. Will he bear in mind the good public relations that we obtain from the use of the helicopter flight at Leuchars, which substantially offsets the aggravation caused by low, noisy and fast jets? We can explain it by saying that they both come from the same air force, and therefore that the benefit of the helicopters substantially offsets the disadvantages of the jets.

Mr. Freeman: I can give my hon. Friend the Member for Tayside, North (Mr. Walker) and also the hon. and learned Member for Fife, North-East (Mr. Campbell) and my hon. Friend the Member for Devon, North (Mr. Speller) that assurance.

Dr. Reid *rose——*

Mr. Freeman: No, I am answering my hon. Friend.

I can give an assurance that when we reach a decision —and we have not done so yet—about search and rescue deployment for those areas of the United Kingdom about which we have not made an announcement we will take into account the benefit that, in the minds of the public, search and rescue is perhaps the acceptable face of low flying.

Dr. Reid *rose——*

Mr. Freeman: I am sorry, but I have only 10 minutes left. I am sure that the hon. Gentleman will forgive me, but I must make progress.

I shall deal briefly with the points raised by other hon. Members concerning the reserve forces.

Mr. Michael Jopling (Westmorland and Lonsdale) *rose——*

Several Hon. Members: Oh!

Mr. Jopling: My hon. Friend has made a most important statement regarding low flying, which causes immense difficulties in many parts—especially the north of England. Will he give an undertaking that the welcome and important announcement that he has made tonight means that never again in future ought pilots of low-flying aircraft find that there are other low-flying aircraft in the same area without their knowledge?

Mr. Freeman: No, I cannot give my right hon. Friend that assurance. The assurance I can give him is that, in a particular area, both aircraft will be well separated and flying in the same direction. I hope that that answers his concern.

Dr. Reid *rose——*

Mr. Freeman: No, I must finish answering the remaining points.

I must answer my hon. Friends the Members for Weston-super-Mare (Mr. Wiggin) and for Kingswood (Mr. Hayward), who raised the question of the reserve forces. The equipment used by the Territorial Army and the Regular Army is the same as they have the same role. We have taken positive steps to increase the bounty, particularly for those who have served for more than three years.

My hon. Friend the Member for Kingswood specifically asked me about over-commitment of the Territorial Army. We shall ensure that all TA units are made well aware that the minimum requirement is clearly explained. It is wrong that TA soldiers who are giving their own time should become over-committed and be expected to do too much. That way lies bad recruitment.

This has been a one-sided debate, because most of the debate has been on the Opposition Benches. *[Interruption.]* Then Opposition Members have not been listening. The hon. Member for Dunfermline, West (Mr. Douglas) rightly said that there is room on the Labour Benches for only two positions that, to use his words, are credible, and that the electorate would understand. He said that the first was to keep Trident. That is not only the policy of this Government but has, by extension to Polaris, been the policy of all Governments, both Labour and Conservative, since the war. I may say to the right hon. Member for Chesterfield (Mr. Benn), who asked a specific question about targeting and Trident, that Trident does not depend—I repeat, does not depend—on a United States satellite system for its operation and targeting. It is independent of that system. The right hon. Gentleman does not believe me, but I give the House that assurance.

The second of the credible options to which the hon. Member for Dunfermline, West referred was to scrap our independent deterrent, and by definition to scrap also United States bases. That is what he talked about as being the credible alternative. That is in the amendment of the hon. Member for Islington, North (Mr. Corbyn). That is the neutralist position that the hon. Member for Dunfermline, West believes is the second alternative. The neutralist position is unacceptable to the British electorate, and any political party that adopted that platform would become permanently unelectable.

Dr. Reid: On a point of order, Mr. Speaker. May I bring to your attention the fact that the Minister is not replying to the debate? He has refused to give way to me, and has refused to answer questions about the Royal Ordnance factory in Bishopton.

Mr. Speaker: Order. There are five minutes to go, and we have no idea what the Minister is going to say. As far as I am concerned, what he has been saying is in order, and that is my responsibility.

Mr. Freeman: The hon. Member for Dunfermline, West also said that there was no room for shilly-shallying as far as the Opposition Front Bench was concerned. He was referring directly to his right hon. and hon. Friends on the Front Bench. I think that shilly-shallying, by his definition, is what we get from the Opposition Front Bench. As far as my hon. Friends and I can understand, their policy is to believe in complete nuclear disarmament in return for an

insignificant Soviet nuclear disarmament. That is what "something for something" means. It means all our strategic nuclear capability in return for some of the Soviets' capability.

According to the right hon. Member for Leeds, East (Mr. Healey), who spoke at the Labour party conference, that equation is four of our submarines—Polaris or Trident—in return for eight Soviet submarines. That is an inadequate policy to place before the House and the electorate. Furthermore, their policy would be to shelter under the United States nuclear umbrella, which is a dishonest policy.

Mr. Cryer: Will the Minister give way?

Mr. Freeman: No. The hon. Member for Liverpool, Walton (Mr. Heffer) said yesterday that he did not know into which Lobby he would pass tonight when we vote on the Opposition's amendment. He said that he would be thinking very carefully about which way he, and presumably some of his colleagues, would be voting in the first Division. Presumably, by definition, the right hon. Member for Chesterfield will also be thinking very seriously. I ask both of them, and their colleagues, to consider three aspects of the Opposition Front Bench policy that we have been discussing in the past two days, and to decide whether they can support that policy. First, the Opposition Front Bench——

Mr. Cryer *rose*——

Mr. Speaker: Order. The Minister is not giving way.

Mr. Freeman: First, the Opposition Front Bench specifically made no commitment to scrap Trident on coming into office, which they will not in 1992. Instead, they have suggested an inadequate barter compromise: all our nuclear capability in return for some of the Soviets' nuclear capability. Secondly, there is no mention in the Opposition's official policy of removing American bases. Thirdly, there is no promise to switch any defence savings to social programmes in the United Kingdom. If the hon. Gentleman votes with them tonight——

Mr. Rogers: On a point of order, Mr. Speaker.

Mr. Speaker: Order. It is two minutes to ten.

Mr. Rogers: On a point of order, Mr. Speaker. Five right hon. and hon. Members have brought up the issue of Royal Ordnance factories, and the Minister has not the guts to answer.

Mr. Freeman: The hon. Gentleman's point of order was born of his frustration about the differences of opinion on the Opposition Benches between Opposition policy and the policy suggested and espoused by the hon. Member for Walton.

The policies advocated by the Opposition Front Bench spokesmen do not represent united Labour party policy. If they are offered to the electorate at the next general election, the Opposition will surely lose. Unless there is a radical change, the Labour party will remain permanently unelectable.

Question put, That the amendment be made:—

The House divided: Ayes 197, Noes 321.

Resolved,

That this House approves the Statement on the Defence Estimates 1988 contained in Cm. 344.

Trade Barriers (European Community)

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Fallon.]*

10.26 pm

Mr. Phillip Oppenheim (Amber Valley): I begin by expressing a measure of sympathy for my hon. Friend the Minister who is to reply to the debate. He is having to defend a position to which the Government are acquiescing but which goes against virtually all their stated objectives of encouraging consumer choice, deregulating and fostering industrial efficiency.

Although we have heard a great deal of noise over the past year or so about 1992 and the opening of the European market, we have heard less about the corollary of that, which is that many civil servants within the European Commission believe that as we open our internal market we should steadily close the external market to prevent non-EEC manufacturers from taking advantage of our more open internal market. Therefore, as we are seeing barriers within the European Community being broken down, we are seeing a fortress-Europe mentality being introduced by many within the EEC establishment.

For example, many car manufacturers are already talking about introducing a 15 per cent. EEC import quota for Japanese cars after 1992 to replace the series of national quotas which currently exist. Britain now has an 11 per cent. import quota for Japanese cars, France has a 3 per cent. quota and Spain and Italy allow only a few thousand Japanese cars to be imported each year. Most of the other EEC countries have no quotas or import restrictions. Therefore, a 15 per cent. quota in 1992 will in many cases mean less consumer choice and more protection than at present.

Apart from the quotas being proposed there is already a wide range of EEC-wide quotas. The EEC currently imposes quotas on imports of compact disc machines, videos and televisions. Significantly and topically, there are also quotas on imports of steel. It is almost impossible for non-EEC producers to import steel into the European Community. That has severe ramifications for steel-consuming industries within the EEC.

Apart from the quotas already in existence and those being proposed and taken seriously within the Commission, the increasing use of what I consider to be spurious anti-dumping duties by the Commission is dangerous. In recent years, the Commission has imposed severe anti-dumping duties on imports of photocopiers, computer printers and electronic typewriters. I understand that it is proposing duties on imports of facsimile machines and microchips.

The 1982 regulations, which are the basis for the anti-dumping regulations, have been drawn so widely that the Commission can say that almost anything is dumping. I should like to draw the Minister's attention to two particular examples. The first concerns constructed prices. Rather than send its investigators to Japan and Europe to find out at what prices the products are being sold, the Commission artificially constructs prices. The structures by which it does so are different in Japan from those in Europe. In Japan, the price includes much of the overheads and marketing costs, but in Europe it does not. That obviously makes the European cost at which the

Japanese are selling far lower than that of their home market, thereby making a large dumping margin when in reality there is none.

The second example is the system whereby the Commission can say that any company or industry selling products on the EC market at a loss is automatically dumping. It is well known that start-up companies, especially when they are opening a high-volume factory, may for the first year or two not reach full economic volumes. By the Commission's regulations, they will be selling their products at a loss on the European market and will therefore be dumping. A penal anti-dumping duty will be imposed on them, with the result that the Commission will have the power to strangle almost any new non-EC entrant to the market at birth.

In its defence, the Commission says that the European Court has ruled that it is imposing its anti-dumping duties legally, which is right. Companies that fought the Commission in the European Court found that the court expressed much sympathy but said that the Commission was working well within its own regulations, even though they are drawn up unfairly.

The other excuse that is used is that the anti-dumping regulations fall within the general agreement on tariffs and trade. The problem is that the GATT guidelines are drawn so widely and vaguely that almost any regulations would fall within their parameters. I do not consider that to be a defence to the Commission's stance.

I have mentioned these problems to European industrialists, European civil servants and the many defenders of protectionism, including many Socialists. In their more candid moments, they admit that these measures are blatantly protectionist, but their main justification for them is that the Japanese have been protectionist so we must be protectionist ourselves. Everyone knows that the Japanese were very protectionist in the 1950s and 1960s, but we fool ourselves if we believe that Britain, Europe and the United States were not and are not extremely protectionist in a variety of ways. The fundamental difference is that, while the Japanese are making genuine efforts to reduce their protectionist barriers, we in Europe, and to a large extent America, are erecting ours.

One of the reasons why people mistakenly believe that Japan is a protectionist country is that the Japanese market is difficult in a variety of ways and many western manufacturers have come to grief by trying to sell the wrong product and not persevering. The Japanese, with a relatively small home market, have had to sell their products in the west, whereas for many western manufacturers it has been far easier to sell into the linguistically and culturally similar markets in Europe and the United States, or to old colonial markets, which were protected and offered substantial advantages. There has not been the incentive for western manufacturers to sell into the Japanese market in the same way that there has been a necessity for Japanese manufacturers to sell into western markets. That is one reason why Japanese export penetration into Europe has been higher than western penetration into Japanese markets. Anyone who studies the Japanese market will find many examples of western companies, producing the right product at the right price, that have done extremely well.

Before being fortunate enough to be elected to this place, I worked in the information technology industry, editing a business consumer magazine which covered many of the products that are subject to EEC Commission anti-dumping investigations or have had duties imposed on them. I know that the Japanese succeeded primarily because they produced the right products at the right price and marketed them creatively.

The Japanese have done well with photocopiers because they produced in volume. Because they did that, they were able to incorporate features in their machines which were formerly the preserve of the top name products. The Japanese also marketed creatively, cutting costs by introducing dealer marketing rather than direct sales. Many European industries and even Xerox, the American-owned company, were slow. They did not sell the right products and were not agile in marketing. The Japanese have succeeded not through predatory guile but by producing and selling the right products at the right price and delivering on time.

Unfortunately, it is far easier for European manufacturers who have failed in the Japanese market, and failed against Japanese competition in their home markets, to whinge, whine and complain about unfair trade practices. If they can palm the blame off on to the Japanese, it obviously means that they are not at fault.

The other major argument to justify protectionism is that protectionist barriers forced the Japanese to set up in Europe. Examples in Britain which have recently been given much publicity are the Nissan car factory in the north-east and a variety of typewriter and office equipment factories. I make it clear that I welcome with open arms foreign investment of all types. If that investment is represented only by assembly plants, that is better than nothing. If that foreign investment comes into this country only to jump over import barriers, the rest of the economy must pay the price.

I should like to quote Nissan as an example. Obviously, it has been of great benefit in the north-east and people there have warmly welcomed the Nissan factory. The company has also been of benefit in a wider sense by its example to the British economy in general. But it is important to recognise the disadvantages. Although it may deny this, Nissan came to Britain largely because of Britain's 11 per cent. import quota on Japanese cars, the so-called gentleman's agreement which was introduced in 1976 by a Labour Government, supposedly to give Austin-Rover a breathing space. However, that plan does not seem to have done much good. I believe that it is a good argument against protectionism.

Although Nissan brought many benefits in its train, the quotas which brought the company here in the first place have resulted in an annual extra cost by distorting the market for United Kingdom car buyers by about £1 million a year. That sum represents the costs over and above the costs that should be paid by British industry which are diverted from efficient and productive industry into less efficient, less productive industry.

Import barriers can also be damaging to the rest of the economy because they limit choice. Once again, I shall adduce Nissan as a good example. Nissan produces in relatively low volumes in this country. It has to have longer product runs to make those volumes competitive and economical. The company cannot introduce in the British market the new models that it would introduce in a free market. For example, the Nissan Bluebird, which is produced in the north-east, is an obsolete model. In far eastern markets, Nissan introduced a new Bluebird more than a year ago. Nissan denies this, but the fact is that,

[Mr. Phillip Oppenheim]

because the company needs long production runs to make its plants economic, it cannot introduce new models as quickly as it might otherwise do, so choice is limited.

Exactly the same has happened with the Rover Group, which has an agreement to assemble certain Honda products. Most of the group's product line are Honda-designed and developed.

Rover produces a car called the Rover 200 that is effectively the same car as one that it assembles for Honda, which is called the Honda Ballade. That, in turn, is the old Honda Civic model, which has long since been replaced in other markets but because the Rover Group had to have long runs of this model it will be unable to replace it until next year. By limiting consumer choice, such practices make our market less competitive, and that damages not only consumers but the industry.

Mr. Christopher Gill (Ludlow): My hon. Friend said that the Nissan car company came to this country because in doing so it was able to leap the protection barrier. Would he say that the grants that were made available to this company when it came here were not significant or did not enter into the company's thinking when it planned to open the new plant?

Mr. Oppenheim: My hon. Friend is right. I said that import quotas were one of the reasons why the company came here, but I agree that another was generous assistance from the Government. Furthermore, it found that Britain, compared to other countries, was a good place in which to do business, and we should recognise that. However, import quotas were a major element when it made the decision to come here, although the company might deny that.

Mr. Gill *rose*——

Mr. Oppenheim: I hope that my hon. Friend will forgive me if I do not give way again, but I have to leave enough time for my hon. Friend the Minister to give me a considered reply.

I know that the Minister is concerned about screwdriver and anti-dumping duties. On top of proposing a series of protectionist duties, which, to an extent, encourage Japanese industry into Europe, now that the Japanese have come to Europe, the Commission is saying that they must use a high proportion of local components. That is not necessarily in the interest of the assembling country, and it is not always possible for the companies to find high quality components locally. That is damaging, and it compounds the damage already done by the protectionism that is the result of many of the Commission's policies.

The casual listener—I accept that there are not many casual listeners here tonight, but I trust that I am not immodest in hoping that some people will read this debate —may think that I am arguing on behalf of Japanese industry. I should like to emphasise that I am not. I am arguing for our industry because I believe that protectionism damages our industry in a number of ways. First, it increases prices, often of industrial feedstocks. For instance, the import quotas on non-EEC steel mean that our steel consumers, which include the car industry, have to pay more for their steel than they would if they were buying it in another country.

Another good example are microchips. Not only has the EEC placed anti-dumping duties on Japanese chips, but there is already a ludicrous system whereby the import duty on non-EEC chips is higher than the import duty on fully built computer boards and computers. That means that it is often far cheaper to import fully built-up boards than to import the chips, which can be used to build products here. That is largely the result of lobbying by the big European chip makers—Siemens, Philips, Thomson and SGS ATES. The result is that assemblers of products using chips, such as the Amstrad company, find it cheaper to import fully made-up products, whereas, if the duties were equal, they would find it more economic and preferable to assemble the products here.

Protectionism not only increases the cost of feedstock to our industry, but indirectly helps the Japanese, by creating artificially high markets from which they are able to profit. The Japanese make huge profits out of selling cars to the protected European markets—Britain, France, Italy and Spain—and those profits are repatriated to Japan, so that helps. Ultimately, protectionism does not help the industries that it is supposed to protect. It puts off the time when those industries have to sort out their own houses and become efficient and effective. Thus, it compounds and continues their inefficiencies. If a company cannot compete in its home market with the Japanese, how does it expect to be able to compete in overseas export markets?

There is a further danger in protectionism because, if we allow ourselves to be convinced by failed European industrialists that the Japanese have succeeded as a result of predatory trading practices, we shall have no incentive to improve ourselves and to learn the many valuable lessons that they can teach us to help us sort out our industrial problems. Some of the real reasons for the success of the Japanese are not so much predatory guile, but rather the fact that, ever since the war, they have had consistently right of centre Governments who have followed extremely sound economic policies. They have a first-rate education system which churns out a highly skilled and literate work force, and the country as a whole has not suffered from Socialist anti-business and anti-profit attitudes, but has a solidly and robustly pro-business, pro-enterprise ethos.

I therefore urge my hon. Friend to look carefully at the protectionism which exists and is being built up by the Commission because that protectionism runs counter to the Government's avowed policy of deregulation, industrial efficiency and consumer choice. I accept that my hon. Friend probably does not know a great deal about the protectionism because much of it that arises in the Commission probably comes on to his desk or those of his colleagues with a little note from civil servants saying, "This is all right. Sign." Many anti-dumping orders are probably signed without my hon. Friend and his colleagues knowing what they are signing. I am sure that, if they realised what they were signing, they might well have second thoughts. Ultimately, it is extremely dangerous for European industry, if it knows that it has an easy path, to go whingeing to the Commission asking for protection rather than sorting itself out.

10.46 pm

The Parliamentary Under-Secretary of State for Corporate Affairs (Mr. Francis Maude): I congratulate my hon. Friend the Member for Amber Valley (Mr. Oppenheim), first, on having gained this opportunity and, secondly, on having used it so skilfully and, in his usual measured way, having deployed a formidable and detailed range of knowledge of a difficult subject. He will understand that one or two other matters were occupying my mind today, but, none the less, I am grateful to have the opportunity to reply to the serious and well thought out points that he has made.

There is not all that much difference of opinon between my hon. Friend and me. He knows that the Government's stance is essentially a liberal one in respect of trade. We are not a protectionist Government. We reject protectionism, for very much the reasons that he set out. He talked about the way in which the single European market is likely to develop; and the way in which it is perceived to be developing is as important as the way in which it does develop. There is no doubt that it is crucial to the long-term success of completing the single market that it conducts its external trade relations after 1992 in a sensible way.

With the United States and Japan, the Community is one of the world's three great trading blocs, and that imposes great responsibilities which we have to live up to. We are already deep into the Uruguay round of trade negotiations which aims to reinforce the system by which the international rules of trade are multilaterally agreed and applied. We are seeking major reforms in that system so that it can better serve the interests of all trading nations in the decades ahead. The Community, and especially the United Kingdom Government, are well aware of the benefits that we draw from open trade in terms of growth, investment, technological advance and consumer satisfaction and we have therefore made it clear right from the start that, in our view, there can be no question of a "fortress Europe" or of us using the completion of the single market to raise external trade barriers. That would make no sense and would tend to isolate the Community from developments elsewhere.

The Secretary of State made our position absolutely clear in the White Paper, "The Department for Enterprise", which he published in January. It is worth pointing out that the European Council strongly reaffirmed the same principle at Hanover in June of this year, as did my right hon. Friend the Prime Minister in her speech at Bruges last month, but, as I have said before, it is not just what the Community does; it is how it is perceived that matters.

A fear is often expressed in countries outside the Community that the development of the single market will be paralleled by increased protection against outside competition, especially from the United States and Japan. I have recently visited two or three countries in the far east, where I found that it was accepted as a certainty that that would happen. I hope that I managed to instil a doubt in the minds of those to whom I spoke. Their preconception is very much that Europe is turning itself inwards and closing itself to trade from outside. We must resist such moves. The single market process must help to reduce external barriers, not increase them. Raising Community barriers would be self-defeating. It would encourage inefficiency and a lack of competitiveness. Whatever we were to gain at a cost to consumers and our economies, we would lose internationally.

There is a real danger, if our trading partners misunderstand our intentions, that there could develop a retaliatory spiral of protectionism, with the various trading blocs, which are increasingly developing around the globe, erecting ever more severe trade barriers. I do not need to spell out the disastrous consequences that that would hold. We could suddenly find that there was a clamp on world trade, with serious effects on economic growth worldwide. I hope that all our partners in the Community will express as robustly as we do a commitment to a liberal policy in trade. The consequences of doing otherwise could be severe.

There is already misinterpretation on this side of the Atlantic of the American Trade Bill. It is interpreted as being more protectionist than it is. There is misinterpretation in the United States of what is happening in Europe. Similarly, there is misinterpretation in the far east. Whenever uncertainty and discordant voices emerge from one of the trade blocs, there is a tendency for our trading partners to make an interpretation that is in the worst possible light. There is thus the danger of a retaliatory round of trade barriers being erected. That could happen suddenly and without notice, with serious consequences for world trade.

It is clear that the removal of the internal barriers in the Community will bring great benefits to nationals of other countries and to the subsidiaries of foreign firms that are established in the Community. They will profit from the single market in the same way as Community nationals. That gives the lie to some of the more exaggerated fears that have been expressed, especially in the United States press. Foreign-based firms play a dynamic part in the economies of all the member states and we need to encourage the dynamism, not seek to repress it.

We can look to our partners to continue the process of liberalisation, and we must do so. We are doing this already in the way in which we are negotiating in the GATT to extend the multinational rules to services, with the aim of progressively opening services markets worldwide. We in the Community as a whole will continue with this process. The Uruguay round provides the mechanism with which it will be possible for the Community, in an appropriate instance, to claim credit for the external liberalisation that will occur with the completion of the single market.

My hon. Friend the Member for Amber Valley referred to imports. It is part of the Government's policy to provide an economic climate that promotes the enterprise and prosperity that will enable both the manufacturing and service sectors to compete in world markets. A policy of open markets—of free but fair trade—is an indispensable element in this policy. Imports at fair market prices provide both a significant input to our manufacturing effort and a competitive spur, which help to keep costs down for both consumers and industrial users and to widen choice.

Since 1985, as part of our initiative of competition, we have been reviewing the justification for the voluntary restraint agreements that have typically been concluded between a United Kingdom industry and its counterpart overseas. I answered written questions on 30 March and subsequently which were tabled by my hon. Friend the Member for Darlington (Mr. Fallon), whom I am

[Mr. Francis Maude]

delighted to see on the Government Front Bench. I am sure that the whole House will wish to join me in congratulating him on his elevation to the Whips' office, even if, as a result, we shall be denied the pleasure of his contributions to our debates for the time being. As I explained in my answer to the questions that he so pertinently asked, in assessing the costs and benefits to the United Kingdom economy, we concluded that in most cases such arrangements were not in our interests, and we advised the industry concerned accordingly. But in the cases in which we believed that there was some justification, we continue to keep those arrangements under review.

My hon. Friend spoke about anti-dumping. He is absolutely right that anti-dumping measures must not be used as an easy way out. When complaints about dumping are made, we have to ensure that the proper procedures are followed. In case my hon. Friend has any doubts about this, I can assure him that I have at no stage signed an anti-dumping order, whether I have read it or not. And I know that my hon. Friend the Minister for Trade, before whom these matters may come, exercises great diligence and care before committing his name to anything.

We need to ensure that these processes are not abused and that, when complaints are made, the proper procedures are followed. For the most part, we believe that that happens. The danger is that, if the procedures are thought to be abused—there is no doubt that in some parts of the world they are thought to be used too freely, and conclusions that meet the anxieties of the protectionist lobby are thought to be too freely reached—great damage will be done to the reputation of the European Community, which is based on economic liberalism.

It was right of my hon. Friend eloquently to raise the other side of the coin. Too often, for Governments and public authorities generally——

The motion having been made after Ten o'clock and the debate having continued for half an hour, MR. DEPUTY SPEAKER *adjourned the House without Question put, pursuant to the Standing Order.*

Adjourned at four minutes to Eleven o'clock.

House of Commons

Friday 21 October 1988

The House met at half-past Nine o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

Education and Industry

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Lightbown.]*

9.34 am

The Parliamentary Under-Secretary of State for Education and Science (Mr. John Butcher): I hope that it is significant that the first Friday debate after the summer break concerns the importance of developing links between industry and education. It would appear that this is a subject whose moment has arrived. Both inside and outside the House there is a growing and healthy interest in ways in which we can make education more employer friendly and ways in which our employers can acquire a greater understanding of the needs and objectives of education in the late 1980s.

As adults become more and more distant from their own schooldays, so their memories become increasingly selective. They remember hard seats, long hours, some dull lessons, bleak classrooms and cold showers. They tend to forget the more pleasing aspects—the joy in discovery, the satisfaction to be had from cracking a difficult problem or mastering a new concept—but children are very much aware of, and seek out, the pleasure and fun to be found in learning. That is particularly true when they are being treated as grown-ups.

The idea of treating young people as adults and showing them the world of adult life is not new. Some five years ago I arranged for a young sixth former from Perry Barr school in Birmingham to "shadow" me when I was at the Department of Trade and Industry. She took part in a number of visits to industrial and commercial sites in the west midlands and she found those visits a revelation. She saw intelligent people facing challenging problems every day and the fact that she found this novel suggested an unacceptable gap in young people's awareness of industry and commerce. Incidentally, I might add that Samantha Clark is now in her final year at Sheffield polytechnic reading chemistry and computer studies. I am confident that her experience in 1983 will play an important part in her approach to the choice of a career.

From that beginning, there have been impressive developments. The first step was the shadowing of 12 chief executives, in different regions, by 12 schoolgirls; and that in turn brought about a programme set up by the Institute of Directors in which 3,000 sixth formers are shadowing managers up and down the country. Work-shadowing has now received the ultimate accolade of becoming the subject of a new, and extremely entertaining, novel. Of course, shadowing is only one way of ensuring that young people have some experience of what goes on in the world of work; but other sorts of activity are also on the increase. As a result, today two out of three children receive first-hand experience of the world of business before they leave school.

Why is it important for children to have this contact with industry and commerce? Did we not, after all, spend much of the last century trying to get young children out of factories? To start with, children enjoy the contact. They learn from it and learn fast. I will quote some examples of what some schoolchildren have said about their work experience. Sylvia Boumbourou from Mount Carmel school said:

> "When I went into the International Department of the bank it was incredibly busy and I thought I'm not going to like this . . . Then I learned about telexes and I typed and sent one. I felt really good with myself—I'd done something worthwhile."

Tony Hall at Holloway school said:

> "Early in the week it was really quiet in the shop with hardly any customers. Friday was much better, really busy."

Ukpong Anderson from Islington Green school said:

> "When we went to the building sites . . . I would write things down. Later on I was able to do some details on real plans. After a while it was as if I'd been working there for ages . . . in fact I got so into working there I almost thought it was my job."

Those children who have had the chance to experience it at first hand see the world of industry as an exciting, adult world. We may find that surprising; but it is because we are all too aware of the responsibilities of adult life—the need to pay the mortgage, the gas bill, saving for a holiday. Children, have a fresh outlook, and are able to perceive the opportunities offered them by adult and working life.

Experience with industry—and by that I do not just mean heavy industry, but all types of manufacturing and service employers, everything that contributes to our economic well-being—helps children to mature into adults with adult attitudes. The process of introduction to work-related activities is no longer the haphazard event it was in our childhood. Now it is properly planned and monitored. Arrangements are made in advance, and they are made with care.

More important still, those experiences are subsequently integrated into each child's education back at school. There is now an explicit understanding by a great many educational institutions and businesses of the importance of that activity and its valuable role in preparing responsible and valued citizens. That is not to say that there is no scope for improvement. I am sure that there will be many suggestions in this debate as to ways in which we can take those various programmes forward, and that a number of new ideas will be advanced. There is scope for improvement, and I shall come to that point shortly.

For example, the recent report of the CBI's education task force, chaired by Sir Adrian Cadbury, pointed out that more than half the firms in its survey did not have regular links with schools. That will have to change. But let us first look at the background to these concerns, to see what lessons should be learned by education and employers in taking matters forward.

During the 19th century, our education system faced the task of ensuring not just that children grew up with a knowledge of the industrial and commercial processes that were beginning to transform the world, but also that they developed traditional character attributes of self-reliance, self-discipline, respect for authority and service to the community. That ideal was not a cynical philosophy designed to produce obedient factory fodder. It was an

[Mr. John Butcher]

attempt to educate the whole man: Not the universal man of the Italian renaissance—the growth in knowledge meant that was virtually impossible—but rather a self-sufficient personality with powers of analysis and reflection, with sober judgment and ease of communication—to quote Cardinal Newman:

"a cultivated intellect, a delicate taste, a candid, equitable, dispassionate mind."

Unfortunately the interpreters of Newman and of the Arnoldian tradition failed to take on board the true implications of these ideas. Their "whole man" was really only half a man, who had received a rarefied and esoteric education in which the "cultivated intellect" and "delicate taste" were carefully nurtured, but the more fundamental aspects of society and its economic basis were thought to be beneath notice. All too often, those who had made their fortunes in industry sought in this way to rid their own children of its unsavoury associations. That approach bred a generation who, well-fitted though they may have been for the life of a district commissioner in the empire, were neither equipped nor disposed to become captains of industry.

For the others—the vast majority of children—education meant a brief period of rudimentary schooling and then, from a very early age, learning about industry at first hand in the heat of the factory floor. In that way, the thirst for knowledge, for self-improvement, was for most people stifled; they became unwilling, and thus under-achieving, participants in an industrial society. Our objective is, as always—that much used group of words —"broad, balanced people".

The legacy of the polarisation that I have just described survived, regrettably, in attitudes which were—and perhaps still are—to be found in the 20th century. For far too long, education considered the world of industry to be a last resort for those of its products who were unable to find "respectable" jobs elsewhere, and in consequence ignored it. Equally, industry tended to expect school leavers to come fully equipped with everything they needed to be model employees. Both attitudes exemplified a fundamental misunderstanding of the role that education can and should fulfil in our society.

What is needed is a balance; and the means of achieving it has bedevilled the discussions of educational philosophers throughout the 20th century. Of course young people need to leave school with a broadly based knowledge of the world about them, but they must also have the basic skills on which to build the capabilities that they need to function as adults in the world of work. To put it the other way round, young people must get from their education the ability to survive and prosper economically in order to contribute usefully and productively to society. But they must also have an understanding of that society and their responsibilities within it to be able and equipped to serve and improve it.

The Government's view is that a balanced and successful society needs both utilitarian and cultural elements. No longer can we be satisfied with the ideal of the "all-rounder" if it does not include an awareness of the practical realities of working life as well as cultural values. We need more engineers, more technologists and more managers; but we need to ensure that qualities such as the power of judgment, the ability to communicate and the will to imagine are developed equally by students in technology and science as by those who study the humanities and the arts.

A very old joke is touted around, which I am delighted to say is now out of date. It concerns an engineer who, having been subjected to that well-balanced and rounded education, observed, "I wanted to be a well-rounded engineer, and now I are one." That engineer is a human of the past. Our engineers are becoming more articulate and more multidisciplinary. [HON. MEMBERS: "Hear, hear."] Judging by the reaction of my hon. Friends on the Back Benches, there are some engineers among them who look forward to demonstrating the proposition that things have changed.

In the Government, we feared that many of our schools were still in some ways reflecting the old division between education for work and education for life. There can no longer be any such division. There must be both. The one complements the other. The desirable qualities that I mentioned earlier are of universal application and not the preserve of erudite scholars. Education in all its phases and variety must be available to all.

The Butler Act in 1944 ensured that all children would have access to free education from the age of five to—ultimately—the age of 16. This was a great leap forward, but its focus on fundamental provision meant that it would not treat the school curriculum as a priority. It has become increasingly clear that the education system has not been producing the well-rounded and adaptable school leavers the country needs.

For too long there have been complaints from many quarters. Some parents felt that their children were being taught values and attitudes that were not the traditional ones they had learned. Employers felt that school leavers knew little of industry and lacked the appropriate attitudes and adaptable skills that could be developed in work. Those charged with maintaining the fabric of society may have felt that young people were lacking in social values and a proper concern for the community in which they lived.

For too long, education has been seen as being about academic achievement alone, and either measuring up to it or failing by it. All too often, success has been measured in terms of achievement in the sciences, arts or professions. That has been at the expense of the acquisition of understanding and skills with industrial applications. One could say that we have neglected the enterprise culture to our cost.

So the Government are working hard on a number of fronts to change those attitudes. Let me outline some of the initiatives leading towards that objective.

First, and most fundamental, is the introduction of the national curriculum and the range of targets, monitoring and assessment measures and records of achievement that goes with it. The national curriculum will guarantee that no pupil leaves school without a proper grounding in basic areas of essential learning and skill. It will provide a framework of objectives and programmes of study.

At the core of the national curriculum are the three most basic subjects—English, mathematics and science —and seven other foundation subjects—history, geography, technology in all its aspects, a modern language for secondary school children, art, music and physical education. In addition, all schools will continue to be required to provide religious education for all their pupils, unless their parents stipulate otherwise.

This will mean that all pupils will receive an education that is broad, balanced, relevant to their needs and set in a clear moral framework. It will not longer be possible, for example, for girls to give up science or technology or for boys to abandon modern languages, and relevance and the application of understanding and skills are to be a main feature of all the core and foundation subjects.

Let me quote from the Government's proposals for science, based on advice from the science working group and published in August:

"We share the Group's view of the importance of developing scientific skills through appropriate practical and investigative work. We also recognise the importance of ensuring that pupils are able to communicate effectively about what they have done. We shall not raise the standards of science of the kind the nation will need in the future, unless these aspects of science are tackled in schools. Nor do we believe that pupils should study science without reference to economic and social considerations."

Of course, simply bringing in the national curriculum will not of itself guarantee that school leavers will achieve appropriate standards across the whole range of subjects, but we are tackling this by introducing quality control measures in the form of assessment of pupils' attainments against clear targets. This will have two effects. First, it will act as a diagnostic device so that teachers will know which pupils are experiencing difficulties and will be able to arrange for the extra help that they may need. Secondly, it will serve as a check on the performance of the system as a whole.

We are also ensuring that examinations are able to give a useful indication of what pupils have learnt and are capable of achieving. We are improving the information that school leavers will carry with them as they seek their first job, so that employers will have a much better picture of the skills, abilities, aptitudes and personal qualities of the individual applicant than they were ever able to get from the bald fact that he or she had five O-levels, or CSEs, or whatever. These are important ways of making the education service more "employer-friendly".

These developments are also very significant steps towards the fulfilment of "the educational needs of industry", because in essence industry's needs are precisely the same as the needs of the rest of society. Society requires its young people to be introduced to a wide range of concepts, experience and skills, and as a result to be equipped with the knowledge—and the understanding and flexibility to apply it—that they will need to fulfil all their adult responsibilities towards families and friends, towards employers and colleagues, and towards the community and society as a whole.

But there are other ways—less wide-ranging and visible, but no less significant—in which schools are working with industry to ensure that they understand its needs and take them into account in what they do. Links at local level between individual schools and local firms are growing. The Departments of Education and Science, of Industry and of Employment are working together to foster and encourage these local initiatives, and the range of possibilities is very wide.

Let us take activities based in the workplace, for example. I have already mentioned the impact of work-shadowing. Work experience, in which a young person spends perhaps two weeks in a local firm doing a real job, provides the sort of first-hand experience of the world of business that no amount of teaching, however skilful, can supply.

Dr. Keith Hampson (Leeds, North-West): It strikes me that, although what my hon. Friend has been saying is absolutely true, it was all being said by Labour Ministers back in the early part of 1978. Some of us on the Conservative Benches criticised them then for limiting themselves to mere exhortation. It seemed clear that neither schools nor business men, particularly in the smaller businesses, had the time or inclination to get together with any depth or understanding. Would my hon. Friend consider a system of field officers—based on either the chambers of commerce or the system of science and technology regional organisations—to act as a permanent bridge to bring the two sides together?

Mr. Butcher: I think that my hon. Friend has signposted one of the subjects of debate for this morning. The first point to note is that such people are being put into place now, as a result of the initiative announced by the three Secretaries of State last week. Those advisers will be signposting employers and schools in the appropriate manner to forge such links.

I hope that my hon. Friend agrees—indeed, I hope that there is universal recognition in the Chamber today—that the climate has changed fundamentally. It may have been simply the misfortune of that Labour Administration that the climate was not right then. I think that the exhortation of the past six or seven years has had a very beneficial effect, and it is now focussed even more by the demographic trend that a number of us may wish to discuss today.

I hope that my hon. Friend will be of good cheer. We have a much more positive environment in which to work, and I believe that both schools and employers are of their own volition taking many initiatives that they would not have considered back in those interesting days of 1978.

Mr. Tim Rathbone (Lewes): May I remind my hon. Friend of the activities of the RSA, which have been funded not just by exhortation but with Government money? The "Industry Year" of 18 months ago has now turned into "Industry Matters", and is a continuing concern.

Mr. Butcher: My hon. Friend and I share a close connection, and indeed affinity, with the RSA, which has started something that I consider of long-term significance. As we discuss this issue we shall find it fairly easy to list a large number of bodies concerned with it, both within education and outside in the industrial and commercial world. An awful lot of people are marching towards the problem with considerable enthusiasm, and we must commend them for it. I hope that we can get through the debate with an appropriate mention for each of those bodies and that we shall not miss any out, for I do not wish to offend gratuitously those who have been working for such a long time.

We have discussed work experience and work observation, in which pupils are guided around the workplace to see employee activities. But it is also significant to note the way in which schools are managed and the changes that are coming along, so that we can involve the local community—particularly the business community—in a much more meaningful way. The new composition of governing bodies will give parents a greater say in the running of their children's schools, and the presence of co-opted governors—who in most schools will form the largest single category on the governing body

[Mr. Butcher]

—will serve to broaden the range of interests represented. If none of the elected or appointed governors can be considered a member of the local business community, at least one co-option must be from that community.

The governing bodies of most schools are now being reconstituted under the new arrangements. In making their co-options, the new governing bodies will be looking to recruit a range of people from the community served by the school. They may be choosing bank managers, shopkeepers, police officers, firemen and people running their own small businesses.

The new governing bodies will include people with an enormous variety of backgrounds and experience. They will give their time partly as a matter of public service, but also because they recognise that this is a key opportunity to influence the direction that education is taking, and the preparation that our young people receive for adult life and employment. We believe that the new arrangements will enrich the life of each individual school and will make a significant contribution towards higher standards of education.

Many hon. Members wish to participate in the debate, but I should be grateful, Madam Deputy Speaker, if I could catch your eye later in the proceedings. I hope that what I have said so far has been an appropriate framework in which to pursue our discussions, and I look forward to hearing the comments of hon. Members on both sides of the House.

9.58 am

Mr. Derek Fatchett (Leeds, Central): I take this opportunity to welcome the Minister to his new responsibilities in the Department of Education and Science. This is his first intervention in an education debate or in any education business in the House. I was impressed by the extent to which he was prepared to discuss ideas and to consider the philosophy of education. I am sure that that will enrich our future debates.

Much as we welcome the hon. Gentleman's arrival, those of us who have regularly attended education debates in recent years will mourn the passing of the hon. Member for Yeovil (Mr. Ashdown), whose contribution to education debates provided some of the more enlightening moments. After his intervention yesterday during Prime Minister's Question Time, he, too, may feel that he would serve the House much better if he returned to looking after his party's education brief. It is noticeable that, so great is his influence within his party, he has left a void in terms of an education spokesperson for the alliance.

The Minister spent a good deal of time on the purpose of education. He stated, in terms with which I wholly agree, that the purpose of education is to develop broad and balanced people who can make a broad and balanced contribution to our society. I welcome that definition. It shifts a good deal of the Government's rhetoric and argument away from what I regard as a limited approach to the debates on the Education Reform Act. We cannot and we must not develop an education system that regards education as providing simply outputs for industry. That is wrong for two reasons.

I do not hold the view that sophisticated manpower planning can forecast what industry will need in 20 years. I suspect that British industry is incapable of knowing what it will require in 12 months, never mind in 10 years or 20 years. We do not have the ability to build up such a sophisticated model of manpower planning. Our experience of manpower planning suggests that we have been far from successful in predicting figures of that kind. We should not develop an education system that will provide people who can be slotted into industry. As industry changes rapidly, because of the new technology, we want people to be able not just to fit into a slot but to move into a number of slots. We have to ask not how we do a particular job but why we do it and how it fits into the much broader picture.

Mr. Patrick Thompson (Norwich, North): Does the hon. Gentleman not concede that the message that all hon. Members are repeatedly getting from industrialists and business people is that their major requirement from the education system is not so much that which can be discovered by sophisticated techniques as the basic skills of literacy and numeracy and the other skills that should be provided by any basic education? Therefore, his point is not valid.

Mr. Fatchett: My point is valid. I shall return later to the hon. Gentleman's point, which is a different one.

The Minister referred to the philosophy and the purpose of education and said that we should not envisage education as the means of enabling people to fit into particular slots. That is restrictive, and bad for industry's future. Education has to be broad. That broadness includes a knowledge of industry and of a variety of other activities.

I always love to refer to the experience of a school in a constituency adjoining my own. I suspect that it is very well known to the hon. Member for Leeds, North-West (Dr. Hampson). A few years ago two teachers at Harehills middle school, which had run into difficulties, took the initiative to develop dance as a compulsory part of the school curriculum. Their initiative was tremendously successful. Out of their initiative have come two professional dance groups—Phoenix Dance and Northern Contemporary Dance. I did not see the programme, but I understand that this week a Channel 4 programme was devoted to them. Phoenix Dance has already had the ultimate accolade of a South Bank programme devoted to it.

The result of that initiative by two teachers has been a significant change in the character of the school. It has come to life. Many good things happen in the school, not just in terms of dance. That initiative has provided the youngsters and the teachers with greater self-confidence and the ability to achieve in other areas. The point that I am making from that experience is that education is about developing the whole person in order to give him the confidence and ability to undertake tasks in many arenas, one of which is industry. The others relate to much broader aspects.

Dr. Hampson: Surely there is another lesson to be learned from it. It has been learnt in inner-city areas in America, in cities such as Boston. It is important, if possible, to put resources into specialised areas to enrich particular parts of the school curriculum, because it can lift the reputation of the school. I should be interested to know whether the hon. Gentleman backs those of us who for more than a decade have been calling for the development

of magnet schools in certain local education authorities. The Leeds education authority could be given a few lessons.

Mr. Fatchett: I am sure that it would not be appropriate to have a debate about Leeds, but I am keen to see the development of special characteristics in our schools. I am not sure whether they should be called magnet schools; I do not want to enter into a semantic argument of that kind. However, the education system should allow schools to develop special characteristics, whether dance or engineering, or something else.

Schools should be able to develop special interests and special characteristics. The fear that some of us have always had about a national curriculum is that it may not allow such abilities to be developed. The national curriculum has to be sufficiently flexible to allow that to happen. I agree with the Minister that we need to develop a broad liberal education that will lead to balanced individuals and a balanced society.

That does not mean that an understanding of industry should not play an important part in education. Any youngster who leaves school at 16 or 18 should understand the society in which he or she lives. They should understand how wealth is created and what happens to it —how and why it is distributed in particular forms. The "how" questions are important. Equally, the "why" questions are important. Through the ability to ask the "why" questions, we stimulate the debate that moves society on and enables progress to be made. We want an understanding of industry. We want an understanding that allows questions to be asked about the purpose of industry and the broader purposes of society.

Mr. Peter Thurnham (Bolton, North-East): The hon. Gentleman refers to the need to understand industry and the need for progress. One of industry's great characteristics is competition, yet when the Government introduced the new city technology colleges the Opposition condemned that initiative. They said that it would compete with their own local authority monopolies.

Mr. Fatchett: I shall refer later to the city technology colleges. It is not inconsistent to say that we need to understand the nature of competition. Whether people accept the value of competition, and some of the more rigorous examples of it, is up to them. They must make political and personal choices. If there is to be any understanding of the capitalist market society, there must inevitably be an understanding of the role that competition plays in it.

Alongside industry, we expect youngsters to leave education understanding other institutions in our society. Industry is one important institution. So are trade unions. So is local government. So is this place. It would be encouraging if more youngsters left school with a greater understanding of how the political system works, the nature of decision making and the role played by Parliament. Such an interest should be developed. Given the opportunity to learn such information, young people are more willing to participate in decision making.

I agree with the Minister that any good education system must be broad and balanced, enabling people to understand industry and to place industry in a broader social context. It must enable people to understand values and to challenge and analyse them. I think that we all agree that we must never have a narrow education system which tries merely to train people to perform specific tasks.

I was glad to hear the Minister say that there was traditionally a sharp division in the English education system. That may be truer for the English education system than for the Scottish or Welsh education systems. As the Minister said, the distinction was between a well trained and well educated group equipped to run the empire and the vast majority of the population who were trained to perform certain tasks in industry. Their knowledge of industry developed haphazardly on the job and was based on experience. We should move away from the first and develop the second so that people see wider opportunities and a wider chance to develop their talents.

Thus far we all agree, but we run into difficulty with the Minister's suggested initiative to enhance the relationship between education and industry, and their mutual understanding. The Minister focused his attention on the Government's introduction of the national curriculum. Those of us who were involved in the long debates on the Education Reform Act 1988 will have been through many of these arguments before, but I should like to put two detailed points to the Minister and then make a broader general one about the national curriculum.

The Minister said that testing will make an important contribution to improving standards and performance. We have always accepted the role of testing. We disagree with the Government about the balance between what may be seen as competitive testing and what may be seen as diagnostic testing. The Minister seemed to come to the side of the argument that we advanced on Second Reading and in Standing Committee on the Education Reform Bill. We have always favoured diagnostic testing and believed that the vast majority of teachers and schools participate regularly in it.

The Minister used the term "diagnostic testing", and we welcome that. We accept the need for it, but will the Minister tell us the Government's intentions with regard to publishing the results of testing at the ages of seven, 11 and 14? To what extent will those results be presented in a competitive context in an attempt to compare schools and local education authorities? We have always felt that there are substantial difficulties associated with that process, as we do not have the sophisticated measures required to show different inputs in different schools or education authorities.

Mr. Butcher: As is his right, the hon. Gentleman is selectively interpreting my opening speech. I am saying that, if we continue the 19th century tradition of educating the whole man, in 20th century terms we shall be educating half a man. If people are unfamiliar with the enterprise ethic and wealth creation activity, they are half persons.

I was clear about testing. I regard it as part of the quality control mechanism that we need in education. Teachers will always deliver according to their own judgment against yardsticks, but testing has to be about quality control and monitoring. That is a legitimate objective in every other walk of life. The hon. Gentleman started by being very kind to me, but his analysis of my opening speech is a little unkind.

Mr. Fatchett: I shall again extend the hand of kindness to the Minister, as I am not sure that the difference between us is substantial. The report of the task group on

[Mr. Fatchett]

assessment and testing considers the need for assessment against critieria. That is testing, and anybody who has been involved in education understands that it is a necessary part of the education process. The difference between us concerns what happens to the results of testing.

TGAT and the science and maths working party show that testing must rely on individual teachers. There is no question of teachers not being involved, but how will the results be published? What form will they take? For what ages will they be shown? How will the Government take account of the different socio-economic factors that still determine performance of schools and local education authorities to a great extent?

The Minister said—quite rightly, as it is the nature of the Education Reform Act—that the three core subjects of the national curriculum will be English, maths and science. Just over 12 months ago, it was possible for the Government to have arrived, with teachers and political organisations, at a consensual core curriculum which would have provided a framework of agreement for the education system into the next century. The Government and the Secretary of State decided on another course, which involved little consultation and little interest in other people's views.

As a result, the Government now face a severe problem in terms of delivering the national curriculum. If ever there was an example of the Government rushing and then not being able to make pace later, the national curriculum is it. If the Government had talked to the education service, and if they had realised what was said in the three major political parties' manifestos for the 1987 general election, they would have seen the basis of consensus. That is why the Labour party never voted against the principle of a national curriculum.

Instead of building up co-operation before legislation, the Government are now trying to put together a national curriculum without consultation and, to some extent, without confidence. Come the 1991 or 1992 general election, Conservative Members will not be able to talk about delivering a national curriculum. There will have been four wasted educational years, as little of the national curriculum will be in place by then. If the Government's diagnosis of education problems depends on a prescription called the national curriculum, they will not be able to deliver that prescription by the next general election.

I should like to hear the Minister give some further indication of the time scale of delivery. It will not make good news for Conservative Members. I should also like to hear something about the balance of the national curriculum. The Government have had more than 15 months to think about that balance, but there is still no published version and no understanding of it. How much time are we to spend on maths? How much time are we to spend on science? How much time are we to spend on foreign languages? The Government simply do not know the answers to those questions. It is crucial that at some stage, perhaps today, the Minister gives us a breakdown of the national curriculum and sets out its component parts.

The national curriculum presupposes that sciences and foreign languages will be taught to all until the age of 16. We do not disagree with that objective, but we are profoundly worried about it. I do not believe that the Secretary of State has understood the educational difficulties in providing education in science and foreign languages for all until the age of 16. It is not good enough to say that if those subjects are made compulsory youngsters will not have the right to opt out of them as they do now. That may be correct, but if one wants to provide a good education one must understand the means of delivering it. Part of that process involves an ability to maintain the interest of all pupils in science and in foreign languages until the age of 16. When the Minister replies, I hope that he will give us some idea as to the Government's thinking on how to maintain that interest.

My final point about the national curriculum is that, to deliver a national curriculum of quality and one that will improve standards in our schools, we need a well-motivated teaching force. There must be sufficient numbers in the appropriate subjects to deliver that curriculum. That is a major problem that faces the Government and to which they have not related in an effective way.

There is a growing crisis in our educational system because of a teacher shortage and all the evidence points to that. In June, the evidence provided by the Engineering Council, the Secondary Heads Association and the Headmasters' Conference all showed an acute and growing shortage of teachers in the key subjects. Those are the subjects to which the Minister referred as the keys to delivering higher educational standards and higher standards for industry. Those shortage subjects—maths, physics and foreign languages—are the very subjects that are at the core of the national curriculum.

I was involved with a survey published this week which shows that two thirds of local education authorities are now finding it increasingly difficult to recruit teachers of maths, physics, general science and foreign languages. That crisis holds the key to educational performance. The Government, however, appear to be taking no measures to ensure that we have a sufficiently large and well-motivated teaching force. As demographic changes hit this country, the pool of youngsters from which we can recruit our teachers will become smaller and smaller. To maintain our teaching force, we need to take a larger percentage from that pool, but what are the Government doing to encourage people into the teaching profession? The Government have simply failed to come up with any measures that will make teaching more attractive and more rewarding.

Mr. David Lightbown (Lords Commissioner to the Treasury): Oh!

Mr. Fatchett: The hon. Member for Staffordshire, South-East (Mr. Lightbown) may scoff from the Treasury Bench, but the reality is that there is a drain of people from the teaching profession.

Well-qualified teachers are leaving the profession simply because they are not motivated enough to stay. Apart from salary, there are two reasons for that. For nine years we have had a Government who have consistently run down the professionalism of teachers. Such criticism has been one of the occupational pleasures of the Conservative Benches. The results of such criticism are now coming home to roost, because teachers recognise that they are serving a Government who have consistently undermined their performance and status. The Government now are paying the price for that, as teachers leave the profession.

The second Government measure that further undermined morale was the abolition of teachers' pay negotiations. That basic democratic right, supported by international organisations, was taken away from teachers. The Government's entire approach has been to weaken the attractions of the teaching profession.

Mr. Tony Baldry (Banbury): The hon. Gentleman's argument appears to be that there are too few teachers. Perhaps he would like to come home with me and explain to my young son why he was denied a day's education yesterday. The Inner London education authority, finding that it has too many teachers, is seeking, sensibly, to redeploy them. I understand that the hon. Gentleman is sponsored by the National Union of Teachers. What would he say to its London members about their professionalism, given that they denied young children, such as my son, a day's education? What effect does he think that such action has on the confidence of young children in the teaching force? What sort of professionalism is that?

Mr. Fatchett: That was a far from effective intervention, and it was wrong on two points. First, I am not sponsored by the NUT, I never have been, and have never been a member of that union. On that basis I suspect that the case of the hon. Member for Banbury (Mr. Baldry) is rather threadbare. I do not know whether the hon. Gentleman is a lawyer, but I hope that he never represents me and puts a case forward on that basis.

The argument that the hon. Member for Banbury put forward fell apart at first, but I believe that he was seeking to make a serious point, and I shall respond in a similar manner. The hon. Gentleman may be interested to know that the Labour party has said that it supports the approach to compulsory redeployment adopted by our colleagues in ILEA. We oppose those teachers who are making that process difficult for it. We also said to our colleagues in ILEA that we thought that they should have adopted a process of redeployment some time ago as it would have saved money and would have meant that scarce resources were used more effectively. On that basis, I believe that the hon. Gentleman's intervention falls on two counts.

Mr. Ian Taylor (Esher): Will the hon. Member for Leeds, Central (Mr. Fatchett) help us by saying a little more about trade union reaction to regional pay bargaining? Many teachers in my area of Surrey would very much like regional pay settlements instead of the nonsense that is currently spoken about everyone being paid the same amount. That is one of the main difficulties in getting good teachers in the south-east.

Mr. Harry Greenway (Ealing, North): I believe that the hon. Member for Leeds, Central (Mr. Fatchett) is sponsored by ASTMS.

Mr. Fatchett: I am glad that somebody has done some homework and provides the necessary information. That union, which has now changed its name, does not sponsor me, but sponsors my constituency Labour party.

Mr. Baldry: What is that union called now?

Mr. Fatchett: I will offer that information so that the hon. Gentleman's next intervention will be correct. My constituency party was originally sponsored by ASTMS and those hon. Members who are interested in industrial relations will now know that it has changed its name to MFS—the Manufacturing, Finance and Science union. I hope that the hon. Member for Banbury does not fall into the same trap as I did, because at the press conference that launched MFS I sadly slipped into calling it MFI.

The hon. Member for Esher (Mr. Taylor) asked about regional pay variations. I do not believe that that is a solution to the problem. The problem is not so much one of regional differences—the survey conducted by the Labour party and other surveys have demonstrated that—the real problem is subject shortages. There is a shortage of teachers of maths, science and foreign languages. Those subject shortages occur not only in Surrey, but in Leeds, the north-east and across the country. There is no regional variation in that. We need to find ways to recruit teachers in those shortage subjects.

If the national curriculum is to improve standards, it needs enough good-quality teachers, but the Government are not providing teachers for that purpose.

My second major point relates to our ability to provide for industry's needs in post-16 education. The substantial failure, which the Education Reform Act 1988 did not resolve, is the ability of the education system to retain youngsters after the age of 16. The biggest single educational loss of talent and ability is at the age of 16. That is an indictment not just of the Government but of the education system. International comparative figures show that Britain's staying-on rate at the age of 16 is half that in many of our competitor countries in western Europe, in Japan and in the United States. Even worse, some of the south-east Asian countries, especially South Korea, will soon have a much more substantial staying-on rate than in the United Kingdom. An article published in the *Financial Times* in June shows that roughly seven out of 10 South Korean youngsters leave school at the age of 18 with technical qualifications approaching or beyond A-level standard.

That is what we are competing against, but the Education Reform Act failed to deal with it. We must create the conditions in which our youngsters want to stay on in education after the age of 16. We shall not compete or provide the Minister's "balanced person" unless we continue to provide good quality education and training beyond the age of 16.

Going around the country, as I and many hon. Members do, and talking to representatives of British industry, the response that we increasingly hear is that we are short of skilled people. Those skills shortages are developing not just in Surrey and the south-east but in other areas, and they are very much a reflection of our teacher shortages. They are specialist skill shortages. Last week, I visited the Vickers factory in Leeds, and the manager told me that the company had difficulty recruiting planners and engineers. Education should make a contribution to resolving that skills crisis, and the real indictment of the Government and the Secretary of State for Education and Science is that at no time during the passage of the Education Reform Bill did they try to aid the development of technical skills and expertise among 16-year-olds.

Mr. James Pawsey (Rugby and Kenilworth): May I take it that the hon. Gentleman would support my right hon. Friend's advice to the interim advisory committee that differentials should be taken into account? Those differentials will ensure that the shortage subjects will

[Mr. James Pawsey]

attract teachers because they will be better remunerated. Secondly, at long last the hon. Gentleman seems to have been converted to the idea of city technology colleges. They will go a long way to resolving some of the problems to which he referred.

Mr. Fatchett: If the hon. Gentleman can see, on the basis of such flimsy evidence, conversion where none exists perhaps he should have chosen the Church rather than politics as a profession.

We need to develop a strategy that helps us to provide good quality education and training post-16, and I offer the Minister three suggestions for developing Government policy. First, we must reconsider—a cost is involved, but it must be faced because it is an investment—the provision of educational maintenance allowances or study grants for youngsters who stay on in education post-16. We know for a fact that youngsters—mainly girls—leave education at the age of 16 for financial reasons. We need to provide the financial incentive and security to stay on, and it would have been a significant education reform if the 1988 Act had included a provision for such study grants.

Secondly, we must broaden the range of skill and qualifications post-16. One of the most damaging acts of the Secretary of State—I sense that it was not his decision but that of the Prime Minister—was to reject at a stroke the Higginson report on the reform of A-levels. The education system cries out for broader provision post-16—a provision that reflects the Government's national curriculum, that will allow our youngsters to maintain a broad and balanced education that will allow them to study science and technical subjects, together with arts and the social sciences, after the age of 16. Britain is unique in the Western world in its provision of post-16 education and training. Only we believe that a tight, specific education is the road to the future. I believe otherwise. We must develop a much broader base for our post-16 education.

Finally, to deal with a point made by several Conservative Members, the Government must reconsider yet again our training requirements. The best way to deal with skills shortages is to return to the provision of long-term training courses—skills-based, employer-based and college-based, but providing genuine skills. I was interested to read an article in *Computing Weekly* of 25 August which showed that the information technology industry has rejected the Government's approach to training. It believes that the Government's courses are underfunded and aimed too low. We need to extend them and to return to long-term provision to deal with the skills and training shortage.

Very finally——

Mr. Pawsey: That is the second "very finally".

Mr. Fatchett: Without all the helpful interventions from Conservative Members, my agenda would not have been extended. The hon. Member for Rugby and Kenilworth (Mr. Pawsey), in his usual mischievous way—I sat through 200 hours of it in the debates on the Education Reform Bill—always wants to extend the debate, and he asked me about my conversion to city technology colleges.

In conclusion, let me say that there has been no such conversion. City technology colleges will not provide the skills and resources that are necessary for all our youngsters. As we saw in *The Times Educational Supplement* last week, the programme has already run into the greatest difficulty. Conservative Members will recall—I am sure that they participated in the statutory standing ovation—that at the 1986 Conservative party conference the Secretary of State described city technology colleges as the most significant reform of the century. It seems that any initiative taken by the Secretary of State is the most significant reform of the century. He said that industry would come into the education system to reform and reshape it and to give it new life.

At the following year's Conservative party conference, the Secretary of State said that this great initiative to open 20 technology colleges had not run as smoothly as he might have hoped. But at that stage he was delighted to announce to the faithful that one of the 20 schools had been opened in Solihull. This year he returned, and somehow the city technology colleges started to slip off his agenda. That is hardly surprising, because he will not now reach the figure that was suggested at the 1986 conference. He will not reach it because industry recognises that it is not its job to finance and resource education: it is the Government's job. That is why industry has not been prepared to come forward with the cash.

If Conservative Members deny this or disagree with it, they should remember that in the early days, in that conference speech in 1986 in Bournemouth, the Secretary of State said that most of the money would come from industry and that the Exchequer—the public purse—would play little part. The opposite has happened: 80 per cent. or more of the spending on CTCs will come from the taxpayer, not from industry. The truth is that the CTC programme is a failure, not because of Labour opposition or the opposition of Labour and Conservative local authorities but because of the opposition of industry. There is no enthusiasm for the scheme. Industry wants the balanced person to whom the Minister referred; and it wants a well-resourced and maintained education system. It wants a system with enough teachers, resources, textbooks and buildings, and it wants an education system and a Government that will start to tackle the problems of the skill shortage in this country.

This Government have failed industry; their policies in education have failed it, too, and we need a great change. Only the Labour party is putting forward the necessary new agenda.

Several Hon. Members *rose*——

Madam Deputy Speaker (Miss Betty Boothroyd): Order. I am keeping a keen eye on the clock. Since the debate opened it has become clear that there is considerable interest in it. Had Mr. Speaker been aware of that at the outset it is likely that he would have imposed the ten-minute limit on speeches. I know that he would appreciate it, therefore, if hon. Members would employ some self-discipline. I should like to call a large number of hon. Members and it would help me enormously if that self-discipline were employed and hon. Members chose to speak for no more than 10 minutes.

10.42 am

Mr. Gerald Bowden (Dulwich): I shall take seriously the suggestion that you, Madam Deputy Speaker, have made. I think that the number of Conservative Members present

reflects the concern in the Chamber about this problem. It was clear from the speech by the hon. Member for Leeds, Central (Mr. Fatchett) that there is a great deal of shared ground between the two sides of the House. The difficulty, I suppose, is that we have a different view of the causes of the problem and of the solutions to it. I hope to touch on one or two of these in the short time that I propose to detain the House.

Immediately before entering Parliament I taught in a polytechnic close to this Palace. I was associated with a vocational course. I myself had gone through a fairly traditional university course of three years, at the end of which one might proceed to a professional qualification. However the course on which I taught at the South Bank polytechnic was called a thick sandwich course. The students on it spent three years in college and one year in a professional attachment. The remarkable thing about it was that they spent the first two years gaining basic skills necessary to make the conversion to the world into which they hoped to work. Their third year was spent in the world of business outside the polytechnic, while the fourth was back in the polytechnic putting the final touches to their academic qualifications. That work experience at that age was undoubtedly beneficial and was a formula that might well have been used in other universities. It took the polytechnics to pioneer that sort of vocational training. All this, however, was directed to a professional qualification, as opposed to one for industry, but there are lessons to be learnt from that professional approach in training and education for industry and commerce.

If one thing emerged from my experience in teaching it was that many students with the appropriate grades at A-level arrived on their higher education degree courses without the basic skills of communication, fairly simple numeracy and the literacy with which to express themselves and make it possible for them to communicate professionally and understand the professional instruction that they were required to absorb. So there is a real need to go back a stage before the higher stages of education and specific training for industry, to secondary education and to ensure that the elements in the core curriculum that are important in enabling students to absorb the technical, professional and practical needs of industry are present.

Going back one stage further, we need to ensure that the seeds of good training are sown at the base of our educational system. Our primary and nursery schools must show the way ahead. I well remember going around a nursery school in which I had an interest in placing a child and seeing a purposeful group of children there going about what was referred to not as play but as work. One little scene that attracted my attention was that of a child with a glass and jug. In the jug were beads. The child was pouring the beads from the jug into the glass. Some fell on the floor and were retrieved. I asked the head of the school what was happening and she told me that when the child could pour all the beads into the glass without spilling any he would be able to pour himself a glass of milk from the jug. That was a simple training technique at the early age of three or four. Those were the seeds of education for industry planted at the very beginning of a child's educational career in a school that fostered good motivation. This is not to deny children access to the humanities, the arts and all the other things that we regard as constituting a rounded liberal education.

I agree that motivation in children and parents is important, but I take issue with the remark by the hon. Member for Leeds, Central that Conservative Members have indulged in a sustained campaign of denigrating the teaching profession. Not so. Conservative Members who have been teachers or who have been involved in education applaud teachers who are doing a good job, but that in no way prevents us from pointing the finger at the ones who are doing a poor job, of which there are some. We must make sure that teachers in our schools are conscious of the importance of education to industry, of industry to our economy and of our economy to our civilisation and way of life. These things are all interlocked. One of the failures in inner London was that many teachers have not been conscious of that fact or, if they have been have deliberately fought against it.

I pay a small tribute at this point to Dulwich college in my constituency, one of the most forward-looking of schools, and to its former master, David Emms, who, long before it became fashionable to talk about industry and education, took the initiative in trying to ensure that the boys in his school who were on an entirely academic course were not unaware of the practical application of that course to the world at large and of the importance of that application to the economy.

Mr. Mark Wolfson (Sevenoaks): Does my hon Friend agree that some people in the teaching profession have been unnecessarily defensive about legitimate criticism of some of their performance? There is criticism of management, trade unions and of people in all sorts of other careers, and it should be no oddity that criticism is made of teachers when it is justified.

Mr. Bowden: I am grateful to my hon. Friend for provoking another line of thought. I shall answer him obliquely. A short time ago I spoke to a headmaster who said that when he was appointed to that post he had had no training for the job. He had been a senior subject teacher and was appointed as headmaster of a large comprehensive school. After his appointment he was lucky to receive a two-week training course in administration. He contrasted his experience with that of his brother or brother-in-law—I forget which—who was in the Army and was destined for promotion from major to lieutenant colonel. That promotion would enable him to take over the running of a signals regiment. He had a two-year training course before taking over the regiment. There is an analogy there that should be followed.

When we require teachers to become managers or heads of school and to become involved in the administrative process of management, which is an industrial concern as well, we must make sure that within the teaching profession there should be a way to allow people to develop the skills that they will require to do a proper job. There can be no criticism of the individual who sometimes fails, but there are grounds for criticism of the system if the procedures I have mentioned are not in place.

I am conscious, Madam Deputy Speaker, of what you said about the pressure of time, but I should like to deal briefly with one other matter. We are all involved in the learning process and in education for industry. I should like to pay tribute to the Industry and Parliament Trust. My hon. Friend the Member for Rugby and Kenilworth (Mr. Pawsey) sees conversion where others would not. I welcome that faith and perception, and can tell him that I am a late convert to the Industry and Parliament Trust and recently became involved in one of its programmes. The

[Mr. Bowden]

arrogance or complacency of many of us who opine about industry and commerce without being deeply involved in it has shaken my self-confidence.

I go round factories and I hope that I make the right noises and I am certainly told various things. But it was not until I became involved in a fellowship with the EMAP —the East Midland Allied Press, through the good offices of Sir Frank Rogers, who suggested that I might learn something by looking at its operation, that I realised how far industry has moved on from the time when I first had close connections with it. It is important for us to recognise that there is no training for life, but there is training for a phase of employment. Throughout industrial life there is a retraining process during which one re-equips oneself to deal with the challenges of new technology, new industrial demands and new management techniques.

I am conscious, as are all hon. Members, that we have no life tenure in Parliament. We might have to retrain at any time for other careers. There is a need in the country, in industry and in the teaching profession to be prepared to accept that we all may need to be retrained for industry. It is a continuing process involving not only children at school or people in higher education but all hon. Members and everyone in industry. We must respond to the challenge by being prepared to retrain and re-educate ourselves.

10.54 am

Mr. Peter L. Pike (Burnley): Bearing in mind, Madam Deputy Speaker, your strictures about time I do not propose to deal with the arguments by the hon. Member for Dulwich (Mr. Bowden) or to reiterate any of the fine points made by my hon. Friend the Member for Leeds, Central (Mr. Fatchett). I should like to take part in the debate for two simple reasons. First, the north-west, the region in which my constituency is based, is an industrial area and always has been. Secondly, before I was elected to the House I worked in industry on a production line on a continental shift system which meant changing shifts every three days. Therefore, I know a little about industry.

The Minister spoke about some of the problems in education and in industry. I had hoped for some insight into how we might set up a system that encourages people to the view that a job in industry, in management, supervision or working on the production line, is important to Britain and that we want people to do those jobs. There is a tendency for people to say not that their daughter should not go on the stage, but that their children should not go to work in a factory. They apply that attitude to management, supervisors and to people working on the production line. That is appalling because industry is of basic importance to Britain.

I do not deride the importance of invisible exports such as banking, insurance or tourism, but at the end of the day our bread and butter and Britain's future depends on a strong manufacturing base. Our industry needs to succeed and must export a far higher proportion of goods than it is able to do at present. Our balance of payments must be improved. The key thing to say to people with ability who are looking for jobs is that if they want to enter management it is good to go into industry. There are also good jobs to be had in supervision and people are needed on production lines.

We must change the concept in industry of a difference between so-called white collar staff and blue collar hourly paid workers. That concept still exists in many industries. I worked for the large multinational Philips group and in our factory all the workers were on staff conditions. When I was a shop steward and involved in negotiations I always recognised that a cleaner was just as important as management to the running of the factory. Everyone working together ensured the success of the factory. We must ensure that people working in factories are not treated as second-class citizens and we must change the attitude that people earning hourly pay are only doing so because they cannot get another job. I do not look at it in that way.

I should like to refer to a letter, of which my hon. Friend the Member for Blackburn (Mr. Straw), who has just left the Chamber will have received a copy. It is a letter from Mr. David Tinniswood. I received a copy this week and a copy has also gone to the hon. Member for Rossendale and Darwen (Mr. Trippier), the Parliamentary Under-Secretary of State for the Environment. It is a copy of a letter sent to the hon. Member for Pendle (Mr. Lee), the Parliamentary Under-Secretary of State for Employment. Mr. Tinniswood is an education and industry liaison officer and has offices in the Pendle constituency. His letter deals with the subject that we are debating. In his letter to me Mr. Tinniswood says:

"North East Lancashire has gained a national reputation for linking education and industry in a very meaningful way but the continuance of this work could be under threat in the near future if some satisfactory method of funding this work cannot be found."

If that is correct, it could threaten the purpose and function of the issue that we are debating today. I hope that the point will be looked at.

Mr. Tinniswood says that his post, which he has held for six years, is on a secondment basis, and because of the threat to local government funding, the county council is not able to make it into a permanent post. He says that three Cabinet Ministers recently launched the Department of Trade and Industry business and education initiative, a launch which he attended, and at which the work done by his section of the education department was recognised. Despite that, his job is in jeopardy. He continues:

"Presently I am heavily engaged in delivering an effective cross-curricular education/industry policy within the National Curriculum, managing the education team preparing the Blackburn Compact and actively involved in meeting the targets set for us in the Business and Education Initiative."

At the end of his letter, he says that he believes that this problem could be solved by a special education support grant to ensure that such a function can be maintained.

This work is a good example of what can be done to develop links between industry and education. It is important to ensure that such exercises in other sectors do not fail. I was involved in the preparation of the bid by Burnley for a compact. It was unsuccessful, and I accept that, because of the deprivation criteria, Blackburn may have had a better case than Burnley. However, we shall continue to go for it, because we do not accept that no as a final answer.

Even if we have the right education for children who leave the education system at 18, 19 or even later, we have to recognise that with the changes in society and industry, brought about by automation and other developments that need to be introduced, if we are to compete in the market place, people will not remain in the same job all

their lives. Much will change, and I hope that we shall provide for those who will have to go in and out of education and training at various stages in their lives. We have to ensure that when people do such education and training, whether they are men or women, they must be able to do so without suffering financial difficulties. I have dealt with a number of cases recently where this has not happened. For example, a woman received a grant for retraining, but that affected her husband's benefit, which was a deterrent to going back to education. In another case, benefit was stopped while somebody underwent a short training course. How such people are expected to live, I do not know.

We must make available education and training opportunities throughout people's working lives as well as in the early school leaving period. That is crucial. Furthermore, the Government have to accept that the man or woman going back into education or training must be able to maintain their standard of life so that they and their families do not suffer poverty or deprivation as a result. This is an important debate, but I am aware of the constraints of time. I am sure that other hon. Members will add other important issues at which we shall be looking.

11.4 am

Mr. Tim Rathbone (Lewes): Whatever the criticisms from parents, students, employees, teachers or politicians, I believe that we can stand proud of the record of what our universities, polytechnics and other institutes of education can do and are doing. Britain must live by her wits. Leading industrialists look to those educational institutions, particularly those in further education, as sources of able, well-qualified and adaptable young people who can keep up with, influence and lead the ever-changing economic, social, political and technological world in which we live.

As change is part of educational life, it is healthy that the curriculum is being reappraised. It must be healthy that centres of excellence are being identified, built up and expanded, that the performance of both academic and administrative staff is better appraised and recognised, that higher students standards are being encouraged, and that more and better bridges are being built between the world at work and the world at study. This includes liason between schools and businesses, technology transfers, co-operative provision of services on and off campuses, encouragement of out-of-work and teach-in opportunities and a far closer relationship between educational institutions and particularly between universities and polytechnics, which are breaking down the historic barriers of yesteryear and drawing together complementary skills for the benefit of teachers, students and industry alike.

That is not to say that all that is beautiful has to be big, even though there is a case for rationalising provision for some kinds of expensive scientific research on an international as well a national basis. For instance, at Sussex university, part of which is in my constituency, the vice-chancellor pointed out at the annual meeting of court earlier this year that there is a group in physics made up of just two members of faculty. However, this group has been awarded hundreds of thousands of pounds of research grants; has established research collaboration with the high resolution electron microscopy facility at Arizona state university, where one of the group is a visiting professor; and, very importantly, has built up close working links with a number of industrial companies manufacturing scientific instruments near the university.

Flexibility must be the password to future success in education as in business. Universities will have to co-operate more with local institutions to develop pre-university foundation and preparatory courses tailored to the new demands of degree courses. Also at Sussex university, the school of engineering and applied science has set up a linked scheme with local technical and sixth form colleges to give potential engineering students specialist training in mathematics and physics and areas of expertise not covered by their colleges.

Degree programmes will have to become more flexible, with increasing acceptance of credit transfers, so that a degree may be fashioned out of compilation courses, sometimes taken at a number of different institutions and at different times—a point made by the hon. Member for Burnley (Mr. Pike)—and joint degrees must be developed. We must make an even greater contribution to, and seek ever increasing numbers of people—teachers and students—from overseas universities, particularly within Europe, and we must also allow credit transfers and split and joint degree schemes with them. As degrees and the work leading up to them become more career-relevant, so our universities and polytechnics must prepare provision for mid-career training, with short and part-time courses to update those in professional and technical employment.

As our developed nation and world becomes ever more interdependent with developing nations, we must build stronger educational links with those nations and encourage more and better students from those areas to create a more advanced, better integrated and more extensive information and communications environment throughout the international academic community.

I should like to say a special word about our Open university, which has only slightly fewer than 200,000 students this year and 100,000 graduates to its credit. It is extremely successful, with an established high reputation among students, employers and academics. It will be needed more than ever in the future as either a first-chance or second-chance provider of further education. It claims, with justification, to offer the most cost-effective source of training, retraining and reskilling. Over recent years, it has increased its efficiency, reduced its costs and improved markedly its entrepreneurial earnings from other sources. However, it is now facing such financial pressures that its educational programmes are at risk and soon it may not be able to meet its charter obligations. Therefore, I plead for increased block grant to match more closely the far higher inflation within and across all its cost factors than is found in the country generally. The need for the Open university's special qualities has never been greater. It deserves our proud and realistic support.

Another educational initiative which is especially pertinent to today's debate, and one which comes from outside the formal education system is Education for Capability, which is administered by the RSA, the Royal Society for the encouragement of Arts, Manufactures and Commerce. It is based on the belief that a well balanced education should embrace analysis and the acquisition of knowledge, but must also include the exercise of creative skills; the competence to undertake and complete tasks, the ability to cope with everyday life and the ability to do all those things in co-operation with others.

[Mr. Tim Rathbone]

The aim of Education for Capability is to encourage and develop in people four capacities that are currently too often under-emphasised in our education system. The first is to improve competence by the practice of skills and the use of knowledge. The second is to enable students to cope better with their own lives and the problems that confront them and society. The third is to develop the students' creative abilities. Above all, the fourth aim is to enable students to co-operate with other people in those capacities. It is those four capacities which Education for Capability is designed to encourage and develop.

New projects are started every year. Three have been launched in 1988—on effective learning, practice and management, on learning by experience in further education, and on higher education for capability. The projects are funded by foundations and trusts, public companies and the Training Commission, but there is still a shortfall for the first of the three years of the programmes, and considerably more money is needed to meet costs during the second and third years. Any encouragement that my hon. Friend the Minister can give, either with funding or to help attract further funding, will be most welcome.

My hon. Friend the Member for Dulwich (Mr. Bowden) mentioned the education requirements and the importance of education at the other end of the education spectrum—the importance of practical and useful learning at the early stage, in nursery school. Nursery schools are the overlooked and often forgotten cornerstone of all other learning and all other life. I hope that the House may have an opportunity to return to that subject and to debate it in depth at some future date, as there is not the time to go into it this morning.

We must remember that the seeds of the industrial revolution can be found in the universities of the renaissance. Together, industry, the universities, polytechnics, colleges and other educational institutions could today make history repeat itself. That is what this important debate is really about. I should like to end by thanking my hon. Friend the Minister for instigating it and for his continued interest in this subject—more strength to his elbow.

11.14 am

Mr. Ieuan Wyn Jones (Ynys Môn): Without doubt this is a debate on one of the most challenging topics of our generation. It is even more crucial in the light of the fact that there will be 25 per cent. fewer school leavers in 1993 than this year.

We in Wales—I recognise that I carry a heavy responsibility today as I am the only Member from Wales present to participate in the debate—consider that proper education and training for our children and young people is essential to protect our communities from massive rural depopulation. We understand that a diverse, vibrant and healthy local economy depends on a well educated and properly trained work force and on young people being sufficiently motivated to set up in business and commerce.

I was interested to hear the hon. Member for Leeds, Central (Mr. Fatchett) refer to certain skills shortages in some of the industries in his constituency. During the summer recess, I visited several factories and workplaces in my constituency and found a similar problem there. There is now a considerable lack of skills in some areas. The harsh and unpalatable reality is that jobs remain unfilled simply because some skills are not available locally.

I hasten to add that the vast majority of employers wish to recruit from within the locality; they know that, if they can do that, prospective employees will have a commitment to the area and to the industry. People from outside often see jobs purely and simply in terms of career development. Clearly, there will be occasions when it is not possible to recruit locally, and of necessity people must be brought in from outside the area. However, where it is possible for us to find properly skilled people within the locality, my experience is that employers prefer that course.

The problem is that companies which are large enough to have their own training resources do their training without anybody else's assistance because they have the expertise. The companies that lose in areas of skills shortages are the ones which are too small to have training resources. They therefore go without the skills which are necessary to enable them to develop. The Government must take that issue seriously.

Our communities are under threat in rural Wales, mainly because our economic base is weak and we face challenges from wealthier regions especially the south-east of England and the midlands. In the past 18 months, that has led to pressures on house prices, which have recently been pushed up and which have exploded out of the reach of local people, especially young people.

One way in which we could meet that challenge is to ensure that schools and colleges of further education give young people every opportunity to go into industry and commerce, and that they encourage them to do so. In the past, there has been reluctance in rural Wales even to regard a career in industry as an option. We must change that attitude if we are to succeed in the task of maintaining a decent standard of living and thus our community life and values, and if we are to defeat the real scourges of rural deprivation, unemployment and depopulation.

I am pleased that the links between schools and industry are developing in Gwynedd and that the local education authority has appointed an education-industry liaison officer to forge even closer links. All sides agree that even more should be done, so in September I launched an initiative entitled Menter Môn or Anglesey Action, which was aimed at improving links between education and industry. The launch was attended by local industrialists, representatives of the Welsh Development Agency and the Wales tourist board, the Gwynedd county council director of education, the education-industry liaison officer and representatives of the economic development department of the borough and county councils.

Due to the initiative's early success in its approach, concrete follow-up initiatives are planned. These will include increasing the number of visits to factories and industrial plants by schoolchildren, better liaison—that is vital—between careers masters and schools and industry, setting up specific projects in schools that are aimed at creating a greater awareness among children of industry and commerce, and creating links between schools and specific industries in their areas.

I realise that industry's recent interest in education and training is not entirely benevolent or altruistic. Industrialists realise that competition for recruits will be fierce in the next decade, and accordingly they are busy offering sponsorships and grants to potential recruits in

our schools. A recent BBC "Panorama" programme highlighted the Compact scheme in London, in which companies target schoolchildren and offer them job prospects at an early age. This is happening because of the reduction in the number of 16-year-olds in the next five years.

Experience and research has shown that contact between schools and industry is patchy. A survey undertaken by Booz, Allen and Hamilton, which was reported in the *Financial Times*, examined the experience of more than 1,500 secondary schools, almost 1,000 companies and more than 80 education authorities. It found that almost 40 per cent. of schools and 54 per cent. of businesses lack regular links. Only one in five pupils has sustained contact with business, and only a very few have an understanding of small businesses in rural areas. It is significant that schools reported that only 16 per cent. of them had links with companies with fewer than 50 employees.

Some teachers are now being seconded to industry to develop links. This is only partial, however, and the experience that is gained benefits very few. The report of Her Majesty's inspectors on a survey of enterprise, education and school-industry links in Wales referred to statistics:

"These figures, however, require careful interpretation because in many schools only a small number of pupils and teachers are involved. Activities may only involve one particular course, or may be restricted to the work of one dept. In these schools the mainstream curriculum is often largely uninfluenced by industrial contacts and the schemes of work in the major subject areas make little reference to applications which could enrich and provide relevance to the learning."

That report suggests that there is a long way to go.

Local technical colleges have an important role to play in preparing young people for careers in industry. I congratulate Coleg Pencraig, the technical college in my constituency, on the steps that it has taken. It has set up courses to meet the changing demands of local industry, including the tourist industry. Even more important, it has entered into a joint enterprise initiative with the WDA that is aimed at encouraging young people to set up in business on their own. It is attempting to tackle the problems that that entails.

Careers teachers in schools work in extremely difficult conditions. On the one hand, they are the vital link between a pupil and his or her career, yet on the other they often lack the time, the resources and the experience to undertake the task successfully. Proper training and resources for careers teachers, and an appreciation of the work that they do, is a top priority. Proper guidance for pupils at the ages of 14 and 15 years, not in my view at 16, 17 and 18, is crucial for their career prospects. Careers teachers should improve the links between their schools and industry. There should be greater liaison between training officers in industry and careers teachers. Seminars should be organised so that they can understand one another better.

We must understand also that there are strains in the relationships between schools and industrialists. We must be wary, as the hon. Member for Leeds, Noth-West (Dr. Hampson) said, of industrialists who see education merely as a vehicle to provide them with a properly trained work force. Education must and should mean more than that. Schools prepare people for jobs, of course, but they have the wider responsibility. The National Union of Teachers' document entitled "Better Schools: an alternative view", states:

"But to see education as the instrument to fulfil the industrial and economic needs of the country is to regard individuals only in terms of socio-economic roles and the education service as an agency to satisfy the Government's manpower plans."

I accept that there must be a balance, but we must be wary that it is not tilted too much to one side.

We must increase links between education and industry. We shall then be preparing the ground for a better balanced economy. There are increasing pressures on the economy of rural Wales, and I warn the House that we are finding them difficult to resist. One way of easing the pressures is to make the local economy more resilient. In the 1950s, 1960s and 1970s, inward investment was seen as the answer to rural unemployment and depopulation. The recession in the 1980s proved that to be a flawed theory. We must rebuild our economy in large part from within and through greater economic success, and that will be done partly through education and training. We can thereby preserve our communities and enable our language, culture and traditions to flourish anew.

11.28 am

Mr. Peter Thurnham (Bolton, North-East): I know that Friday is a day for a friendly debate, but I must express surprise at the unevenness of attendance when comparison is made between the number of my hon. Friends who are in their places and the few Labour Members who are in theirs. The minority parties are doing a relatively and proportionately better job than the Labour party in representing those for whom they speak. It is not surprising that official Opposition spokesmen have been seen outside the Chamber trying to find some more Labour Members to fill the Opposition Benches. There are five hon. Members on the Opposition Benches, and when I last made a count there were 16 Conservative Members.

Mr. Richard Page (Hertfordshire, South-West): I beg my hon. Friend not to try to rustle up more Labour Members. If they are brought into the Chamber, some Conservative Members will not be able to contribute to the debate.

Mr. Thurnham: Given the pressure of time, I shall follow Gladstone's example with speeches and taxis, and I shall content myself with a reference to Disraeli, who said over 100 years ago that it was upon the education of the people of this country that the fate of the country would depend.

I congratulate my hon. Friend the Minister on his success in securing this debate and on being appointed a Minister at the Department of Education and Science. I cannot think of a better person to be so appointed. He will be able to make a unique contribution, with the knowledge of industry that he gained before coming to the House and his experience as a Minister in the Department of Trade and Industry.

We and industry wish to see a much greater spirit of competition in our schools, but it is clear that the Labour party is afraid of that. The Labour party is frightened by the idea of competition. The idea of the skills Olympics, for example, must be abhorrent to it. We need the spirit of

[Mr. Thurnham]

competition, and it is fortunate that the Government are taking initiatives that will allow schools to opt out of the suffocating, monopolistic control of local authorities.

I wonder whether my hon. Friend the Minister had a chance to hear the most excellent appeal on the radio this morning from the parents and chairman of governors of St. James Church of England school in Bolton. They desperately hope that they can opt out of the control of the local authority which is not only suffocating the school, but killing it. The authority wants to close that excellent school. The school is not in my constituency, but many of my constituents have approached me about it, because they are worried about developments.

I should like to think that my hon. Friend the Minister will give every consideration to the school's appeal to opt out. The parent who spoke at the end of the programme, Mr. John Waith, made an important point when he said that he wanted to see the school become the best in Bolton. He followed the council spokesman who said that all schools in Bolton were equal. That is the precise difference in spirit which is so inhibiting the competition that we want. That is the way Opposition Members like to see things. We want competition between schools and more competition within schools to encourage the very best to come forward so that when people enter industry they have a strong spirit of competition.

The hon. Member for Leeds, Central (Mr. Fatchett) referred to Japan where more 16-year-olds remain at school. The whole thrust of the Japanese education system is to encourage the spirit of competition. Children are encouraged to have extra lessons after school to improve and enhance their performance in competition with each other to get into the best college or university. I ask my hon. Friend the Minister to do all in his power to increase the spirit of competition and allow local authority schools to opt out of the suffocating control of local authorities and so proceed on their own to show how well they can perform.

11.31 am

Mr. Frank Haynes (Ashfield): First, I welcome the hon. Member for Coventry, South-West (Mr. Butcher) to the Dispatch Box in his new position as Parliamentary Under-Secretary of State for Education and Science. He was at the Department of Trade and Industry, but now he is responsible for a certain section of education. Hon. Members have referred to the way in which education and industry should be working together in the interests of children and the economy. This nation is very important to all of us.

There would appear to be a number of teachers on the Conservative Benches although I do not mean the hon. Member for Hertfordshire, South-West (Mr. Page) whom I have woken up. The teachers on the Conservative Benches know what education is all about. The Conservative party has been in power for nearly 10 years and it has failed the education and training system. Conservative Members should be ashamed of themselves.

I know that one or two hon. Members have a particular interest in youngsters who have left school, but have not had a real opportunity in education. The hon. Member for Ealing, North (Mr. Greenway) and I have tried to help those people by setting up an all-party group for adult education. We believe that we achieved a fair amount of success. We visited different places to see how the system worked and how we in the House could help. I am grateful for the guidance that I received from the hon. Member for Ealing, North, and I acknowledge his great experience in education—*[Interruption.]*

The hon. Member for Rugby and Kenilworth (Mr. Pawsey) keeps saying "Hear hear." He and I often have a natter about things. One of the things that we talk about is the education of our children in preparation for when they leave school to enter industry. We firmly believe that the youngsters of this nation should have a first-class opportunity to prepare for work.

In the past nine or 10 years the education system has been failed. There are schools in my constituency where the conditions are atrocious. We must start with the provision of education and all that goes with it, and go right through to when children leave school and start a job. Schools in my constituency are in a terrible state, but I praise to the hilt the Nottinghamshire county council education committeee for its work over many years. However, its work has been held back because of the cuts in education finance in my county. The education committe wants to do the right thing, but is denied the opportunity because the finance is not available. I hope that the Minister will help to ensure that money is available for forward-looking education authorities that want to do the right things—the things that we believe should be happening in the interests of school children, but are not happening.

I recognise the dedication of teachers to education. I heard serious criticisms from Conservative Members about the education system and the quality of teaching. I am proud that my children are teaching. I am proud that they have degrees, one in languages, a subject which my hon. Friend the Member for Leeds, Central (Mr. Fatchett) gave a right good going over. I believe that my family has played a part in the system. However, many families are playing a part, but do not receive the leadership that they need from the Government on education and training.

I hear a lot of technical jargon about education. I want to talk about basic and important things because the technical jargon follows on after that. We must have the right things at the beginning before we can talk about what should be happening. I did not get a real chance in education. I was born with a shovel in my hand and I took it to the pit for 35 years. However, I received an educational opportunity from a nationalised industry which allowed me to go back to school and get certain qualifications. I am proud that that industry gave me that opportunity, but it taught me a lesson. I did not have those opportunities way back in the 1930s when I was a kid. We have a real responsibility now for our nation's children. Over the past 10 years we have criticised what has been happening and we are still arguing about it.

Firms in my constituency are squealing out for skilled persons. My hon. Friend the Member for Leeds, Central gave that a good bouncing. Yes, the hon. Member for Rugby and Kenilworth can have a nice big grin on his face; indeed he always has one there. However, firms are squealing out for skilled people and we are not providing them. I will tell you a very brief story, Madam Deputy Speaker.

Madam Deputy Speaker: I hope it is brief.

Mr. Haynes: The local district council in Ashfield is a first-class local authority. As a result of the squealing from local industry about the lack of youngsters from school with computer experience, the authority decided that it could have a go at trying to fill the gap and provide skilled people for local industry. What did it do? It cadged £35,000 worth of obsolete equipment which could be used for its purposes. It will provide a building to house the kids and equipment. We applied to the Department of Employment for financial assistance because Ashfield district council is really pushing the boat out. What happened? There have been letters going back and forth, but no way is the Department saying that it will provide money and help with the problem. I keep having to bang on the Minister's door and try to wake him up.

The finance required is not a great amount. Its importance is that it will give some kids an opportunity, so that after leaving school they can obtain training and then get a job somewhere. Still the Secretary of State for Employment will not cough up the money that is needed.

I make another plea. It is about the only thing that I can do. I am sick of writing letters. Here I am, appealing on the Floor of this Chamber, in the hope that the Minister will listen seriously and himself knock on the door of the Department of Employment and wake it up—because the people there are half asleep. They want telling in no uncertain terms that we need that help.

The hon. Member for Banbury (Mr. Baldry) spoke about his son losing one day's education. The Conservatives have been in office for nearly 10 years, and their policy has caused the loss of more than one day's education over that period, because of the awkwardness of the Treasury Bench. The hon. Member for Banbury wags his head, but unless the Treasury Bench and the Secretary of State for Education and Science get themselves and the education system sorted out in the interests of the children, there will be more problems in the future. The teachers have had a bellyful.

Mr. Baldry *rose*—

Mr. Haynes: No, time is time.

Head teachers are sick to death of being told that they must be accountants. They have been trained to teach and not to serve as accountants. One of my hon. Friends was right to speak about teacher shortages. Teachers are being driven away because of the Government's damned education policy. We ought to be pulling in the specialist teachers on all subjects in the curriculum. I mentioned computing, but mathematics also comes into it. We need more help from the Government. I hope that the debate will give youngsters more opportunity, for it is they upon whom we shall be depending in the future. We have played our part. I am nearing retirement. The hon. Member for Dulwich (Mr. Bowden) spoke of training for another career. I stand here going on for 63, and I am training myself for retirement.

The important point is that we must look after our youngsters and industry. That is what we are supposed to be doing, and I hope that we shall have some success as a result of this debate.

11.43 am

Mr. Patrick Thompson (Norwich, North): I am grateful for the opportunity to speak briefly in this important debate. As one of the ex-teachers on the Government Benches, I was interested to hear the remarks of the hon. Member for Ashfield (Mr. Haynes). I can at least share his passion for education, even if I do not agree with all his conclusions. It was a little unwise of him to refer to the education record of the various political parties. I remember being a teacher in the early 1960s, at a time when the Labour party did grievous damage to the education system from which we are still, in many ways, trying to recover.

Mr. Haynes: Will the hon. Gentleman tell the House what we did?

Mr. Thompson: I certainly share the hon. Gentleman's stress on the importance of this debate.

I was pleased that my hon. Friend the Member for Bolton, North-East (Mr. Thurnham) was able to speak, because he is one of the members of the parliamentary group for engineering development. Earlier this year, this House had a debate on engineering. I am delighted to welcome my hon. Friend the Minister to his new appointment, and I am also pleased that he is replying to this debate. I recall very well him taking part in our earlier excellent engineering debate on 11 March.

My speech will be briefer than it might otherwise have been because many of the points made in that debate by hon. Members present today and by others are totally relevant to the subject we are now discussing. I refer, for example, to the importance of being able to compete with Europe and elsewhere as we approach 1992. There is also the importance of improving our attitudes to industry, which are still not right. That point was stressed in the engineering debate.

Mention has been made time and time again by speakers on both sides of the House of skills shortages. There is no doubt that industry and business face a major crisis, and I am delighted that that issue has been raised today, as it was during our engineering debate earlier this year. In his opening speech, the hon. Member for Leeds, Central (Mr. Fatchett) was long on identifying the problems that exist. I agree with much of his analysis, but he was not quite so long on the question of policy. That is a difficulty in which the Labour party often finds itself. When it comes to deciding what should be their education policies, I do not find them anything like so convincing, but I do not have time to develop that theme.

I support my hon. Friend the Member for Dulwich (Mr. Bowden) in his remarks about the Industry and Parliament Trust. I have also been involved in that organisation, having recently done an attachment. Many of the points made in this debate are supported by the experience of those who have been on attachment to industrial firms, and I confirm my hon. Friend's remarks. I welcome the Government's initiatives in respect of education and industry. I refer, for example, to the technical and vocational education initiative, the certificate of pre-vocational education, the National Council for Vocational Qualifications, and to the many initiatives for better links between schools and industry. I welcome them and congratulate the Government on taking the matter so seriously.

Recently, a number of reports, articles and pamphlets on this subject have been published. I refer in particular to the School Curriculum Industries Partnership report, to a recent CBI report, and to a recent pamphlet from the Conservative Bow Group. They all highlight continuing

[Mr. Thompson]

concern among business men and others about education. The message coming through, if I may attempt to encapsulate it, is that they are agreed that we need a good education system if industry is successfully to compete, and that education should be given the Government's highest priority. I am able to congratulate the Government on having given education a high priority in the 1980s, and I hope that my hon. Friend the Minister will do all that he can to ensure that it continues to enjoy a high priority and may even be given a higher priority in future.

In the surveys to which I refer, business men agreed that the United Kingdom's education performance is poor compared with that of our competitors, and that we are sadly deficient in providing basic educational standards. Hon. Members may have seen recent surveys published in the tabloid press and elsewhere, suggesting that Britons are dunces and that A-level candidates cannot write good English. Even taking account of the exaggeration in which the media so often indulges, there is enough truth in those reports for us all to be concerned and to share the worries that industry and commerce have in that respect.

There is a mismatch somewhere between the needs and beliefs of people in business and industry and the beliefs and statements of those involved in education. If only we can bring those two groups together so that there will not appear to be some kind of warring between them, we would make much more progress. After all, I know that business people share the ideals of educationists; they also believe that young people should have a full and broad education, and should not just be "educated for a job". There is not really a difference, and it is wrong to imply that there is antagonism between the parties involved.

We all believe in a good education for its own sake, but it is also true that industrialists are frustrated by some of the attitudes of educationists. According to one, we must stop producing 50 social scientists for one job while we are able to produce only one production engineer for every 50 jobs, and that encapsulates the frustration felt by industry.

Those involved in education, head teachers and others —I am speaking now about my own profession—should try harder in their public statements to be positive about what they can offer industry. They should perhaps—I choose my words with care—spend a little less time talking about the current political issues that may face education attacking some aspects of the Education Reform Bill with which they are not particularly happy, or discussing teachers' pay. All those things are important, but I should like to hear my old profession speak more about its positive ideas for education and the way in which it can help industry.

My hon. Friend the Member for Sevenoaks (Mr. Wolfson) was right to say that the teaching profession had been a little over-sensitive recently. This country has a high regard for the profession. Why does it not capitalise on that? Let its members criticise the Government by all means, but let them also spend more time emphasising the positive aspects of what they can do.

I realise that I shall not be able to say much more in the time available, but I should like to mention one initiative promoting school-industry links—the engineering education scheme. I was lucky enough to attend the awards presentation at the Institution of Civil Engineers this summer, and I also went to a school in my constituency, Hellesdon high school, which was placed second in Norfolk. This is one of many excellent schemes involving closer links between industry and schools. The only warning that I would give my hon. Friend the Minister is that I have read recently in the press that there is a risk of our having almost too many initiatives, and that confusion is beginning to sweep in. I should be grateful if the Minister could embark on a programme of rationalisation to emphasise the more important initiatives.

I had wanted to spend some time commending and supporting Government policy and actions in both education and trade and industry. It is, in a sense, symbolic that my hon. Friend the Minister is present, because the link between the two is important. I shall, however, conclude by saying merely that there is a need for a revolution in our attitudes towards industry and education. Despite what has been said, it is generally agreed not only that more commitment is needed from industry, but that even more commitment is required from the Government. What we are discussing this morning is critical to the country's future.

Compared with the records of many other countries —I particularly cite Japan and France, because I have been studying them in the past few days—ours is still not good enough. Much more needs to be done, and I hope that we shall all work together to see that it is done—for the good of our young people, and for the good of the country.

11.53 am

Mr. David Madel: (Bedfordshire, South-West): Let me first join hon. Members on both sides of the House in welcoming my hon. Friend the Minister to his new responsibilities. The fact that the Department of Trade and Industry and the Department of Education and Science are coming closer together on this issue makes his move appropriate. The background to our debate is the changing attitude to industry—skills, profits and an appreciation of how vital commercial success is for this country.

The hon. Member for Leeds, Central (Mr. Fatchett) mentioned education maintenance allowances. I take it that when he talked about security he meant financial security for the family. That is a challenge to the Government to make imaginative use of the family credit scheme, the income support scheme or child benefit so that young people from homes with modest means are not deterred from staying at school.

As has already been pointed out, every month brings us closer to 1992 and all that it can mean to our country's commercial success. The first problem is how to define more closely what industry wants from the education service. That does not apply only to school leavers; it is relevant throughout the various stages of craft technician and higher technician, and to the recruitment of graduates and postgraduates.

When it is better established and understood, the national curriculum should go a long way towards meeting industry's basic requirements, provided that we can get the right number of teachers in mathematics, science and technical subjects, where shortages are now appearing. That will require new and imaginative thinking between the Department and industry. We must also look thoroughly and sensibly at what our EEC partners can do to help.

Technology has an important part to play in the new curriculum, but education through technology is more important than education in technology. Education through technology can stimulate the pupil's interest and convince him or her of the relevance of what he or she is learning.

Many useful changes have occurred in higher and further education with the growth of partnership modes and schemes. But we now need more meaningful working partnerships, not only involving the top echelons of technological and scientific thought but enabling line managers and supervisors to become more closely involved with the education system. Technical college staff need to be given industrial roles, not only as observers but as participants and workers—say for a three or four-month period.

Education has made a big effort to get its people into the world of work, but the flow from industry into education has been very small. The Government should be thinking—especially as the Chancellor is months away from his 1989 Budget—about a scheme whereby secondment from industry to education would carry some tax advantage for both the company and the individual —a change in corporation tax, a training allowance or a change in national insurance charges and contributions. Now is the time for us to make such suggestions, before the Chancellor goes into purdah.

There is, of course, the problem of small businesses. Because of the welcome Government support with which my hon. Friend the Minister has been so much involved, the growth in such businesses has been rapid, but their success depends largely on how quickly they can respond to perceived market needs. We now need a better framework of continued support for the more established small company. The needs of small businesses arise at fairly short notice and need a rapid response. I hope that the Training Commission can assist by deploying specific funds to sustain the small business beyond the start-up period, so that the employees at last have secure employment.

The construction industry has established many links with technical colleges, and it knows what it wants. Because expansion has finally come about, people who have training in construction can now get jobs, but the demands on the industry are increasing. We need a new mechanism for the colleges that are trying to help to enable them to seek central support, so that they can do more to help the industry and all that goes with it—electrical maintenance, and electrical installations and all the other aspects that are so important to an industry which is at last showing a real increase in the number of people it can employ.

Let me briefly make three final points. First, a major worry for the Government is the number of engineering graduates who do not go into the engineering industry, and I think that the time is ripe for some deep research into that. Secondly, there is need to maximise the number of academics who know and regularly talk to people in industry, and vice versa.

Thirdly, industry must keep a constant check on how much training is done by industry itself in our major competitor countries and how much of an advantage over us that gives to competitor countries. They are often doing more training, through industry doing it itself. I refer not just to shop floor training overseas but to the training of top management throughout the company—from the company chairman right down, through the employees, to those who work on the factory floor.

The debate points to the need for this country to widen rapidly its industrial base by 1992. That is essential for employment. Moreover, by having a wider and more effective industrial base we shall be able to keep state spending at a level that is sensible and thoroughly beneficial to all those who need help from the state. They will be unable to get that help if we do not have a prosperous industry and a thoroughly modern and responsive education system.

12 noon

Mr. Mark Wolfson (Sevenoaks): First may I thank you, Madam Deputy Speaker, for calling me. I am mindful of your direction that speeches should be short. Your intervention this morning had the support of all hon. Members. In that context, I pay a particular tribute to the Labour party for so obviously staying away from the debate and for giving those who sit on the Government side of the House the opportunity to be called. We are extremely grateful to it.

I welcome the Minister to his new responsibilities and I echo what has been said by my hon. Friends, who support his appointment to his new job. We shall value the experience and interest that he brings to it, from both a professional and a ministerial point of view.

The debate takes place against the background of a dramatic fall in the number of school leavers. It provides a major opportunity for the education service to meet the needs of industry and commerce that are more important than ever before. In addition, it will increase the opportunities that are available to young people. When they leave school and go out into the world their skills and attributes will be much needed.

As has been said by so many speakers in the debate, "skills" is the key word. Those who are facing long-term unemployment lack the skills that are relevant today. There is universal acceptance in the House that the highest priority has to be given to the development of the skills of those who are going through the education system now so as to enable them to continue to be employed throughout their working lives, even in a world of rapid and continuing change. My hon. Friend the Member for Norwich, North (Mr. Thompson) said that there should be no argument about the different desires of the educationist and of the industrialist. Industrialists are looking not for factory fodder, but for well-rounded, thinking people with initiative, whose approach to their work is positive and who, through their abilities, will be able to ensure that they have a full and satisfying life at work. The educationist, too, wants individuals to develop in such a way as to make the fullest contribution that they can to a satisfying life both at home and at work.

A good education will benefit both the potential employer and the individual. During the last few years the education system has failed to deliver, after they leave school, young people who are able to carry out the work that employers offer to them. We have heard about the skills shortage. We have also heard about the lack of application and of the unrealistic views that some young people have about work. Young people need to be reliable, to be prepared to take responsibility and to be consistent in what they offer on a day-to-day basis at work. Family

[Mr. Mark Wolfson]

and schools have to bear in mind that it is important to instil in young people a sense of responsibility and knowledge about what the world of work involves.

In the teeth of a good deal of educational and political opposition, the Government have set out on a long and difficult road with the aim of achieving an education system that will be much more in line with the lifestyle and the skill needs of the world of today and tomorrow. Their initiatives have been welcomed by parents, who have never been very enthusiastic about the unrealistic philosophy of certain parts of the teaching profession during the last 20 years.

To give an example, some teachers have adopted a defensive approach to appraisal. It astonishes me that teachers should be so unhappy and that they should resist appraisal systems. They are used in the Civil Service, the services and in industry and commerce, and also to a very great degree in another caring profession about which I know a good deal. I refer to social workers. My wife is a social worker. Many teachers argue that they belong to a caring profession and that their job cannot be appraised, but the basis of competency in social work is based on appraisal. That appraisal is very tightly done and is carried our regularly.

Appraisal has existed for many years. That does not mean that difficulties do not arise in the profession or that problems do not occur, but appraisal is fully accepted as part of the job. Promotion depends upon appraisal. Why, therefore, should teachers resist appraisal? I am pleased that constructive and positive appraisal of teachers' work is now being carried out in many schools. It will help teachers to further their careers.

Some of the Government's initiatives that will lead to higher standards in schools and colleges bear specifically on industry's needs. Numeracy, literacy and scientific knowledge have been well covered this morning but I wish to refer to another factor that relates specifically to the opportunities that are open to young people.

Schools should ensure that youngsters have the ability and confidence to be articulate. If we compare the articulate ability of British and American children leaving school, we find that there is a great difference between them. The education that we provide in other areas can be well ahead of that provided in the United States, but that does not necessarily apply to articulacy. I hope that the education service will pay attention to that problem. It is particularly important that less well-favoured young people should be able clearly to argue their case. Their ability to put over what they mean is important when they are answering the telephone at work or making a sales contact, and in their relationships with other people.

I would like my hon. Friend the Minister to comment on the shortage of teachers of science, mathematics and physics. What action do the Government intend to take to overcome that difficulty? One of the suggestions that has been advanced today is regional pay. Another may be higher incentive payments to teachers in short supply. The stronger our economy gets, the greater will be the opportunities outside teaching for people to earn high salaries. The Government must bear that in mind more closely.

Language teaching is another area of shortage. If ever there was a need for young people in Britain to be able to speak one or two foreign languages, it is now. We shall be left far behind in trade with the rest of the world if we do not overcome this problem. We spend as long at school studying a foreign language as young people in other countries, but whereas they come out speaking English, for example, fluently, our young people leave school having spent as many hours supposedly learning a language yet unable to speak it. That is not just the result of British reticence—it is partly the way in which languages are taught.

I appeal to the Department of Education and Science and ask what action Ministers can take to demand of universities that they give a much higher priority in examinations—60 or 70 per cent. of the marks—to oral ability in a foreign language rather than written work and grammar. If universities made that fundamental change, school examining boards would rapidly follow, and teachers would follow. The result would be a major change in school leavers' ability to converse in a foreign language. The ability to converse must be the priority. If people can first talk in a foreign language, they will later learn to read it in newspapers or technical papers. People need the incentive to speak it, however, and what I have suggested is the most practical way forward.

12.12 pm

Mr. James Pawsey (Rugby and Kenilworth): I agree with what my hon. Friend the Member for Sevenoaks (Mr. Wolfson) said about business and industry looking not for factory fodder but for a more developed individual. That is a pertinent point to which I may refer later if time allows.

I listened to all of the speech of the hon. Member for Leeds, Central (Mr. Fatchett), which was rather more difficult than it sounds. I agreed with at least one part of it, however—his reference to my hon. Friend the Minister, whom we warmly welcome. He will bring a great deal to our discussions on education.

In the past, schools and industry have operated in almost separate vacuum packs and the attitude to industry was almost one of take it or leave it, but it seems to me and, I believe, many other hon. Members that education is too important to be left to the educationists. Industry has a clear right to make a contribution which must be heard.

It is clear from the Confederation of British Industry's report that while business expects a certain amount of cultural knowledge among school leavers, more important are what it describes as relevant skills such as skills in numeracy and literacy and in the use of screens and keyboards—the basic life skills. The CBI says in its excellent report that schools have concentrated too much on pure knowledge and not enough on developing children's talents and abilities. The report was right to remind us that 40 per cent. of engineers' knowledge is outdated within three years.

That message is at last beginning to get through to schools. I am delighted at the number of current initiatives to promote the very qualities that the CBI regards as desirable in a work force. School-industry links now exist in many parts of the United Kingdom. Such schemes provide an opportunity for teachers to discover what takes place in industry. It also gives business an opportunity to see what is taught in Britain's schools and to understand the difficulties that teachers sometimes encounter when trying to educate today's youngsters. Each side is given a better understanding of what the other is trying to do.

Teachers are being seconded to industry and, as a result of the Education Reform Act 1988, industrialists and managers are being encouraged to sit on school governing bodies. I was interested to see that although school-industry links are increasingly being established, 40 per cent. of the 1,500 schools recently surveyed by the CBI education task force still have no regular links with local businesses. I can put that figure into perspective by saying that more than half of the 1,000 businesses surveyed have no regular links with schools. It is therefore important for even greater emphasis to be placed on the need to bring education and industry together.

The technical and vocational education initiative is one way in which to bridge the gap between education and industry. It is necessary for our young people to learn through modern work-related courses which develop skills and aptitudes as well as impart pure knowledge. Such courses should encourage more than just academic skills. I suspect that in the past too much emphasis has been put on the academic high flier who seeks a place in one of the professions and not enough on the average youngster.

The Government recognise the scope of the problem. The hon. Member for Ashfield (Mr. Haynes) made an excellent speech. Nobody can doubt the sincerity with which he speaks. I can reassure him that the Government have not abdicated their responsibilities in education. Indeed, the present Secretary of State is probably the most reforming Secretary of State since Butler. The hon. Gentleman can draw encouragement from that. Measures recently introduced in the Education Reform Act will encourage business to become more involved in school governing bodies. Those initiatives should be commended.

On the core curriculum, however, I take a very different view from the hon. Member for Leeds, Central. I believe that it will provide pupils with a better preparation for adult life and employment. Its emphasis on English, mathematics and science will ensure that they are better able to earn a living. That is one of the more important aspects of education. The core curriculum will ensure that the important subjects cannot be dropped in favour of soft options. Attainment targets will provide a clear indication of what is to be learnt and will be capable of being applied to different levels of ability.

Unfortunately, that message has not reached the Labour Benches. I recall during a session of Standing Committee J, which considered the Education Reform Bill, referring to the need to ensure that young people are adequately and properly trained for industry when they leave school, so that, as a result, they will be able to earn a living. I was then told by a Labour Member that school was not about that. Clearly the message has not reached all Opposition Members.

It is fair to say that, until recently, technology and the learning of technical skills has been a major weakness in British education. That is why we have introduced TVEI. Although it is a considerable help, it does not go the whole way and that is why I support the introduction of city technology colleges. Despite what the hon. Member for Leeds, Central said, CTCs represent a major step forward. I particularly like the fact that industry is directly involved in the funding of those colleges. Industry has a real interest in their success and will invest time and expertise to ensure that CTCs do not fail.

I am delighted that the first CTC has been sited in the west midlands. It is up and running and I hope that others will soon come on stream. With particular reference to the speech of the hon. Member for Leeds, Central, may I say how much I regret and deplore the failure of certain local education authorities to respond positively to the challenge of CTCs by not making available redundant school buildings. That is why we are not seeing more CTCs. It is due not to a shortage of funding, but to the shortage of buildings being made available by LEAs, principally Labour-controlled authorities.

I am at a loss to understand why LEAs cannot appreciate that, in failing to co-operate with the provision of CTCs, they are depriving children in their areas of a good, solid technical education that will equip them to earn a living in industry and play a substantial part in society.

Mr. Fatchett: I am sorry to disturb the hon. Gentleman's flow, but as he condemned local authorities for not taking up the initiative on CTCs, does he extend that condemnation to those Conservative authorities such as Trafford, which has said that it will not participate in CTCs because the proposals interfere with its reorganisation plans? Does he condemn the industrialists in Plymouth, for instance, who say that they want no part in the CTC scheme because it will interfere with good quality local education?

Mr. Pawsey: The few instances that the hon. Gentleman quotes do not damage my argument. Of course I regret any LEA, whatever its political persuasion, not making available redundant school buildings for use as CTCs. The CTCs have a genuine and important part to play in education, and authorities that are so short-sighted about them should be condemned. I believe that CTCs increase the amount of choice that is available to pupils. They should be welcomed and not denigrated, particularly for reasons of political dogma.

I hope that when my hon. Friend responds to the debate he will say that he will accelerate the development of CTCs. Each month, each year lost in their development means that more children are being deprived of a valuable educational opportunity.

I have referred so far to the relationship between schools and industry, but hon. Members will understand that the United Kingdom's long-term prosperity also depends on industry attracting more graduates. In turn, that means that we need more young people entering higher education. We need a greater reservoir of graduate talent. It is projected that there will be a 4 per cent. increase in student numbers by the year 2000, but I believe that my hon. Friend should bear in mind that that may be an unduly modest goal. That percentage needs to be expanded, certainly if the United Kingdom is to compete successfully with countries such as Germany, Japan and the United States. We need more graduates and it would be helpful if the Minister could say how the United Kingdom compares with the countries that I have mentioned.

It is difficult to make a speech on education without referring to teachers; after all, they play a critical part. I believe that the majority of teachers in our schools are dedicated to their profession and to the children in their charge. I was delighted that my right hon. Friend the Secretary of State, speaking at the Conservative party conference last week, paid tribute to the many teachers who put in a great deal of personal and professional effort to make the GCSE such a success. Teachers, however, are

[Mr. Pawsey]

not always their own best advocates. Clearly the disruption that has taken place in our schools has left some lasting scars.

The debate is of genuine value because it underlines the importance not only of education, but of industry. I believe that those two pillars are essential to the nation's well-being.

12.25 pm

Mr. Tony Baldry (Banbury): As befits the chairman of the Conservative Back Bench education committee, my hon. Friend the Member for Rugby and Kenilworth (Mr. Pawsey) made an excellent speech on the comprehensive range of measures that the Government are taking to further educational advancement in this country. I support the thrust of his argument.

All the major educational initiatives have come from the Conservative Benches and very new ideas or new suggestions have come from the Labour Benches. We have a "we can do" attitude. It was said that we could not introduce the GCSE in time. We said we could, and we did. It was said that we could not find enough parent governors to take up their places on the school boards. We said that we could and it has happened.

I am sure that the House will be glad to know that on the shortest election manifesto ever I was recently elected a parent governor. My election manifesto said, "Tony Baldry is the father of Edward and Edward is in class 1." I won by two votes and I may adopt that manifesto at the next general election.

The fact that there is a full turnout on the Conservative Benches today is evidence of the genuine commitment of our party to improving education and ensuring that what every good parent wants for his children is achieved—the state providing good education for all our children.

New ideas on education and industry links are extremely important. Today we have heard about a whole range of initiatives that the Government are introducing. One initiative that has not received sufficient attention so far was that launched not by one but by three Secretaries of State, the enterprise and education initiative. My hon. Friend the Minister alluded to that earlier. It is a substantial initiative and I believe that it needs to be flagged up. Under that initiative, the Government have made a commitment that each child will have two or more weeks' work experience in normal school hours before he leaves school, and that every year one in 10 teachers will have business experience. That means that by 1990 about 50,000 teachers each year will have business experience. During the next two years the Government will spend £12 million to pump-prime the initiative and nearly £5·5 million to fund at least one adviser in each local education authority area.

That is a fantastic initiative, and for those who have sometimes criticised the fact that there is no clear focus on whether the Department of Education and Science, the Department of Employment or the Department of Trade and Industry is the lead Department, it was good to see the three Secretaries of State working together on that initiative.

I hope that my hon. Friend the Minister will ensure that every hon. Member is given a copy of the press pack that was issued at the launch. I received it only because I publish books on education, and I suspect that the reason why my hon. Friend the Member for Leeds, North-West (Dr. Hampson) made the intervention that he did was that he had not seen the press pack. Likewise, I hope that every hon. Member will be sent a copy of the pamphlet entitled "Schools-Industry Links", which deals with the point made by my hon. Friend the Member for Norwich, North (Mr. Thompson). One difficulty is that if we are not careful we shall have too many initiatives. That could easily be resolved by those in schools and business and hon. Members knowing what is available.

That point is especially relevant to the business community. In north Oxfordshire there are few big companies. It is a thriving economy with many small businesses, all of which want to do their best for the local community and many of which have strong links with local schools. No primary or secondary school in north Oxfordshire does not have strong, vigorous links with local industry. But what employers find rather confusing is the many demands made upon them. The Department of Employment asks them to become involved in local employer networks. The Department of Trade and Industry comes along with signposting initiatives, and there are suggestions that private industry councils should take over from area manpower boards. But employers do not have much time. Smaller businesses do not have too many people who will become involved in such decisions. They want to make a positive and useful contribution, and we must provide a clear framework in which they can do that.

With the enterprise and education initiative, the three Secretaries of State have made a good start. But of course there will be changes. Funding for the local employer networks will end soon, and there will have to be a discussion of what will replace the area manpower boards as the Manpower Services Commission, as a training agency, is reshaped. I hope that the three Departments involved will remember that these programmes must be delivered on the ground by busy teachers and employers.

The debate has provided evidence of the overwhelming energy and enthusiasm to ensure that the links between industry and education work. The most encouraging factor is that when one visits schools one finds the climate has changed completely from that of a couple of years ago. Then it was all moans, depression and dispirited people, but now—with the exception of a few neanderthals in the National Union of Teachers in inner London—there is a much more optimistic picture, with schools raring to go, embracing the local community and thinking positively. Among head teachers and others to whom I have talked in my area recently, the enthusiasm is infectious. Through the Education Reform Act and measures such as the national curriculum and TVEI, we are putting Britain on the right path—acknowledging the demographic trends—to take advantage of the opportunities of the next century.

There is enormous optimism in the Conservative party, and the pathetic turnout of the Opposition parties today is tragic. The only time that they take part in education debates is at the behest of some teaching unions. But we believe that the enthusiasm and energy that now flows through British education is exciting. We can do a lot more, and we are doing it.

12.38 pm

Mr. Mike Woodcock (Ellesmere Port and Neston): I hope that all contributors to this debate at least share a common belief that education and training needs in industry will increase—and for two reasons. They will increase, first, because demographic trends suggest that over the next few years the United Kingdom will face a shortage of skilled manpower as the number of school leavers entering industry falls. Secondly, they will increase because the retraining of existing work forces will become necessary, as will the re-entry of many maried women to many of our industries.

If we are to survive and succeed in an increasingly competitive world the quality of our management must improve, and it is about that quality that I wish to speak. I want to deal with the need to educate our managers.

I recently returned from speaking at a management development conference in California, a part of the world which, more than any other, has nurtured new approaches to the development of managers. It is 10 years since I last spoke at a management conference in the United States and I remember that at that time British speakers had a major credibility problem. Britain was then world-famous for shoddy goods, poor quality, late deliveries—in short, for what was known as the British disease. British presenters were the ambassadors of failure.

My reception this year was very different, I am pleased to say. Participants were anxious to hear about British success, about how we had managed in less than 10 years to turn the sick man of Europe, languishing at the bottom of the economic growth league, into one of the most successful economies in the world. What part had British managers played in that process? How had they been trained to lead a second industrial revolution?

Managers have to live within the constraints imposed by politicians, but they also have to live and succeed in an increasingly competitive world. It was John Egan who defined business as making money out of satisfying customers, but in the 1960s and 1970s Britain unfortunately largely forgot that truth. We were driven by Keynesian notions, and businesses became mere bureaucracies for employing people. We became famous for shoddy goods, poor service and appalling industrial relations. In those days we were investing only a quarter of what our competitors were in developing managers.

Ten years later our economy is much more consumer-driven; we are more marketing-oriented. Marketing is now seen as satisfying customers, not as a euphemism for moving shoddy goods. We are well on the way to creating an enterprise culture and achieving a widespread recognition that our economic well-being depends primarily on producing the right goods in the right quantity of the right quality at the right price.

To survive and succeed we must be competitive. There is much talk right now about 1992, but many of the challenges that face our managers are more global and even more significant than that. We have to compete not only with our partners in Europe, but worldwide. We must meet the challenge of the Pacific basin countries, the challenge of lower wage rates in many parts of the world, and the emergence of China as a world economic force.

Over the past few years I have been privileged to visit and work with managers in many countries, and it is clear to me that, although circumstances differ around the world, successful managers the world over exhibit a similar set of beliefs. They believe that managers must manage, that only the management group in an organisation has the knowledge, authority and position to determine the mission of the enterprise, to acquire resources and to take strategic decisions. They believe that, as with milk, the cream has to be at the top, that the quality of those who fill management roles is crucial and that management competence must be continually developed throughout working life. They believe that in successful organisations performance must be king and rewards must be linked to performance. They believe that managers of organisations must do the right thing—in other words, they must focus on the right issues and on the things that get results. They also believe that organisations must do things right: they must be efficient if they are to succeed. They recognise that there is no such thing as a free lunch, that in every organisation every activity costs money and that someone, somewhere must pay. That realisation has been hard to achieve in many of our public sector industries.

These managers believe, too, that in the end it is the management that cares that wins, and that when demanding hard work, loyalty, skill, care and honesty from employees, commitment will be given only to managers who are fit to govern. Compassion and fairness bring that committment. They believe that it is necessary in an organisation for the whole work force to pull together, that teamwork is vital at every level, and that a well-organised team can achieve much more than the sum of its parts. They believe that justice must prevail in the organisations of today. They believe that managers have considerable power over people's lives and often act as judge and jury with no right of appeal and that it is therefore necessary for a successful organisation to devise and administer fair rules and regulations. They believe that every organisation needs to study the environment and to know its enemies. That is because in every commercial organisation the world over talented people are planning how to increase their business at the expense of other organisations.

They believe that it is the fittest who survive, that competitiveness is the only answer and that we cannot avoid market forces nor would it be healthy to try. Finally, they believe in the SAS motto, "Who dares wins". Successful managers take calculated risks. They are opportunists. My experience suggests that those 12 beliefs invariably characterise successful managements wherever they are to be found in the world. The emergence, or perhaps the re-emergence, of those beliefs in United Kingdom organisations has substantially contributed to our economic success in the past few years.

In recent years the policies of the Government more than anything else have enabled managers in the United Kingdom to put those beliefs into practice and to lead our economic revival. But beliefs are not enough. Managers must have skills and the competence to meet the challenges of today's world. In the United States we see a culture in which, much more than in the United Kingdom, everyone grows up thinking that to some extent he has to behave as a business man. There is much more emphasis on people owning their own development, which is seen as an investment in their future. A quarter of all undergraduates in the United States are majoring in business studies. The United States produces 170,000 masters of business administration, and 85 per cent. of all top managers in the United States have degrees. There is increased questioning

[Mr. Mike Woodcock]

of education in business schools and a widespread move to put training back into companies and to link it to practical experience.

When we contrast [illegible] position in the United States with that in the United Kingdom, we find that only 24 per cent. of our top managers have degrees. That compares to 85 per cent. not only in the United States but in Japan. Britain has only 12,000 MBAs compared to 170,000 produced in the United States. By contrast, we have 120,000 qualified accountants compared to 4,000 in West Germany and 6,000 in Japan. In Britain there is, quite wrongly, a belief in pragmatism rather than in professionalism, that experience is the only worthwhile school. We have no well signposted and generally accepted route into business and management, and that may be one of the reasons for fewer entrants to management.

As I said earlier, in the 1960s and 1970s we were investing only one quarter of the amount invested by our competitors in training and development. Managers in many other countries and certainly in the United States, West Germany, France and Japan are better qualified. There is a widespread belief in those countries that managers need to be well and appropriately educated before management and must be helped to develop throughout their working life. Unfortunately that belief is not as widespread in the United Kingdom. We have some excellent managers, but we simply do not have enough. In management development terms we are amateurs rather than professionals.

We must do more, and the way to develop managerial competence is not always through traditional approaches. Classroom learning is weak at dealing with the problems and opportunities that managers face. It is passive and does not utilise experience to the full. It is expensive in terms of time away from work and return on investment. We need more distance learning, which will allow managers to study in their own time and at their own pace and which does not involve time off work. Like the hon. Member for Lewes (Mr. Rathbone) I, too, commend the work of the Open university, the United Kingdom Chartered Association of Certified Accountants and the Henley management college in pioneering distance learning approaches.

Secondly, we need more action learning, which is an effective, work-based alternative to classroom learning—an approach based on managerial improvement through rigorous study of the manager's own and other people's jobs. This concept was originally proposed by Professor Reg Revans, and the International Management Centre from Buckingham, now part of the International Manager Centres organisation, whose president is Baroness Cox and whose principal Professor Gordon Wills, has done some valuable work on it. I commend its work to the Government.

In a recent report written by Professor Wills, which he called "Creating Wealth through Management Development", he argued that the Government should apply to management education and training some of the principles that they have applied to other parts of our national life. Among the recommendations, which I support and commend to the Government, are, first, that the Government should end the funding of mid-career management development except as an employer because it creates the wrong dependent relationship. Industry should call the shots, and industry should pay. Secondly, it recommends that state-supported business schools should be privatised because they will operate more efficiently and respond better to the needs of those who will be paying. Thirdly, it recommends that, as a benchmark, 10 per cent. of the management payroll in our major organisations should be invested in management development; fourthly that managers should make an annual report to shareholders and staff on the development of managers, and finally that universities engaged in management development work should compete for funds to ensure excellence in management development. He argues, and I agree, that our universities have failed to distinguish between scholarship for its own sake and scholarship that helps managers to be more effective.

There is hardly anything more important to the economic success of the United Kingdom than the education and training of our managers. It is they who will largely determine our success in international markets, and through it, our standard of living. In the past we have not done a good job. My principal message to my hon. Friend the Minister is that it is time for us to stop relying so much on the institutions that have let us down and time to start supporting the institutions that have provided more relevant approaches.

12.46 pm

Mr. Richard Page (Hertfordshire, South-West): There is an old story of a teacher who took her charges around the local factory, and, having loaded them into the coach to go home, said, "Right. I have taken you round the factory and if you don't work hard and pass your exams, that is where you will end up." That is the sort of deeply ingrained attitude of the past that is responsible for the position that we are in now.

I think that the attitude is changing, but, nevertheless, there are those in education who wish to see the continuation of the greater emphasis on the arts than on the sciences. To them I say that as we come increasingly on the receiving end of the products of foreign technology —as the balance of payments illustrates every month—it is increasingly unlikely that rafts of young men and women able to claim to be members of Mensa will be able to reverse that trend.

The seriousness of the position was outlined in a letter in *The Daily Telegraph* last week, which I read while I was attending our excellent conference in Brighton, just before the brilliant speech by my right hon. Friend the Secretary of State for Education and Science. The letter, which is written by Professor Miller, whom I do not know from Adam, talks about:

"the low undergraduate enrolment in the hard sciences, including engineering, in the English-speaking nations—of the order of 10 per cent. as opposed to close to 40 per cent. in the rest of the developed world."

That position will get worse. We all know how falling school rolls affect our constituencies. We are all faced with school closures and I can see that competition in our professions for qualified and expert people will continue to grow. Unless there is a dramatic change, science and industry will be heavily squeezed in getting the right calibre of people to come forward to be the managers of the

future. What is to be done to change the climate of opinion so that engineers in this country are treated with the same respect as those in France or Germany?

Matters are improving and Government actions are helping. A few years ago we had an "industry year" which was a great success. However, I could not help thinking at the time, "I bet Japan has an industry year every year and not just a one-off effort which is then abandoned."

I welcome today's debate. It is an example of the Government's further commitment to the needs of industry. The discussion is particularly timely, because the CBI's task force report on business and education, was published on Monday. That report points out clearly that the success of the education system is vital if industry and commerce are to be successful.

As I have already said, the decreasing number of school leavers will produce dramatic problems. Industry's needs are relatively simple. It wants school leavers to come out of school able to read and write and with basic mathematical skills so that they can be trained by industry. There is ample evidence, stretching back over the years, that industry has been dissatisfied with the performance of the education system.

In his 1986 publication, "The Illiterate Generation", John Spencer wrote:

"the country cannot be getting value for money from the education system when the present number of youngsters leave school ill-equipped to enter the world of work, with a low standard of literacy and numeracy, few if any other skills, and no qualifications leaving employers and further education to pick up the pieces".

That, if nothing else, is justification for the Government's Education Reform Act 1988. I shall not go into the details of the Act now, but, given industry's attitude to our education system, I am surprised by the Opposition's resistance to the change and the improvements that the Act is trying to bring about.

Life is not just a one-way street, and industry must be equally aware of its obligation to play a positive part in establishing links with education. Companies must encourage managers and employees to take up places as school governors. The sad evidence, which has already been quoted by my hon. Friend the Minister is that about 60 per cent. of firms have no links with their local secondary schools; less than one third of such schools have the necessary links with firms to enable them to provide two weeks' work experience for their fourth-formers, and more than one third of secondary schools have no links with business. That is unacceptable. If that position is not improved, the education system will not be sensitive to the requirements of industry.

Her Majesty's inspectorate published a report on secondary schools in the summer which reveals a slight rise in educational performance since 1979. It seems that the most able children and those below average ability are the least stimulated. The report shows that teachers have a lower expectation of their pupils than is justified. I find that a sad conclusion.

Hon. Members have produced examples of how we compare with foreign countries. I shall not go through that again, but one figure showed the contrast with Japan. About 90 per cent. of Japan's school population studies mathematics to the age of 18; in the United Kingdom that figure is only 18 per cent. If one adds that fact to the other comments made today, one can see that our schoolchildren will have to work harder and longer at school to achieve the levels and standards that they will need in the modern world.

We have high quality for a few of the high fliers in engineering, but there is a vast gap between that and the intermediate level. It must be closed. The CBI mentioned that 60 per cent. of the firms that it surveyed had no links with schools, and anyone can work out that 40 per cent. do. Lever Bros., which is based in the Wirral, has its centenary schools competition. It is fostering closer links between industries and local schools. That is something that all firms should try to do in their area. I have been in correspondence with a Mr. Etches, who is a director of the Express Food Group, which is a subsidiary of Grand Metropolitan. I hasten to say that I have no connection with the company apart from this correspondence. Mr. Etches goes out of his way to say that his company

"welcomes the Government's proposal to arrange for all teachers to have a one-week introduction to industry with commercial organisations".

He adds that it will do everything possible to help. He observes that there are some difficulties, especially when it comes to implementation of the scheme. He says that his company is not assisted

"by an apparent unwillingness on the part of the teachers and pupils to undertake some of the training during school holidays periods. To exclude the school holidays means that there are not enough weeks in the year to enable us to meet these demands."

Mr. Etches requests that all teachers who complete a training course be given, as part of the curriculum, one or two weeks in industry so that they receive a grounding in what is involved and needed in the industrial world.

The Education Reform Act, the introduction of city technology courses and other initiatives show that the Government are on the right lines and are tackling a severe problem. If there is wholehearted effort on all sides, and no split as a result of party arguments, we can produce the ethos and the culture within the classroom that will produce a generation of children that will go into our industries with dedication and the knowledge that wealth creation will create a better society for the whole nation.

12.58 pm

Mr. James Paice (Cambridgeshire, South-East): I am grateful for the opportunity to contribute to this wide-ranging debate. Many issues have been raised and I do not want to repeat any of them.

The hon. Member for Leeds, Central (Mr. Fatchett) referred to training and the need to have many more much longer courses. I read into what he was saying the belief that we need to return to the old training systems of many years ago, such as five-year apprenticeships. Since then there have been many changes. Training technology is different from that which prevailed a few years ago. We no longer train by the old sit-by-Nellie syndrome, whereby one gradually gained knowledge by sitting and watching. Modern training techniques mean that skills can be gained far more quickly. The acquisition of skills still takes some time, but there is no reason why most skills cannot be gained in a two-year training programme such as the YTS, with perhaps a one-year extension.

The demographic changes that are coming will have an effect on industry and education, and I do not intend to re-rehearse all the statistics. There will be no room in industry for those who do not have the skills that will be

[Mr. James Paice]

required. The hon. Member for Ashfield (Mr. Haynes) told us that he was born with a shovel in his hands and then used it for 35 years. There have been many changes since then. There will be no jobs in future for men with a shovel.

Mr. Barry Sheerman (Huddersfield): What about the pits?

Mr. Paice: Technology is advancing rapidly even in the pits. In future, there will be little opportunity for the manual unskilled worker. That means that we must encourage and enable all our school leavers to do much more than an unskilled manual job. We must remember that children leaving school today will have a 40-year or 50-year working life ahead of them. If we think back and consider how work and employment have changed over the past 40 or 50 years, we must understand what could happen in future and recognise that changes may take place.

There is also a need for greater personal skills among school leavers. In future many jobs will be, as they are now, in the service sector. That sector involves far more customer contact than the manufacturing sector. Such contact requires a greater degree of personal skills which we must emphasise.

Keyboard skills are also very important. The great variation in the provision of those skills in different areas has been brought to my attention. My sons recently changed schools from one county to another and I have seen the great difference in computer provision between the schools. It is now eight years since my right hon. Friend the Secretary of State for Education and Science, as Minister for Industry and Information Technology, launched what was then one of the great reforms of the century, the introduction of computers into schools. However, many schools still have a long way to go in computer provision.

My hon. Friend the Member for Banbury (Mr. Baldry) referred to the confusion among many businesses. The majority of jobs in future will be created in small businesses. One of the features of those businesses is that they do not have a specialist personnel department. They do not have individuals with the time, ability or background information to specialise purely in personnel. One of the big difficulties is keeping up, not simply with the latest jargon, but with the new courses and qualifications. That impinges on recruitment processes.

Over the past few years we have seen the Government's initiatives in schools and further education including the technical and vocational education initiative and the certificate of pre-vocational education. However, we have also seen the efforts of the National Council for Vocational Qualifications which is playing a vital role in improving the quality of qualifications and improving assessment methods and is also trying to set standards for the different qualifications so that employers and users can clearly understand them.

Progress on that appears to be slow. It is important for small businesses that someone—and I believe that it must be the NCVQ—accepts the responsibility to inform businesses of what is happening about the standardisation of qualifications. I know from experience before I was elected to the House that many people are rejected for employment simply because a small employer does not have a clue what the apparent qualification paraded by the applicant actually means. That may be a highly relevant and important qualification, but if the employer does not know what it means, it jeopardises the young person's opportunity. It is important that the NCVQ should publicise its work in that respect.

We must also remember that small business men must be able to understand qualifications to assess their relevant merits to their businesses in terms of standards and the practical or theoretical content. Small businesses must also understand whether qualifications represent an ability to acquire knowledge or a measure of knowledge or skill already acquired. There is quite a difference in that.

The hon. Member for Ynys Môn (Mr. Jones) referred to careers advice and counselling. I endorse the points that he made, and I speak from my own considerable experience of the recruitment sector and of training young people.

There is no doubt in my mind that many careers teachers and careers advisers in the county services do not fully understand industry as we would like them to do. Their heart is very much in the right place, and I should not wish my words to be taken as being critical of them. However, they are not always provided with resources, opportunity and support from their peers in respect of the need to achieve greater commitment and involvement within industry.

We have heard about many of the Government's important initiatives, but I endorse the view that much more needs to be done. We must ensure that teachers do not take the attitude that no one should trespass on their preserve of education. Some industries have adopted in the past the isolationist attitude that education is nothing to do with them, but fortunately that is changing. If we can improve the quality of careers teachers and advisers, we shall be building the bridge with which much of the debate has been concerned; the bridge between education and industry.

It appears to me that careers officers are best placed to provide that bridge. If my hon. Friend the Minister is to take messages from this debate—and there have been many—I hope that he will convey the need to devote greater effort to improving the quality of advisers and increasing the available resources. I refer not only to financial resources, but to time and to the support of those advisers' peers and employers, in improving the quality of careers advice that is available in our schools and building that bridge that we all want.

1.6 pm

Mr. Harry Greenway (Ealing, North): I join those hon Members who have paid tribute, albeit in his absence, to the hon. Member for Ashfield (Mr. Haynes), for his excellent speech. I also thank him for his kind personal remarks, and acknowledge how much he has contributed to adult education, both with me in this House and with others.

A week ago, I had the honour of sponsoring a centenary dinner in the House for the London Head Teachers Association. It was a great pleasure for me to welcome so many former colleagues on that auspicious occasion. They ranged from a former headmaster of Holland park comprehensive school having 2,000 children, to the heads of many small schools. They ranged

in age from a lady in her 20s who had been recently appointed to another lady in her 80s who had been retired for many years.

In our informal discussions we talked about the links between schools and industry in London over the past 100 years. What came out of those discussions was that there have been considerable links between them, most having been forged by head teachers. I pay tribute, as other hon. Members have done, to the great teaching profession, of which I have been so proud a member, and especially to those teachers who labour under growing difficulties at times.

I was told by east London head teachers, for example, that they had had great links with the docks. Many of the children in their schools were the sons or daughters of dockers, and so those children would visit the docks and knew all about what was going on there. The same has been true of other industries. In my constituency, pupils of the schools around the former Hoover building on the A40, many of whom were the children of the 1,500 people who worked there, frequently visited it. There have traditionally been strong links between schools and industry, and the present drive to strengthen and improve them is much to be welcomed.

Let me sound a word of warning, however. As one who was in teaching for 23 years and headed a mixed school of 2,200 for seven of them, let me say that there is no substitute for the development of a clear and firm work ethic in pupils, or for ensuring that they emerge from their schools with that ethic. In many schools, both today and historically, it has been missing. While bearing in mind that Lord Elton is conducting an inquiry into school discipline, I must warn that truancy and poor work in schools will do more to damage future education and training links between schools and industry than anything else. In some London schools 40 per cent. of children are absent every day, and others are out of control. Whatever we say in the House, they will be in no position to profit much from whatever links are forged.

The House should remember that its first duty is to pay attention to the basic needs of education. A good, clear national curriculum is necessary, as has been said, but only firm discipline gives children the security to work really well. We should also remember that we shall need the 40 per cent. who are truants or irregular attenders in future: they will have to play an important part in our industries if the country is to remain competitive.

Some of those children are difficult, but not many. When there is high employment a small element will always say, "I need not work hard, because I shall get a job anyway." Today, they say, "There is no point in working hard now because I shall probably not get a job"—although, as we all know, unemployment is falling dramatically, which is very welcome. We must take account of the presence of that mentality, because those children are part of our future and it is essential that the educational system meets their needs and instils in them the work ethic that I have mentioned.

There is a bright light on the horizon in the form of the GCSE examination: I am glad to see that the hon. Member for Leeds, Central (Mr. Fatchett) agrees with me. In many ways the CSE was more effective than O-level. Many of my hon. Friends may not understand why I say that, but the CSE was effective in that it tested, examined, quantified and assessed course work undertaken over two years. In English and foreign languages there was a strong emphasis on oral and aural work, allied with proper assessment of "physical" work in such subjects as art, as well as written papers. Those four elements gave the CSE an impact that O-level had ceased to have. Throughout those two years pupils knew that each piece of work that they undertook could be submitted to examiners for assessment, and they therefore worked hard. The examination induced much stronger efforts to produce good work.

The GCSE, happily, embraces all the principles of the CSE, which was based on a report by Robert Beloe, commissioned as long ago as the 1950s. That report is much to the credit of the Conservative Administration of the day. It does not neglect the value of testing memory and nerve on the day and the value of a pupil being able to produce a good performance, but it does not say that if a pupil cannot perform well on the day he must fail. Attainment tests will be valuable. They will set targets for children and give an idea of how their aptitudes and abilities are developing. In my opinion, attainment tests are to be welcomed.

At the same time as congratulating ourselves on these great movements forward, we have to note that 16-year-old pupils are about a year, and in some cases two years, behind their counterparts in France, Germany, Holland and other major industrial competitors in basic disciplines, notably mathematics. That is very serious. I hope that the Education Reform Act and the new national curriculum will deal directly with that deficiency.

The Government's aim is to have one in five of the population over 18 years of age in higher education, most of them on degree courses, by the year 2000 and, if possible, to achieve that figure before then. When the Government came to power in 1979, about one in 13 of the population were in higher education—a figure substantially and dangerously far below the figures in other European countries.

A school's first duty is to the children. It must prepare them for life by developing their fullest education potential. In the Prime Minister's memorable words it must teach them "zeal for achievement, above all things." That is a great phrase. Implicit in that achievement is a sound work ethic. Education must help pupils to adopt flexible attitudes and to adapt successfully to new work practices. Most people will have five different jobs, and possibly many more than that, during their working lives.

I welcome the suggestion of work experience for pupils and teachers, but I have reservations about it. It is a very important part of the Education Reform Act, but from my long experience I feel that I must sound a note of warning. Present work experience for pupils is achieving only limited success. If boys or girls of 14, 15, 16 or over go to factories, newspapers or other places of work for two weeks they are not really wanted; they are a bit in the way. They sit around and nobody takes any notice of them. People are too busy to think about them. Not enough is being done for these boys and girls. Unless pupils are given a properly supervised programme of work and unless they are helped to appreciate what they are expected to do, work experience will not be successful.

The same is true of teachers. If teachers are invited to go into industry to have a look but simply hang around there, they will not have an opportunity to see what industry is attempting to do, why it is attempting to do it and how it is attempting to do it. Teachers will use their initiative and make something of it, but more thought

[Mr. Harry Greenway]

needs to be given to that aspect. We must not fall back on slogans. We are pleased that this is to happen and it is good that it will, but more thought should be given to what they are to do. Work shadowing is much better than work experience as we have known it and as I have described it.

I hope that, if we recruit more teachers from industry, we will build into schools a relationship between education, training and industry. Such a relationship has been valuable where we already have teachers from industry. I have known teachers come in to teach handicraft subjects, book-keeping and home economics, for example. Such teachers can be recruited from industry. In that way, we can build into schools a valuable relationship with industry.

Why do we not have heads who are recruited direct from industry? The emergency-trained heads who came into schools just after the war, often with only one year of training, were in almost all cases outstanding because they had a background in the forces, industry or other jobs. They gave superb leadership to schools. Dame Margaret Miles was a very successful head of a London comprehensive, but she had never taught before. Arthur Fford was a successful head of Rugby school and had never taught before. The same can be said of Geoffrey Fisher, later Archbishop of Canterbury, who became a head at the age of 26 and without any previous teaching experience. I do not think that the profession would mind that. We should have more teachers from industry and try to find some heads to come directly from industry.

1.21 pm

Mr. Ian Taylor (Esher): The improving climate between education and industry, which the Government have encouraged, has been mentioned by several of my hon. Friends, and I should like to give examples of what is happening in my constituency.

About two years ago, the mayor of one of the boroughs decided to have as his theme for the year a competition for schools in conjunction with industry to develop certain technical and mechanical skills. The theme was co-operation between education and industry. It was a splendid success and most schools took part. There were some remarkable results of applied research. Some of the models looked a bit strange. One looked a bit like a mechanical phallus, but its properities were undoubtedly ingenious and Leonardo da Vinci would have been proud of it.

When I went round schools, I noted the enthusiasm with which they were responding to the challenge, and the tremendous backing supplied by industry. One school in my constituency won a national award for developing research projects with industry.

The hon. Member for Leeds, Central (Mr. Fatchett) spoke of his interesting trade union ties. He will, therefore, wish to know that I have a first-class training centre in my constituency which is run by the Electrical, Electronic Telecommunication and Plumbing Union. Its centre in Esher has provided considerable assistance to unionists who want to increase skills and develop a practical understanding of how industry works. The centre goes wider than that, however. It often runs courses to assist small businesses. It knows that small businesses, which are great providers of new employment, often do not have a proper training scheme. Such a union with foresight and a positive approach to the future is therefore able to assist small businesses by providing expertise. I am sure that my colleagues welcome that initiative.

Until a few years ago, industry and higher education operated largely independently of one another. Universities regarded industry as distant from the real purpose of learning and scholarship and industry was slightly bewildered about how it could relate to universities.

Over the years, the cold light of economic realities, together with Government encouragement, has changed the situation in three ways. First, research, both basic and applied, has increased. Secondly, the training and provision of personnel has altered and thirdly there has been a growing realisation of the need to compete more openly with other countries within the European Community. Industry has come to recognise that it must have people who have had comparable training to those in such countries as Germany.

The changes that have taken place in research should be welcomed and have been of mutual benefit to universities and industry. Companies donate funds, equipment or executive know-how to academic ventures. In turn universities provide research results, a testing ground for new products and access to future markets. The proliferation of science parks in particular represents a major advance. By simply being located on a university campus they are at the heart of the new interface between industry and education.

Universities have also done a great deal to encourage greater research funding from industry and the mutual benefits to which I have referred have been apparent. Salford university is perhaps the best-known example of education and industry working to each other's benefit, but it is not the only one. Hull university's research income from outside industrial resources has gone up by 80 per cent. in the past two years, and it is an interesting model. That university's very existence was threatened a few years ago, but it is now picking itself up and many local industries, not least Reckitt and Colman, are benefiting as a result.

I wish to pay particular tribute to a university that covers my constituency, the university of Surrey. The Surrey research park, attached to the university, is probably the fastest growing university-based science park in the United Kingdom. The university has emerged as a research leader among the technological universities. It is a matter of interest that many of the lecturers and professors are directly involved in industry. The university is known to have one or two shareholding interests in companies that are being developed.

I was particularly pleased that the annual report of the University of Surrey for 1986-87 said:

> "A University therefore has an important role to play in advances in knowledge and information so as to ensure that this country has an adaptable, informed and creative workforce. All connected with the University must regard themselves as part of that workforce."

That is a tremendous statement for a university to make and shows how far we have come in recent years in the realisation of the importance of such matters.

A study of the revenues of the University of Surrey in 1987 shows that research grants and contracts have risen

from £5 million to £8 million while the University Grants Committee grant has remained static at £14 million. Here is a case of a university putting its own house in order.

Of particular relevance to that university's efforts has been the increase in applied research. The research projects in three faculties have attracted millions of pounds of support from industry, from the Government as well as from research institutes and research councils. Among the programmes that are currently in operation are biotechnology, information technology, space satellite engineering, computer-aided design, robotics, drug reactions, artificial intelligence and energy economics. Surely that represents the way forward for universities. They should try to develop the sort of courses that can benefit their students and the country.

I also welcome those schemes that have been developed to utilise university and polytechnic resources for the training of Britain's work force. Of particular importance is the PICKUP scheme, which was started by the Government six years ago. Last year, under that scheme, a nationwide network of PICKUP technology centres was introduced, designed to bring together academic skills and expertise with commercial opportunities. The centres serve as regional offices co-ordinating the activities of those in higher and further education with those in industry and commerce and even local government. Industry has provided cash, people, equipment and facilities for the centres, and for the Government it has been a pump-priming exercise, contributing so much in the first year and tapering off in successive years.

All those developments are to be welcomed, but much more must be done. Universities have responded to the challenge, albeit late and perhaps out of necessity, following the financial restraints of 1981. But industry is still lagging behind. Compared with our European neighbours, the amount spent by British firms on research and development is disappointing. More spending could involve a bigger role for higher education, especially in basic research. That was drawn out by the report of the House of Lords Science and Technology Committee entitled, "Civil Research and Development", which was published in November 1986.

The role of higher education in the provision of personnel is likely to become increasingly important, and industry must be made aware of it. As it is, the number of graduates entering industry has fallen. In the 1970s, an average of 50 per cent. of graduates went into industry. By 1986, the figure had fallen to 29 per cent. I was heartened to see a recent survey in the *Daily Telegraph* showing that 18 per cent. of current students were keen to go into industry, because industry finds it difficult to compete with well-paid jobs in the City and its problems are compounded by the fact that it will soon be fishing from a smaller pool. The demographic changes that have been mentioned this morning mean that the number of graduates coming on to the job market will take a sharp downturn, so industry will be competing for fewer graduates. If during the next six years the number of school leavers falls by 25 per cent., it will have a knock-on effect on universities. That survey, however, also showed that engineering was among the least respected jobs. That is a worrying sign and we must bring to bear ample pressure to change the position.

Industry can do something for itself. Given the demographic changes, it strikes me—it was also very much in the mind of a personnel director to whom I spoke earlier this week—that industry must do more to encourage undergraduates before they go up to university. There must be much more sponsoring of undergraduates by industry, as the Army has done successfully. By sponsoring undergraduates, industries will be sure that they can obtain employees in a competitive job market. It will take pressure off the Government, given the difficulties that will be faced when we require more money for higher education. That is a practical way to ensure co-operation between industry and universities.

1.32 pm

Mr. David Amess (Basildon): All the speeches that I have heard have been extremely constructive when talking about the educational needs of industry. I wish to bring to the attention of the House what we are doing in Essex, and especially in Basildon.

When I became Member of Parliament for Basildon in 1983, more that 10,000 people were without jobs. I am pleased to tell the House that today that number has decreased to 3,439. That is still too many, but each year, each month and each week the number of people without work in Basildon is decreasing. The reason for that is the endeavour of our educationists and of industry. I have visited every educational establishment in Basildon and am about to embark on another tour. I have involved myself with most industrial activities in the town and I am happy to say that communication is improving all the time. In Essex, and in Basildon, we are happy to meet the challenge of industry's requirements for education.

I was heartened, two nights ago, to be invited to attend an open evening of the largest secondary school in Basildon, Chalvedon school. There I found an enthusiastic headmaster supported by a hard-working, united team. He said in his address:

"I have looked forward with relish to the opportunity of showing off the splendid facilities and some of the wonderful work of our pupils.

Our achievements are testimony to the hard work and enormous capability of the teaching staff and also to the involvement of parents."

There was a headmaster who was eagerly meeting the challenges that we face in 1988. All the parents of the children in the feeder schools were extremely impressed by what he said, his speech having shown the school's determination to uphold traditional values and to meet the changing challenges of education.

Essex education committee presides over the largest education area in the country. It is magnificently led by councillor Mrs. Margaret Hutton, who is ably supported by her fellow councillors and an excellent team of officers. In 1986, as part of industry year, Essex local education authority published a directory called "Connections". It listed education's links with industry. In 1986 there were 25 such links, and it is a testimony to the success of the programme that there are now 40.

At the heart of the Essex approach is the need to ensure that all Essex pupils appreciate how the nation earns its living, and that schools and colleges help them acquire the knowledge and skills that are relevant to adult life. I shall give a few examples of the various initiatives that we have introduced in Essex. The first is the extension of the technical and vocational education initiative into all schools and colleges in Essex. That initiative features the development of significant education and industry links, including the formation of employer-led advisory bodies for all schools and colleges in Essex.

[Mr. David Amess]

Next, there is work experience for all pupils under project Trident. Every company I visit in Basildon seems to have one of the young children who are training under Trident; the children are enthusiastic and find the experience invaluable. Between 1986 and 1987 more than 8,000 pupils from 100 schools took part in the scheme and more than another 1,000 pupils participated in the Essex work experience scheme.

Finally, we have industrial secondment for teachers and lecturers. The LEA pursues an active secondment programme that enables teachers and lecturers to spend up to two years on joint projects. At the moment, British Petroleum and GEC Avionics are involved in the scheme. The Ford Motor Company has also been extremely supportive. We have training programmes for teachers and lecturers, and school—industry practice in the curriculum. We also have the Essex introduction-to-industry scheme, "Learning for a changing world", and so on.

All these links and more are managed and encouraged by the Essex education committee, which is concerned now that these initiatives in education and industry should all come under one umbrella—that of the Department of Education and Science—and not remain part of the responsibilities of three separate Departments.

An industrial group in Basildon meets regularly to analyse what is happening in our schools. It is concerned about skills shortages and about the increasing demand from a wide range of non-technical and non-engineering industries for scarce technical skills. In addition, the growth sector of small new enterprise industries which operate predominantly in information technology and computer systems drain many trained and skilled people from established industry.

Finally, the traditional engineering companies need to employ a greater proportion of staff with technical skills as our technology develops. Essex education committee welcomes any challenge that industry wishes to put before it. Basildon is increasing all the time the number of initiatives that it takes on board from Essex county council. Standards are improving all the time and I am optimistic that we will be able to meet all the challenges that industry will set for us.

1.40 pm

Mr. Barry Sheerman (Huddersfield): This is a most useful debate and I should like to add my congratulations to those offered by hon. Members to the Minister on his new role. I am not so sure about congratulations for fighting and clamouring for this debate on the first Friday back, but I am sure that the Minister will take those congratulations with a pinch of salt. That is how they were viewed by the Opposition. The Opposition do not have a shadow Minister who has recently transferred from one Department to another, but we have with us two shadow Ministers, one for education and one for employment.

Most hon. Members have spoken from personal experience and many of us spent some time in education. I was not sponsored by the Association of University Teachers but I was a university teacher for 13 years and spent many years in the chemical and construction industries. I was interested in the way in which the debate flowed and in the Minister's speech when he talked about renaissance man and the renaissance concept of the whole man. Nowadays we would not get away with talking about the whole man. I prefer to show the marks of my generation by talking about Herbert Marcusa and one-dimensional man. I suppose we could talk about the multidimensional person because that is largely what the debate has been about. We all want to see an education system that produces multidimensional people. I shall say more about that later.

We had excellent speeches from my hon. Friends the Members for Leeds, Central (Mr. Fatchett) and for Burnley (Mr. Pike) and we heard a passionate speech from that well-known personality in the House my hon. Friend the Member for Ashfield (Mr. Haynes). Some of us went to university and got all the benefits of a university education and it does us good to hear hon. Members speak for people who left school at the age of 14 and who had to get their education elsewhere. Sometimes that voice is not heard enough when we talk about education and training.

As some hon. Members have said, in only four years we shall have the reality of the single market in Europe. I have been to conference after conference about 1992 but very little is said about education at that time. There is a great deal of talk about mobility of labour but education and what we should do to enable us to face mobility of labour is not tackled. Mobility of qualification is also important. From 1992 it will be eight years to the end of the century and there will be many challenges to face in terms of making the nation successful and wealth-creating. Those challenges are very real. We shall meet those challenges of creating wealth only if we meet the twin challenges of ever-changing technology and faster-changing markets. If we do not have the skilled work force to meet those twin challenges, we shall not make wealth. The Labour party wants to distribute that wealth in a dramatically different way from the way the Tory party wants to distribute it, but we both agree that wealth creation is the ultimate aim. That is not the only aim of education, but the debate has made clear how important it is.

We have to compete to survive. In that sense, the debate has had some refreshing insights. A great deal has been said about the importance of producing transferable skills. What will happen in 1992 makes it important that we consider seriously the transfer of skills and qualifications across Europe. We need to be planning for educational credit cards and educational entitlement cards, which will be a passport for work and opportunity across Europe. We want the Government to be attending to that now. There should be a dialogue about the reality of that impact over the next few years. People still talk about 1992 as though it is in the distant future, but it will come soon. We shall need transferable credit cards for education and transferable qualifications, transferable entitlement, and the ability to meet that entitlement from a wide range of sources. I do not ignore the international dimension beyond Europe.

A second aspect is the changing nature of work in this and every industrial country and the ever more rapid movement to something touched on in speech after speech —the lack of need for the unskilled. All of us remember going past factories when we were young and seeing a sign saying "Hands wanted". We do not see that sign very often these days. There was an implication that brains need not apply. We had an educational system that, for too long, relied on producing a large number of people that were a pair of hands and little else. The structure of industry—for

example, the structure of the chemical industry when I entered it—was based on a demand for such unskilled people. That demand does not exist any more. There are exceptions, such as the construction and mining industries. The hon. Member for Cambridgeshire, South-East (Mr. Paice) seems to know very little about mines. I do not think that shovels are necessary any longer. I recommend that he visits a mine to check that out.

Most industry does not need unskilled workers, and the challenge of education is to produce brain power and the people that the new generation of industry needs. We do not need narrow skills. We do not need job-specific skills. All the evidence shows that the young person leaving school will need to change and retrain and train again. To give someone a job-specific skill now is to do no service to the nation or to the individual. The nature of education has to move fast.

Many hon. Members have mentioned the demographic changes. I have been here for most of the debate and two specific points have not come out properly. One is that the decline in the number of young people has serious implications for every sector. I am a former university teacher, but I shall say less about universities than about anything else. However, several hon. Members have spoken about the way in which universities will have to compete for a smaller pool of talented people. Both sides have to accept that for far too long universities and higher education have been a preserve for a tiny elite. The number of people going into higher education must be increased dramatically, whichever party is in Government.

Throughout the labour market those changes will be hard felt. I shall concentrate on two categories. For all kinds of reasons part of that demographic change is that there will be more black young people as a percentage of the population. It is important that the House takes notice of that. I do not want to knock employers from the Dispatch Box, but there is evidence that employers have less positive attitudes to black young people than to white young people. A new attitude to black young people and to their possibilities and potential must sweep through British industry. As I have said, as a percentage of the population there will be more black young people in the job market and we must use their talents to the full.

Another demographic change is that we shall be far more dependent on women returners than ever before. We must start taking seriously the job of attracting women back into the labour market and we must take far more seriously the challenge of how we treat part-time employees in our economy. For too long British industry has regarded part-time employment as cheap employment. Some of our major industrial competitors such as the United States and Sweden do not pay women less than men and do not regard part-time employees as working for pin money. They believe in taking that labour resource as seriously as any other labour resource. This country is lagging far behind in terms of attitude to women returners and part-time workers. Decisions about that low-wage attitude to part-time work must be made soon.

We should question industry's record on education. When we talk about education and industry some of us knock education far more than industry. It is fashionable to say that there should be a more positive relationship between schools and industry. I am part of my party's Front Bench employment team and, having listened to many debates—I have been away from education debates for a year or so—I must say that industry's record is not all that marvellous when it is put under scrutiny. Some of the best employers in this country cannot be beaten worldwide. They are super. However, if one looks below the top level, one starts to think that we are a long way behind many of our industrial competitors when it comes to employers' attitudes—CBI report or not.

Let us look at what is happening in the south-east of England and in other parts of the country now that we have a downturn in demographic trends and a slight upturn in the economy. Two or three years ago all hon. Members were congratulating ourselves on the fact that the school leaving age had effectively been raised to 18. We were saying that everyone leaves school at 16, that although there are no jobs for 16-year-olds, they go into YTS if they do not get anything else, or into further or higher education. In the past 18 months with that slight upturn in the economy and with fewer people leaving school at 16, there have been more jobs available. However, we have gone back to the rotten old system of more than 100,000 young people this year going into jobs with no training and being offered nothing—not even YTS.

I introduced a simple little Bill in June saying that there should be a duty on every employer in this country to train young employees to at least the minimum standard of the two-year YTS. If there is a compulsion on young people to take up a YTS place—if we are honest we would agree that it is a compulsion because young people cannot get unemployment or any other benefit if they do not—there should be a duty on employers to train to at least that minimum standard. It cannot be right for a civilised industrialised nation in 1988 to take vast numbers of young people into employment with no training.

Two weeks ago I went to a job fair at Derby. At one end of the exhibition hall was the stand of a wonderful local engineering employer who in some senses was of the old school, although the company had kept pace with changes. It had kept going, even through the difficult times. I refer to NEI, the international combustion company, which provides engineering for the power industry. It takes 50 apprentices a year, and did so even through the bad days. It has an enlightened apprenticeship system, which is vital for engineering. It is unfortunate that this has largely disappeared elsewhere. In come the lads—mostly lads—at 16 to craft apprenticeships. If they were good enough, they went into technicians apprenticeships. If they were better than that, they went into anything. They would go through university and postgraduate work. Two members of the NEI board started as apprentices. That good tradition used to provide a channel for the youngster who left school at 16 with ability but perhaps not with family backing for higher education. Such youngsters were still able to make it, as it were, through the apprenticeship tradition.

At the other end of the exhibition hall was the United Biscuits stand. I believe that the chairman, Sir Hector Laing, is a friend of the Prime Minister. It had a large display stand, most of which was set out to enable those who attended the job fair to try the company's fresh biscuits. The biscuits were pleasant, but I asked the representatives of the company about the training that was provided for school leavers. The company was offering free bus travel to school leavers of 16 years if they chose to work at the buscuit factory at Ashby-de-la-Zouch. I asked whether the company was part of the youth training scheme or whether it offered a different system. I was told: "We don't do that. We give them about six weeks'

[Mr. Barry Sheerman]

training." I took that up and pointed out that that approach ran counter to the feelings of hon. Members on both sides of the House on education and industrial training. It is commonly felt that the good employer should offer a broad-based training for life. The company representative said, "We are training these people only to be biscuit feeders. You do not need more than six weeks' training to be a biscuit feeder."

I observed that later in life some of these young people might want to be something different from a biscuit feeder. I pointed out that the factory might close down. The United Biscuits factory at Halifax, which is near to my constituency, recently announced its closure. I asked what the biscuit feeders would do if that happened. The response was, "Once a biscuit feeder, always a biscuit feeder."

The two attitudes—those of NEI and United Biscuits—are very different. The approach of United Biscuits and that of some other large employers must be changed. Unfortunately, it is one that goes to the heart of the problem that is created by the binary divide in our education system. It is the divide between the academic haves and the vocational nots. We still have not tackled the problem.

I understand that Back Benchers want to be nice to those on the Front Bench on their side of the House. Some of us take that approach on the Opposition Benches, especially when we are looking for promotion. Some might say that there is not much chance of that, at least until the next election. The fact is that we all have to be nice to those on the Front Bench. It is a fact that the binary divide and the problems that it represents has not been tackled by the Government since they took office in 1979. We still have the dreadful system that means that far too high a percentage of our youngsters leave school at 16 years because they are unable to continue in higher education. Many of them are unable to do so for all sorts of reasons, including economic pressures. These youngsters do not have the opportunities that are enjoyed by the academic mainstream, the elite, who pass through the comprehensive system into higher education.

The problem has become worse and there are now three strata. First, there are the privileged young people who go through university and then obtain professional qualifications. Secondly, there are those who stay on in non-advanced further education. They obtain good qualifications but very often their opportunities are not as great as those enjoyed by those who go into higher education. Many of these youngsters in NAFE should be in higher education and gaining degrees and other post-graduate qualifications. Thirdly, there is the group who have no training. These youngsters go into YTS.

Youth training was designed in this country originally as a scheme—and I hope that the Minister will agree with this because I think that he knows something about it—for employed and unemployed youngsters at 16. Apart from 9 or 10 per cent., it has become a programme for the unemployed youngster. If the Government can do anything immediately to change what is happening between education and industry, they should ensure that YTS returns to being a programme for the unemployed and employed young person at 16. The Government have increased the divide between the two sides. The divide between the technical and vocational education initiative and the national curriculum is typical of that rather loose thinking of which the Government are guilty. On the one hand TVEI looks at a spread of coherence across subjects while the new national curriculum deals with matters subject by subject. There is a contradiction in terms of the way in which those two initiatives originate, one from the Department of Employment and the other from the Department of Education and Science. Whatever is said about joint press conferences between three Departments, in many of the areas that we have discussed today, it is about time those Departments got their act together.

The Government have structured matters that way and have reinforced the sharp distinction that I have mentioned. Those Conservative Members who have complained about the lack of ideas on the Labour Benches have not read the material. I had a great deal to do with the Labour party manifesto in this area before the last general election and in the policy groups prior to the election. Our ideas and policies about what we would do for people aged between 14 and 20 were very imaginative and bold. The idea of a building block for every youngster aged 16 to 20 was an offer to which everyone aged 16 could look forward as it would provide education and training for four years. That would at last give the have-nots, who have never had higher education opportunities or the resources spent on them, an opportunity to look forward to at least four years of opportunity to fulfil themselves.

As my hon. Friend the Member for Leeds, Central (Mr. Fatchett) said, the 16 to 20s problem is the Government's weakest spot. That group is crucial to an education-industry linkage and the position will not be improved unless some very bold decisions are taken over the next year or two. Those decisions will come too late if they are not made soon.

Finally I want to consider exactly what education and industry links really mean. Industry does not mean simply employers of managers. It means everyone working in industry and that includes employees and trade unions. Education also means educationists and experts. It also includes people with expertise in local education authorities who, for donkey's years, have been more interested in eduction and more expert than most hon. Members in this House. During the past two years we have seen a rupture in the consensus on education and training which will do immense damage over the next 10 or 20 years.

The Government's decision to break the consensus in terms of the Manpower Services Commission and their attack on local authorities and trade unions means that it is almost impossible to achieve a fruitful dialogue on the very subject that we have discussed today.

If we really want to go ahead and build a relationship between industry and education we need to do so on the basis of consensus and co-operation. The Government and the Prime Minister do not believe in that. In the short term there may be political advantages in drawing that type of battle line, but in the long term we shall see more evidence of the rupture of the past two months, produced as a result of the Government's decisions. That will mean that many of the things that we have agreed on today, for example that we must have good education and employment links, will fall by the wayside because of the failure to build a consensus that will bring practical and positive measures into practice.

2.4 pm

Mr. Butcher: First, I pay tribute to every contributor to the debate. It is almost a convention of the House that in winding-up speeches, those who respond comment that it has been an excellent and rewarding debate, or words to that effect. There is something about Friday debates, and perhaps about this particular subject, that leads me to make that assertion with a great deal of conviction.

At 10 o'clock, I sat down after saying that I would be interested to hear the observations of hon. Members in all parts of the House. Over the past few hours, we have been treated to a number of very positive suggestions. One could argue that if all education debates were as positive as this one has been, many outside who complain that education is used as a political football would feel a lot easier about how those who deal with the politics of education perform.

I begin by disputing the concluding remarks of the hon. Member for Huddersfield (Mr. Sheerman), in that the whole ethos behind the major and significant policy changes we have witnessed over the past two or three years has been the building of bridges between the consumers and the demanders of educational skill and those who are the suppliers of those skills and capabilities in the schools. For example, if one looks at the curriculum for subjects such as CDT, and at what is happening in the TVEI, it will be seen that we are breaking down the divide to which the hon. Member for Huddersfield referred, and to which we both referred in a historical context, between vocational education and academic trends.

It appears to be a ritual in education debates that contributors must establish their credentials. Although I was most grateful to my hon. Friends for their comments about my industrial experience, I may point out that I spent six years as a member of the city of Birmingham education authority, the second largest in the country, and served as its chairman for two years. I am also married to a teacher, and I assure hon. Members that I become involved in discussions on conditions of service over the breakfast table virtually five days a week.

Something that I found very encouraging about our debate was that, if I compare the terminology used in the education debates in Birmingham in which I participated as a local authority councillor with that used in this debate and generally throughout the country today, there is to be seen a refreshing change in the way in which people discuss the role of education. I was present when the then emissary of Lord Callaghan, Mrs. Shirley Williams, came to Birmingham to indulge in something called the great debate. As I recall, it was concerned with the relevance of education, and the then Labour party was very worried about the alienation that many parents felt towards what the education service was delivering.

We have actually done something about that. There is a growing consensus that if we can bring the market place —if I dare use that term in an education debate, in referring to the demanders of skill, the employers and parents—closer to the teachers, then many of the things that hon. Members have said they wish to see happen will happen. That closeness of itself is a management technique that can deliver the results we want.

I wish to respond to points made by every hon. Member, but before doing so I shall conclude my remarks on the changes in the relationship with school governors and in management practices that we expect will occur over the next few years—being necessary in satisfying the need for closer links between industry and education.

The new governing bodies will include people with an enormous variety of background and experience. They will give their time partly as a matter of public service, but also because they recognise that it is a key opportunity to influence the direction that education is taking and the preparation that our young people receive for adult life and employment. We believe that the new arrangements will enrich the life of each individual school and will make a significant contribution to higher standards of education.

The introduction of local management of schools will rely substantially on the new governing bodies. In my view, this reform—which is part of the general reforms —has been comprehensively underestimated by commentators on the Education Reform Act. The enthusiasm and commitment of governors will be a key factor in enhancing the responsiveness of schools at a local community level and, by keying the education process into local conditions and local priorities, helping to increase the efficiency of the system and to ensure that all pupils are properly prepared to lead an effective and practical working life. Similarly, the new city technology colleges mentioned by two of my hon. Friends will provide their pupils with a thorough preparation for the increasingly specialised requirements that the changing needs of industry will create.

There are many other examples of partnership. Education and employment are brought close together in the compact, in which the Department of Employment will spend £12 million over three years, and in the very successful TVEI scheme. We can all benefit from the personal experience that we gain from talking to youngsters and teachers. One of the most rewarding conversations that I have had recently was with an industrialist who was overjoyed that his hitherto non-academic son had suddenly discovered the joy of learning through TVEI, which triggered his interest in other academic areas. That initiative restored the faith of a wealthy man—whose son had all the advantages—in the education system and its relevance for his son.

Mr. Fatchett: I accept much of what the Minister has said about TVEI, and I have seen very good work related to it in schools up and down the country. Like a number of other hon. Members on both sides of the House, however, I am concerned about how TVEI can be linked with the national curriculum. My hon. Friend the Member for Huddersfield (Mr. Sheerman) spoke of the curriculum being seen very much in "subject" terms. Can the Minister put to rest some of the fears about the relationship between the work in TVEI and the proposals in the curriculum?

Mr. Butcher: TVEI complements a number of parts of the curriculum, particularly CDT. I do not propose this afternoon to say how I would seek to manage the consolidation of disciplines, but I expect that much of my time, particularly over the next six months, will be devoted to that managerial question. [Hon. Members: "Good answer."] It was an excellent answer. If the hon. Member for Leeds, Central had seen the briefing, he would realise how excellent it was.

Much has been said about the consolidation and co-ordination of the various bodies. It has been asked

[Mr. Butcher]

whether there are too many, and whether we should try to bring them together. That, too will be very much a part of my preoccupations, and no doubt the House will test me in the coming months on the conclusions that we reach, but I feel that we have made a good start in bringing together the various packages. The variety of interest and approach is to be welcomed. We do not want people to get in each other's way, and we do not want laudable organisations to be ignored or not to receive the attention that they require to meet their objectives, so we shall have to stay very close to them.

Many people outside the House are asking why there has been such a major reform—this immense momentum and dynamism in the politics of education during the past two years. It is because the world beyond these shores so ordained it. The dynamism was not there for its own sake. Those who are competing with us economically, industrially and commercially are running faster and faster and faster. The race for competitiveness—I use those words advisedly—and the economic warfare that is going on in the international markets mean that we have to respond.

John Egan has been quoted. He is a very interesting man—an industrialist who takes the trouble to think about the broader issues. Happily, more people like him are to be found by the day. However, he says that it is not a question of Jaguar competing with Mercedes but of the people of Coventry being able to compete with the people of Stuttgart. What we are able to do to enhance the capabilities and the skills of our people will decide who wins that race. That is why there has been this immense impetus for change in the education system. If we do not respond to what our competitors are doing we shall become the nation of the whole man who is only half a man because he knows nothing about the needs of commerce, industry and enterprise. That is what lies behind a number of the reforms that have been introduced.

We have to think seriously about retraining and re-education, a point that was made by my hon. Friend the Member for Dulwich (Mr. Bowden). We have identified today an interesting consensus. It may have been identified before, but unfortunately I did not witness it. We are now educating people who can be trained. Employers do not want a trained shorthand typist or a trained tool-setter to emerge from the education system at 18. They want people who are equipped with the core skills on to which they can graft the appropriate training. They also want an education system that is flexible enough to enable people to undertake further regrafts of skill and capability five, 10 or 15 years later.

I welcome the growing movement between the public and the private sector at the further education and the higher education levels. They are doing deals, they are recognising opportunities, they are getting money into the universities from both the private and the public sectors. The further education colleges in particular are moving very fast in that direction. They are responding to the consensus, so we are all on the same side. My hon. Friend the Member for Dulwich clearly identified that point.

The hon. Member for Burnley (Mr. Pike), whose interventions in other debates I have always enjoyed, is absolutely right when he says that manufacturing in this country matters. We shall always have to make and manufacture products, simply because manufacturing output is 80 per cent. internationally tradeable. If we succour and look after manufacturing, we shall be supporting a sector that earns foreign currency most efficiently.

My hon. Friend the Member for Lewes (Mr. Rathbone) reinforced the point that education must continue. We need to focus on the need for re-education and retraining throughout working life. Our graduates need to learn new skills, too. Furthermore, because of the demographic time bomb, considerable attention will have to be paid to the retraining and re-educating of women who leave work to have a family. Those women, who may be professionals, skilled or semi-skilled, will need to be able to return to work seven, 10 or 12 years after they have made the laudable commitment to bring up a family. The same will also apply to some men.

Mr. Rathbone: I made two specific requests—one was for increased block grant to the Open university and the second was for ministerial help by direct funding and encouragement for underwriting educational capability. Can my hon. Friend say a few words about that?

Mr. Butcher: I do not like using those time honoured words, "I shall write to my hon. Friend," but I think that I ought to on this occasion because the issues that he has raised are huge. Moreover, for reasons that he will understand, they are not issues purely for my Department. I shall therefore have to respond in a more considered manner. I give an undertaking that I shall discharge that obligation on those two points.

I must tell the hon. Member for Ynys Môn (Mr. Jones) that I am not a Welshman, but I have the odd sprinkling of his nation's language as a result of spending a lot of time in his part of the world. He will know that there is a famous Welsh folk song called "Dyddian Difyr". If my pronunciation is correct, the hon. Gentleman will know that it has an interesting and subtle meaning. It means interesting days or happy days. I believe that, for education, we are in for a period of "Dyddian Difyr." The profession has to be happy and interested.

There are probably more Welsh teachers in Birmingham and the midlands than there are in Ynys Môn. I am aware that they bring a certain flair to our cultural life in the classroom. The hon. Gentleman was down to earth about careers in industry. He wants us to be more positive about them.

My hon. Friend the Member for Hertfordshire, South-West (Mr. Page) also raised this matter when he talked about the prejudice involved when schoolchildren are crocodiled around a factory and told, "This is where you will end up if you do not get decent GCSEs or A-levels." That must stop. It is coming to an end. The culture is changing and the fusion of the vocational with the academic is, happily, under way.

I agree that where contact between business and the education system is patchy, we should do whatever we can to discover the best practice and see that it is general practice throughout the country.

My hon. Friend the Member for Bolton, North-East (Mr. Thurnham) made some interesting observations. There is nothing wrong with variety, provided that variety of choice produces a general trend towards excellence. That is what we have set in hand.

In his own way, the hon. Member for Ashfield (Mr. Haynes) is a shortage. I do not want him to retire because the Labour Benches need working men. I understand that they are running out of working men, that there are far too many academics and that the number of sons of toil is on the retreat. "Do not retire" is my message to the hon. Member for Ashfield. His party needs him and I suspect that his national executive may call on him shortly. It needs his pithy observations on the real needs of working people.

When discussing skill shortages, we have to be careful to define what we are talking about. I recall a major examination of shortages in information technology four years ago revealing that the shortage was not so much in computer sciences as in physicists and mathematicians who make the great leaps in computer science. Electronic engineers were easier to supply, as the Japanese have found out.

That debate has moved on because some people in the computer industry now say that they want classically trained scholars. People who read Latin and Greek apparently make brilliant systems analysts and software engineers. The argument keeps moving. We cannot say, "Here is a quota for an identifiable shortage. We now need 7,500 electronic engineers." because that target will move almost overnight. Our system must therefore be able to respond flexibly. The new partnerships that are being built up between academia and industry in vocational areas are one of the ways in which we can ensure that we are fast on our feet.

I do not agree with the hon. Member for Ashfield that all our head teachers will have to become accountants. Our head teachers, with their governing bodies, will enjoy the responsibilities that they will have. In every walk of life we see that, time and time again, if one pushes responsibility upstream there is an improvement in responsiveness and quality. The schools will enjoy their responsibilities—I am convinced of that. They will enjoy the fact that they will be able to deploy their own resources within their commitments to teaching and logistic support.

I read a flip comment from one spokesman about what will happen in Cambridgeshire. He said that schools would not run the radiators as hot as they used to because they will now be paying for the fuel. There is something in that comment. If one talks about transferring certain sums of money within a school's expenditure heads of account one does examine critically where one feels one might be wasteful. One also examines most carefully where one definitely needs to spend more money. If a school decides to push up salary grades for maths and physics teachers so be it. We have a sophisticated profession; it is asking for management training support and cash support, which it will get.

Mr. Robert Rhodes James (Cambridge): Is my hon. Friend saying that schools, particularly primary schools, will receive more cash support?

Mr. Butcher: An announcement has already been made that there will be a programme, cash supported, to provide those management skills that a number of our head teachers feel are necessary. We understand and respect that view. I shall have to come back to my hon. Friend the Member for Cambridge (Mr. Rhodes James) about the level to which that support will be given to primary schools and how far down it will go. My hon. Friend will know that there is some discussion as to when that support is triggered as well as regarding the size of the school.

In reply to my hon. Friend the Member for Norwich, North (Mr. Thompson) we need more commitment and we need to be motivated about education. Those who come back from Japan after their first visit always draw the same conclusion: there is nothing that the Japanese are doing either in education or in industry that we cannot do or have not already done. What they have in abundance in Japan is commitment—with a capital C. They are utterly committed to drive to meet their objectives and that is the only distinction between our two industrial cultures. We are acquiring and must continue to acquire that level of motivation. My hon. Friend the Member for Ealing, North (Mr. Greenway) found a phrase for that when he talked about zeal for achievement. He quoted a famous person as coining that phrase. I believe that the word commitment should be added to that phrase.

My hon. Friend the Member for Esher (Mr. Taylor) made a telling contribution. I am sure that he would agree that the smart graduate is the one who recognises a trend before everyone else. That is necessary if he wishes to be involved in a career that is lucrative, rewarding and satisfying. I would advise people to buck the hitherto perceived trend of not moving into engineering. That market will have its revenge and salaries will increase if the shortages in certain skills in engineering continue.

If I were a young man or woman of 21 reading an applied science degree I would look hard at the present scenario. I believe that all of us could go out tomorrow and write a speech entitled "Would I let my son marry an engineer?" I believe that that would be a good thesis to examine because women who go into engineering to fill the gaps left by men, who are not going in in sufficient numbers, will be extremely attractive future brides on the basis of their income, their intellect and job security.

I say to my hon. Friend the Member for Basildon (Mr. Amess) that we agree completely that there should be proper co-ordination and consolidation where it is required. But does he agree that, on education and industry links, we are no longer talking about why we should have them but how we have them? That is the major change, and it is to be greatly welcomed.

My hon. Friend the Member for Bedfordshire, South-West (Mr. Madel) wanted to see more secondees from industry in education, and he made an interesting point about how that should be viewed in terms of tax advantages to the company. I shall faithfully report his comments to my right hon. Friend the Chancellor of the Exchequer before he goes into purdah to see whether he has any observations to make directly to my hon. Friend.

My hon. Friend the Member for Sevenoaks (Mr. Wolfson) invited me to march into an especially controversial area which I shall not do this afternoon. He was interested in the shortage subjects in teaching. All that I will say now is this: if we are to tackle the problem, we need more flexibility in the way that we reward our teachers. That flexibility must reflect not only skill shortages but geographical shortages.

It being half past Two o'clock, the motion for the Adjournment of the House lapsed, without Question put.

BUSINESS OF THE HOUSE

Ordered,

That, at the sitting on Tuesday 25th October, paragraph (2) of Standing Order No. 30 (Questions on amendments) shall apply to proceedings on the Motion in the name of Mr. Neil Kinnock as if that day were one of the days allocated under paragraph (2) of Standing Order No. 13 (Arrangement of public business).—*[Mr. Fallon.]*

Housing Associations (Neasden)

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Fallon.]*

2.30 pm

Mr. Ken Livingstone (Brent, East): This issue should not be a source of contention between the parties because it relates to a community in my constituency which shares many of the values that have been severely eroded in other parts of our society. This long-established community is known as Neasden village. It has housed three generations of London Transport workers who have served the community well and from whom we have seen many examples of community service that we would like to spread to the other major cities where that sense of community no longer exists.

The community is seriously threatened by a pernicious property developer, and I fear that what is happening in Neasden will happen in many other areas when the Government's housing legislation, which is still before Parliament, becomes law.

Neasden village consists of 272 homes spread over four streets in a fairly isolated area. It was developed in two phases, with 142 brick houses and 130 concrete houses. As one would expect, the concrete houses need more repairs than the brick houses. The uniqueness of the estate is recognised by the fact that the local council has declared it a conservation area.

The first appalling decision in this case was that of London Transport more than a year ago not to maintain those houses and provide homes for its workers but to sell them on the open market. Given the problems that we are told London Transport has of finding people to drive its trains and buses, it is breathtaking that such an estate should have been put on the market. The Government, through the Housing Corporation, and Brent council backed a reputable local housing association that wanted to purchase the properties and continue to run them in a reponsible fashion. Unfortunately, it was gazumped. A property developer was prepared to pay more than the market rate, determined by the district valuer and the council, and the reputable housing association was unable to buy the houses. The estate passed in to the hands of Asda Securities Ltd.

There is a major problem in terms of the Government's policy for funding housing associations through the Housing Corporation. Housing associations are restricted by the real market value of occupied properties, but a property developer can look at the same properties and estimate how many of the tenants can be winkled out. He can see the longer-term potential for development by emptying the homes and selling them on the open market. So housing associations are hamstrung when in competition with the less desirable property speculators.

The same day that Asda Securities bought the properties it immediately sold the concrete homes—130 of them—to a firm called Unicoin (Neasden) Ltd. The tenants in the homes passed into the loving care of their new landlord, a Mr. Sturt. His approach to housing management seems to have been largely influenced by the activities of the American Mafia, and I am sure that no hon. Member of any party would find his approach desirable or worthy of emulation. Since Mr. Sturt took

over, no repairs have been done. He immediately applied for a £10 a week rent increase, but on appeal from the tenants that was reduced to £1·50.

Then there started a series of harassing visits. Many of the tenants, who are now elderly, received calls at odd times of the day urging them to move and warning them that major disruption would be caused by development works in the area. Confusion and doubt were spread among the community. All sorts of disturbing rumours abounded, but no real information. Mr. Sturt opened no genuine channel of communication with his tenants. He started offering sums of money to tenants to move out. Tenants who resisted have in some cases been offered as much as £15,000. That sounds like a reasonable sum but I can assure the House that a one-bedroom flat in my constituency usually goes for about £60,000. So what good would £15,000 be to a family that had lost its home? It would eventually become a burden on the local council and have to occupy bed and breakfast accommodation. What use would £15,000 be to a pensioner who would have no chance of getting a mortgage to take him up to the £60,000 which is the going rate in Brent?

Mr. Sturt found that, by and large, tenants were not interested in his offer, so he chose to up the pressure—which is why I referred earlier to the Mafia style of housing management. At 6 o'clock one morning this June a group of men claiming to be building workers arrived in the area, climbed on to the roofs of the properties and started to rip the tiles off, throwing them down through the buildings and thus causing even more damage. They started with the properties that Mr. Sturt had kept empty throughout the previous year but they moved on to occupied properties, ripping away the gable tiles and allowing water penetration into occupied homes. Mr. Sturt was achieving his objective: having failed to bribe or harass the tenants to move out he was now engaging in a physical drive to do so by demolishing the houses around them. That was completely illegal, as the place is a conservation area. He broke the law to achieve his ends. Brent council issued a notice that he should desist from his activities, with which he eventually complied.

Since then, Mr. Sturt has taken no action to repair the properties from which his building workers ripped the roofs, and deterioration continues. Moreover, tenants wonder whether a landlord who is prepared to behave like this will not have other extremely unpleasant tricks up his sleeve. Mr. Sturt then had the remarkable gall to say that he would not meet the tenants because they were behaving like a lynch mob. If so, they had my sympathy. Mr. Sturt's housing management record stretches my opposition to capital punishment to the point at which I might be able to make an exception: the limited reintroduction of hanging for this sort of landlord.

Mr. Sturt then applied for planning permission, having recognised that the council would not allow him to demolish the properties illegally. He has now applied to demolish all 130. Where will the tenants living in the properties that are still occupied be rehoused by Mr. Sturt? A community that has lasted three generations is now to be thrown to one side so that Mr. Sturt can make a fast speculative profit with half the homes in a conservation area. He intends to replace them with buildings of different heights, completely altering the nature and scale of the conservation area. The development would consist of 392 yuppie flats and bedsits. If the right hon. Member for Brent, North (Sir R. Boyson) were with us today he would confirm that there is tremendous traffic congestion in this area. The site borders the Neasden roundabout and a busy junction with the north circular road. No member of any political party would support the idea of many yuppies and cars coming into an area that is already a nightmare of traffic congestion. I am sure that opposition to that would unite all the members of Brent council.

The House will be interested to know that Mr. Sturt does not share the Prime Minister's commitment to the environment, which she recently expressed in a speech. He intends to demolish the mature oaks and silver birch trees that have grown on the site over three generations to make way for the maximum number of new tacky homes that he can squeeze into Neasden village.

What should the House ask the Government to do? I appeal to the Minister to consider several matters. The House should say that these homes should be repaired. Simply to demolish homes that have been neglected, especially by a landlord who refuses to repair them, is not the answer. If a house needs to be demolished because there is no possibility of repairing it, it needs to be sensitively replaced so that it blends into the existing community.

The Government face a choice in terms of their funding of housing associations. They can give associations the freedom to bid against the speculative developer and go beyond the price agreed by the district valuer. None of us would welcome that because it would mean spending more public money in a market where property speculators endlessly bid up prices. The alternative that I recommend to the Government would cost nothing extra. It is to support compulsory purchase orders placed by the local council on properties such as those at Neasden, but with the specific agreement that instead of control passing to the council the properties would automatically be sold as soon as the council's compulsory purchase order was confirmed by the Government. They would be sold to a reputable local housing association or to the tenants who could buy them individually or collectively. That would achieve for private tenants what public sector tenants have been given in the right-to-buy legislation—the ability to determine the ownership of their properties. I have no doubt that that would receive overwhelming public support in areas of the country where bad landlords continue to abuse their tenants.

I ask the Government to look at how easy it is for people such as Mr. Sturt to get away with these activities. The penalties for the illegal activities undertaken by Mr. Sturt in a conservation area are laughable. No doubt he could make £30,000, £40,000 or £50,000 profit per property on the sites where he has illegally tried to demolish these houses. No financial penalty imposed by the courts could ever deter people such as Mr. Sturt. He will laugh all the way to the bank. We should compare the penalties that he might face to the penalties being imposed by courts for insider trading in the City where financiers face long prison sentences. An insider trader indulges in evil activities that disrupt people's financial lives, but is it not worse that homes and communities should be disrupted by Mr. Sturt?

We know about the doubt and confusion felt by a person who is mugged on the street. Mr. Sturt's activity damages people's lives by causing worry, confusion and doubt, and the pain felt by many of his tenants ranks with the damage caused by the mugger on the street. When dealing with such vandals we should hand out heavy

[Mr. Ken Livingstone]

prison sentences. I hope that the Minister will look at the severity of the penalties that are available. The only deterrent to people such as Mr. Sturt is the knowledge that they will be put inside for two or three years. We also need to find ways in which we can assist tenants to prosecute their landlords when they refuse, month after month, to carry out repairs.

This is not a party matter. I do not think that any Tory Member would support the activities of people like Sturt any more than they supported the activities of people like Rachman. We should be able to unite against such characters. I know that the Minister will not be able to give a commitment now, and will say that these matters will have to be considered. If Brent council seeks to put a compulsory purchase order on these properties, I beg him to say that the Government will consider that favourably. It would be a warning to many others of Mr. Sturt's inclination if the House were united beyond party divisions to make sure that bad landlordism like this is not allowed to destroy established and respected working class communities.

2.45 pm

The Parliamentary Under-Secretary of State for the Environment (Mr. David Trippier): I congratulate the hon. Member for Brent, East (Mr. Livingstone) on having obtained this debate and spoken on so important a subject. It is extremely gracious of him to say that he understands that the Minister cannot give a commitment, because that is certainly true. It is an interesting exercise for Ministers to guess or second-guess what hon. Members will raise in detail in their Adjournment debates. I was unaware of the vast majority of what the hon. Gentleman told us. I can give him the assurance that I will look at it, but the councils and the tenants to whom he has referred, who are involved in this case, should exercise the legal remedies available to them. I am handicapped by not being able to comment on that because the matter may come before the courts and there may be some legal redress. As the hon. Member has gone wider in his comments by talking about funding, I shall say something about that and return to the specific point about the village later. In this case, it may not have made as much difference as he suggested, but that is a matter for conjecture and not of fact.

The housing association movement has a long and honourable tradition with its rare, if not unique, combination of social awareness and enterprise. In the hon. Gentleman's constituency, the housing association movement has a long and proven track record, with some of the most distinguished and active housing associations in the country. They include the Brent people's housing association, now called the network group, the Paddington churches housing association and the metropolitan housing trust. Others have earned a well-deserved local reputation, often catering for special needs.

In Brent, housing associations own about 6,900 homes —about one third as many as the council, which is a high figure—and more than 7 per cent. of the entire housing stock. There are few aspects of housing provision in which the associations are not involved. They buy property, improve it to the standards that we now expect, convert properties into self-contained flats, and house the homeless and those in special need. I shall come to examples of those later.

The hon. Gentleman is aware that the Government pay grant, known as housing association grant, for approved projects carried out by housing associations that are registered with the Housing Corporation, and this is a capital grant. In 1987-88, the total amount paid was £886 million. This went towards the cost of buying land for development, buying standing properties for use as housing, building work, professional fees and interest on the cost of the projects. There are two routes for applying for grant—through the local authority or to the Housing Corporation—and loan finance may come from either source. When we drew up our recent proposals, we saw an advantage in making the corporation the sole funding agency.

The hon. Member for Brent, East suggested that more money should be made available to housing associations. If the means whereby that could be made available were through the housing association grant, he is clearly looking to the Government—at the moment, there are negotiations with the Treasury—for an increase in future years' allocation for such an exercise. It may be we would agree on that. There may be no political difference between us on that. What interests me in the debate is whether, had there been additional money available for the housing association to which the hon. Gentleman referred, it would have changed the situation. I am allowed to comment on that.

Although the hon. Gentleman is understandably concerned over what has been happening at Neasden village, where the network organisation was unsuccessful in bidding for houses sold by LRT, the figure that the association bid was obviously a matter for its own judgment, based no doubt on qualified professional advice. Naturally, I do not have knowledge of the association's finances, but even if it had had the funds available it does not necessarily follow that it would have increased its bid for the properties. It could have taken the view that expenditure at that level would produce a poor return in housing terms compared with other projects it might have carried out. I ask the hon. Gentleman to accept that that is possible: Perhaps we need to explore that further.

As the village is a conservation area—the hon. Gentleman referred to that—demolition of any of the buildings will require the consent of the local planning authority or of my right hon. Friend the Secretary of State. As the hon. Gentleman knows, it would be wrong for me to speculate on the future of the village in that sense because the Department plays a semi-judicial role in that respect. However, I can give him an assurance that what he has said will be taken into account when we consider the matter.

On the subject of the tenants, hon. Members will know of the existing legal safeguards against harassment and of our proposals for strengthening them in the Housing Bill. I do not expect the hon. Gentleman to accept all that we are seeking to do in the Bill and he has already spoken about that. However, as far as I am able, I can give him the assurance he seeks that I shall consider the matter. If he wishes to come to the Department of the Environment, I am prepared to meet him to discuss the subject. It would be unwise at this stage to go further.

Question put and agreed to.

Adjourned accordingly at eight minutes to Three o'clock.

Written Answers to Questions

Monday 25 July 1988

EDUCATION AND SCIENCE

Free School Meals

Mr. Frank Field: To ask the Secretary of State for Education and Science if he will list *(a)* the number of families and *(b)* the number of children (i) eligible and (ii) claiming free school meals for each year since 1979.

Mr. Dunn: Data on the number of pupils receiving free school meals in England since 1979 are available in the Department's annual school meals census, copies of which are available in the Library.

The number of children eligible to receive free meals was included in the October 1987 census, but this information for previous years and the number of families eligible has not been collected by the Department.

Child Care

Ms. Richardson: To ask the Secretary of State for Education and Science what action he is taking to implement the recommendations within his area of responsibility of the European Commission's childcare network report "Caring for Children—Services and Policies for Childcare and Equal Opportunities in the United Kingdom."

Mr. Dunn: My right hon. Friend recently received and is considering this detailed report, which covers the areas of responsibility of a number of Government Departments.

French

Mr. Butler: To ask the Secretary of State for Education and Science whether he proposes to take steps to reverse the downward trend in the GCE French A-level percentage of total passes between 1965 and 1985.

Mrs. Rumbold: The Government are concerned to increase the number of pupils continuing to study a foreign language until age 16 and beyond. Our proposals for a national curriculum include a modern foreign language as a foundation subject at secondary level to be studied by all pupils between the ages of 11 and 16. We expect the majority to want to offer it for public examination at age 16 and hope that the greater numbers studying a language up to that age will result in an increase in those continuing their studies to A or AS-level.

School Leavers

Mr. Tom Clarke: To ask the Secretary of State for Education and Science if he will publish a table in the *Official Report*, showing for each year from 1979 to the latest year for which figures are available, the number of school leavers with special education needs who left school, broken down by type of institution, and the numbers who went into *(a)* employment, *(b)* education, *(c)* training, *(d)* care and *(e)* who cannot be traced.

Mr. Dunn: Only limited information is available. The estimated number of pupils aged 16 who left maintained and non-maintained special schools in England in each of the years 1981 to 1987 is as in the table. Comparable figures for earlier years are not available. Information for other types of institution attended aond on the destination of leavers from special schools is not collected centrally.

(thousands)

	Number[1]
1981	12·5
1982	11·9
1983	11·2
1984	10·8
1985	10·7
1986	10·5
1987	10·0

[1] Leavers from special schools age 16.

Workers Educational Association

Mr. Hinchliffe: To ask the Secretary of State for Education and Science what level of grant has been allocated to the Workers Educational Association on an annual basis from 1979 to the present day; what the projected support for the Workers Educational Association will be to 1990-91; and what future role he sees the Workers Educational Association playing in adult education.

Mr. Jackson: Grants made by the Department to the Workers' Educational Association (WEA) districts in England in the academic years 1979-80 to date are set out in the table.

Grants to Workers' Educational Association districts in academic years

	£ million
1979-80	1·129
1980-81	1·447
1981-82	1·970
1982-83	2·209
1983-84	2·405
1984-85	2·516
1985-86	2·437
1986-87	2·431
1987-88	[1]2·497

[1] Allocation.

Grants are also paid to the WEA national office to assist in the monitoring and promotion of WEA provision generally. Details of the amounts paid in the financial years 1979-80 to date are set out in the table.

Grants to WEA National Office in financial years

	£ million
1979-80	0·038
1980-81	0·043
1981-82	0·043
1982-83	0·045
1983-84	0·045
1984-85	0·047
1985-86	0·056
1986-87	0·050
1987-88	0·081
1988-89	[1]0·052

[1] Allocation.

Since 1985-86 the Department has in addition made grants to the WEA for the in-service training of staff, as follows:

Financial year	*£ million*
1985-86	0·050
1986-87	0·052
1987-88	0·054
1988-89	[1]0·055

[1] Allocation.

Grant allocations are made on an annual basis and my right hon. Friend is not therefore in a position to state what the support for the WEA will be for the years to 1990-91.

The WEA has asked the Department to review the role and resourcing of the association. Officials are currently discussing with the WEA how this might best be done.

Teachers (Negotiating Rights)

Mr. Fatchett: To ask the Secretary of State for Education and Science what representations he has received concerning the declaration on teachers' negotiating rights (document B2-1187/87) entered in the register of the European Parliament under rule 65 of its procedures, consequent on petition to the president of that body on 9 March by representatives of the National Association of Schoolmasters, Union of Women Teachers and others; and whether he will make a statement.

Mrs. Rumbold: My right hon. Friend has received a small number of letters from NASUWT members, both directly and through hon. Members, drawing his attention to this declaration.

Education Reform

Mr. Madel: To ask the Secretary of State for Education and Science if he proposes to establish a special unit in his Department to deal with requests for guidance and assistance from governors of schools in maintained sector who are contemplating applying for grant maintained status for their schools; and if he will make a statement.

Mr. Dunn: A team of officials in my Department will continue to provide information and advice on request to all those interested in our proposals for grant-maintained schools. Copies of a draft document of guidance on our proposals have already gone to the governing bodies of all maintained schools.

Retinitis Pigmentosa

Mr. Shersby: To ask the Secretary of State for Education and Science if he will list in the *Official Report* in tabular form details of all scientific research being carried out with support from public funds into retinitis pigmentosa, giving for each project (i) its name, (ii) the name of the research worker concerned, (iii) the location, (iv) the amount being spent, (v) the duration and (vi) its expected completion date.

Mr. Jackson *[holding answer 4 July 1988]:* The Medical Research Council (MRC), which receives a grant-in-aid from this Department, is the main agency through which the Government fund medical research in the United Kingdom. I understand that the MRC provided support for the following projects during 1987-88:

1. *Project title:* DNA sequence markers in single gene disorders (retinitis pigmentosum, chromosome x-linked mental retardation, etc.)
   Investigator: Professor H. J. Evans (Unit Director)
   Location: MRC Clinical and Population Cytogenetics Unit
   Duration: Commenced 1 April 1983 and ongoing

2. *Project title:* Characterisation of antiretinal autoimmunity in retinal vasculitis
   Ivestigator: Professor D. C. Dumonde
   Location: Guy's and St. Thomas's Medical School, London
   Duration: 1 March 1984 to 28 February 1987

3. *Project title:* The physicochemical basis of light reception in vertebrates
   Investigator: Professor Sir Alan Hodgkin
   Location: Physiological Laboratory, Cambridge University
   Duration: 1 October 1984 to 30 September 1987

4. *Project title:* Dark-adaptation and light-adaptation of rod photoreceptors
   Investigator: Dr. T. D. Lamb
   Location: Physiological Laboratory, Cambridge University
   Duration: 1 October 1984 to 30 September 1987

5. *Project title:* Phototransduction in vertebrate rods and cones
   Investigator: Dr. D. I. Attwell
   Location: Department of Physiology, University College London, London
   Duration: 1 October 1984 to 30 September 1987

6. *Project title:* Receptoral and post-receptoral processes in colour vision
   Investigator: Dr. J. D. Mollon
   Location: Department of Experimental Psychology, Cambridge University
   Duration: 4 February 1984 to 30 June 1988

7. *Project title:* Molecular structure of the membrane-cytoskeleton network and of rhodopsin and squid photoreceptor microvilli
   Investigator: Dr. Helen R. Saibil
   Location: Department of Zoology, Oxford University
   Duration: 1 July 1985 to 30 June 1988

8. *Project title:* Clinical and functional studies of different genetic forms of retinitis pigmentosa
   Investigator: Professor A. C. Bird
   Location: Department of Clinical Ophthalmology, Institute of Ophthalmology, London
   Duration: 1 May 1985 to 30 April 1988

9. *Project title:* Synthesis and sorting of glycosaminoglycans in the retina; cone cells and interphotoreceptor matrix
   Investigator: Dr. Carolyn A. Converse
   Location: Department of Pharmacy, University of Strathclyde, Glasgow
   Duration: 14 June 1986 to 13 June 1987

10. *Project title:* Temporal visual processing in amblyopia
    Investigator: Dr. R. F. Hess
    Location: Physiological Laboratory, Cambridge University
    Duration: October 1988 to September 1989

These projects are not exclusively directed to research on retinitis pigmentosa. For example, the first project listed, at the MRC clinical and population cytogenetics unit, includes research on a range of single gene disorders. The council's estimate of total expenditure on research directly related to retinitis pigmentosa in 1987-88 is £134,000.

Some support for research on retinitis pigmentosa is also provided by this Department through UGC block grants to universities and medical schools.

OVERSEAS DEVELOPMENT

Ethnic Minorities

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs in which grades people from the ethnic minorities employed in the aid wing in grades 1 to 7 are employed.

Mr. Chris Patten: Disclosure of this information would breach the code of practice agreed with the Council of Civil Service Unions about the confidentiality of ethnic origin information on staff in post, and would risk identifying individuals.

Female Workers

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if the Overseas Development Administration monitors the effect of United Kingdom bilateral aid on the proportion of the female population who are economically active in recipient countries.

Mr. Chris Patten: We evaluate the effects of our aid on women, but it would be impracticable to distinguish the effect of this aid from all other factors which determine the proportion of women who are economically active.

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will publish a table in the *Official Report* showing, for all countries in Latin America, information available to him for the latest year for which figures are available on the proportions of the female population who were economically active, in ranked order and the percentage change since 1960.

Mr. Chris Patten: Following is the information:

	Activity rate (1985) females (per cent.)	*Percentage change in female activity rate 1960-85*
Jamaica	42·5	+39
Haiti	36·2	−30
Uruguay	23·3	+19
Trinidad and Tobago	22·6	+26
Brazil	19·9	+77
Chile	19·7	+39
Argentina	19·4	+15
Panama	19·0	+33
Venezuala	18·3	+58
Mexico	17·9	+96
El Salvador	16·6	+51
Peru	15·4	+14
Costa Rica	15·2	+56
Bolivia	14·8	+6
Colombia	14·3	+21
Nicaragua	14·2	+27
Paraguay	13·8	−1
Ecuador	11·7	+10
Honduras	10·3	+30
Guatemala	8·7	+11
Dominican Republic	8·2	+38

Note: The activity rate is the ratio of the economically active population (all employed and unemployed persons including those seeking work for the first time) aged 10 years and over to the population of all ages.
Source: World Demographic Estimates and Projections 1950-2025, United Nations 1988

OECD Countries

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will publish tables in the *Official Report* showing, in ranked order, per capita contributions by Organisation for Economic Co-operation and Development Countries to *(a)* the United Nations International Children's Emergency Fund, *(b)* the United Nations Educational, Scientific and Cultural Organisation, *(c)* the World Health Organisation, and *(d)* the Food and Agriculture Organisation for the latest year for which figures are available.

Mr. Chris Patten: Available information is in the tables. Figures for the United Nations Educational Scientific and Cultural Organisation and the Food and Agriculture Organisation combine assessed and voluntary contributions. Figures for the World Health Organisation cover only assessed contributions to the budget; contributions to voluntarily funded programmes are not available for Organisation for Economic Co-operation and Development countries. Contributions to the United Nations International Children's Emergency Fund are all voluntary. 1986 figures are the latest available for UNESCO.

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will publish a table in the *Official Report*, showing for each member of the Organisation for Economic Co-operation and Development in ranked order, the percentage change in proportion of gross national product given as overseas aid between 1979 and the latest date for which figures are available.

Mr. Chris Patten: Comparative figures are available only for net official development assistance as defined by the Organisation for Economic Co-operation and Development, and not for the amounts actually spent on overseas aid as a proportion of gross national product.

Exact figures are only available for those countries which are members of the OECD's Development Assistance Committee and have been so throughout the period in question. The information is as follows:

	Net official development assistance as a percentage of gross national product		*Percentage change in ratio between 1979 and 1987*
	1979	*1987*	
1. Italy	0·08	0·32	300
2. Finland	0·21	0·50	138
3. Switzerland	0·21	0·30	43
4. France	0·60	0·75	25

Source: DAC chairman's report 1985 and OECD press notice published on 22 June 1988.
Ireland became a member of the DAC in 1985.

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will publish a table in the *Official Report*, showing for each member of the Organisation for Economic Co-operation and Development Assistance Committee, for 1979 and 1987 *(a)* the per capita gross national product, *(b)* the

proportion of gross national product constituted by bilateral aid, *(c)* per capita bilateral aid, *(d)* the percentage changes in gross national product on the previous year and *(e)* the percentage real change in bilateral aid on the previous year.

Mr. Chris Patten: The information for 1979 is as follows:

DAC Country	*(a) GNP per capita in $*	*(b) bilateral aid as percent of GNP*	*(c) bilateral aid per capita in $*	*(d) percentage change in GNP on previous year*	*(e) percentage real change in bilateral aid on previous year*
Australia	8,206	0·39	32	11	5
Austria	9,116	0·09	8	18	−51
Belgium	11,433	0·39	45	15	−28
Canada	9,375	0·27	25	10	−15
Denmark	11,706	0·43	51	16	6

External Debt

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will publish a table in the *Official Report* showing, for each of the years 1973 to 1987, as a total for all non-oil developing countries for *(a)* the current account balance, *(b)* the current account balance excluding interest payments on external debts and official transfers and *(c)* the interest payments on external debt.

Mr. Chris Patten: The information is as follows:

US$ thousand million

	Non-oil developing countries		
	Current account balance	*Current account balance[1]*	*Interest payments on external debt*
1973	−11·3	−9·9	6·9
1974	−37·0	−36·4	9·3
1975	−46·3	−42·9	10·5
1976	−32·6	−29·2	10·9
1977	−29·6	−22·2	15·6
1978	−33·2	−19·6	21·9
1979	−50·7	−29·8	32·2
1980	−73·4	−36·4	49·5
1981	−98·4	−43·6	68·3
1982	−77·4	−12·1	78·4
1983	−41·8	15·4	71·2
1984	−25·9	38·5	78·5

	Non-oil developing countries		
	Current account balance	*Current account balance*[1]	*Interest payments on external debt*
1985	−28·1	31·9	77·1
1986	−13·1	43·8	74·6
1987	6·6	48·9	73·9

Source: World Economic Outlook, International Monetary Fund, 1983-1988.

[1] Excluding official transfers and interest payments on external debts.

Nicaragua

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will publish a table in the *Official Report* showing, in ranked order, for 1986 and 1987, the bilateral aid earmarked for technical co-operation paid to Nicaragua for each reporting member of the Organisation for Economic Co-operation and Development's development assistance committee.

Mr. Chris Patten: Figures for 1987 are not yet available from the development assistance committee. Figures for technical co-operation provided to Nicaragua in 1986 are as follows:

	US$ millions
Italy	7·12
Germany	5·40
Finland	5·38
Netherlands	4·94
Sweden	3·54
France	2·07
Norway	0·62
Switzerland	[1]0·30
Denmark	0·23
Japan	0·16
Canada	0·06
Belgium	0·02
Australia	—
Austria	—
Ireland	—
New Zealand	—
United Kingdom	—
United States of America	—

[1] Estimate.

Note: "—" in the table signifies disbursements of less than $5,000. Figures compiled by the development assistance committee provide insufficient evidence to rank these countries; they are ordered here alphabetically.

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will publish a table in the *Official Report* showing for each reporting member of the Organisation for Economic Co-operation and Development's Development Assistance Committee for 1987 the bilateral aid given to Nicaragua in ranked order.

Mr. Chris Patten: Figures for 1987 are not yet available from the Development Assistance Committee.

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs what is the level of United Kingdom Government funding paid to development projects inside Nicaragua co-financed with British voluntary groups; and if he will list the voluntary groups, projects and individual sums awarded.

Mr. Chris Patten: During the last complete financial year—1987-88—grants totalling £47,065 were paid under the joint funding scheme to British voluntary agencies in order to co-fund 10 of their development projects in Nicaragua. The details are:

Agency	*Project Name*	*Grant in 1987-88* £
CAFOD	Agricultural Development	3,117
CAFOD	Vocational Training and Workshops (in tailoring and embroidery skills) for women prisoners	2,477
Christian Aid	Las Segovias; Mother and Child Health Programme	8,403
Christian Aid	Production and Distribution of Medicinal Plants	1,541
OXFAM	Technical Assistance for Project Evaluation/Implementation	3,907
OXFAM	Training Programme for Health Promoters	5,245
OXFAM	INPESCA: Food Production; Purchase of Generators	3,079
OXFAM	Agricultural Development Programme	10,280
OXFAM	Agricultural Development with Rama Indians	6,516
OXFAM	Appropriate Technology Project: Building Techniques	2,500
	Total	£47,065

UNICEF

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs if he is now able to give finalised figures for per capita contributions to the United Nations International Children's Emergency Relief Fund from Organisation for Economic Co-operation Development member countries for 1987.

Mr. Chris Patten: The preliminary figures I gave the hon. Member on 25 April, at column 167, are now final.

Kampuchea

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs, pursuant to his answer to the hon. Member for Monklands West of 13 May, *Official Report*, column 249, what international efforts the United Kingdom Government has made to organise humanitarian assistance to Kampuchea in the context of international relief efforts.

Mr. Chris Patten: We are considering what response, if any, we shall be making to the Food and Agriculture Organisation appeal for food aid for Cambodia.

Rain Forests

Mr. Wray: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will list the specific projects in which the United Kingdom or the European Community are taking part in order to protect the rain forests in *(a)* Brazil, *(b)* Cameroon, *(c)* Ghana, *(d)* Ivory Coast, *(e)* Malaysia and *(f)* other Asian, African or Latin American countries.

Mr. Chris Patten: Bilateral projects in the countries listed are:

Brazil

Rain forest regeneration study on Maraca Island.

Cameroon

Rehabilitation of Limbe botanical garden as a centre for conservation of rain forest species.

Support for Korup national rain forest park.
Research into ectomycorrhizas in nutrient cycling and forest dynamics in lowland tropical rain forest.

Ghana
Inventory of forest reserves and preparation of management plans.

Ivory Coast
Commonwealth Development Corporation loans for the establishment and replanting of tropical hardwood plantations which relieve pressure on natural forests.

Malaysia
No bilateral projects.

Other Countries:

Belize
Technical assistance for the forestry sector review under the tropical forestry action plan.

Costa Rica
Tropical moist forest management research.

Honduras
Technical assistance in broadleaf forest management.

Nigeria
Oban national park, assistance in tropical moist forest conservation.

Sierra Leone
Research in the management of tropical moist forest conservation.

Information provided to us by the European Community on forestry does not indentify projects to protect rainforests. I indicated on 9 May in my reply to the hon. Member for Southwark and Bermondsey (Mr. Hughes), at column 9, the level of forestry support under the European Development Fund. We are also aware of a project financed from the Community Budget to establish an Association of South East Asian Nations (ASEAN) regional research centre in Malaysia to improve wood processing and thereby relieve pressures on forests.

WALES

Home Helps

Mr. Tom Clarke: To ask the Secretary of State for Wales, pursuant to the answer to the hon. Member for Monklands, West from the Secretary of State for Social Services on 13 May, *Official Report*, columns *273-74*, if he will supply similar information on the level of home help provision in Wales.

Mr. Grist: The information is as follows:

Home helps (expressed as whole time equivalent) per thousand population (all ages), Wales 1979-87

As at 30 September

	1979	*1980*	*1981*	*1982*	*1983*	*1984*	*1985*	*1986*	[1]*1987*
Clwyd	0·80	0·77	0·77	0·77	0·86	0·88	0·97	0·99	1·15
Dyfed	0·80	0·94	0·95	1·00	1·00	1·00	1·00	1·03	1·16
Gwent	1·14	1·22	1·25	1·31	1·20	1·42	1·44	1·47	1·53
Gwynedd	1·27	1·08	1·25	1·19	1·18	1·16	1·14	1·18	1·25
Mid Glamorgan	1·21	1·21	1·32	1·33	1·54	1·59	1·62	1·76	1·89
Powys	0·98	0·97	0·92	0·74	0·86	1·03	1·02	1·10	1·09
South Glamorgan	1·00	1·00	1·00	0·89	1·07	1·07	1·01	1·01	1·04
West Glamorgan	0·80	0·81	0·88	1·07	1·22	1·38	1·59	1·50	1·50
Wales[2]	1·00	1·02	1·06	1·08	1·16	1·23	1·27	1·30	1·39

Note:
[1] Provisional.
[2] Figures exclude home help organisers and assistant and trainee home help organisers.

Clinical Immunologists

Dr. Marek: To ask the Secretary of State for Wales if he will give *(a)* the number and *(b)* the locations of clinical immunologists in Wales; and if he will make a statement.

Mr. Grist: The information requested is not available centrally. Clinical immunology is not classified as a separate specialty in the manpower returns collected by the Department. Doctors practising in this field are shown against their main specialty and are therefore not identified as such in central records.

Advance Factories

Mr. Barry Jones: To ask the Secretary of State for Wales if he will increase the case allocation to the Welsh Development Agency for the construction of more advance factories throughout Wales and specifically at sites on Deeside, Clwyd; and if he will make a statement.

Mr. Peter Walker: In January this year I announced a 40 per cent. increase in the Welsh Development Agency's factory building budget for 1988-89 and a target for new industrial floor-space of 1½ million sq ft, nearly 75 per cent. higher than the area completed in 1987-88.

In March, I agreed to the Welsh Development Agency making a start on an additional 200,000 sq ft of property in 1988-89, and to its planning and designing a further 800,000 sq ft of industrial floor space to form a reserve list for the current financial year and ensure a continuous flow of new projects into 1989-90. The total cost of these additional packages is £25 million.

The geographical balance and overall level of the Welsh Development Agency's property development programme are reviewed regularly in the light of demand, and will be factors that I will bear in mind when considering the agency's budget for 1989-90 and later years.

Cancers

Mr. Flynn: To ask the Secretary of State for Wales if he will estimate the expected increase in cancers likely to result among infants, children and adults in *(a)* Wales and *(b)* north Wales as a result of exposure to Chernobyl fallout in (i) the next 10 years, (ii) the next 50 years and (iii) the next 250 years.

Mr. Grist: Such estimates are not available in the form requested.

Howardian High School

Mr. Michael: To ask the Secretary of State for Wales, pursuant to the answer of 27 June, *Official Report*, column 7, if he has now reached a decision on the South Glamorgan county council's proposal to close Howardian

high school and its implications of that county's ability to reorganise post-16 education in the east of Cardiff; and if he will make a statement.

Mr. Wyn Roberts: Yes. Our decision to approve these proposals was conveyed to the authority on 21 July 1988.

Welsh Language Board (Chairman)

Mr. Flynn: To ask the Secretary of State for Wales what will be the salary of the chairman of the Welsh Language Board; how many days a week the chairman will be employed; what support staff he will have; and what his annual budget will be.

Mr. Wyn Roberts: These and all other practical considerations necessary to ensure that the board is in a position to discharge its task effectively are under active consideration.

Uniform Business Rate

Mr. Alan Williams: To ask the Secretary of State for Wales what he estimates the net effect in revenue would be for each Welsh council from the application of the uniform business rate.

Mr. Peter Walker: It is not meaningful to isolate the effects of the switch to a national non-domestic rate upon the revenue of local authorities, since it will be introduced together with a different grant system and a different basis of resource equalisation.

Dust (Illness)

Mr. Win Griffiths: To ask the Secretary of State for Wales if he has received a copy of the medical surveys in West Glamorgan linking high levels of serious illness with dust from opencast coal mining; and if he will carry out similar surveys in other areas of Wales where there is opencast mining or other activities generating significant levels of dust.

Mr. Grist: Yes. It is too early to comment on whether further surveys might be appropriate or on who might carry them out since the material from West Glamorgan has yet to be independently assessed.

Rating Reform

Dr. Cunningham: To ask the Secretary of State for Wales if he will list for each local authority in Wales what each would have received in 1988-89 from the national non-domestic rate pool the non-domestic rate poundage for 1988-89 and the amount to be received from non-domestic rates in 1988-89.

Mr. Grist *[holding answer 21 July 1988]:* The information requested is provided in the table. It has been calculated on the basis of a national non-domestic poundage for Wales. This has been set to provide an equivalent yield to that likely to be raised from non-domestic rates in 1988-89 and redistributed to local authorities on a per adult basis.

Non-domestic rates based on provisional rating data

	Estimated proceeds from non-domestic rate pool 1988-89 £000's	*Actual non-domestic rate poundage 1988-89 p*	*Estimated non-domestic rates collected 1988-89 £000's*

ATTORNEY-GENERAL

Personal Injury (Compensation)

Mr. Atkinson: To ask the Attorney-General if the Lord Chancellor now plans to implement the recommendations of the Pearson commission on civil liability and compensation for personal injury or to act on its conclusions; and if he will make a statement.

The Attorney-General: In its report in 1978 the Pearson commission made 188 specific recommendations, falling under 16 broad headings. Many recommendations which called for positive steps to be taken have already been implemented or are in the course of implementation. Certain others remain under review.

Animal Beneficiaries

Mr. Andrew Bowden: To ask the Attorney-General what representations the Lord Chancellor has received regarding the administration of the laws relating to the protection of dogs and cats who are beneficiaries of a will.

The Attorney-General: The Lord Chancellor received last week a representation relating to a Yorkshire terrier for whose maintenance the owner had made provision by will.

Mr. Andrew Bowden: To ask the Attorney-General if he will review the existing laws regarding protection for animal beneficiaries of a will.

The Attorney-General: Any questions of a reform of the law in this area is a matter for my right hon. and noble Friend the Lord Chancellor, who has no present proposals for such a reform.

Sunday Trading

Mr. Stanbrook: To ask the Attorney-General what representations he has received concerning the decision of the Tunbridge Wells borough council not to issue summonses for alleged Sunday trading offences pending the outcome of the deliberations of the European Court on two cases referred to the court; and what action he proposes to take to secure the enforcement of the law on this subject.

The Solicitor-General: My right hon. and learned Friend the Attorney-General has received no representations concerning the present policy of the Tunbridge Wells borough council regarding the enforcement of the law on Sunday trading.

PRIME MINISTER

Departmental Advertising

Mr. Harry Barnes: To ask the Prime Minister what is her policy on the way in which paid advertising is used by Government Departments and agencies.

The Prime Minister: This is a matter for departmental Ministers within the Government conventions on the use of paid publicity and advertising.

Deputy Heads of Government (Meeting)

Mr. Spearing: To ask the Prime Minister what response she has made to the proposal of M. Delors, President of the Commission of the European Economic Community for a fortnightly meeting of deputy Heads of member Governments to reach decisions on outstanding matters arising from the Council of Ministers.

The Prime Minister: No such proposal has been made to the Council.

Education (Funding)

Mr. Morley: To ask the Prime Minister whether she has discussed any plans for the removal of funding of education services from local government and replacing it with any form of central Government funding or control.

The Prime Minister: I refer the hon. Member to the reply I gave to my hon. Friend the Member for Bromsgrove (Mr. Miller) on 26 April, at column 199.

TRADE AND INDUSTRY

Timber Imports

Mr. Maxwell-Hyslop: To ask the Chancellor of the Duchy of Lancaster if he will list the nature, type and value of timber products imported into the United Kingdom in 1987.

Mr. Alan Clark: United Kingdom imports in 1987 were as follows:

	£ million
Wood (SITC Division 24 [less cork])	1,198·5
Pulp and waste paper (SITC Division 25)	657·2
Wood manufactures (SITC Division 63 [less cork]) (excluding furniture)	784·6
Paper, paperboard and articles therefrom (SITC Division 64)	3,238·2

Further detailed information is available from the December 1987 volume of the *Overseas Trade Statistics*, a copy of which is available in the Library.

Equal Opportunities

Mr. Janner: To ask the Chancellor of the Duchy of Lancaster what is the ethnic classification and gender of the equal opportunity officer working in his Department.

Mr. Butcher: The equal opportunity officer is male. It is DTI policy not to reveal the ethnic classification of individual members of staff.

Mr. Janner: To ask the Chancellor of the Duchy of Lancaster by whom information on equal opportunities has been and is being collected on behalf of his Department; when and by whom it will be analysed to see whether any further action is necessary; and when he expects that analysis to be completed.

Mr. Butcher: Information is collected by the DTI's equal opportunities officer. The information is or will be subject to various forms of analysis in agreement with the departmental trade union side by the equal opportunity officer, the personnel management division of DTI, and the office of the Minister for the Civil Service. The time scales will differ as I have indicated in replies to other questions from the hon. and learned Member.

Mr. Janner: To ask the Chancellor of the Duchy of Lancaster whether the provision for monitoring ethnic origin in respect of recruitment, promotion, career development and training, respectively, are now in hand or proposed, respectively.

Mr. Butcher: As part of a review conducted by the office of the Minister for the Civil Service, ethnic origin information has been collected since 1 September 1987 at various stages of our recruitment process; arrangements are proposed to monitor a promotion board before April 1989; arrangements are in hand to monitor the postings aspect of career development in three divisions; and two training courses at executive officer level are being monitored for the calendar year 1988.

Mr. Janner: To ask the Chancellor of the Duchy of Lancaster in what quasi-governmental bodies or other organisations under its aegis he has authority to request or require the carrying out of ethnic monitoring exercises in accordance with the code of the Commission for Racial Equality; and what ethnic monitoring and equal opportunities exercises have been carried out by each such Department.

Mr. Butcher: Non-departmental public bodies and other bodies sponsored by DTI are responsible for arrangements for recruitment and personnel management of staff they employ. Bodies are encouraged to be equal opportunities employers, and to pursue practices in the codes of the Commission for Racial Equality and the Equal Opportunities Commission. No central records are held of ethnic monitoring and equal opportunities exercises carried out by these bodies.

Departmental Staff

Mr. Janner: To ask the Chancellor of the Duchy of Lancaster (1) how many of the staff from ethnic minority groups known to be working in grades one to seven in his Department are in grades one, two, three, four, five, six and seven, respectively;

(2) how many of the non-industrial staff as at 1 June from ethnic minority groups known to be working in grades one to seven in his Department are in grades one, two, three, four, five, six and seven, respectively.

Mr. Butcher: The figures, for those non-industrial staff who responded to the ethnic survey, and as at 1 June 1988 are as follows:

Grade	*Number*
1-5	nil
6	6
7	15

Mr. Dobson: To ask the Chancellor of the Duchy of Lancaster if he will list for 1979, 1984 and the most recent year the numbers of staff by grade in the statistical divisions in the Duchy offices and the Department of Trade and Industry, respectively; if he will differentiate between staff in the statistical posts and staff in administrative posts; and if he will give separate figures for the Business Statistical Office and the Office of Telecommunications.

Mr. Butcher *[holding answer 21 July 1988]*: Direct comparisons with 1979 are not possible because of changes in the Department's internal structure, the introduction of unified grading, and machinery of Government changes. There are no statisticians in the office of the Duchy of Lancaster. The figures available are as follows:

Business Statistics Office

Grade	*1 April 1979*	*1 April 1984*	*1 April 1988*
Grade 3	1	1	1
Chief Statistician	4	4	[1]—
Grade 5	1	1	5
Grade 6	1	1	1

Ethnic Monitoring Survey

Mr. Janner: To ask the Chancellor of the Duchy of Lancaster when he expects the information obtained from the ethnic monitoring survey of his Department's staff completed in April to be analysed; and whether he will place a copy of that survey in the Library.

Mr. Butcher: The form of the analysis is still under discussion by the office of the Minister for the Civil Service with the national trade union side. We will proceed with the analysis when the discussions are completed. A copy of the analysis will be placed in the Library.

National Engineering Laboratory

Mr. Ingram: To ask the Chancellor of the Duchy of Lancaster if he will list the organisations which have submitted a bid to take over the National Engineering Laboratory, East Kilbride; and if he will make a statement.

Mr. Butcher: My right hon. and learned Friend has received bids from a number of organisations interested in taking over the National Engineering Laboratory. Some of these organisations have asked not to be named, hence I do not propose to list them.

Textile Imports

Mr. Tom Clarke: To ask the Chancellor of the Duchy of Lancaster if he will publish a table in the *Official Report* showing, in ranked order, the value and proportion of textile imports into the United Kingdom, on a country of consignment basis, for the latest year for which figures are available, indicating whether or not each country is a signatory to the multi-fibre arrangement.

Mr. Alan Clark: The top 22 countries, representing nearly 90 per cent. of the total imports, from which textiles were consigned are shown in the table. A full list including the remaining 125 countries has been placed in the Library.

United Kingdom Imports of Textiles—December 1987

Country of Consignment	*£000s*	*Per cent.*
1 Federal Republic of Germany[1]	581,599	14·08
2 Italy[1]	437,328	10·59
3 Belgium/Luxembourg[1]	402,205	9·74
4 France[1]	275,118	6·66
5 Netherlands[1]	248,220	6·01
6 Irish Republic[1]	213,831	5·18
7 United States of America[1]	172,455	4·17
8 Portugal[1]	170,283	4·12
9 Japan[1]	150,798	3·65
10 Switzerland[1]	135,664	3·28
11 India[1]	104,815	2·54
12 Pakistan[1]	92,932	2·25
13 China[1]	83,461	2·02
14 Hong Kong[1]	79,887	1·93
15 Austria[1]	78,084	1·89
16 Turkey[1]	75,682	1·83
17 Denmark[1]	64,541	1·56
18 Australia	61,445	1·49
19 Spain[1]	60,882	1·47
20 New Zealand	59,273	1·43
21 South Africa	48,917	1·18
22 South Korea[1]	44,102	1·07

[1] Indicates a signatory to the multi-fibre arrangement.

Note:

Textiles are defined as Standard International Trade Classification Divisions 26 and 65.

All figures are provisional.

Source: Overseas Trade Statistics December 1987.

Commodity Prices

Mr. Tom Clarke: To ask the Chancellor of the Duchy of Lancaster if he will publish a table in the *Official Report* showing for each year from 1970 the average price index, taking 1970 as 100 of *(a)* cotton, *(b)* metals, *(c)* wool, *(d)* coffee and *(e)* all non-food agricultural products calculating all prices in constant 1987 United States dollars.

Mr. Alan Clark: I refer to my reply to the hon. Member on 17 May 1988 at column *384*. Data for 1987 are in the table:

World Export prices of selected primary commodities[1]

1970 = 100

	1987
Cotton	242
Non-ferrous Metals	186
Wool	249
Coffee	216
Non-food Agricultural Products	266

[1] Based on prices in US dollars.

Source: United Nations.

Single European Market

Mr. Tom Clarke: To ask the Chancellor of the Duchy of Lancaster what sums have been paid to date for radio, television and newspaper advertising on the current single European market campaign.

Mr. Maude: The estimated costs to the end of July of radio, television and newspaper advertising in support of the single European market campaign are about £56,000, £5,602,000 and £609,000 respectively.

Barlow Clowes

Mr. Nicholas Winterton: To ask the Chancellor of the Duchy of Lancaster if he will list the names and nationalities of the directors of the Barlow Clowes companies which have recently collapsed.

Mr. Maude: The names of the directors of Barlow Clowes Gilt Managers Ltd. recorded at the companies registration office in June of this year were as follows:

P. Clowes
Mrs. P. M. Clowes
D. R. Tree
C. F. Newman
B. C. Osborn
M. Tariq
L. Hobbes

All are believed to be of British nationality.

Barlow Clowes International is registered in Gibraltar and information about it is not publicly available in the United Kingdom.

Mr. Nicholas Winterton: To ask the Chancellor of the Duchy of Lancaster (1) what information his Department has concerning the amount of income derived by the Barlow Clowes International operations from *(a)* the United Kingdom and *(b)* overseas sources;

(2) what information his Department has concerning the amount of income invested by the Barlow Clowes International operations in United Kingdom companies.

Mr. Maude: None, at this stage. Barlow Clowes International is in liquidation in Gibraltar and my hon. Friend may wish to seek information from the joint liquidators.

Mr. Nicholas Winterton: To ask the Chancellor of the Duchy of Lancaster what percentage of the investors in Barlow Clowes international operations whose cases have recently been referred to him are resident within the United Kingdom.

Mr. Maude: The vast majority of letters received by my Department concerning investors who may have placed

money with Barlow Clowes International have involved persons resident in the United Kingdom. Less than 1 per cent. of cases put to the Department have involved persons resident overseas.

Airport Delays

Mr. French: To ask the Chancellor of the Duchy of Lancaster if he has received any representations seeking compensation by holiday tour operators for holiday-makers who have experienced airport delays; and if he will make a statement.

Mr. Butcher: I have had no representations from either tour operators or holidaymakers concerning compensation for recent delays experienced at United Kingdom airports. Whether or not a holidaymaker is entitled to compensation in these circumstances will depend on the terms of his contract with the tour operator or on the terms of his holiday insurance policy. Arrangements for holiday makers in the event of airport delays was one of the matters considered by the Office of Fair Trading in its recent review of the operation of the ABTA codes. The office will be publishing its report in the very near future.

Estate Agents

Mr. French: To ask the Chancellor of the Duchy of Lancaster what representations he has received concerning unprofessional conduct amongst estate agents; and if he will make a statement.

Mr. Butcher: My Department has received a number of representations alleging unprofessional conduct by estate agents. The main areas of concern have been failure to disclose a personal interest in a transaction, inadequate or misleading descriptions of property, and excessive commission rates. The Office of Fair Trading, which is responsible for administering the Estate Agents Act 1979, has also received a number of representations and issued 12 banning orders against estate agents guilty of serious misconduct during 1987.

I have invited representatives of the main organisations with an interest in estate agency to meet me to discuss areas of current public concern.

Steel

Mr. Salmond: To ask the Chancellor of the Duchy of Lancaster if he will publish a table indicating the steel-making capacity of each EEC member state at *(a)* 1979, *(b)* 1983 and *(c)* the latest date for which figures are available.

Mr. Atkins: The information requested is contained in the table:

Effective Steel Making Capacity (Production Potential) of EC Member States

	Million Crude Tonnes			
	1979	*1983*	*1986*	[1]*1987*
Belgium	19·7	17·0	13·6	13·6
Denmark	1·2	0·9	0·9	0·9
France	32·0	28·8	28·2	27·0
Greece	—	4·0	4·4	4·5
Irish Republic	0·1	0·3	0·3	0·3
Italy	37·0	39·6	35·4	35·5

Export Licences

Mr. David Nicholson: To ask the Chancellor of the Duchy of Lancaster what number of applications for export licences were received by his Department during the following periods *(a)* April to June 1986, *(b)* April to June 1987, and *(c)* April to June 1988.

Mr. Alan Clark: The figures were as follows:

	1986	*1987*	*1988*
Total applications for export licences received by the DTI in the three months April-June	23,358	25,496	26,211

Mr. David Nicholson: To ask the Chancellor of the Duchy of Lancaster what targets he sets for the time, after which an applicant for an export licence should receive his licence.

Mr. Alan Clark: Straightforward applications to export goods to non-sensitive destinations should be granted or refused a licence within seven working days. About two thirds of the applications received by the Department of Trade and Industry fall into this category. Other applications, which may involve extensive consultation with other Government Departments and with COCOM partners in the case of certain export to Eastern Europe or China, take considerably longer. Where practicable, targets are set for these applications according to the nature of the goods, the proposed destination and end-user and the extent of the consultation necessary.

Mr. David Nicholson: To ask the Chancellor of the Duchy of Lancaster what was the average length of time taken to process an export licence application, during the following periods *(a)* April to June 1986, *(b)* April to June 1987 and *(c)* April to June 1988.

Mr. Alan Clark: In the three periods stated, some 75,000 applications were received. Applications are handled case by case and details are recorded manually. Information on average processing times could not be provided except at disproportionate cost.

Mr. David Nicholson: To ask the Chancellor of the Duchy of Lancaster how many staff in his Department were engaged wholly or mainly on export licensing work on the following dates *(a)* 1 April 1986, *(b)* 1 April 1987 and *(c)* 1 April 1988.

Mr. Alan Clark: The numbers of staff up to and including grade 7 (principal) engaged wholly or mainly on export licensing work were:

April 1986	*April 1987*	*April 1988*
52	52	56

Notes:
1. In May 1988 an additional seven staff were posted to export licensing.
2. The figures do not include DTI technical staff who provide technical ratings and assessments of certain applications.

Ranks Hovis McDougall

Mr. Harry Greenway: To ask the Chancellor of the Duchy of Lancaster if he will refer the current bid for Ranks Hovis McDougall to the Office of Fair Trading with a view to reference to the Monopolies and Mergers Commission; and if he will make a statement.

Mr. Maude: The proposed acquisition by Goodman Fielder of Ranks Hovis McDougall is being looked at by the Director General of Fair Trading under the provisions of the Fair Trading Act 1973. He will advise my right hon. and noble Friend in the normal way on the question of reference to the Monopolies and Mergers Commission in due course.

HOTOL

Mr. Page: To ask the Chancellor of the Duchy of Lancaster when he expects to come to a decision on prospects for HOTOL; and if he will make a statement.

Mr. Kenneth Clarke: The Government provided 50 per cent. funding to enable proof of concept studies of HOTOL to be carried out. These studies were completed earlier this year since when the two main companies involved. Rolls-Royce and British Aerospace, have been analysing the results. I have since held further talks with the companies. The scale of funding required to develop HOTOL or any similar concept to eventual production would be far too great for the United Kingdom to contemplate on a national basis, particularly since only a relatively small number of such launch vehicles are likely to be required. I have, therefore, concluded that any further development must take place on the basis of international collaboration. The Government will be supporting efforts by United Kingdom companies to find suitable collaborators, but will not be providing any further financial support for the foreseeable future. In the meantime I expect the United Kingdom, as an ESA member and a participant in earlier Ariane programmes, to have reliable access to ESA launchers which promise to be competitive throughout the 1990s.

Alcoholic Beverages

Mr. Frank Field: To ask the Chancellor of the Duchy of Lancaster what is his Department's estimate of the anticipated size of the volume of the European market in alcoholic beverages, by major categories of beverage, following the introduction of the single market in 1992.

Mr. Donald Thompson: I have been asked to reply.

The Department does not have estimates of the anticipated size of the European market in alcoholic beverages in 1992. However, the figures in the table, which are based on industry estimates, provide an indication of the size of the market in 1986:

	Consumption in EC.12, 1986 million litres
Beer	25,000
Wine	14,000
Spirits[1]	600

[1] 100 per cent. alcohol.

DEFENCE

Low Flying

Mr. Wray: To ask the Secretary of State for Defence how many flights (i) by British military airplanes, (ii) with British military pilots and (iii) with British crew, would be affected in the event of the Parliament of the Rhineland palatinate state deciding to cancel all military low flights below 300 m.

Mr. Freeman: Low-flying training, other than that which is part of a major exercise, is not planned in advance but carried out on a day-to-day basis as weather and other considerations permit. An answer to this hypothetical question is therefore not possible.

Ocean Surveillance

Mr. Cohen: To ask the Secretary of State for Defence if the proposed joint ocean surveillance information centre is to be connected to the SSIXS communications system.

Mr. Ian Stewart: It would not be in the national interest for me to comment.

Nuclear Materials (Movements)

Mr. Cohen: To ask the Secretary of State for Defence if the movement of nuclear materials by his Department is covered by the Department of Transport's code of practice for the carriage of radioactive materials by road; and if he will make a statement.

Mr. Ian Stewart: The safety arrangements for the movement of defence nuclear materials are designed to be fully consistent with the relevant civil regulations.

"British Defence Policy 1988-89"

Mr. Redmond: To ask the Secretary of State for Defence, pursuant to his answer to the hon. Member for Sheffield, Brightside (Mr. Blunkett) on 26 May, *Official Report*, column *327*, how many copies of the booklet "British Defence Policy 1988-89" had been distributed at the latest available date; and if he will make a statement.

Mr. Ian Stewart: Approximately 69,000.

Historic Warship Wrecks

Mr. Onslow: To ask the Secretary of State for Defence (1) what steps he now intends to take to ensure that antiquities recovered from the site of the warship Invincible, sunk in the Solent in 1758, will be preserved in museums in accordance with the policy of Her Majesty's Government as outlined in the answer of the Secretary of State for Transport on 8 March, *Official Report*, column *155*, instead of being offered for public sale; and if he will make a statement;

(2) what action he intends to take to provide for the proper management of the sites of historic warship wrecks in British waters; and if he will make a statement.

Mr. Freeman: The interest of the Ministry of Defence in the excavation of shipwrecks is limited to wrecks of warships of which the Ministry of Defence is the legal owner.

The Department of Transport gives licences under the 1973 Act to excavate all controlled sites such as Invincible and other warship wrecks in this category. The Department of Transport oversees the conduct of the salvors. The Ministry of Defence has a right to reclaim all salvaged property from such controlled sites at a price agreed with the licensed salvors in the form of a salvage award.

As a matter of current policy the Ministry of Defence does not pay such salvage awards as they are not an appropriate charge to Defence votes. The items salvaged are therefore the property of the licensed salvors to dispose of. I understand that the salvors of Invincible offered the items recovered to Chatham historical dockyard trust, which purchased a representative sample. The balance was sold by the salvors at auction.

The law governing recovery of antiquities from wrecks is a matter for the Secretary of State for Transport and I will draw my right hon. Friend's attention to the concern of the right hon. Member over this matter.

Royal Naval Armaments Depots

Mr. Nicholas Bennett: To ask the Secretary of State for Defence whether he has concluded his review of the work of the Royal Naval armaments depots at Trecwn and Milford Haven; and if he will make a statement.

Mr. Freeman: As my hon. Friend will know, the MOD has for some time been studying the future of several defence activities in Wales. These studies have now been concluded.

A study has recently been completed into the future roles and tasks of RNADs Milford Haven and Trecwn. I am releasing today a consultative document, which concludes that RNAD Milford Haven should be closed, because the task allotted to it has substantially declined in recent years. The work force, trades unions and local authorities will be given a full opportunity to comment on the document before I decide what the depot's future will be. The reduction of the task given to the Trecwn district will also affect RNAD Trecwn which is to be the subject of further study. Meanwhile, I am arranging for copies of the consultative document to be placed in the Library of the House.

A review has also been completed recently on the scope for rationalisation of the various single service forms and publications stores. I have now decided, subject to consultation with the trades unions, that all the stores will be transferred from their existing locations to form a centralised organisation at the former RNSD at Llangennech. The stores are currently located at the Central Ordnance depot, Donnington, Royal Arsenal west, Woolwich, and Her Majesty's Naval base, Portsmouth. The proposal is to colocate all activities at the former RNSD by early 1991, leading to a projected annual saving of about £1·2 million. The colocation of the forms and publication stores at Llangennech should provided around 250 new jobs in the area, most of which would be filled through local recruitment.

Radioactive Waste

Mr. Fatchett: To ask the Secretary of State for Defence what radioactive waste is stored at RAF Fylingdales; and what steps are taken in relation to its safety.

Mr. Sainsbury: The only radioactive waste stored at RAF Fylingdales consists of old radar system valves, which contain an extremely low level of radioactivity. This

is regularly monitored, and results of this monitoring confirm that there is no hazard to station personnel or members of the public from that source.

Western European Union

Mr. O'Neill: To ask the Secretary of State for Defence what discussions he has had with other North Atlantic Treaty Organisation defence ministers concerning the future role and possible expansion of the Western European Union.

Mr. Ian Stewart: My right hon. Friend has had a number of discussions with NATO colleagues on the WEU, both bilaterally and in multilateral fora. He attended a meeting of WEU Foreign and Defence Ministers in the Hague in October 1987 at which the platform on European security interests was approved, and a further WEU meeting in April this year at which it was agreed to issue an invitation to Spain and Portugal to begin discussions about possible accession to the organisation.

Public Relations

Mr. Dobson: To ask the Secretary of State for Defence (1) what is the latest figure for the number of staff presently employed in the press and public relations office of his Department;

(2) what is the latest figure for the number of staff presently employed in the press and public relations office of each of the armed forces.

Mr. Ian Stewart *[holding answer 21 July 1988]:* A total of 206 staff are currently employed in the defence public relations staff. These include staff in single service headquarters as well as in joint headquarters and in the central defence staffs of the Ministry of Defence.

RAF Fleet Aircraft

Dr. Thomas: To ask the Secretary of State for Defence if he will outline the problems which have been encountered recently with the turbines and compressor fans of RAF fleet aircraft.

Mr. Ian Stewart *[holding answer 20 July 1988]:* A wide range of technical problems can arise during the operation in service of aircraft engines. If the hon. Member wishes to specify any particular problems he has in mind I should be happy to consider a further reply.

RAF Fleet (Resparring)

Dr. Thomas: To ask the Secretary of State for Defence, why the entire RAF fleet was recently resparred; and if he will make a statement.

Mr. Ian Stewart *[holding answer 20 July 1988]:* It was not.

FOREIGN AND COMMONWEALTH AFFAIRS

Soviet Union (Cultural Exchanges)

79. **Mr. Harry Greenway:** To ask the Secretary of State for Foreign and Commonwealth Affairs how many cultural exchanges with the Soviet Union are expected to take place in the current year; in what areas of artistic activity; and if he will make a statement.

Mrs. Chalker: The following major events have taken or are planned to take place in the current year:

	Event
British events in the Soviet Union	
1988	
May	Tour by the BBC Welsh Symphony Orchestra (Leningrad, Moscow, Novosibirsk)
May-June	Tour by the National Theatre Company
August-October	Exchange of Exhibitions between the National Gallery and the Pushkin and Hermitage Museums
September-November	Francis Bacon Exhibition
October	British Film Week
Soviet events in the United Kingdom	
1988	
March-April	Tour by the Novosibirsk Symphony Orchestra
March-April	Tour by the Red Army Ensemble
May	Maly Theatre of Leningrad (Riverside Studios)
May	Concert by the Moscow Philharmonic Orchestra (Barbican)
Summer Season	The Moscow State Circus
July-August	Tour by the Moscow Classical Ballet
August	The Kirov Ballet Company
August-October	Exchange of Exhibitions between the National Gallery and the Pushkin and Hermitage Museums
October	Soviet Week in Birmingham
November	Tour by the Moscow Radio Symphony Orchestra

International Debt

Mr. Skinner: To ask the Secretary of State for Foreign and Commonwealth Affairs when he next proposes to meet other Foreign Ministers to discuss the problems of international debt; and if he will make a statement.

Mrs. Chalker: I refer the hon. Member to the answer I gave him on 4 May, at column 459.

Commonwealth Secretary-General

Ms. Ruddock: To ask the Secretary of State for Foreign and Commonwealth Affairs when he next plans to meet the Secretary-General of the Commonwealth; and what subjects he plans to discuss.

Mrs. Chalker: While my right hon. and learned Friend regularly meets the Secretary-General informally, he has at present no plans for a formal meeting.

Falkland Islands

Mr. Campbell-Savours: To ask the Secretary of State for Foreign and Commonwealth Affairs whether he has any plans to visit the Falklands.

Mrs. Chalker: My right hon. and learned Friend has no current plans to do so.

Chile

Mr. Harry Barnes: To ask the Secretary of State for Foreign and Commonwealth Affairs what discussions he has had recently with the Government of the United States regarding the current situation in Chile.

Mrs. Chalker: I refer the hon. Member to my hon. Friend the Parliamentary Under Secretary of State's reply

of 6 July 1988 to the hon. Members for Hackney, South and Shoreditch (Mr. Sedgemore), for Edinburgh, South (Mr. Griffiths), and for Greenock and Port Glasgow (Dr. Godman).

Iran-Iraq War

Mr. Teddy Taylor: To ask the Secretary of State for Foreign and Commonwealth Affairs if he will raise at the Security Council the current situation in the Iran-Iraq conflict; and if he will make a statement.

Mrs. Chalker: Following the Iranian acceptance of UNSC resolution 598, the UN Secretary-General has begun work with Iranian and Iraqi representatives aimed at the early and full implementation of the resolution, the first step of which is a ceasefire. The Secretary-General is dispatching a small technical team to discuss the modalities of implementing that ceasefire.

We, as a permanent member of the Security Council, have pledged our utmost support for the Secretary-General in his efforts to bring an end to the conflict.

Central America

Dr. Reid: To ask the Secretary of State for Foreign and Commonwealth Affairs what discussions he has had with the Government of the United States of America regarding recent developments in the Central American peace process.

Mrs. Chalker: We have regular discussions with the United States Government on a wide range of issues including developments in the Central American peace process.

Ethnic Monitoring

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs what was the grade of the 2 per cent. of respondents in *(a)* the diplomatic wing and *(b)* the aid wing who classified themselves as coming from an ethnic minority.

Mrs. Chalker: I refer the hon. and learned Gentleman to the reply my hon. Friend the Parliamentary Under-Secretary gave him on 22 June.

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs whether he will place a copy of his updated ethnic monitoring programmes in the Library.

Mrs. Chalker: Our ethnic monitoring programmes are updated regularly as new information is received. Up-to-date figures for the FCO will be included in a further Cabinet Office survey report covering the whole of the Civil Service, which will be published later this year.

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs when he expects processing of applications from the advertisement in the *Voice* to be completed; whether he will then inform the House of the results thereof; and what other newspapers with a large ethnic minority readership he uses for the advertisement of vacancies in his Department.

Mrs. Chalker: The processing of these applications is unlikely to be completed before the end of the year. There are no plans to inform the House of the results.

Both the diplomatic and development wings have advertised in the "South London Press". The development wing has also used the North London Group of newspapers, which include the "Islington Gazette" "The Wood Green Journal", "The Hornsey Journal", and "The Tottenham Journal".

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs in what quasi-governmental bodies or other organisations under his aegis he has authority to request or require the carrying out of ethnic monitoring exercises in accordance with the code of the Commission for Racial Equality; and what ethnic monitoring and equal opportunities exercises have been carried out by each such department.

Mrs. Chalker: Non-departmental public bodies sponsored by the Foreign and Commonwealth Office are responsible for arrangements for recruitment and personnel management of staff they employ. Bodies are encouraged to be equal opportunities employers, and to pursue practices in the code of racial equality and the Equal Opportunities Commission. No central records are held of ethnic monitoring and equal opportunities exercises carried out by these bodies.

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs in which of the grades DS 6 to 7 each of the people from ethnic minorities are employed.

Mrs. Chalker: To provide this information would break the code of practice agreed with the Council of Civil Service Unions about the confidentiality of ethnic origin information, as it might lead to indentification of individual officers.

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs in which grade the person from ethnic minorities in grades DS 1 to 5 is employed.

Mrs. Chalker: To provide the information requested would normally breach the code of practice agreed with the Council of Civil Service Unions about the confidentiality of ethnic origin information on staff in post, as it could lead to identification of individual officers.

I regret to add that in this case the officer in question has died since the compilation of the statistics included in the answer my hon. Friend the Parliamentary Under-Secretary gave the hon. and learned Gentleman on 22 June.

Equal Opportunities

Mr. Janner: To ask the Secretary of State for Foreign and Commonwealth Affairs what is the ethnic classification and gender of the equal opportunity officer in the diplomatic wing appointed in June 1988.

Mrs. Chalker: The equal opportunity officer is white and female.

Hong Kong Stock Exchange

Mr. Cox: To ask the Secretary of State for Foreign and Commonwealth Affairs what reports have now been made to his Department over the events surrounding the Hong Kong stock exchange crash in October 1987; and if he will make a statement on any action to be taken by the Hong Kong Government.

Mrs. Chalker: The Hong Kong Government have been in close and regular touch with us about developments since the events of October 1987. We welcome the recommendations for reform made by the Securities Review Committee, appointed by the Hong Kong Government, in its report published on 2 June. The Hong Kong Government, together with the industry itself, are acting as quickly as possible to implement the recommendations. An independent statutory regulatory body, the Securities and Futures Commission, is to be established as soon as the necessary legislation can be introduced. The Hong Kong stock exchange has just adopted important constitutional reforms which will make its governing body more broadly based and representative. We are confident that this prompt and decisive response will help to maintain and enhance Hong Kong's reputation as an international financial centre.

Broadcasting Exhibition

Mr. Temple-Morris: To ask the Secretary of State for Foreign and Commonwealth Affairs if his Department has considered an application for an exhibition relating to broadcasting to the world to be displayed in the Upper Waiting Hall.

Mrs. Chalker: We understand that, under procedures agreed by the Services Committee, arrangements have been made with the authorities of the House for this exhibition to be held in the Upper Waiting Hall for a week from 7 November.

Diplomatic Relations

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs with which member countries of the United Nations the United Kingdom does not have full and normal diplomatic relations.

Mrs. Chalker: We do not have full and normal diplomatic relations with the following member states of the United Nations:

The People's Socialist Republic of Albania
The Argentine Republic
Cambodia
Libya
Syria

We do not have diplomatic relations with the Kingdom of Bhutan, but maintain friendly contacts and conduct official business with its embassy in New Delhi.

Kampuchea

Mr. Tom Clarke: To ask the Secretary of State for Foreign and Commonwealth Affairs what recent representations he has received regarding the present situation in Kampuchea; and if he will make a statement.

Mrs. Chalker: We have received a number of inquiries from Members of Parliament and the public about our policy on Cambodia. Our general policy was set out by my right hon. and learned Friend the Secretary of State in the Foreign Affairs debate on 30 June. We welcome the talks between the parties to the dispute that are due to take place in Indonesia on 25 July and hope that they will in due course lead to a peaceful settlement of the problem.

Nicaragua

Mr. Tony Banks: To ask the Secretary of State for Foreign and Commonwealth Affairs if Her Majesty's Government will assign a full-time ambassador to Nicaragua, based in Managua; and if he will make a statement.

Mrs. Chalker: We have no plans to make further appointments to the embassy in Managua for the time being, but diplomatic staffing levels at all posts overseas are kept under review.

Mr. Tony Banks: To ask the Secretary of State for Foreign and Commonwealth Affairs if he has any plans to visit Nicaragua; and if he will make a statement.

Mrs. Chalker: My right hon. and learned Friend has no plans at present to visit Nicaragua.

Mr. Tony Banks: To ask the Secretary of State for Foreign and Commonwealth Affairs what has been *(a)* the staffing and *(b)* the running costs of Her Majesty's embassy in Nicaragua in each year since 1979.

Mrs. Chalker: *(a)* There was no resident diplomatic staff at Her Majesty's embassy, Managua from 1979 to 1984. A resident chargé d'affaires was appointed in mid-1984. A second secretary was appointed in late 1986, and a third secretary in February 1988. In addition, Her Majesty's ambassador at San Jose, and three/four members of his diplomatic staff have been and continue to be accredited to Managua. A defence attaché and a first secretary are accredited from Panama City.

(b) Since the embassy at Managua is supervised by that in San Jose, the two posts are accounted for jointly. Because many members of the embassy at San Jose have dual accreditation, it is difficult to isolate those costs pertaining only to Managua. The total costs for San Jose since 1983 (the earliest year for which the figures are available) have ranged from around £300,000 to around £500,000 of which we estimate that about 25 per cent. is attributable to Managua.

Mr. Tony Banks: To ask the Secretary of State for Foreign and Commonwealth Affairs how many visits have been made to Nicaragua by Her Majesty's ambassador accredited to that country in each year since 1979.

Mrs. Chalker: Approximate figures since 1982, the earliest year for which figures are available, are as follows:

	Visits
1982	4
1983	7
1984	6
1985	9
1986	5
1987	[1]6
1988	4

[1] And one by charge in San Jose.

Mr. Tony Banks: To ask the Secretary of State for Foreign and Commonwealth Affairs what has been the cost in each year for travel by Her Majesty's ambassador to Nicaragua from Costa Rica.

Mrs. Chalker: Estimated figures since 1982, the earliest year for which figures are available, are:

	£
1982	828·87
1983	2,523·94
1984	2,754·87

	£
1985	2,576·04
1986	1,466·71
1987	[1]1,622·14
1988	1,456·54

[1] Plus £400 for one visit by charge.

Central American Parliament

Mr. Tony Banks: To ask the Secretary of State for Foreign and Commonwealth Affairs what representations have been made to the Governments of Costa Rica and El Salvador regarding the ratification of the Central American Parliament treaty.

Mrs. Chalker: We and our European partners have on a number of occasions called on all the signatories of the Esquipulas II peace agreement to fulfil their outstanding obligations under the agreement without delay. Ratification of the Central American Parliament treaty is, of course, a matter for the national Parliaments rather than Governments.

Endangered Species

Mr. Tony Banks: To ask the Secretary of State for Foreign and Commonwealth Affairs, pursuant to his answer of 19 July, if he will give details of the 143 seizures of endangered species made by the Hong Kong authorities in the first six months of 1988.

Mrs. Chalker: Details of the 143 seizures of endangered species made by the Hong Kong authorities in the first six months of 1988 are:

Species	
Stuffed Sea Turtles	21
Parrots	12 (live)
Pangolin Meat	40 Kg
Birds of Prey and Owls	18 (live); 20 (dead)
Elephant	28 tusks: 200 Kg cut pieces: 1 skin
Deer Antler	29 pieces
Wild Cats	2 carcases: 430 skins and 10 parts
Alligator/Crocodile	4 skins and 11 stuffed animals
Asiatic Bony Tongue Fish	14 (live)
Giant Salamander	1 (live)
Lizard/Snake Skin	3,767 pieces
Otter Skin	1,020 pieces
Seal Skin	1 piece
Butterfly	8

NORTHERN IRELAND

64 Main Road, Cloughey

Mr. John D. Taylor: To ask the Secretary of State for Northern Ireland whether a repair grant has now been approved for the dwelling at 64 Main road, Cloughey; and when this dwelling was constructed.

Mr. Needham: This is a matter for the Northern Ireland Housing Executive but I am advised by the chairman of the executive that an application for repairs grant in respect of 64 Main road, Cloughey, was approved by the executive in March 1988. In the course of processing the application, the executive was led to believe that the dwelling was constructed before 1957 and, therefore, qualified for consideration for grant-aid. It subsequently transpired that the dwelling was constructed in 1964.

Residential Care Homes

Mr. Andrew Bowden: To ask the Secretary of State for Northern Ireland if he will give the number of voluntary, private and local authority residential care homes for elderly people in Northern Ireland; and, in each case, what is the total number of places available.

Mr. Needham: At 31 December 1986, the latest date for which figures are available, the position was as follows:

Type	*Number of homes*	*Available places*
Voluntary	46	1,239
Private	39	388
Statutory[1]	82	3,506

[1] In Northern Ireland local authorities have no responsibility for statutory residential homes: these are provided and operated by the four Health and Social Services Boards.

Secretary of State's Pleasure

Mr. Hayward: To ask the Secretary of State for Northern Ireland if he is now in a position to make a further statement about Secretary of State pleasure cases in Northern Ireland.

Mr. Tom King: The highest total of persons detained during the Secretary of State's pleasure for murder was reached in 1982, when for a time there were 66 such cases; at the beginning of 1986 there were 55. There are now 33, including one sentenced only on 1 July this year. Of these six have been given provisional release dates, and the judiciary are being consulted (as required by law) in another three cases about the possibility of fixing release dates.

Of the remaining 17 prisoners who have served more than eight years and therefore meet the existing criterion for a first review, one has recently been sentenced to a fixed term of imprisonment for offences related to the Maze escape. Review dates have been fixed by the life sentence review board for all the remaining prisoners. Four of the cases are due for review before the end of this year, seven in February or April next year, four later in 1989 and one in April 1990. Two of the prisoners whose reviews are due in February and June 1989 will have them brought forward to the end of this year in consequence of the review of special category prisoners serving indeterminate sentences which I announced in reply to my hon. Friend the Member for Tatton (Mr. Hamilton) on 7 June at column *464*.

Having given very careful thought to the particular circumstances of this group of prisoners, my right hon. Friend the Minister of State and I have decided to bring forward the timetable of reviews so that all the prisoners who have served more than eight years will have their cases reviewed by the life sentence review board before the end of 1988.

Rural Wales (NPCI Package)

Mr. Hume: To ask the Secretary of State for Northern Ireland (1) what account he will take of the NPCI package for rural Wales under the regional fund in his considerations about an integrated rural development plan for Northern Ireland;

(2) what consideration the Government have given to the Hume resolution in the European Parlianent on an

integrated rural development programme for Northern Ireland, the Maher report outlining and recommending such a programme and the European Commission's response to those proposals; and whether the Government have any plans to pursue such a programme.

Mr. Needham *[holding answer 20 July 1988]:* In considering ways in which to maximise the benefits to Northern Ireland of funds available from the European Community account is taken of the proposal supported by the European Parliament for an integrated rural development programme and of other relevant proposals.

Housing

Mr. Alton: To ask the Secretary of State for Northern Ireland what is the breakdown of housing stock by percentage and type in Northern Ireland.

Mr. Needham *[holding answer 21 July 1988]:* Details of housing stock by tenure type are given in table 1.2B of "Housing Statistics 87" published by the Department of the Environment (Northern Ireland), a copy of which is available in the Library.

Mr. Alton: To ask the Secretary of State for Northern Ireland what percentage of the housing stock is terraced housing in Northern Ireland.

Mr. Needham *[holding answer 21 July 1988]:* Details of housing stock by type of building are given in tables 9.2 and 9.3 of "Housing Statistics 87" published by the Department of the Environment (Northern Ireland), a copy of which is available in the Library.

Mr. Alton: To ask the Secretary of State for Northern Ireland what percentage of the population own their own home in Northern Ireland.

Mr. Needham *[holding answer 21 July 1988]:* The information is not available in the form requested. From reports of the Northern Ireland census 1981 there were 742,719 persons living in owner-occupied acommodation. This represents approximately 50 per cent. of the usually resident population as enumerated in the 1981 census.

HOME DEPARTMENT

Remand Prisoners

Mr. Butler: To ask the Secretary of State for the Home Department how many hours were spent by police officers on the care and custody of remand prisoners in the latest available year.

Mr. Douglas Hogg: I understand from the Commissioner of Police of the Metropolis that a total of 1,240,721 man hours were spent by his officers on the care and custody of remand prisoners in the year ending 31 May 1988. Corresponding figures for other forces could be obtained only at disproportionate cost.

Passports

Mr. Cox: To ask the Secretary of State for the Home Department what action his Department takes to ensure that British passports, reported lost by holidaymakers, are not subsequently used as the basis for forged passports to gain unlawful entry into the United Kingdom.

Mr. Renton: Security features are incorporated in United Kingdom passports to ensure that any attempts to facilitate their use by another person, through alteration of personal details or substitution of photographs, will be readily apparent on examination of the document at United Kingdom ports of entry.

Mr. Gale: To ask the Secretary of State for the Home Department how many European Community countries have chosen to adopt the common format passport; in how many variations of colour, by country, they will be printed; and when, by country, they will be issued.

Mr. Renton: The majority of the 12 EC member states are already issuing national passports in the EC common format. The United Kingdom will begin to do so next month, and the Netherlands, Spain and Portugal are expected to follow before the end of the year. I understand that, the passports yet to be introduced in common with those already in use, will all comply with the terms of the relevant EC resolution, which specifies that the covers shall be burgundy red.

Mr. Worthington: To ask the Secretary of State for the Home Department (1) if he will state the monthly demand for passports over each of the past five years;

(2) what was the demand for British passports in 1979; and what is the current demand.

Mr. Renton: The monthly demand for passports 1983-88 is given in the table:

Passports issued

	1983	*1984*	*1985*	*1986*	*1987*	*1988*
January	122,263	119,037	117,566	132,122	121,591	141,213
February	181,634	185,082	145,259	176,020	192,834	215,925
March	239,562	235,821	188,514	186,379	255,694	270,641
April	228,472	204,945	191,373	270,540	205,582	269,590
May	244,103	222,498	229,189	270,304	172,613	300,501
June	239,578	226,798	194,712	231,996	212,832	276,937
July	226,359	217,231	219,992	257,450	235,608	—
August	172,536	166,461	157,494	178,753	211,763	—
September	106,761	102,644	109,202	128,267	150,137	—
October	83,213	93,064	101,594	116,565	98,602	—
November	82,983	83,116	83,300	91,782	100,419	—
December	52,280	50,608	60,848	70,366	83,545	—
	1,979,744	1,907,305	1,799,043	2,110,544	2,041,220	1,474,807

The annual demand for British passports in terms of the number of passports issued in 1979, 1987 and 1988 to the end of June, is as follows:

	Number
1979	1,809,091
1987	2,041,220
[1]1988	1,474,807

[1] January to June.

I regret that the annual figures for passports issued during 1979, 1983, 1985 and 1987 given in my reply to a question on 23 June at column 679 from my hon. Friend the Member for Barrow and Furness (Mr. Franks) were incorrect. I shall write to the hon. Member when I have established how the errors arose.

Home Defence

Mr. Thorne: To ask the Secretary of State for the Home Department what criteria are used in determining the degree of protection provided to the general public in his home defence and civil protection policy.

Mr. John Patten: The level of civil defence protection must be proportionate to the risk of war in Europe, which is presently considered to be very low. Policy development in this area is based upon section 7 of the emergency planning guidance to local authorities, copies of which are in the Library.

Mr. Thorne: To ask the Secretary of State for the Home Department (1) what provision he has made for the building, and conversion of existing buildings to offer shelter and protection to the general public in time of war;

(2) what protection is available to the general public against (i) nuclear and (ii) chemical attack in time of war; and if these include the issue of respirators and protective clothing to all citizens.

Mr. John Patten: Public provision of purpose-built shelters cannot be justified because of the high cost. Successive Governments have concluded that people should stay in their homes, using and improving the available protection. Local authorities have a duty to plan for the use of existing structures as shelter for people who would be unable to achieve useful protection in their homes. In the event of a war crisis, advice would be given on expedient measures to improve protection in the home. The manual "Domestic Nuclear Shelters—Technical Guidance", copies of which are in the Library, gives details of designs for purpose-built and improvised shelters. In respect of chemical attack, studies into effects and protective measures are continuing.

Immigration

Ms. Richardson: To ask the Secretary of State for the Home Department (1) how many children *(a)* under the age of five years, *(b)* between the ages of five and 15 years, and *(c)* between the ages of 16 and 18 years, were detained under Immigration Act powers by individual Immigration Act detention centres in each of the years 1985, 1986 and 1987;

(2) what was the average length of time spent in detention by the children detained under the Immigration Act powers *(a)* under the age of five years *(b)* between the ages of five and 15 years and *(c)* between the ages of 16 and 18 years in each of the years in 1985, 1986 and 1987;

(3) how many children *(a)* under the age of five years *(b)* between the ages of five and 15 years and *(c)* between the ages of 16 and 18 years were detained under the Immigration Act powers by nationality in each of the years 1985, 1986 and 1987.

Mr. Renton: The information requested is not centrally recorded and could be obtained only at disproportionate cost.

Mr. Tom Clarke: To ask the Secretary of State for the Home Department how many prosecutions have been brought under the Immigration (Carriers' Liability) Act 1987.

Mr. Renton: None. The Act creates a liability which is pursuable in the civil courts: no such proceedings have yet been instituted.

Mr. Madden: To ask the Secretary of State for the Home Department how many applications for *(a)* single entry and *(b)* multiple entry visit visas were (i) received, (ii) granted and (iii) refused at each post in *(x)* the Indian subcontinent, *(y)* Ghana and *(z)* Nigeria in each quarter of 1987 and the first quarter of 1988; and what was the delay between application and interview of those whose applications were felt to need a second or long interview at each of the above posts in (1) January 1987, (2) June 1987, (3) January 1988 and (4) the nearest available date.

Mr. Renton *[holding answer 20 July 1988]:* The information available on applications for a visit visa is given in the following tables. Separate information on applications for single entry and multiple entry visas is not available.

Table 2 Waiting time for persons applying for a visit visa who required a lengthy interview

Number of days

Post	Waiting time for persons interviewed at end of period: Dec. 1986	June 1987	Dec. 1987	May 1988
Dhaka	—	—	—	—
New Delhi	10	—	—	—
Bombay	5	4	1	14
Calcutta	—	—	—	—
Madras	3	3	2	—
Islamabad	—	—	—	—
Karachi	—	—	—	—
Accra	14	5	2	[1]13
Lagos	[2]	1	1	1
Kaduna	[2]	—	—	—

— Same day.
[1] Figure for end of April 1988.
[2] Visa requirement for Nigerians was not introduced until 1 February 1987.

Rapists (AIDS)

Mr. John Marshall: To ask the Secretary of State for the Home Department how many of the convicted rapists who have been paroled in the last four years were suffering from AIDS when paroled.

Mr. Douglas Hogg: None to our knowledge.

Police Helicopter Landing Pads (South Yorkshire)

Mr. Redmond: To ask the Secretary of State for the Home Department how many emergency police helicopter landing pads there are in south Yorkshire for use in emergencies; where they are sited; and if prior permission was sought from local authorities or private landowners.

Mr. John Patten: The following 23 locations have been identified by South Yorkshire police as sites which could be used in emergencies by helicopters hired by the force:

Barnsley District General Hospital
Rotherham District General Hospital
Royal Hallamshire Hospital, Sheffield
Northern General Hospital, Sheffield
Lodge Moor Hospital, Sheffield
Doncaster Airport
Doncaster Racecourse
RAF Finningley
Adwick School, Doncaster
Bentley High Street Middle School
Queen's Ground, Barnsley
Recreation Ground, Park Avenue, Panistone
Dorothy Hyman Stadium, Cudworth
Rockingham Sports Ground, Hoyland Common
Herringthorpe Valley Playing Fields
(rear of pavilion Boswell street side)
Aven Tools, Maltby
Thomas Rotherham College, Rotherham
Phoenix Golf Club, Rotherham
Tinsley Park Golf Club, Sheffield
Balfour Darwin's Sports Ground, Hathersage road, Sheffield
Laycock's, Archer road, Sheffield
(access to site off Periwood Road)
Niagara Sports Ground, Sheffield
Shirecliffe Heliport

I understand that the owners of these sites have agreed to them being used by helicopters operated by or for the police force.

Discretionary Life Sentences

Mr. Galbraith: To ask the Secretary of State for the Home Department what action his Department is taking in response to the judgment of the European Court of Human Rights on 2 March 1987 concerning discretionary life sentences.

Mr. Douglas Hogg: The implications of the judgment are still under consideration. Further applications by life sentence prisoners are awaiting hearing by the European Commission of Human Rights and we shall take account of the progress of those applications in considering whether any amendments may be necessary to our law and practice.

Prison Officers (Ethnic Background)

Mr. Tom Clarke: To ask the Secretary of State for the Home Department what monitoring of the ethnic background of prison officers takes place in prisons in England and Wales; and what information he has available on the ethnic backgrounds of prison officers.

Mr. Douglas Hogg: In a series of regional surveys all Home Office staff, including prison officers, were recently invited to complete a questionnaire. A total of 0·6 per cent. of those in prison service unified grades VI to VIII who responded stated that they were of ethnic minority origin. A further questionnaire is being sent to all those who did not respond.

Citizenship

Mr. Tom Clarke: To ask the Secretary of State for the Home Department what is the current backlog of applications for British citizenship; and how many letters of application remain unopened.

Mr. Renton: I refer the hon. Member to my reply to the hon. Member for Bradford, West (Mr. Max Madden) on 20 July at column *650*. The number of applications outstanding at 30 June was approximately 260,000.

Political Asylum

Mr. Tom Clarke: To ask the Secretary of State for the Home Department (1) if he will show as a table in the *Official Report*, for each year from 1979 until the latest available year, the proportion of people seeking political asylum in the United Kingdom who were either granted full refugee status or exceptional leave to remain;

(2) if he will publish a table in the *Official Report* showing, for each year since 1979 aggregated, the numbers of people seeking political asylum in the United Kingdom on a country of origin basis, showing the proportion each constitutes of the total number of people so applying;

(3) if he will publish a table in the *Official Report* showing, for each year from 1979 until the latest year for which figures are available *(a)* the number of persons applying for political asylum in the United Kingdom and *(b)* the statistics in *(a)* expressed as an index with 1983 = 100.

Mr. Renton: Information for the years 1979 to 1987 on the numbers of applications for refugee status, grants of refugee status, and grants of exceptional leave to remain, analysed by nationality, is published in tables 1 to 3 of Home Office statistical bulletin "Refugee Statistics, United Kingdom, 1987" (issue 16/88), copies of which are in the Library. More detailed analyses by nationality are published in tables 6 and 7 of this bulletin and corresponding tables in the similar bulletins for 1985 and 1986 (issues 12/86 and 13/87 respectively).

Mr. Tom Clarke: To ask the Secretary of State for the Home Department (1) how many representations by hon. Members regarding individual applications for political asylum have not been accepted as sufficient to obtain a stay of removal since 3 March 1987;

(2) if he will show on a monthly basis from January 1986 the percentage of applications for political asylum which had been rejected which were then referred to the United Kingdom Immigrants Advisory Service.

Mr. Renton: No central record is kept of cases in these categories.

Mr. Tom Clarke: To ask the Secretary of State for the Home Department how many people who had been refused political asylum in the United Kingdom and decided to challenge the decision through the courts have been deported before all legal proceedings were completed, since 3 March 1987.

Mr. Renton: No central record is kept of legal proceedings following the refusal of asylum. There can be no guarantee that an applicant will be allowed to remain in this country whilst all possible proceedings are pursued.

Mr. Tom Clarke: To ask the Secretary of State for the Home Department if he will publish a table in the *Official Report*, showing, for the latest year for which comparable figures are available, in ranked order, on a per capita basis for each member country of the Organisation for Economic Co-operation and Development, the number of applications received by each of those countries for political asylum.

Mr. Renton: Full information is not available in the form requested. Some information about asylum applications in Western European countries was given in response to a question from my hon. and learned Friend the Member for Burton (Mr. Lawrence) on 5 July at column *502*. Information on the population of Organisation for Economic Co-operation and Development countries is available from a number of published sources including the "United Nations Demographic Yearbook", a copy of which is in the Library.

Mr. Tom Clarke: To ask the Secretary of State for the Home Department what assessment he has made of the effects of the operation of the Immigration (Carriers' Liability) Act 1987 on the ability of people who genuinely wish to seek political asylum in the United Kingdom to do so.

Mr. Renton: We do not believe that the Act will stop refugees finding safety and coming to this country when it is the most appropriate place of refuge. In the past the great majority of genuine asylum applications have arrived here without resorting to forged documents.

Mr. Soames: To ask the Secretary of State for the Home Department if, pursuant to the reply given on 4 July, *Official Report*, column *418*, his Department has yet sent quarterly asylum statistics to the United Nations High Commissioner for Refugees.

Mr. Renton: Officials have now written to the United Nations High Commissioner for Refugees. I am placing a copy of the letter, with tables attached, in the Library.

Refugees

Mr. Tom Clarke: To ask the Secretary of State for the Home Department what representations he has received regarding "Charter 87: A Charter for Refugees"; and if he will make a statement.

Mr. Renton: Representatives of Charter 87 have corresponded extensively with me and officials. I met a delegation in March. A number of hon. Members have also written on their behalf. Many of the points in the charter are in line with the Government's present policy and practice. Our main disagreement is with the proposal of a full, in-country right of appeal for all asylum applicants at ports. We remain convinced that this would lead to increased abuse of the asylum process.

Magistrates' Clerks

Mr. French: To ask the Secretary of State for the Home Department what representations he has received about the resignation of magistrates' court clerks and their subsequent employment by the Crown prosecution service; and if he will make a statement.

Mr. John Patten: Representations have been received from justices' clerks and others about losses of court clerks, especially those qualified as solicitor or barrister, and some of these have made particular reference to staff leaving for employment in the Crown Prosecution Service. I understand that figures collected by the joint negotiating committee for magistrates' courts staff indicate that 19 court clerks left the magistrates courts service to take up posts in the Crown Prosecution Service in the year ending 31 March 1988. This represents 1·5 per cent. of the complement of approximately 1,250.

Birds of Prey

Mr. Hinchliffe: To ask the Secretary of State for the Home Department (1) what was the total amount of fines levied against persons found guilty of stealing the eggs and young of British birds of prey for the last year in which figures are available;

(2) how many successful prosecutions were brought against persons wilfully stealing eggs or young and disturbing the nests of British birds of prey, during the latest year for which figures are available.

Mr. Douglas Hogg: The information available which may be incomplete and which does not distinguish between British birds of prey and other wild birds, show 89 convictions in 1986 under section 1 of the Wildlife and Countryside Act 1981. Of these, 79 resulted in fines totalling £6,217 being imposed.

Court Adjournments

Mr. French: To ask the Secretary of State for the Home Department if he has any plans to seek to amend section 48 of the Criminal Law Act 1977 so as to limit the scope for application for adjournments; and if he will make a statement.

Mr. John Patten: There are no plans at present to seek to amend section 48.

Mr. French: To ask the Secretary of State for the Home Department if he has received any representations regarding the working of section 48 of the Criminal Law Act 1977; and if he will make a statement.

Mr. John Patten: We have not received any such representations.

Drug Addiction

Mr. Dobson: To ask the Secretary of State for the Home Department if he will give the total of registered drug addicts for 1979 and each subsequent year and the estimated total of such addicts, respectively; and if he will give them also by the smallest geographical area by which they are broken down.

Mr. Douglas Hogg: Information on the total number of addicts notified to the Home Office in the years 1979-86 is given in table 3.1 of the "Statistics of the Misuse of Drugs in the United Kingdom, 1986" (Home Office statistical bulletin 28/87). The same information is broken down by police force area and is given in tables A3.1, A3.2 and A3.3 of "Statistics of the Misuse of Drugs in the United Kingdom, 1986, Area Tables". Both publications are in the Library. It is hoped that figures for 1987 will be published in September.

Because of the nature of the activity, it is not possible to make any reliable estimate of the total number of unregistered drug addicts in the United Kingdom.

Passport Office (Staff)

Mr. Worthington: To ask the Secretary of State for the Home Department how many temporary and part-time staff have been employed by the Passport Office in each of the past five years at each of its local offices.

Mr. Renton: The information is as follows:

Peak number of casual staff in post

	1984	*1985*	*1986*	*1987*	*[1]1988*
London	52	35	47	50	62
Liverpool	27	14	32	49	62
Peterborough	23	28	34	43	62
Newport	20	24	31	51	53
Glasgow	12	13	18	26	40
Belfast	6	6	6	5	6
	140	120	168	224	285

[1] January to June.

Mr. Worthington: To ask the Secretary of State for the Home Department what has been the bill for overtime payments for the passport department for each of the past five years.

Mr. Renton: The information is as follows:

Year	*Overtime expenditure* £
1984	157,494
1985	394,309
1986	746,872
1987	872,015
1988[1]	855,421

[1] January to June.

Fines

Mr. Neil Hamilton: To ask the Secretary of State for the Home Department if he will list the total number and amount of fines imposed by magistrates' courts in England and Wales which remain unpaid to date.

Mr. John Patten: The total amount of fines and fees imposed by magistrates' courts in England and Wales which remained unpaid at 31 December 1987, the latest date for which complete information is available, was £84,660,000. Part of this sum consists of fines for which the time allowed for payment had not expired. The latest available information on numbers of unpaid fines is that at 31 December 1986 there were about 1,280,000.

Lindholme Prison

Mr. Harry Greenway: To ask the Secretary of State for the Home Department on what date the governor of Her Majesty's prison Lindholme took up appointment; on what date the categorisation for Her Majesty's prison Lindholme was altered to enable it to house non-category C prisoners; and what other changes in *(a)* management and *(b)* population have occurred since November 1987.

Mr. Douglas Hogg: The governor took up his appointment at Her Majesty's prison Lindholme on 20 June 1988. The establishment has never held inmates in security categories higher than category C, and no changes in the criteria under which prisoners are allocated there have been made since November 1987. Following the conversion of an existing building, an additional 250 places became available at Lindholme earlier this year. Inmates are being allocated to the new places according to existing criteria. Fresh Start working began at the establishment on 3 January this year.

Remand System

Mr. Greg Knight: To ask the Secretary of State for the Home Department when he expects to publish his Green Paper on private sector involvement in the remand system.

Mr. Hurd: The Green Paper "Private Sector Involvement in the Remand System" (Command 434), published today, sets out and invites comment on the options for involving the private sector in the operation of new remand establishments and of associated escort and court duties. The Green Paper identifies the main issues of principle and practice which need to be taken into account. Management consultants, assisted by criminal justice system experts, will shortly begin a detailed examination of the practical implications of involving the private sector in the ways which the Green Paper envisages. The Government will take the responses to the Green Paper, and the report of the consultants, into account in deciding, towards the end of the year, which, if any, of the options to pursue.

Public Expenditure Survey

Mr. Worthington: To ask the Secretary of State for the Home Department if he will provide a detailed breakdown for the year 1982-83 to 1990-91, by nature of item and functional area of charge, of the receipts to his programme classified as charges for the purposes of the public expenditure survey.

Mr. Hurd *[holding answer 7 July 1988]:* The following figures, which are consistent with those given by my right hon. Friend the Chief Secretary of the Treasury on 27 May at columns *375-76* relate to receipts in respect of programme expenditure for which the Home Office is responsible. Receipts in respect of running cost expenditure are not included.

Public expenditure (Home Office): charges 1982-83 to 1990-91[1] *(£ million)*

Description	*1982-83 outturn*	*1983-84 outturn*	*1984-85 outturn*	*1985-86 outturn*	*1986-87 outturn*	*1987-88 estimated outturn*	*1988-89 plans*	*1989-90 plans*	*1990-91 plans*

[1] Totals may not coincide with the sum of individual components due to roundings.

ENVIRONMENT

Planning Appeals

Mr. Maxwell-Hyslop: To ask the Secretary of State for the Environment whether he will give, for the latest convenient period, the figure for the percentage of planning appeals *(a)* that have been allowed unamended, *(b)* that have been allowed subject to restriction or amendment and *(c)* that have been disallowed.

Mr. Waldegrave: Of the 18,474 planning appeals decided between 1 April 1987 and 31 March 1988, 6,955 (37·6 per cent.) were allowed and 11,519 (62·4 per cent.) were refused. In all cases the grant of planning permission on appeal is subject to a condition that sets a time limit within which the development must commence.

Information on the proportion of planning appeals allowed that were subject to further restriction or where the proposal in the original application was amended is not available.

Housing Associations (Tower Hamlets)

Mr. Simon Hughes: To ask the Secretary of State for the Environment if he will list *(a)* all applications for consents to dispose of properties and-or sites to or for the purpose of use by housing associations at outsanding loan debt or less than market value received by his Department from the London borough of Tower Hamlets between 8 May 1986 and 18 July 1988; *(b)* the date on which each submission was first received by his Department; *(c)* the date on which consent was granted in relation to each application so far decided, *(d)* the latest date by which consent will be given in relation to each application not yet decided and *(e)* the explanation for the delay between application and decision in each case.

Mrs. Roe: The information requested is not readily available in the form required. The Department has the following applications for consent outstanding:

Monteith Estate, received 26 June 1987;
Glenaffric Avenue, received 17 November 1987;
Masthouse Terrace, received 7 December 1987;
Ashfield Street, received 23 December 1987;
Hadrian Estate, received 23 February 1988;
Bishops Way, received 18 April 1988;
Selby Street, received 3 May 1988;
Buckfast Street and Barnet Grove, received 20 June 1988.

Cases have been delayed because all the necessary information from Tower Hamlets London borough council and outside bodies has not been available to the Department. Consents, where appropriate, will be issued as soon as possible.

Government Vehicles

Mr. Redmond: To ask the Secretary of State for the Environment if he will list the total number of motor vehicles supplied by his Department for use by each Government Department and the number that have been converted to run on unleaded petrol.

Mr. Chope: I refer to my reply to the hon. Member for Stoke-on-Trent, North (Ms. Walley) on 25 May 1988. 17 vehicles have been converted so far to run on lead-free fuel.

Wherever possible, vehicles are now being converted to run on lead-free fuel and as new models capable of running on both types of fuel without adjustment come into the fleet the need for conversion will progressively diminish.

Equal Opportunities

Mr. Janner: To ask the Secretary of State for the Environment what publicity he has given to the Government's policy statements on the subject of equal opportunities.

Mr. Ridley: My Department publicised the policy statement on equal opportunities in 1984 and 1985 by issuing establishments bulletins, which are seen by all members of staff.

Mr. Janner: To ask the Secretary of State for the Environment how many and what percentage of women are employed by him in grades 1, 2, 3, and 4 respectively, as at 31 May.

Mr. Ridley: The number of women employed at grades 1-4 in my Department as at 1 July were:

Grade	*Numbers*	*per cent.*
1	0	0
2	0	0
3	4	9
4	1	7

Ethnic Monitoring

Mr. Janner: To ask the Secretary of State for the Environment how many and what percentage of ethnic minority staff are employed in grades 1, 2, 3, 4, 5 and 6 respectively, as at 31 March.

Mr. Ridley: The numbers of ethnic minority staff employed at grades 1-6 as at 31 March 1988 were:

Grades	*Numbers*	*Per cent.*
1	0	0·0
2	0	0·0
3	1	2·4
4	0	0·0
5	2	1·6
6	5	1·5

Mr. Janner: To ask the Secretary of State for the Environment whether he will place in the Library copies of the results of the ethnic monitoring exercises in the areas of part time working and job sharing, reinstatement, special leave, special training, recruitment and the ethnic origin of staff, carried out by his Department.

Mr. Ridley: I shall place results of the ethnic monitoring recruitment and staff in post surveys in the Library.

Ethnic monitoring of part-time workers and job sharers, those reinstated and applicants for special leave and special training has not been carried out, although monitoring by gender has.

Mr. Janner: To ask the Secretary of State for the Environment when he expects that the analysis of the ethnic origins of his Department's staff in post in March 1988 will be completed; and whether he will place a copy in the Library.

Mr. Ridley: Analysis of my Department's ethnic origin data is a continuous process. An initial analysis by grade, region and location will be completed by the end of October 1988, and I shall place a copy in the Library.

Promotion Monitoring

Mr. Janner: To ask the Secretary of State for the Environment what participation there has been from his Department in the essential training review and promotion monitoring projects respectively.

Mr. Ridley: My officials have completed an OMCS questionnaire on equal opportunities training and have participated in the Cabinet Office-led review on training. My Department is also participating in the OMCS sponsored survey of promotion board monitoring.

Sporting Events (Ministerial Visits)

Mr. Menzies Campbell: To ask the Secretary of State for the Environment if he will list the international sporting events attended by the Minister with responsibility for sport, the hon. Member for Lewisham, East (Mr. Moynihan) in the last 12 months and the cost to public funds in each case.

Mr. Moynihan: The following are the principal international sporting events overseas which I have attended in the last 12 months and the costs to public funds in each case.

	Event
26 July	Final stage of the Tour de France, Paris. Cost to public funds, £221.
28 August	World Rowing Championships, Copenhagen. No cost to public funds.
3-7 September	World Athletics Championships, Rome. Cost to public funds, £717.
9 September	England v. West Germany, Dusseldorf. Cost to public funds, £229.
7 November	Final World Cup One Day Cricket, Calcutta. Cost to public funds, £1,905
12-18 February	Winter Olympics, Calgary, Alberta, Canada. Cost to public funds, £2,308.
1 April 2 April 3 April	FC Berlin v. Erfurt, East Berlin. Ice Show, East Berlin. Ladies Handball International, East Berlin. Attended while on an official visit to look at the structure of sport in East Germany, at the invitation of the East German Government. Cost to public funds of entire visit, £690.
12-13 April	British National Skiing Championships, Alpe d'Huez, France Slalom challenge, part of ten events initiative for disabled sport. No cost to public funds
12 June	European Football Championships: Eire v. England, Stuttgart. Cost to public funds, £277.
15-16 June	European Football Championships: England v. Holland, Dusseldorf. Cost to public funds, £341.

North West Water Authority

Mr. Onslow: To ask the Secretary of State for the Environment (1) whether his Department has asked the North West water authority to explain why 54 of its effluent treatment plants were reported in 1987 as being non-compliant with the authority's own discharge consent conditions; and what estimate his Department has been given of the capital cost and time required to rectify these deficiencies;

(2) whether his Department has asked the North West water authority why 15 of its effluent plants failed to meet the authority's discharge consent conditions in 1987 because of trade effluent; what types of trade effluent were involved in the cases concerned; and how long he expects this situation to continue.

Mr. Moynihan: North West water authority reports that where sewage treatment works failed its consents due to trade effluent this was caused by effluent from farming or agricultural related processes, food production, textile manufacture and chemical treatment.

Her Majesty's Inspectorate of Pollution is continuing to discuss with North West water authority the reasons for failure of their sewage treatment works. The Government have already announced that water authorities are taking steps to improve the performance of sewage treatment works through major investment programmes to bring all works up to standard by 1991-92. North West water authority expects that of its 55 non-compliant works, 31 will report compliance in their returns relating to 1988. A further 12 are expected to be compliant by the end of this year. Another six works feature in the capital programme at a cost of some £1,400,000. Investigations at the remaining six works are expected to be completed later this year.

Winget-type Houses

Mr. Hinchliffe: To ask the Secretary of State for the Environment (1) what is his estimate of the fiscal resources which would be required by local authorities in order that all Winget-type houses purchased from council stocks and presently in private ownership could be repurchased at current market prices under the Housing Defects Act 1984;

(2) what information he has on the total current market value of Winget-type houses purchased from local authorities and currently privately owned.

Mrs. Roe: Local authorities in England have reported 175 Winget properties in private ownership. The current market values of these properties will depend, among other things, on their location and condition. It is not therefore possible to estimate reliably the total market value of these houses, nor the costs of their repurchase at 95 per cent. of defect free value, as the housing defects legislation provides.

Defective Housing

Mr. Hinchliffe: To ask the Secretary of State for the Environment if he will give an estimate of the fiscal resources which would be required by local authorities in order for reinstatement grants to be issued for a satisfactory method of repair to be undertaken in respect of all council housing stock identified as defective in the Housing Defects Act 1984 which has a method of repair agreed by the Department of the Environment with the National House Building certificate.

Mrs. Roe: Under the housing defects legislation local authorities may pay grants to eligible owners of designated dwellings for reinstatement in accordance with the Act's provisions. Such grants are not available towards the cost of reinstatement works to properties in local authority ownership.

Mr. Hinchliffe: To ask the Secretary of State for the Environment (1) what estimate he has of the total current market value of houses identified as defective under the Housing Defects Act 1984;

(2) what is his estimate of the fiscal resources required by local authorities in order for all owner-occupied houses, designated as defective by the Housing Defects Act 1984 and which have no approved method of repair, to be repurchased by local authorities at current market prices.

Mrs. Roe: As market values of individual designated properties will vary, depending, among other things, on location and condition, it is not possible to make a meaningful estimate of the total current market value of all designated properties. Nor is it possible reliably to forecast the total number and cost of local authority repurchases under the housing defects legislation.

Mr. Hinchliffe: To ask the Secretary of State for the Environment how many houses defined as defective under the Housing Defects Act 1984 have been demolished since 1984; and if he will give a breakdown of houses demolished against housing type and year.

Mrs. Roe: I am aware that some local authorities have demolished certain designated properties in their areas, but detailed information on numbers and house types by year is not available.

Mr. Hinchliffe: To ask the Secretary of State for the Environment (1) which housing types have been designated as defective under the Housing Defects Act 1984; and how many dwellings of each type remain in council housing stock in the United Kingdom;

(2) how many houses, and of what type, designated as defective under the Housing Defects Act 1984 have been purchased from local authorities in the United Kingdom since 1980; and how many remain in private ownership.

Mrs Roe: The house types designated nationally under the housing defects legislation in England are as follows. In addition, local designations have been made for certain properties in Dudley; and for Smith houses with additional foundation defects in Dudley, Birmingham, Sandwell and Nuneaton and Bedworth.

Airey
Boot
Boswell
Cornish Unit
Dorran
Dyke
Gregory
Myton
Newland
Orlit
Parkinson
Reema Hollow Panel
Schindler and Hawksley SGS
Smith
Stent
Stonecrete
Tarran
Underdown
Unity and Butterley
Waller
Wates
Wessex
Winget
Woolaway

Information on the numbers, by type, of prefabricated reinforced concrete dwellings designed before 1960 in private and public ownership, was obtained in 1983, and updated in July 1986, to include Smith houses. Copies of this material are in the Library. We have been assembling updated information from local authorities on the numbers of designated types (including Boswell) and this should be available shortly. No information is available specifically on the numbers sold by local authorities since 1980.

The library also contains local authorities' own HIP returns for 1987, giving total numbers of designated properties in local authority and private ownerships, though these figures are not broken down by type.

Water Pollution

Mr. Hinchliffe: To ask the Secretary of State for the Environment (1) when figures for 1987 will be made available for the total amount of fines collected following prosecutions under the Control of Pollution Act 1974 in respect of water pollution due to the breach of water authority consents;

(2) on how many occasions the maximum fine has been levied against an offender in breach of water authority consents following the implementation of the Control of Pollution Act 1974;

(3) what was the total amount of fines collected in each year, following the implementation of the Control of Pollution Act 1974, in respect of successful prosecutions brought against polluters in breach of water authority consents;

(4) when figures for 1987 will be made available on the number of occasions when water authority consents for the discharge of pollution into United Kingdom waterways were breached by polluters, the legal action taken by water authorities and the convictions achieved.

Mr. Moynihan: Information collected by my right hon. Friend the Secretary of State for the Home Department shows that in 1986, the first year for which figures are readily available, fines imposed following prosecutions by water authorities specifically for breaches of discharge consents totalled approximately £20,000. Magistrates imposed the £2,000 maximum fine on one occasion. Data for 1987 are expected to be available in the autumn.

Mr. Hinchliffe: To ask the Secretary of State for the Environment why, in view of the number of sewage treatment works breaching his consents, no prosecutions have thus far been taken out against water authorities for breach of consents; and if he will make a statement.

Mr. Moynihan: As announced in our recent response to the Environment Committee, water authorities have major programmes of capital works to bring all sewage treatment works into compliance with their consent conditions by 1991-92. Clearly, where major investment is involved, it takes time to bring works up to standard and, in the Government's view, there is little to be gained by prosecution in these circumstances. However, Her Majesty's Inspectorate of Pollution has recently informed water authorities that it will consider prosecution in cases where works are persistently non-compliant, where discharges are significantly affecting water quality and where an authority has no plans for remedial action.

Yorkshire Water Authority

Mr. Hinchliffe: To ask the Secretary of State for the Environment what action he will take to ensure that the Yorkshire water authority brings all its sewage works up to the legal minimum standard by 1991.

Mr. Moynihan: We have made it clear to Yorkshire water authority that effluent discharges from its sewage treatment works must comply with discharge consent conditions as soon as practicable. The authority is now preparing the necessary investment plans.

House Condition Survey

Mr. Hinchliffe: To ask the Secretary of State for the Environment when the results of the 1986 English house condition survey will be published.

Mrs. Roe: I refer the hon. Member to the answer given by my hon. Friend the Minister for Housing and Planning on Tuesday 5 July 1988, at column *545*.

Council Houses

Mr. Hinchliffe: To ask the Secretary of State for the Environment how calculations for national council house vacancies are made; what formula is used; and how the data are collated.

Mrs. Roe: The number of council house vacancies in England is simply the sum of the numbers reported by all the English local authorities for April of each year in their annual housing investment programme HIP1 returns. The number vacant can also be expressed as a percentage of the council housing stock reported in the same returns.

Birds of Prey

Mr. Hinchliffe: To ask the Secretary of State for the Environment whether he will consider seeking to increase penalties for the illegal theft and disturbance of British birds of prey; and what information he has on the prices commanded abroad for falcons, eagles and hawks.

Mr. Moynihan: I do not propose at present to seek an increase in the penalties for the illegal taking of birds of prey from the wild. I have no specific information on the prices which falcons, hawks and eagles may command abroad.

Mr. Hinchliffe: To ask the Secretary of State for the Environment what action he is taking to reduce and prevent the theft of British birds of prey, including the peregrine falcon and goshawk, for the purposes of sale to falconers both in Britain and abroad.

Mr. Moynihan: Section 1 of the Wildlife and Countryside Act 1981 makes it an offence for any person to take a wild bird, unless he has a defence under any other provision of the Act. The enforcement of section 1 is a matter for the police.

Public Expenditure

Mr. Hinchliffe: To ask the Secretary of State for the Environment what level of local government staffing and pay are anticipated in the Government's expenditure plans 1988-89 to 1990-91; and if he will make a statement.

Mr. Chope: The Government's expenditure plans for 1988-89, 1989-90 and 1990-91 (Cm. 288 published in January) provided for local authority current expenditure in England of £27,538 million, £28,500 million and £29,360 million respectively. The plans for 1989-90 and 1990-91 were based on the figure for 1988-89 uprated by the GDP deflator then forecast in each year; they thus provided for spending to be broadly level in real terms. The 1988-89 figure is that provided for by the Secretary of State in the rate support grant settlement for that year. On 7 July the Secretary of State announced a proposal that provision for the 1989-90 settlement should be £29,140 million, an increase of about £1·4 billion over Cm. 288 after deducting the cost of polytechnics, which from April 1989 will be the responsibility of central Government. In making provision for a particular year the Secretary of State takes into account, as he is required to do by statute, the latest information about the rate of local authority relevant expenditure; possible fluctuations in demand for services which are not under local authority control; the need for developing those services and the extent to which, having regard to general economic conditions, he considers it reasonable to develop them; and the level of prices costs and remuneration.

Local Authorities (Pay and Manpower)

Mr. Hinchliffe: To ask the Secretary of State for the Environment what was the level of local authority pay awards and manpower increases in 1986-87 and 1987-88; what level was allowed for in the plans for those years; and if he will make a statement.

Mr. Chope: The main pay awards were as follows:

	Pay awards in			
	1986-87		*1987-88*	
	from	*percentage*	*from*	*percentage*
Teachers	1 April 1986	5·7	1 October 1987	8·2
	1 January 1987	8·2		
Further education lecturers	1 April 1986	5·6	1 April 1987	5·0
			1 September 1987	5·3
Police	1 September 1986	7·5	1 September 1987	7·75
Fire	7 November 1986	7·3	7 November 1987	7·3
Manuals	1 September 1986	6·7	1 July 1987	10·6
APT and C	1 July 1986	6·0	1 July 1987	5·0
			1 February 1988	2·5
Engineering craftsmen	1 February 1987	5·6	1 February 1988	4·0
Electricians and Building trade operatives	1 February 1987	4·0	1 September 1987	6·8
Chief officers and Chief executives	1 July 1986	5·5	1 September 1987	7·0

Manpower in the 12 months to March 1987 and March 1988 increased by 0·7 per cent. and 0·9 per cent. respectively.

The rate support grant settlements for 1986-87 and 1987-88 provided for local authority current expenditure of £22,253·5 million and £25,251 million respectively. In deciding the level of provision the Secretary of State took account of those factors which he is required to by statute. In addition, the first supplementary report for 1987-88 took account of the estimated cost in that year of the new rates for school teachers' pay provided for in the "Teacher's Pay and Conditions Document 1987".

Estuaries (Sewage)

Mr. Hinchliffe: To ask the Secretary of State for the Environment why figures for the volume of raw human sewage allowed into British estuaries are not kept centrally; and if he will make a statement.

Mr. Moynihan: The information asked for is not held centrally, because to do so would serve no useful purpose.

The last surveys of discharges of foul sewage to estuaries and coastal waters were published in 1973, but they do not differentiate between the two types of receiving waters. Details of all discharges to rivers, estuaries and coastal waters are, however, available from water authorities' public registers. Since 1973 there have been major reductions in such discharges in most of the estuaries in the United Kingdom.

NRA (Sport and Recreation)

Mr. Denis Howell: To ask the Secretary of State for the Environment which members of the National Rivers Authority advisory committee have been appointed to safeguard the interests of sport and recreation; what are their qualifications; and which organisations were consulted before these appointments were made.

Mr. Moynihan: Members of the National Rivers Authority advisory committee have been appointed for the contribution they can make in the preparations needed for the establishment of the National Rivers Authority, not to represent particular interests. There was no consultation outside Government before the appointments were made. Until the National Rivers Authority is established, it remains the statutory duty of the water authorities to encourage the use of water and land associated with it for recreation.

Local Authorities (Finance)

Dr. Cunningham: To ask the Secretary of State for the Environment what was the total of debt charges charged to revenue account for local authorities in England and Wales for each year from 1980-81 to 1987-88; and what percentage this represents of gross revenue expenditure.

Mr. Ridley: The information for local authorities in England and Wales, is as follows:

Rate Fund Revenue Account; debt charges and gross revenue expenditure

	Debt charges £1	*Gross revenue expenditure* £ million	*Debt charges*[1] *Per cent.*
1980-81	2,134	25,215	8·5
1981-82	2,268	27,810	8·2
1982-83	2,162	30,197	7·2
1983-84	2,165	32,366	6·7
1984-85	2,443	34,286	7·1
1985-86	2,678	35,105	7·6
[2]1986-87	2,373	37,113	6·4

[1] As percentage of gross revenue expenditure.
[2] Provisional.

The information is not available for 1987-88.

Debt charges are also incurred on housing revenue account and in respect of trading services.

River Thames (Pollution)

Mr. Bowis: To ask the Secretary of State for the Environment what steps he is taking to monitor the effect of pollution and the greenhouse effect on water levels in the Thames.

Mr. Moynihan: The Thames water authority operates a network of eight tidal gauges to monitor the level of sea water in the Thames estuary. There is a chain of such gauges around the coast of the United Kingdom.

The Department has initiated a research programme into the greenhouse effect which will consider, amongst other things, the impact of any rise in sea level.

Lululla Arborea

Dr. Marek: To ask the Secretary of State for the Environment, pursuant to his reply of 26 May, *Official Report*, column *310*, if he will give details of the consultations between representatives of the EEC member states concerning the proposal to include Lululla arborea in appendix II of the Berne convention; what objections were made to its inclusion and by which countries.

Mr. Moynihan: The Department does not hold details of the objections made by other member states.

Water Authorities Association

Mr. Boyes: To ask the Secretary of State for the Environment what information he has as to how much money has been expended by the Water Authorities Association on the services of merchant bankers Kleinwort Benson, in their capacity as advisors to the Water Authorities Association on water privatisation.

Mr. Moynihan: None.

Halton Moor Estate, Leeds

Mr. Fatchett: To ask the Secretary of State for the Environment (1) whether his Department will organise a ballot of tenants on Halton Moor estate, Leeds, as to whether they wish to become part of a housing action trust; and if he will make a statement;

(2) what weight he will give to the results of a ballot organised by tenants of Halton Moor estate, Leeds, as to whether they wish to become part of a housing action trust; and if he will make a statement.

Mrs. Roe: My Department has no plans to ballot tenants. However, final decisions on the areas to be designated as housing action trusts will be taken in the light of local views. My right hon. Friend wrote on 11 July to all residents in the Halton Moor estate who might be affected by the establishment of a housing action trust, and I met representatives of tenants groups in Leeds on Friday.

Imports and Exports (Sale Control)

Mr. Corbett: To ask the Secretary of State for the Environment what measures are being taken to monitor compliance with article 6 of EEC regulation 3626/82 in the United Kingdom, and to enforce the provisions of this article.

Mr. Moynihan: The Department has issued advice on article 6 sale controls in its "Supplementary Notice to Importers and Exporters No. 6" and looks into any cases brought to its attention. Where appropriate the relevant enforcement agency will be advised.

Mr. Corbett: To ask the Secretary of State for the Environment how many alleged infractions of article 6 of EEC Regulations 3626/82 have been drawn to the attention of his Department; and what were the results of investigations of these cases.

Mr. Moynihan: This information is not readily available, as the Department has no central record of alleged infractions.

Staffordshire County Council

Ms. Walley: To ask the Secretary of State for the Environment if he will adjust the rate support grant to pay additional moneys to Staffordshire county council equal to the amount of repayments made to the Severn-Trent authority as a result of the Cakebread decision on sewage hereditaments.

Mr. Chope: We are considering the representations which have been made about the implications of the Court of Appeal's judgment in the Cakebread case. Rate support grant can, however, be paid only in accordance with the latest rate support grant report for each year. We shall be issuing proposals for supplementary reports for 1985-86 to 1988-89 and consulting on them later this year.

Block Grant

Mr. Baldry: To ask the Secretary of State for the Environment, pursuant to his statement on 7 July, *Official Report*, columns 1199-1201, when he proposes to introduce legislation to modify the way in which block grant payments are to be calculated for the remaining years of the present rate support grant system.

Mr. Ridley: I plan to introduce a short Bill later this Session.

Homes Insulation Scheme

Mr. Forman: To ask the Secretary of State for the Environment what plans he has to review the homes insulation scheme introduced on 1 February.

Mrs. Roe: An amendment to the homes insulation scheme has today been laid before Parliament which increases the maximum grant payable under the scheme. Householders in eligible dwellings in receipt of housing benefit, income support or family credit can thus qualify for grant towards the cost of loft insulation of 90 per cent. of the cost of works up to the new maximum amount of £144. The increase should enable those on lower incomes to continue to afford loft insulation and derive benefits in terms of energy savings or increased warmth. The amendment to the scheme, which includes a revised schedule of materials approved for grant purposes, applies to England, Scotland and Wales, and will come into effect on 15 August 1988.

Poisoned Bait

Mr. Tony Banks: To ask the Secretary of State for the Environment if he will give by number and species wild birds known to have been killed by the use of poisoned bait between 1 January 1979 and 30 June 1988.

Mr. Moynihan *[holding answer 22 July 1988]:* This information is not available.

Badgers

Mr. Amess: To ask the Secretary of State for the Environment what information his Department has on the number of badgers that are killed each year.

Mr. Moynihan *[holding answer 22 July 1988]:* No records are kept of badger deaths. However, the Nature Conservancy Council estimates that several thousand are killed annually on the roads. This is the major cause of human-induced mortality of badgers.

Mr. Amess: To ask the Secretary of State for the Environment if he is satisfied with the operation of the Wildlife and Countryside (Amendment) Act 1985 concerning the protection of badgers; and if he will make a statement.

Mr. Moynihan *[holding answer 22 July 1988]:* Yes. The amendment Act strengthened the protection of badgers by reversing the burden of proof upon a defendant, who will be presumed to have committed an offence unless he can show otherwise in cases of the alleged unlawful taking, injuring or killing a badger and in cases of alleged digging for a badger. This remedied a significant weakness in the Badgers Act 1973 and was an important step forward.

Litter

Mr. Amess: To ask the Secretary of State for the Environment (1) what research his Department has undertaken on the on-the-spot-fines for litter dropping; and if he will make a statement;

(2) if he will introduce legislation to allow local authorities to levy on-the-spot fines for litter dropping; and if he will make a statement;

(3) what representations he has received concerning on-the-spot fines for litter dropping; and if he will make a statement;

(4) what powers local authorities have to impose on-the-spot fines for litter dropping; and if he will make a statement;

(5) what is his Department's policy of on-the-spot fines for litter dropping; and if he will make a statement.

Mr. Moynihan *[holding answer 22 July 1988]:* We have received a number of representations over the past 12 months about the desirability of on-the-spot fines, or, more accurately, fixed penalties for litter offences. Under the City of Westminster Act 1988, which came into force in March, the city council has powers to operate such fixed penalty system. The council has established a monitoring group, on which the Department is represented, to assess the effectiveness of the system, which we regard as a valuable experiment. If successful, we would wish to consider whether the system should be extended more widely.

Tyfoam

Mr. Hinchliffe: To ask the Secretary of State for the Environment what representations he has received on the safety implications of the contents of Tyfoam, certificated as a method of repair for wall tie failure.

Mr. Trippier: No representations have been made to the Department on this matter.

Manchester-Salford-Trafford Scheme

Mr. Tony Lloyd: To ask the Secretary of State for the Environment what details he has received of the Manchester-Salford-Trafford integrated development operation scheme; what is his policy on this scheme; if he

has sent the application to the European Community; if he will give details of the timetable for consideration of this scheme; and if he will make a statement.

Mr. Trippier: A revised application for an integrated development operation for Manchester-Salford-Trafford is currently being jointly considered by the Departments of Trade and Industry, Employment and this Department. Subject to Government approval of the application, it will shortly be forwarded to the United Kingdom permanent representative to the European Community, who will lodge it with the European Commission. Thereafter, the timetable for processing the application rests with the European Commission.

Environmental Projects

Mr. Pike: To ask the Secretary of State for the Environment what steps he will take to ensure that an environmental statement is provided in respect of those projects listed in annex II of the European Community directive 85/337 on environmental assessment which are likely to have significant environmental effects; and what criteria will be applied in selecting projects which require such statements.

Mr. Trippier: The Town and Country Planning (Assessment of Environmental Effects) Regulations 1988 (S.I. No. 1199) implement the EC directive for projects in England and Wales which require planning permission. DOE circular 15/88 (Welsh Office 23/88) gives advice to local planning authorities on the implementation of the regulations, including on those circumstances in which environmental assessment under annex II may be needed. Further instruments have been made and advice issued by Ministers concerned with other projects to which the directive applies.

Mr. Pike: To ask the Secretary of State for the Environment if he will introduce measures to ensure that developments promoted under private legislation, including estuarine barrages, are subject to environmental assessment procedures; and if he will make it his policy that there be a requirement on the promoter to prepare an environmental statement.

Mr. Trippier: It is for Parliament to determine the procedures to be adopted for the approval of private legislation. I understand the Joint Committee on Private Bill Procedure is considering the question of environmental assessment. Where the Government themselves promote legislation to approve a project which would have required environmental assessment if the saving in article 1.5 of the EC directive did not apply, they will ensure that an environmental statement is prepared on the project.

Council House Sales

Mr. Austin Mitchell: To ask the Secretary of State for the Environment whether he will publish in the *Official Report* a table showing for Scotland, Wales and each English region the number of council houses sold in the past five financial years and his estimate for 1988, together with the average valuation and the average price received.

Mr. Waldegrave: The readily available information on sales by local authorities, new town and the Scottish Special Housing Association, excluding block sales, is given in the table. Corresponding estimates are not available for 1988-89, but forecasts for sales by English local authorities were included in the public expenditure White Paper (Cmnd. 288-II) published in January.

Dwellings sold by Local Authorities: DOE Administrative Regions, Wales and Scotland 1983-84 to 1987-88

	1983-84	1984-85	1985-86	1986-87	[1]1987-88
(a) *Total number of dwellings sold*					
North	8,580	5,170	4,750	4,860	5,030

CIVIL SERVICE

Administrative Trainees

72. **Mr. Wareing:** To ask the Minister for the Civil Service if he is planning any change in the methods by which administration trainees are recruited.

Mr. Luce: The Government have no plans to change the basic principles of fair and open competition. Changes are made to procedures from time to time.

Civil Service College

73. **Mr. Cran:** To ask the Minister for the Civil Service how many outside organisations use the facilities offered by the Civil Service college; and what was the financial contribution so gained over the last 12-month period for which records are available.

Mr. Luce: Twenty outside organisations used the college's facilities during the period 1 July 1987 to 30 June 1988 and the financial contribution gained was £125,000. The college earned a further £102,000 by letting its facilities to 11 Government Departments. I greatly welcome the use of college facilities by students from the private sector.

Terms and Conditions of Service

74. **Mr. Allen:** To ask the Minister for the Civil Service when he next proposes to meet the Civil Service trades unions to discuss terms and conditions of service.

Mr. Luce: I have informal meetings from time to time with representatives of the Civil Service trade unions.

Official Secrets Act 1911

75. **Mr. Rooker:** To ask the Minister for the Civil Service if he will make a statement on the future role of the Civil Service discipline code in the light of the publication of the White Paper, Cm. 408, on the reform of Section 2 of the Official Secrets Act 1911.

Mr. Luce: As the White Paper on reform of section 2 of the Official Secrets Act 1911 made clear, the disciplinary code will continue to be applied against unauthorised disclosure of information.

Conduct and Discipline

77. **Mr. Harry Barnes:** To ask the Minister for the Civil Service what steps are being taken to improve consultation on conduct and disciplinary issues with the Civil Service unions.

Mr. Luce: There are established procedures for discussing these matters with the Civil Service unions.

Civil Servants (Previous Employment)

78. **Mrs. Virginia Bottomley:** To ask the Minister for the Civil Service how many civil servants have previously been employed as teachers or researchers in a full-time capacity in a higher education establishment.

Mr. Luce: This information is not held centrally and could be collected only at disproportionate cost.

Next Steps Initiative

Mr. Redwood: To ask the Minister for the Civil Service what progress is being made with the "next steps" initiative; and if he will make a statement.

Mr. Luce: Following my right hon. Friend the Prime Minister's announcement on 18 February, the project manager and his team have been working on the implementation of this initiative.

The purpose of Next Steps is to improve management in the Civil Service. The main element is the establishment of individual executive agencies to carry out executive functions. Twelve initial candidates were listed in February and a further 17 candidates have since been announced, including the DHSS social security operations. In total these 29 activities[1] cover over 170,000 people.

My right hon. Friend the Secretary of State for Transport is today announcing that he is establishing the vehicle inspectorate within his Department as the first executive agency, with effect from 1 August 1988. We expect that the next will be the companies registration office, DHSS resettlement units, and the employment service. Work on the other candidates is progressing well and at the same time Departments are considering with the project manager the rest of their operations in line with the Government's acceptance of the recommendation that on the greatest extent practicable the executive functions of Goverment should be carried out by agencies.

Establishing agencies is only part of the task. The project manager has drawn up an action plan in conjunction with Departments aimed at: reorienting training and career management, so that staff are properly trained and experienced in the management of the delivery of services. At the same time, attention is being paid to the scope for giving greater personal responsibility to managers throughout the service, including the scope for increased financial flexibilities and more local responsibilities in pay and personnel matters.

I shall make a further report to the House before the end of this calendar year.

Departmental Advertising

Mr. Dobson: To ask the Minister for the Civil Service (1) what is the latest figures for estimated spending in 1988-89 by his Office on *(a)* television advertising, *(b)* radio advertising, *(c)* newspaper advertising and *(d)* other promotional material;

(2) what is the latest figure for the number of staff presently employed on press and public relations in his office;

(3) what is the latest figure for the estimated expenditure by his office on press and public relations during 1988-89.

Mr. Luce: I refer to the answers given on Thursday 21 July by my right hon. Friend the Prime Minister to identical questions tabled by the hon. Member.

THE ARTS

Northern England

49. **Mr. Holt:** To ask the Minister for the Arts what percentage of the Arts Council budget is spent in the north of England.

Mr. Luce: In 1987-88, 5·8 per cent. of the budget was spent in the area covered by Northern Arts.

Theatre Royal, Stratford, East

50. **Mr. Boateng:** To ask the Minister for the Arts if he will provide additional funds for the Theatre royal, Stratford, East.

Mr. Luce: I do not fund individual theatres direct. The level of funding is a matter for Greater London Arts.

Student Exchange

52. **Mr Key:** To ask the Minister for the Arts what information he has on exchanges of drama and production students between the United Kingdom and overseas countries; and if he will make a statement.

Mr. Luce: No detailed information is available, but I welcome the fact that such exchanges will be facilitated by the International Foundation for Training in the Arts, launched earlier this month.

Arts Support (Economic Benefits)

53. **Mr. Jessel:** To ask the Minister for the Arts how far Government provision for support of the arts takes into account the benefits to the national economy.

Mr. Luce: I am glad to acknowledge the importance of the performing and visual arts, and of the museums, galleries and libraries, to the nation's quality of life and to the education and economic opportunities and the environment of people in this country. The arts are a significant and expanding sector of the economy, a valuable stimulus to tourism, and a source of export earnings for Britain. This is a source both of congratulation and of opportunity to the arts and heritage sectors.

Musical Instruments (Over-tuning)

54. **Mr. Summerson:** To ask the Minister for the Arts what information he has on the destruction of instruments by publicly funded orchestras as a result of over-tuning.

Mr. Luce: None.

Scottish Arts Council

55. **Mr. Menzies Campbell:** To ask the Minister for the Arts when he last met the chairman of the Scottish Arts Council; and what matters were discussed.

Mr. Luce: I refer the hon. Member to my reply to his earlier question on 4 July, at c. 466.

East London

56. **Ms Abbott:** To ask the Minister for the Arts if he will pay an official visit to the Hackney empire to discuss funding of the Arts in East London.

59. **Mr. Sedgemore:** To ask the Minister for the Arts if he will make an official visit to Hackney Arts organisations to discuss funding for the Arts in East London.

Mr. Luce: I have no plans to do so. Funding of the Arts in East London is a matter for the Arts Council and the Greater London Arts Association.

Arts Council

57. **Mr. Butler:** To ask the Minister for the Arts if he will undertake a review of the structure of the Arts Council.

Mr. Luce: I have the structure and operations of the council, and of the other public bodies for which I am responsible, regularly in mind.

Midlands Art (Funding)

58. **Ms. Walley:** To ask the Minister for the Arts if he will pay an official visit to Stoke to discuss funding for the arts in the midlands.

Mr. Luce: I have no immediate plans to visit Stoke-on-Trent. Funding for the arts in the midlands is the responsibility of the Arts Council and the West Midlands and East Midlands Arts Associations.

New Businesses

60. **Mr. Andrew Mitchell:** To ask the Minister for the Arts to what extent those involved in the arts have benefited from Government schemes to encourage new businesses.

Mr. Luce: As at 11 April 1988, 8,646 people involved in the arts were supported through the enterprise allowance scheme, representing 9 per cent. of the total number of people on the scheme. The Small Firms Service provides business advice and guidance to artists in terms of local market research, sales strategy, export procedures and copyright, and training is available through the training for enterprise scheme.

Management Skills

61. **Mr. Patnick:** To ask the Minister for the Arts to what extent arts bodies are able to acquire management skills either from the Arts Council or from his Department.

Mr. Luce: One of the objectives of the Arts Council is to improve business efficiency and management skills in the bodies it supports. I have also earmarked sums for similar purposes in the grants to the national museums and galleries.

Modern Dance

62. **Mr. Haynes:** To ask the Minister for the Arts what resources are made available by his Department for the encouragement of modern dance.

Mr. Luce: The Arts Council direct funding for dance in 1988-89 is £12·71 million; the regional arts associations also fund dance. The allocation to modern dance is not available as a separate figure.

Community Theatres

63. **Mr. Corbyn:** To ask the Minister for the Arts what funds were made available by his Department for community theatres for each year since 1983.

Mr. Luce: Funding of community theatres is, for the most part, the responsibility of regional arts associations. The information requested is not held centrally and could be obtained only at disproportionate cost.

Museums

64. **Mr. Chapman:** To ask the Minister for the Arts if he will make a statement on the number, type and geographical spread of museums and Government financial support for them.

Mr. Luce: The report on the museums database project indicates that in 1985 there were 2,131 museums and galleries in the United Kingdom. Of these, 7 per cent. were directly funded by central Government, 41 per cent. were local authority museums, and the remaining 52 per cent. were operated by companies, charitable institutions, voluntary associations, private individuals, nationalised industries, educational institutions or other bodies.

The geographical spread was as follows:

	Per cent.
Yorks/Humberside	3·2
South West	11·2
South East	47·4
Wales	7·8
East Midlands	2·6
North	4·3
North West	6·0
Scotland	7·8
West Midlands	2·6
Northern Ireland	6·0

Central Government expenditure on museums and galleries (including support for non-national institutions) borne on the votes of the Office of Arts and Libraries was £95·5 million in 1985-86 and is expected to be some £153·6 million this year.

Library Services (Commercial Organisations)

65. **Mr. Couchman:** To ask the Minister for the Arts whether any libraries currently provide free information services to commercial organisations.

Mr. Luce: Most library authorities provide some form of free information service to commercial organisations in their area. The range and extent of information provided, however, vary greatly.

Museums and Galleries (Charges)

66. **Mrs. Clwyd:** To ask the Minister for the Arts what information he has about the number of national museums and art galleries operating admission charges.

Mr. Luce: I refer the hon. Member to my reply to the hon. Member for Clydebank and Milngavie (Mr. Worthington) on 26 May this year, at columns 259-60.

Tourism

67. **Mr. Robert G. Hughes:** To ask the Minister for the Arts what is his estimate of the contribution to inward tourism made by the arts in Great Britain.

Mr. Luce: I refer my hon. Friend to my reply to the hon. Member for Ealing, North (Mr. Greenway) on 4 July 1988, at column 465.

Anglo-Chinese Cultural Exchange

68. **Mr. Fisher:** To ask the Minister for the Arts what encouragement is being given by his Department to further Anglo-Chinese cultural exchanges.

Mr. Luce: Mr. Wang Meng, the Chinese Minister for Culture, recently visited this country, and we had useful discussions. However, cultural exchanges with China are primarily a matter for my right hon. and learned Friend the Foreign Secretary and the British Council, who have negotiated a new cultural exchange programme for 1988-90, which was signed in Peking in April of this year.

London Theatre Trust

69. **Mr. Tony Banks:** To ask the Minister for the Arts if he will make additional resources available to the London Theatre Trust.

Mr. Luce: The Theatres Trust derives its income from the rent for the Garrick and Lyric theatres, and is likely to receive a rent for the Lyceum theatre in due course. I have no plans to make additional resources available.

Public Lending Right Scheme

70. **Mr. Jack:** To ask the Minister for the Arts how many authors are now registered under the public lending right scheme; and what increased funding the Government have awarded the scheme in the last year.

Mr. Luce: New registrations have brought the number of authors registered with the public lending right scheme to over 16,200. I was pleased to be able to announce increased funding from 1988-89 bringing the fund to £3·5 million, an increase of 27 per cent.; and its highest level in real terms since the scheme was implemented.

EMPLOYMENT

Labour Statistics

Mr. Frank Field: To ask the Secretary of State for Employment if he will list the number and proportion of people who have been out of work for over five years for each of the last 10 years.

Mr. Lee: Following is the available information. Claimants unemployed for over five years were not separately identified before April 1983. The table shows the number of unemployed claimants who have been unemployed for over five years in the United Kingdom expressed numerically and as a percentage of the total unemployed claimants for April of each year from 1983 to 1988.

Unemployed claimants in the United Kingdom unemployed over five years

April	*Number*	*Percentage of total claimants*
1983	66,842	2·1
1984	84,286	2·7
1985	136,259	4·2
1986	220,655	6·6
1987	272,047	8·8
1988	271,242	10·7

Mr. Cox: To ask the Secretary of State for Employment what is the present rate of unemployment in the boroughs that make up inner London; and if he will make a statement.

Mr. Lee: The information requested is not available. Unemployment rates are not calculated for areas smaller than travel-to-work areas.

Mr. Frank Field: To ask the Secretary of State for Employment what are the latest total national unemployment figures; and how many of these people have been unemployed for more than five, six, seven, eight and nine years, respectively.

Mr. Lee *[holding answer 22 July 1988]:* Figures are not separately identified for all the durations requested. However the following is the available information. The table shows for 14 April 1988, the latest date for which analysis by duration is available, the number of unemployed claimants who had been unemployed for five years or more, together with the total number of unemployed claimants in the United Kingdom.

United Kingdom

	14 April 1988
Total number of unemployed claimants	2,535,989
Number of claimants unemployed for five years or more	271,242

Mr. Clay: To ask the Secretary of State for Employment how many people were *(a)* unemployed and *(b)* unemployed for 52 weeks or more in April 1979 and April 1988 in (i) England, (ii) Scotland, (iii) Wales and (iv) Northern Ireland, broken down by sex.

Mr. Lee: Direct comparisons of unemployment by duration since 1979 are not possible because of changes in coverage of the count. Following is the available information which is also in the Library. Table A shows the number of male and female, unemployed registrants in April 1979 and unemployed claimants in April 1988, in each country. Table B shows corresponding figures according to the number of unemployed claimants and registrants who had been unemployed for one year or more.

Table A

Country	*Unemployed registrants April 1979*		*Unemployed claimants April 1988*	
	Male	*Female*	*Male*	*Female*
England	739,806	280,194	1,360,569	607,994
Scotland	117,693	57,897	218,158	90,926
Wales	58,729	25,489	100,202	39,871
Northern Ireland	43,002	17,785	86,782	31,487

Table B

Country	*Registrants unemployed one year or more April 1979*		*Claimants unemployed one year or more April 1988*	
	Male	*Female*	*Male*	*Female*
England	223,622	54,810	604,205	187,074
Scotland	35,213	10,365	95,910	27,964
Wales	18,047	4,738	41,225	10,830
Northern Ireland	16,654	3,262	50,841	11,157

Factory Inspectors

Mr. Redmond: To ask the Secretary of State for Employment what regions each factory inspector covers; and how many are in post.

Mr. Nicholls: The information is not available in the form requested.

Factory inspectors based in the Health and Safety Executive's (HSE) area offices do not generally inspect by geographical region but work in industry groups and have a range of inspection responsibilities throughout the district covered by the area office. The following table shows the areas of the country covered by each of the 20 HSE area offices:

Area office		*Area covered*
01	South West	Avon, Cornwall, Devon, Somerset, Gloucester, Scilly Isle
02	South	Berkshire, Hampshire, Wiltshire, Dorset, Isle of Wight
03	South East	East and West Sussex, Surrey, Kent
05/06	London North and South	London
07	East Anglia	Essex, Norfolk, Suffolk
08	Northern Home Counties	Bedfordshire, Hertfordshire, Buckinghamshire, Cambridgeshire
09	East Midlands	Leicestershire, Oxfordshire, Northamptonshire, Warwickshire
10	West Midlands	West Midlands
11	Wales	Wales
12	Marches	Staffordshire, Shropshire, Herefordshire, Worcestershire
13	North Midlands	Derbyshire, Lincolnshire, Nottinghamshire
14	South Yorkshire and Humberside	South Yorkshire, Humberside
15	West and North Yorkshire	West and North Yorkshire
16	Greater Manchester	Greater Manchester
17	Merseyside	Merseyside, Cheshire
18	North West	Lancashire, Cumbria
19	North East	Tyne and Wear, Cleveland, Northumberland, Durham
20	Scotland East	Borders, Lothian, Central Fife, Tayside, Grampian, Highland, Island Areas
21	Scotland West	Dumfries and Galloway, Strathclyde, Western Isles

On 1 July 1988, a total of 548 factory inspectors were in post in HSE's factory inspectorate and 48 were working elsewhere in HSE.

Collective Agreements

Mr. Frank Field: To ask the Secretary of State for Employment if he will update the answer given to the hon. Member for Birkenhead on the numbers of men and women covered by collective agreements for each year since 1982, and the proportion of men and women workers represented by these numbers at 27 July, *Official Report*, columns *320-21*.

Mr. Lee: It is still the case that information is available on a regular basis only in respect of manual employees covered by national collective agreements and statutory wages orders. The information is readily available only for every second year and is as follows:

Estimated numbers covered

	Million
1983	7·8
1985	7·3
1987	6·6

Source: Time Rates of Wages and Hours of Work.

Some figures on the relative numbers of employees covered by various types of collective agreement—national, district, company and so on—or by no collective agreement, covering both manual and non-manual employees and distinguishing males and females, were obtained in the new earnings survey for 1985 and were published in part F (tables 187 to 194) of the report, a copy of which is in the Library.

YTS

Mr. Leighton: To ask the Secretary of State for Employment how many people in the London borough of Newham are available for the youth training scheme; and how many places there are in the borough.

Mr. Cope: Figures for the number of young people in Newham who are available for YTS are kept by the local authority careers service and are not available to the Department. However, based on entrants last year and taking into account extra entrants this September the Training Commission estimate that there will be some 320 entrants in 1988-89. There are currently 447 YTS places available in Newham.

Child Care

Ms. Richardson: To ask the Secretary of State for Employment what action he is taking to implement those recommendations within his area of responsibility of the European Commission's childcare network report: "Caring for Children-Services and Policies for Childcare and Equal Opportunities in the United Kingdom".

Mr. Nicholls: My right hon. Friend received this report at the end of June. It is an interesting document and we are considering it.

Employment Training

Mr. Clelland: To ask the Secretary of State for Employment how many pilot schemes for the employment training initiative are in operation excluding lead development projects.

Mr. Nicholls: None. However, a wide range of development activities have been set up covering the issues and themes which will be addressed in employment training.

Textile Industry

Mr. Tom Clarke: To ask the Secretary of State for Employment if he will publish a table in the *Official Report* showing what information he has on the percentage change in the number of full-time equivalent workers in the textile industry, in each EEC member country since 1979.

Mr. Lee: Insufficient detail is available in the employment estimates for Community members to permit comparisons on a full-time equivalent basis. The available information relates to all employees and is as follows:

Employees in the textile industries
Percentage change between 1979 and 1986

	Per cent.
Belgium	−13·5
Italy	[1] −14·9
France	−23·7
Germany	−23·8
Spain	−30·0
Netherlands	−36·4
United Kingdom	−38·3
Ireland	−42·7

[1] Change up to 1985.
Source: Employment and Unemployment 1988 (Eurostat).

These percentages are based on statistics which have been harmonised to allow for methodological differences between countries, but, like all international comparisons of labour market statistics, they should be treated with caution as it is difficult to obtain data for different countries on a wholly consistent basis.

Training Schemes

Mr. Hinchliffe: To ask the Secretary of State for Employment if he will list all the agencies currently operating Manpower Services Commission schemes, and name any agency which has intimated that it will not be taking part in the new adult training scheme.

Mr. Nicholls: Details of organisations taking part in Training Commission schemes are not kept centrally and the cost of providing the list requested would be disproportionate.

Mr. Hinchliffe: To ask the Secretary of State for Employment what action will be taken against training managers and training agents who fail to meet the performance requirements of the Manpower Services Commission; whether details of such failures will be made public together with the reasons for such a failure; what criteria will be set for the expulsion of agents and managers from the scheme; and if he will make a statement.

Mr. Nicholls: Those training agents and training managers who fail to satisfy the criteria for approved status in employment training will not be allowed to continue to operate in the programme. In all cases where the Training Commission rejects an application for approved status, clear reasons will be given to the organisation concerned, stating which criteria the organisation has failed to satisfy. The Training Commission reserves the right to withdraw approved status from any organisation which fails to meet the criteria.

The commission will keep a record of the number of contracts for employment training; the number of applications for approved status; the numbers of applications approved or rejected; and the number of organisations whose approved status is subsequently withdrawn.

Mr. Hinchliffe: To ask the Secretary of State for Employment whether a full list of all training managers and training agents under the new adult training scheme will be made available together with total payments made to each manager or agent by the Manpower Services Commission; and if such figures will be published in the locality in which they operate.

Mr. Nicholls: A list of training managers and training agents in employment training will be drawn up for publication next year. The names of training managers and training agents operating in any Training Commission area will be available locally from the start of the programme in September. Details of payments made to particular organisations are commercially confidential and will not normally be available on an individual basis.

Mr. Hinchliffe: To ask the Secretary of State for Employment whether the Manpower Services Commission review of approved training agents and approved training managers will include a report on trainers' adherence to the articles of the Sex Discrimination Act 1975 and the Race Relations Act 1976.

Mr. Nicholls: Each training agent and training manager contracting with the Training Commission to deliver employment training is required to apply for approved status. There are nine criteria on which the Training Commission will need to be satisfied before approved status is awarded. One of those criteria relates to the operation of our equal opportunities policy and includes reporting on adherence to the Sex Discrimination Act 1975 and the Race Relations Act 1976.

Mr. Hinchliffe: To ask the Secretary of State for Employment how he established the balance as between the number of places for project-based training as against the number in the unified training programme.

Mr. Nicholls: Employment training is planned to provide a total of some 300,000 training places of which 194,000 will offer practical training on projects. This is broadly the same number of project places currently available for participants on the community programme.

Community Programme

Mr. Hinchliffe: To ask the Secretary of State for Employment what action he is taking to protect the 12-month contracts of those employed on the community programme; if these contracts will be honoured at present levels of remuneration; and if he will make a statement.

Mr. Nicholls: All participants who joined the community programme before 1 March 1988 are entitled to 12 months on community programme wages and conditions. Those participants who started after 1 March 1988 are entitled to six months on community programme wages and conditions, and this was made clear to them when they entered the programme.

The community programme will be superseded by employment training in September. Participants will be able to complete their six or 12 months on community programme wages and conditions. However, they may choose at any time to become trainees and receive the weighted training allowance for the balance of their time on employment training.

Mr. Hinchliffe: To ask the Secretary of State for Employment why supervisors and trainers within the present community programme are to lose their jobs with the introduction of the adult training scheme; and what level of job losses are expected from the introduction of the scheme in September.

Mr. Nicholls: The Training Commission funds the cost of managers and supervisors separately from other costs on the community programme. Under employment training the commission will pay a single fee to cover all the costs of training, including management and supervisory costs. Training managers will then use these fees as they judge will most efficiently provide appropriate support for trainees on the new programme.

It is expected that very many current community programme managers and supervisors will be offered employment by training managers who will contract with the Training Commission to provide training under employment training. In other cases, managers and supervisors may be offered employment by organisations subcontracting with training managers.

Restart Scheme

Mr. Hinchliffe: To ask the Secretary of State for Employment how many people who have attended a Restart interview since July 1986 have been placed directly into employment.

Mr. Lee: Between July 1986 and May 1988, some 345,000 people interviewed under the Restart programme were referred to job vacancies. We do not know how many Restart clients end up in a job or other opportunity after a Restart interview since we do not follow up referral.

Adult Training

Mr. Hinchliffe: To ask the Secretary of State for Employment if he will now take steps to reimburse trainees in the adult training programme all their travel-to-work expenses.

Mr. Nicholls: For participants in employment training, necessary travel costs over £5 per week will be met by the Training Commission, as was recommended by the commission in its report to the Government. This follows practice on other Training Commission programmes where training allowances are paid, and where trainees are expected to meet costs up to a certain amount. However, training managers and their sub-contractors in employment training will be able to meet the first £5 of trainees' costs without any effect on trainees' allowance, or tax and benefit position.

Mr. Hinchliffe: To ask the Secretary of State for Employment whether all participants in the new adult training scheme will be regarded as employees for the purposes of health and safety regulations; if he will outline the responsibility of employers to employees for the provision of safety equipment and clothing whether designated as essential by the Health and Safety at Work etc, Act or necessary under the employers' own regulations for employment; if such safety equipment and clothing will be made available to trainees without cost to them; and if he will make a statement.

Mr. Nicholls: My right hon. Friend the Secretary of State laid before Parliament on Friday 22 July regulations which give all participants on the new employment training scheme the same rights as employees for the purposes of health and safety legislation.

Protective clothing and equipment is specifically required to be provided for certain types of work, under health and safety regulations. Section 9 of the Health and Safety at Work etc. Act 1974 prohibits employers from charging employees in these circumstances. Employers also have general duties under the Act to ensure, so far as is reasonably practicable, the health, safety and welfare at work of their employees. These duties may include providing safety equipment and clothing to employees free of charge depending on the particular circumstances of the work.

Mines and Quarries Inspectorate

Mr. Hinchliffe: To ask the Secretary of State for Employment what is the total number of persons employed as inspectors by the Mines and Quarries Inspectorate and the average number of inspections made by each inspector per year.

Mr. Nicholls: On 1 July 1988, a total of 73 inspectors were employed in Her Majesty's mines and quarries inspectorate of the Health and Safety Executive. During 1987-88 the inspectorate made over 15,000 visits to premises. This figure includes preventive inspections, investigations of accidents and dangerous occurrences, follow-up visits, meetings with management and safety representatives, and general advisory and educational work; some visits combined more than one of these purposes. Consequently it would be misleading to refer to an average rate per inspector.

Mr. Hinchliffe: To ask the Secretary of State for Employment how many mines and quarries are eligible for inspection by the Mines and Quarries Inspectorate; and how many inspections are expected to be carried out in the present year.

Mr. Nicholls: All mines and quarries are eligible for inspections under the Mines and Quarries Act 1954 by the Health and Safety Executive's mines and quarries inspectorate. At present, there are 123 British Coal mines, 197 licensed coal mines and 77 miscellaneous mines which produce a variety of other minerals. There are also approximately 3,000 quarries, including 194 opencast sites. It is planned to carry out 15,000 visits to these premises during the 1988-89 year.

Mr. Hinchliffe: To ask the Secretary of State for Employment what was the total number of inspections

made to mines and quarries within the United Kingdom by the Mines and Quarries Inspectorate for the last year for which figures are available.

Mr. Nicholls: During the year 1987-88, the Health and Safety Executive's mines and quarries inspectorate recorded 7,066 visits to mines, 4,438 visits to quarries and 745 visits to opencast coal sites. In addition, there were 72 visits to mines rescue stations and 199 to other premises. A further 2,442 visits were made to mines and quarries offices.

Agricultural Inspectorate

Mr. Hinchliffe: To ask the Secretary of State for Employment what is the total number of establishments which require visits from the agricultural inspectorate; how many such visits were made in the last year for which figures are available; and how many inspections are expected to be made in the present year.

Mr. Nicholls: The Health and Safety Executive's agricultural inspectorate is the enforcing authority for 279,051 establishments. In the year ended 31 March 1988 a total of 33,408 visits were made to such premises, of which 1,865 were investigations of accidents or complaints. It is anticipated that 34,390 visits will be made in the current year of which 30,940 will be inspections.

Mr. Hinchliffe: To ask the Secretary of State for Employment how many persons are employed as agricultural inspectors; and on average how many inspections they each make a year.

Mr. Nicholls: On 1 July 1988, a total of 148 inspectors were employed in Her Majesty's agricultural inspectorate of the Health and Safety Executive. During 1987-88, the inspectorate made over 39,000 visits to premises. This figure includes planned preventive inspections, follow-up visits, investigations of accidents and dangerous occurrences, meetings with management and safety representatives, and general advisory and educational work; some visits combined more than one of these purposes. Consequently, it would be misleading to refer to an average rate per inspector.

Factory Inspectorate

Mr. Hinchliffe: To ask the Secretary of State for Employment what is the total number of establishments in the United Kingdom which are eligible for inspection by the factory inspectorate; how many such factory inspections took place in the last year for which figures are available; and how many inspections are expected to be made in the present year.

Mr. Nicholls: The information is not available in the form requested. On 31 March 1988 in Great Britain there were 401,923 fixed premises registered with the factory inspectorate.

Between 1 April 1987 and 31 March 1988, factory inspectors made 69,437 preventive inspection visits to fixed premises and it is anticipated that 70,000 preventive inspections will be made in the present year. It is not possible to identify separately visits to factories.

Figures for Northern Ireland are a matter for my right hon. Friend the Secretary of State for Northern Ireland.

Mr. Hinchliffe: To ask the Secretary of State for Employment what is the total number of factory inspectors employed in the United Kingdom; and if he will give an average number of visits each individual factory inspector will make in a year.

Mr. Nicholls: On 1 July 1988, a total of 548 inspectors were employed in Her Majesty's factory inspectorate of the Health and Safety Executive. During 1987-88, the inspectorate made over 173,000 visits to premises. This figure includes planned preventive inspections, follow-up visits, investigations of accidents and dangerous occurrences, meetings with management and safety representatives, and general advisory and educational work; some visits combined more than one of these purposes. Consequently, it would be misleading to refer to an average rate per inspector.

The figures relate to Great Britain. Information for Northern Ireland is the responsibility of my right hon. Friend the Secretary of State for Northern Ireland.

Tourism

Mr. David Porter: To ask the Secretary of State for Employment what assessment his Department has made of the likely impact on the tourist industry in East Anglia afforded by the opening of the Channel tunnel; and if he will make a statement.

Mr. Lee: None. However, the British Tourist Authority's Channel tunnel national tourism working party has produced a report, "The Channel Tunnel—An opportunity and a challenge for British Tourism", a summary of which has been sent to all Members of both Houses of Parliament. This report examines the potential for regions other than the south-east to benefit from the increase in tourists from the continent. A copy of the full report is available from the Library.

Industrial Accidents

Mr. Wilson: To ask the Secretary of State for Employment if he will list the number of deaths resulting from all industrial accidents in each of the past 10 years.

Mr. Nicholls: The available information is as follows:

Reported occupational injuries in Great Britain, resulting in death to

Year	*Employees only*	*Employees and self employed*	*Members of the public arising from work activity*
1977	524	—	—
[1]1978	—	622	—
1979	—	615	—
1980	—	579	—
[2]1981	—	[3]499	75
1982	—	517	84
1983	—	508	88
1984	—	496	101
1985	—	[3]473	[3]159
[7]1986	—	108	24
[6]1986-87	—	410	91

Notes:

[1] 1978-80 fatalities include some involving non-employees voluntarily reported.
